

LOBSTER FISHERY

EVIDENCE

TAKEN BEFORE

COMMANDER WILLIAM WAKEHAM, M.D.

OFFICER IN CHARGE OF THE GULF FISHERIES DIVISION,
IN QUEBEC AND THE MARITIME PROVINCES

PURSUANT TO

ORDER IN COUNCIL DATED JUNE 21, 1909

OTTAWA

PRINTED BY C. H. PARMELEE, PRINTER TO THE KING'S MOST
EXCELLENT MAJESTY

1909

ORDER IN COUNCIL

Order in Council appointing Commander William Wakeham, M.D., officer in charge of the Gulf Fisheries Division, Commissioner to investigate the lobster fishery in Quebec and the Maritime Provinces.

Certified copy of a report of the Committee of the Privy Council, approved by His Excellency the Administrator on the 21st June, 1909.

The Committee of the Privy Council, on the recommendation of the Minister of Marine and Fisheries, advise that in pursuance of the Sixth Report of the Select Standing Committee of Parliament on Marine and Fisheries, Commander William Wakeham, officer in charge of the Lower Gulf Fisheries Division, be appointed a commissioner to visit, during the recess of parliament, the chief points in the Maritime Provinces and the Province of Quebec where the lobster industry is carried on, and take further evidence under the direction of the Minister of Marine and Fisheries for the information of the said committee.

(Signed.) RODOLPHE BOUDREAU,
Clerk of the Privy Council.

The Hon. the Minister of Marine and Fisheries.

MINUTES OF EVIDENCE.

PROVINCE OF QUEBEC.

GRINDSTONE ISLAND, MAGDALEN ISLANDS, July 12, 1909.

Pursuant to Order in Council bearing date 21st June, 1909, Commander William Wakeham, M.D., officer in charge of the Gulf Fisheries Division, this day commenced an investigation into the lobster fishery.

After the reading of the order in council, witnesses were examined as follows:—

DOMINIQUE PETITPAS, fisherman, called and sworn:—

By the Commissioner:

Q. Where do you belong at present?—A. Grindstone island.

Q. What is your occupation?—A. Fisherman.

Q. Do you carry on all kinds of fishing?—A. All kinds.

Q. Have you always fished at this place?—A. I have been fishing at Etang du Nord for 15 years.

Q. That is on the other side of this island?—A. Yes.

Q. Can you give me any idea of the number of people in this immediate neighbourhood engaged in lobster fishing?—A. About 60 boats are engaged.

Q. Fishing from Grindstone island?—A. No, Etang du Nord.

Q. How many from the Hospital take part in the lobster fishery?—A. About 25.

Q. And from House Harbour?—A. About the same number.

Q. What is the number from here?—A. About 20.

Q. Are the boats fished by two men generally?—A. Yes, sir.

Q. What is, approximately, the total catch of lobsters in your district?—A. The average catch at Grindstone island is 1,500 to 2,000 cases.

Q. Is the catch decreasing or otherwise?—A. It has been decreasing.

Q. For how long?—A. It has been decreasing since 10 years ago. For the past three or four years the average has been about the same.

Q. Is the total annual catch maintained by the natural supply of the lobsters, or are you using more gear and fishing harder to obtain the same result?—A. Well, I suppose there is more gear.

Q. More gear is used?—A. Yes, to get the same result.

Q. Has the number of traps increased?—A. Yes, of course, as the gear is increasing.

Q. That is what you mean by using more gear?—A. Yes.

Q. It takes a larger number of traps now to catch the same quantity of lobsters that was taken years ago?—A. Yes.

Q. In your opinion is the supply of lobsters kept up by taking smaller lobsters that were formerly rejected? In the early days when you first commenced lobster

9-10 EDWARD VII., A. 1910

fishing did you get a larger run of lobsters than you do now?—A. Yes, better lobsters than we do now.

Q. There is no doubt about that?—A. No.

Q. How is the lobster fishery carried on here?—A. The fishermen own the boats.

Q. And the gear also?—A. In some places.

Q. How is it in other places?—A. In other places the canner finds the gear.

Q. It has been suggested that for the better regulation of the lobster fishing and the more effective control of the fishermen they should be required to register and take out a license; what is your idea as to that?—A. I do not know. It is a question that I cannot decide whether it would be better or not.

Q. It has been thought that by licensing the lobster fishermen and giving them the right to fish lobsters for the season they would observe the law better and report any violations which came under their notice; do you think such a system would be of benefit?—A. It might be a benefit.

Q. In making this suggestion the idea apparently is to constitute every fisherman receiving a license more or less of an overseer, that having received a document for which there might be a nominal fee, or for that matter no fee at all, exacted, he might be placed in a position of authority and would not only observe the law himself, but see that others did so. Would that appeal do you think to the average fisherman?—A. It might; I do not know.

Q. How does the price paid for lobsters to-day compare with that paid when you first commenced fishing?—A. When we first commenced fishing we got 60 to 65 cents a hundred.

Q. That is a hundred fish?—A. A hundred fish.

Q. They were large fish then?—A. They were large fish, yes.

Q. And now what price do you get?—A. Now, \$3 a hundred.

Q. For a much smaller run of fish?—A. Yes.

Q. Is the custom here not to take the lobsters by weight?—A. In some places they do.

Q. Where they are bought by weight what price is paid?—A. The same price.

Q. You say the practice is to pay \$3 a hundred fish. How much is paid per hundred pounds; do the canners reckon a hundred fish to be 100 pounds?—A. That is just about what they will average here. There is very little difference between the weight and the count.

Q. From your observation as a fisherman what are the spawning months of the lobster?—A. Well, some spawn more or less all the year round, but I think in the spring, the month of May, is the time they most spawn.

Q. Do you see more berried lobsters in the month of May?—A. Yes, in the month of May and June. There are more berried lobsters then than in the fall.

Q. How about the month of June?—A. June and July. Of course the first year we commenced we were fishing those two months—I mean July and August—when we found spawn the whole time we were fishing. I suppose it might be June and July.

Q. Do you think you find as many lobsters with berries on in May as you do in June and July?—A. Of course I never took much account of that.

Q. Do you find lobsters with berries at all seasons of the year?—A. At all seasons, yes, but I suppose there are more about June some time than there would be from May. I know we find some in May.

Q. Does the female lobster come inshore to spawn?—A. That is more than I can tell.

Q. Where do you get the lobsters first?—A. Close to the shore; very close.

Q. Is it not the rule here to set the traps farther out early in the spring?—A. No.

Q. Of what place are you speaking?—A. I am speaking about where I was stationed formerly, Etang du Nord. There we used to get the lobsters closer in shore than we do now. We have to go farther off now.

SESSIONAL PAPER No. 22a

Q. How far off shore do the lobster fishermen fish now?—A. As far as three or four miles from the shore.

Q. The reason you fish lobsters close in is that you are not obliged to go far to look for them?—A. We had better fishing inside than we have outside.

Q. Is there any period in the year when the lobsters are not fit for food?—A. That is a question I cannot answer. At those times we were fishing to the 20th August. We did not find much difference; they used to pack the lobsters the whole season.

Q. At what size do you consider the lobster fully matured?—A. Well, sir, there are all sizes. They are pretty mature when about 11 to 12 inches in size.

Q. Do you ever see small lobsters with eggs?—A. Not very small; no, sir.

Q. What size would be the smallest lobster-bearing eggs that you ever saw?—A. About 9 inches.

Q. Are you in a position to say whether the female lobsters spawn every year or not?—A. Well, I think they do spawn every year.

Q. Some people say they spawn only every second year, others that they only spawn once a year and others again that they spawn twice a year?—A. I think they spawn every year.

Q. And only once in the year?—A. Well, that is as far as I think; they only spawn once in the year.

Q. Have you never seen a female lobster smaller than 9 inches with berries attached to her?—A. Not that I remember.

Q. What is the average size of the lobsters with berries on them that are taken in this locality?—A. 10 to 12 inches taken with berries.

Q. Do you find many lobsters with berries?—A. Sometimes you find a good many.

Q. What proportion of the catch would they make?—A. Perhaps in 100 lobsters you may find 10 or 12 with berries.

Q. What is the proportion of female lobsters below 8 inches in size bearing eggs?—A. I don't remember that I have seen any below 8 inches.

Q. What is the proportion between 8 and 9 inches?—A. The proportion between 9 and 10 inches having eggs is not as plentiful as from 10 to 12 inches.

Q. There is no exportation of live lobsters from here?—A. No.

Q. It has been suggested that it would be a good idea to charge the canners 25 cents a case, instead of 2 cents as at present, and in that way raise a fund for the purchase of seed lobsters from the fishermen, either placing the lobsters in pounds to spawn or removing the eggs and hatching them in hatcheries?—A. That looks all right.

Q. Is the existing regulation for the protection of the berried lobster observed?—A. Well, there has been a rule, but I don't know when it was strictly observed.

Q. Do you think that all the lobsters caught, berried and non-berried, are brought to the cannery?—A. They are all brought to the cannery.

Q. Are the berried lobsters brought in with the berries on them or are they first stripped off?—A. As far as my experience goes they are brought in with the eggs on them.

Q. And the canner takes the lobsters with eggs attached?—A. Yes.

Q. Could you suggest any change in the regulations that, in your opinion, would work for the better protection of the lobster fishery?—A. I would suggest that if there was a hatchery and we could save those eggs it would be a protection for the fishery.

Q. Is stripping or washing off the eggs from the berried lobsters practised here?—A. Not much. We have tried it ourselves, but we thought every time we were killing those eggs; it was no use washing them off and destroying them. They were not ripe, and we thought that by taking them off they would be lost in the same way as if we had bought the lobsters to the cannery.

9-10 EDWARD VII., A. 1910

Q. So you brought the lobsters in with the eggs on?—A. We left the eggs on, yes. We tried it, but it was hard to get them off before they were ripe, and we thought we were killing them; it would be no use, they would never come to maturity.

Q. Do the canners make any scruple about accepting berried lobsters?—A. Not that I know.

Q. Do the canners make any examination for the purpose of detecting berried lobsters, or is delivery made in bulk under conditions which render detection difficult?—A. No, they used to take the lobsters as they came.

Q. You mean by that, they always did take berried lobsters and still do so?—A. As long as I was fishing myself.

Q. Are you fishing yet?—A. No, sir, I have not fished these six years.

Q. If the canners refused to take berried lobsters would the fishermen not be compelled to return them to the water?—A. Yes, sir, of course.

Q. Do you think it would be possible to get the fishermen to return to the water all the berried lobsters they took?—A. The only way would be for the packer to refuse them.

Q. If he did not refuse to accept the berried lobsters the fishermen would bring them ashore?—A. As long as the packer did not refuse them the fishermen would bring them ashore.

Q. It has been suggested that one method of protecting the berried lobsters taken in the traps would be for the government to buy them from the fishermen at a slight advance on the price paid by the canners, and then either place them in pounds or remove the spawn and set it in hatcheries, liberating the lobsters when the fishing season closed; what is your opinion of these suggestions?—A. I think it would be a fine thing. It would be all right. It would give more chance to save the spawn lobsters. One suggestion is about as good as the other.

Q. Are you aware of any fishermen having lost their catch of lobsters by the canners refusing to accept them?—A. On account of the spawn?

Q. On account of any reason at all?—A. No.

Q. Are you aware of any fishermen having had their catch of lobsters thrown back on their hands for any reason at all?—A. I am aware of some of the lobsters being refused when too small.

Q. What would you call too small?—A. Under 7 inches, I think they used to refuse them.

Q. The Lobster Commission of 1898 recommended that temporary reserves, where lobster fishing should not be allowed for two or three years, should be established along the coast, the location of such reserves to be changed from time to time; how do you think that would work?—A. I believe that would do good and allow the lobsters to increase, but it would hurt the fishermen who fish here.

Q. Would not the fishermen get some other employment during the prohibited period?—A. Well, in a place like this it is very hard sometimes to get fishermen other employment.

Q. Is the present regulation restricting the number of canning licenses satisfactory to the fishermen?—A. Well, I don't hear any complaint from the fishermen.

Q. Are you in favour of limiting the issue of licenses to can lobsters, or would you give a license to every man that asks for it?—A. That is a question pretty hard for me to answer.

Q. You as an intelligent fisherman might have some view on the subject?—A. I have got this much view: One fisherman has as much right to have a license as another.

Q. Do you think every man is competent to put up lobsters?—A. Well there might be something in that. I don't see how that can do it, but I suppose any one that undertook to put up lobsters it is his own lookout to put them up good.

SESSIONAL PAPER No. 22a

Q. You do not think that is a matter which concerns the department or the public at all?—A. I don't think so. It only concerns himself. If fishermen do not put up good lobsters they cannot get any price for them.

Q. It has been asserted in some districts that if lobster fishing were still further restricted the canners would have to close down. Supposing the size limit were made 9 or 10 inches instead of 8, how would it affect them?—A. I suppose it would affect them.

Q. Do you think the canners would continue to operate?—A. I suppose they would go on canning the big lobsters as far as they could, but certainly it would hurt the canner.

Q. Supposing all the canneries here were closed what market would the fishermen have for their lobsters?—A. They would not have any.

Q. If the present size limit of 8 inches were strictly enforced what effect would it have upon the canneries?—A. I think it would be all right as far as I know.

Q. In the event of repeated violation of the law by a canner do you think his license should be cancelled?—A. If such were the case it would pay him better not to violate the law.

Q. If the law were enforced in that way do you think it would be better observed by the canner?—A. Yes.

Q. Do you think there are sufficient canneries at present?—A. I think so.

Q. In your opinion if there were more canneries would the fisherman get a better price for his lobsters?—A. No, I do not think so.

Q. You think there is competition at present?—A. There is competition I suppose.

Q. Is there a combination on the part of canners to keep down the price paid for lobsters?—A. I hear sometimes when they hurt the fishermen that there is a combine to establish a price.

Q. Is the price now paid an unfair one?—A. The people are getting now what I think is a fair price. This year the price is lower.

Q. To what is that due?—A. Because the price of the canned article is lower.

Q. Do you think that more canneries would mean the packing of more undersized lobsters?—A. No, I don't think it would. They pack what is good to pack now.

Q. Do you think the canners ever reject any lobsters?—A. When the lobsters are very small they do.

Q. What do you call very small?—A. I think about 7 inches; we would call them pretty small.

Q. Q. Do you think the shipment of live lobsters should be favoured in preference to the canning industry?—A. I think if we had a market for live lobsters it would be preferable.

Q. In your opinion is the shipment of live lobsters from here commercially feasible?—A. I think it is very hard to do it here.

Q. You have not the means of transportation here?—A. No.

Q. Would you favour closing down the canneries here for some years as a means of renewing the lobster industry?—A. No, sir, I would not.

Q. Would you refuse a canning license to an alien?—A. No; I do not think it makes any difference.

Q. It has been asserted that a strict enforcement of the present size limit would result in closing down the canneries?—A. I don't think it would here. The lobsters here are too good a size for that.

Q. Do you know of any instance where a canner has failed to operate his factory although lobsters were plentiful?—A. No.

Q. Who fixes the price paid for lobsters?—A. The canner.

Q. Are you aware of any complaint made by the lobster fishermen that the price paid by the canner was not satisfactory?—A. Sometimes they have complained that

9-10 EDWARD VII., A. 1910

one fellow would get a little more than another. It is all competition amongst the fishermen as to selling. You know how it is.

Q. Could the fishermen make more money if they were allowed to can?—A. Well, I do not think it would make much difference, because some of them have tried it already and given it up.

Q. Would you consider the plan adopted by the department satisfactory, that is, of granting a canning license to one of a number of fishermen, from 15 upwards, who co-operate together for the purpose and agree to share losses and profits?—A. That is the way a good many act here—four or five fishermen will combine together.

Q. Can you say from your own experience whether hatcheries have helped to maintain the supply of lobsters? You never had one here?—A. Never had a hatchery here. I should think it would help the industry if we had one.

Q. Would you recommend the establishment of a hatchery on the Magdalen islands?—A. Yes I would.

Q. What about the establishment of pounds? You have here what are called lagoons?—A. Yes, sir.

Q. Do the lobsters enter the lagoons?—A. Yes, they go into the lagoons.

Q. When do they enter?—A. About this time they commence to go in, about the middle of July.

Q. Why do the lobsters go into these lagoons?—A. We all believe they go in to breed.

Q. Why should they go into the lagoons to breed?—A. Perhaps they have got more shelter there. There is a lot of eel grass in the lagoons and the water is warmer, it is shoaler.

Q. You think it is right for the department to protect the lobsters in the lagoons?—A. I think so.

Q. You think the regulation is a good one?—A. I think so.

Q. Do you think it is owing to the protection given to the lobsters in the lagoons that the fishery has not been so depleted here as in some places?—A. I think so, because they are the only places where the lobster can get in to breed in the summer, and as far as we have got the experience I think it is a good way to have the lagoons protected.

Q. What proportion of the lobsters caught here are below 9 inches?—A. I should think we are getting one-quarter of the lobsters below 9 inches.

Q. What proportion of the catch is between 7 and 9 inches? You are unable to say that definitely?—A. Yes, sir.

Q. What proportion of the lobsters found in the traps are less than 7 inches in size?—A. Very few when I was fishing.

Q. You are not fishing to-day, but you know what goes on, do you not?—A. There are more small lobsters than when I was fishing.

Q. Would you favour an increase in the size limit from 8 to 9 inches?—A. I think 8 inches is about right.

Q. Some people suggest that the small lobsters should be caught and the big ones allowed to escape?—A. I don't believe that catching the small lobsters hurts the fishery as much as taking the spawn lobsters. It rests with the packer whether he thinks he can make money out of 6 or 7-inch lobsters; if it is good for him.

Q. A certain proportion of these lobsters are females and the destruction of them at one time is just as bad as at another?—A. I should think so myself.

Q. Then you would protect berried lobsters and allow the canner to pack the small ones?—A. That is not too small, but up to the size he is taking now.

Q. Does a difference in the temperature of the water retard the growth of the lobster?—A. That is more than I can tell.

Q. Has there been any noticeable decline in the average size of the lobsters caught in this district within the last ten years?—A. I think so.

SESSIONAL PAPER No. 22a

Q. To what do you attribute that decline in size?—A. The lobsters getting scarcer.

Q. Why?—A. Because they have commenced to be fished out.

Q. You do not think it is because the lobsters do not attain to the size they used to?—A. I do not.

Q. Because some people claim the lobsters of to-day are a smaller species. Is it in the interest of the lobster fishery that lobsters should be taken before they have reached the age of reproduction?—A. Well, as you said a little while ago, if you kill off the small lobsters there is no spawn, that is if they are caught too young or too small before they can reproduce themselves.

Q. Is it correct that the larger the lobster the less number it takes to fill a pound can?—A. It will take a less number.

Q. There are people who claim that the very large lobsters are not as profitable as the medium sized ones?—A. Not according to the size. Generally they are not so full of meat as the medium sized, but all told they have got more meat and it won't take so many to make up a can.

Q. Would you favour taking small lobsters and letting the larger ones escape?—A. I think it would be better to take the big lobsters and save the small ones.

Q. It is estimated that it takes nine 7-inch lobsters, which lobsters have not been afforded the opportunity of reproduction, to fill a one-pound can. At that rate what effect will the continued fishing of these immature and berried lobsters have upon the industry?—A. It will hurt the fishery, I suppose.

Q. Do you think it will seriously hurt the industry?—A. I think it will. By and by we will have no lobsters at all.

Q. Do you think it would be better to have no size limit at all, but allow the canner to pack any size he pleases, and in return for that shorten the season somewhat?—A. No, I don't think so.

Q. I mean always providing for the protection of the berried lobsters?—A. That might work. But we have got the season very short as it is. Some times we cannot commence fishing here until the 15th May.

Q. Still a great many canners close down before the expiration of the season?—A. Sometimes.

Q. What packers continue operations until the season ends?—A. There are a few.

Q. They are, as a rule, the small associations of fishermen?—A. They always fish up to the close of the season.

Q. Could a size limit of 10½ inches be maintained here without detriment to the lobster industry?—A. Yes.

Q. Do you think the fishing could be maintained here with a size limit of 10½ inches?—A. The factory? No, I don't think it.

Q. The policy contemplated by the regulations is the taking of the large lobsters and leaving untouched the small ones. What kind of a trap is best calculated to promote that result?—A. They can easily do that by having the laths in the trap farther apart.

Q. They would not catch many small lobsters then?—A. No, not by having the laths farther apart so that the lobsters can go in and out.

Q. Is it true, as stated, that 30 per cent more lobsters by count are required in the fall to fill a one-pound can than in the months of May or June?—A. I cannot tell you that.

Q. Is it true that the size limit has never been recognized in this district?—A. I don't think so. It has been recognized.

Q. What do the fishermen do with the small lobsters?—A. They sometimes bring them to the canner and if too small throw them overboard.

9-10 EDWARD VII., A. 1910

Q. Do you think if the fishermen fished farther off shore, the schools of immature lobsters would be better protected?—A. I don't think there is anything to be gained by fishing farther off shore.

Q. When does the season open here?—A. On the 20th April, and it closes on 10th July.

Q. And you fish a month in the fall, the month of September?—A. Yes.

Q. During what portion of the open season is the fishing most actively prosecuted?—A. In May.

Q. Have you any change in the season to suggest?—A. No, sir.

Q. Do you think it would tend to perpetuate the lobster fishery if the season were shortened?—A. I don't think it would be any better.

Q. What about the September fishing?—A. It suits some people and some it does not. It suits Pleasant bay, but not out of it, not on the north side of the island.

Q. At what period do you say the catch of lobsters is best?—A. From about the 15th to the last of May.

Q. If the season were shortened should it be at the beginning or latter part?—A. Take it off the end part.

Q. If you were framing regulations for the control and perpetuation of the lobster fishery in the Magdalen islands what would you suggest?—A. I think about 8 inches size limit.

Q. And how long a season?—A. The season is about right as it is now.

Q. Including September?—A. Well, September is all right for some parts of the island; more parts they get no benefit from it.

Q. The delay in commencing fishing caused by ice has led to an application for fall fishing in some districts?—A. That has happened here before; that we were very greatly delayed on account of ice in the spring.

Q. On the whole, do you favour fall fishing?—A. I favour it in some parts of the island that get the benefit under it.

Q. Is there anything else you desire to suggest?—A. Nothing else.

Witness discharged.

DAVID GEDDES, packer, Etang du Nord, sworn and examined:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. About 25 years.

Q. When did lobster canning first begin on the Magdalen islands?—A. Eighteen seventy-eight, I think, was about the first year they started at House harbour. In 1879 they started at Etang du Nord.

Q. What regulations were in force then?—A. None.

Q. Can you tell me how many persons are engaged in the lobster fishery from Grindstone island?—A. I could not say exactly because the fishermen also come from Grand Entry and Byron island.

Q. How many boats are fished?—A. From Etang du Nord, 60; from Hospital, 30 or 40.

Q. That is about 100 boats?—A. On the north side of the island.

Q. Now, from Basque harbour to House harbour?—A. On the south side about 20.

Q. How many cases of lobsters are put up from Grindstone island, taking an average year?—A. I suppose the same this year as last, about 2,000 cases.

Q. How does that compare with the quantity put up 20 years ago?—A. It is not one-half.

Q. And to put up that number of cases have you as many boats employed as you had 20 years ago?—A. There are more boats to-day.

SESSIONAL PAPER No. 22a

Q. And a great deal more gear?—A. Yes.

Q. Is the annual catch decreasing or otherwise?—A. Well, the catch of lobsters varies in the season here. Some seasons are rough and the fishermen get their traps broken up. Some seasons there are more lobsters than others.

Q. On the whole, what would you say?—A. On the whole, the lobsters are decreasing.

Q. Is the total annual catch maintained now by the natural supply or by the aid of increased gear and closer fishing? It is a fact, is it not, that you have increased the gear and have to fish harder for what you get?—A. Yes.

Q. Has the number of traps increased?—A. They have not increased this year; there are not as many as last year.

Q. There are not as many canneries in operation as there used to be?—A. No.

Q. In your opinion is the supply of lobsters being kept up by taking smaller lobsters that were formerly rejected and using a much greater amount of gear?—A. I don't think the small lobsters figure in it at all in this island, on our side. There is not a great quantity of small fish on the north side of the island.

Q. The average size is pretty well maintained then?—A. Yes, as you will see by the measurements taken this year.

Q. On what basis is the fishery carried on in your district; do the fishermen own the boats and gear?—A. Some of them do. Most of them the packers supply.

Q. With gear and boats?—A. Yes.

Q. It has been suggested that for the better control of the lobster fishery the fishermen should be required to register and take out a license at a nominal fee. What do you think of that?—A. I don't think they could pay much for a license.

Q. Supposing there should be no fee? You do not think it would make much difference?—A. No.

Q. The idea is that it would cause the fishermen to better observe the law and report any violations they happened to see. Do you think it would have any effect in that way?—A. Not very much, I think.

Q. It has been suggested that a Board should be created to advise the department as to the administration of the lobster and other fisheries. What do you think of the proposition?—A. That would be a good thing.

Q. How does the price now paid for lobsters compare with that paid when the industry was first started?—A. Well, when it first started the packers paid 40 or 50 cents a hundred. Last year we paid 42.

Q. This year the price has fallen?—A. It is \$1.25 this year.

Q. What was the reduced price owing to?—A. Due to the fall in the market.

Q. Are the fishermen always paid by the number of lobsters rather than by weight?—A. By the number of lobsters.

Q. How many lobsters will you run here to the hundred pounds?—A. We weighed a few this year and they went about 5 pounds over the hundred.

Q. That is 100 lobsters weighed 105 pounds?—A. Yes. Last year they were not so good. The lobsters have turned out better this year.

Q. There were more in them?—A. Yes.

Q. Speaking from your observation as a fisherman and packer, what are the spawning months of lobsters?—A. Well, I think August is the chief month, some of them spawn earlier, but I think the bulk of them spawn at that time. When they commence fishing in September you can tell the lobsters that have spawned, they all have new shells and the claws are very small.

Q. Do you find lobsters with berries on them in September?—A. I don't remember having seen them—an odd one perhaps, but they are very scarce.

Q. Do the female lobsters come inshore to spawn?—A. They go into the mud, I think.

Q. Is there any period when lobsters are not fit for food?—A. Well, I don't know as to that. They would not be as good when shedding their shell, I think.

9-10 EDWARD VII., A. 1910

Q. At what size is the lobster fully matured?—A. It is pretty hard to say. Some lobsters get old and they are not large; they don't all grow to the same size. I suppose like other fish there are always some small and others larger.

Q. Can you say whether the female lobster spawns every year, or every two years, or twice a year?—A. I cannot say.

Q. What is the smallest size female lobster carrying eggs that you have seen?—A. I never measured them, but I have seen them about 8 or 9 inches carrying eggs.

Q. Have you seen them below 8 inches in size carrying eggs?—A. No.

Q. What is the average size of the lobsters taken in your district?—A. I could not say.

Q. There are no berried lobsters exported from this district?—A. No.

Q. What do you think of the proposition to collect a fee of 25 cents from the canner towards a fund for the purchase of berried lobsters from the fishermen?—A. I would not advocate that.

Q. Is the existing regulation for the protection of the berried lobster observed?—A. I do not think it is.

Q. Is there any attempt made to enforce the regulations?—A. I do not know of any.

Q. Would you suggest any change in the present regulations, and if so what?—A. Well, if they would build a hatchery they would be able to take care of the spawn lobsters here I suppose.

Q. What percentage of the lobsters found in the traps bear eggs?—A. I could not exactly say, but there is not a great many, perhaps 5 per cent.

Q. What disposition do the fishermen make of the berried lobsters they find in their traps?—A. Some may throw them away. I think that is what the most of them do.

Q. Is the practice of stripping or washing off the berries from the female lobster followed here, and, if so, to what extent?—A. I could not say because I do not know what the fishermen do out in their boats.

Q. Do the canners make any scruple about accepting berried lobsters?—A. I think so. We have spoken to the fishermen about it and told them not to bring berried lobsters in.

Q. Do the canners make any examination for the purpose of detecting berried lobsters when the catch is brought in?—A. I do not know that they do.

Q. Are the lobsters brought to the factory under conditions which render difficult the detection of those with berries; you count the lobsters, do you not?—A. They are counted, yes.

Q. Therefore in counting the lobsters there must be some opportunity of detecting those with berries on? If the canners refuse to take berried lobsters would it not induce the fishermen to return them to the water?—A. I suppose it would.

Q. Would it be difficult to get the fishermen to return to the water all berried lobsters taken in their traps?—A. If they were paid for them it would not.

Q. You think they are the berried lobsters for the momentary gain they derive? Are they as bad as that?—A. That is the way they feel most of them.

Q. Do the fishermen not realize the necessity of preserving the berried lobsters?—A. They do not think they will get scarce.

Q. What do you think of the idea of buying the berried lobsters from the fishermen at a slight advance on the price paid by the canners and liberating them or placing them in pounds to spawn?—A. Well, my idea is it would be no use to throw them back into the water because the fishermen would catch them again next day, a lot of them. If placed in pounds a lot of them would die, I should think.

Q. That depends a great deal upon the nature of the pound I should imagine. It ought to be possible to establish pounds?—A. Take it on our side, the north side, there is no place you could keep them. They ought to be carried to House harbour and thrown into the lagoons.

SESSIONAL PAPER No. 22a

Q. Another suggestion is to buy the berried lobsters and place the eggs in a hatchery to be hatched out?—A. I would advocate that.

Q. At what period of the season are berried lobsters most numerous?—A. That is pretty hard to say. There are times in the spring first when you will see a great many, and sometimes it will be later.

Q. Speaking generally, would you venture to say whether you would see more in the spring than in the fall?—A. Oh, yes, there would be more in the spring than in the fall.

Q. Are you aware of any fishermen having lost their catch of lobsters by the canners having refused to take them?—A. No, sir.

Q. What do you think of the idea of establishing temporary reserves and changing the location of these reserves from time to time?—A. It might be a good idea. I don't think it would be.

Q. You would not have much faith in that scheme?—A. No.

Q. Is the present regulation restricting the number of canning licenses satisfactory to the fishermen?—A. I don't know that it is in some places. I have heard complaints where the fishermen say they could not get licenses and they thought it was wrong for the government not to issue any more.

Q. Would you limit the number of canning licenses or give a license to every man competent to pack lobsters?—A. Yes, I would be in favour of that, to every one competent.

Q. How would you determine the man's fitness to pack?—A. It would have to be a question if he had done it before and knew how. It is not a great art to learn. There are a good many small factories, not having as much help as they should, that don't put up lobsters as good as they should.

Q. Do you think a standard should be established as to quality of packing and that there should be an inspection of the product?—A. I think there should be.

Q. Would that be a good way of establishing the competency of an applicant for a canning license?—A. Yes, I think it would be a very good way.

Q. I suppose there are canneries where the product is put up very loosely and slovenly?—A. Yes.

Q. It has been asserted that if the catch of lobsters is further lessened the canners may have to shut down for lack of supplies; what do you say as to that?—A. There are lots of lobsters caught now. Last year and the year before there were more caught than in the years previous. Take Prince Edward Island and all up the Straits of Northumberland—

Q. You think there has not been a further falling off within the last few years?—A. No, I don't think so. You have noticed the live lobsters going into the United States the last few years, they have increased.

Q. The size limit of lobsters entering the Boston market has been reduced, has it not?—A. Well, that would do it.

Q. Do you think the canneries would have to close down for lack of supplies if the catch of lobsters was further lessened in any way?—A. No, I do not.

Q. You think there still would be a margin left upon which the canneries could operate?—A. Yes, from the number around here. I do not know about other places.

Q. Would the fishermen in this district have any other market for their lobsters if the canneries here were closed?—A. No, I think not.

Q. You cannot export live lobsters from here?—A. Not successfully.

Q. If the present size limit were strictly enforced what affect would it have upon the canneries here?—A. I don't think it would have much effect here.

Q. In your opinion are the present penalties sufficient to deter the canners from violating the regulations if they were enforced?—A. I do not know.

Q. Is any attempt made to enforce the regulations?—A. Well, the inspector comes around I think once or twice a year.

9-10 EDWARD VII., A. 1910

Q. Do the officers ever fine anybody?—A. I do not think they have fined anybody lately.

Q. Have you ever known of anybody being fined for violating the regulations?—A. Oh, there have been, I think.

Q. In the event of persistent violation of the regulations would you cancel a canner's license?—A. Yes, I certainly would if he persisted in it after being notified or warned.

Q. In your opinion has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further licenses be discouraged?—A. Yes, I should say they should be discouraged, because I think there are enough.

Q. You think there are canneries enough?—A. Yes.

Q. There are not as many here as there used to be?—A. I do not think there are.

Q. Why is the number less than it used to be?—A. Most of the small canners have dropped out.

Q. They were not forced out of business in any way by the department, but dropped out of their own accord?—A. Yes.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. No doubt it would.

Q. Should the shipment of live lobsters be favoured in preference to the canning industry?—A. No, I think it is better for the community if the lobsters are canned.

Q. Would you favour closing down the canneries for a time in the interests of the lobster fisheries?—A. No, I do not think I would.

Q. In saying that you are speaking solely for your own district?—A. Yes.

Q. Would you refuse a canning license to an alien?—A. No, I would not.

Q. Was the lobster industry here first started by aliens?—A. Yes.

Q. The labour employed is all Canadian?—A. Yes, on these islands.

Q. Have the canners reduced the price paid to the fishermen for lobsters?—A. They have reduced the price this year on account of the market.

Q. Are you aware of any combine ever having been entered into for the purpose of keeping down the price paid to the fishermen?—A. No, it has been the other way. There has been competition putting prices up.

Q. Do you know of any instance of a canner failing to operate his factory and thus causing loss to the fishermen?—A. I do not think so.

Q. It has been alleged that this has been done in some places with the object of squeezing the fishermen. Has that ever occurred here?—A. No.

Q. Who fixes the price paid for lobsters?—A. The packers.

Q. By that statement do you mean the individual packer or is there any collusion in the matter? Can any packer pay what he pleases?—A. Yes, that is what has been done here.

Q. Are different prices paid in different parts of the islands?—A. There have been different prices, yes.

Q. Are you aware of any complaints by the fishermen that the price paid by the canner is not satisfactory?—A. They will never say they get enough.

Q. Could the fishermen make more money if they canned lobsters themselves?—A. No, I do not think so. They tried that once, but dropped it again.

Q. Would it be in the interest of the lobster industry to permit everybody to can? Would not the thing even itself down in course of time?—A. Yes, it has done so before. A number of fishermen joined together and packed lobsters, but dropped it after a time.

Q. There was a time here when there was no limit to the number of canneries?—A. Yes, but now they are not as they used to be.

Q. You say that fishermen have united here and packed their own lobsters. What measure of success rewarded their efforts?—A. It has been done, but they did not make a success of it and dropped it.

SESSIONAL PAPER No. 22a

Q. From your experience can you say whether the government hatcheries have helped to maintain the supply of lobsters?—A. I think they have.

Q. Can you cite an instance establishing the fact?—A. Take up the Northumberland straits from Pictou island and along there. The lobsters have kept up more there than round this way. They seem to get about the same there every year.

Q. Have you anything to suggest which, in your opinion, would still further improve the efficiency of the hatcheries?—A. We want one here.

Q. Judging from your observation of the excellent results of the operation of these hatcheries you would recommend an increase in their number?—I would.

Q. You would like to see one or more established here?—A. Yes, sir.

Q. Have you any observations to make with respect to the system of breeding lobsters in pounds?—A. No.

Q. You have here what practically amounts to the same thing in your lagoons?—A. Yes.

Q. Why do the lobsters go into these lagoons?—A. To spawn, I think, and shed their shell.

Q. What explanation would you give for their going into these lagoons to spawn?—A. It is a protection for them I think.

Q. The bottom suits them; there is eel grass and the water is warmer?—A. And there is soft mud they can go into.

Q. The temperature of the water in the lagoons must be warmer than that of the water outside?—A. Yes.

Q. Do you favour the prohibition of lobster fishing in the lagoons?—A. Yes.

Q. Do you think the protection thus afforded the lobsters has anything to do with the fairly good condition of the lobster fishery about the Magdalen islands?—A. This September fishing has, I think, hurt the fishery in the Islands.

Q. You are opposed to fall fishing?—A. Yes.

Q. Would you favour a return to the former size limit of 9 inches?—A. No, I would not.

Q. Would you favour any reduction in the present size?—A. I would be in favour of having no size limit, but protecting the spawn lobsters. That is my idea of it.

Q. Would it be a reasonable or good protective measure to abolish the size limit and in return shorten the season somewhat?—A. That is what I would suggest.

Q. That is abolish the size limit, shorten the season at the end, and protect the berried lobsters as strictly as possible?—A. Well, here in the Magdalens on the north side our season is too early now to my mind by 15 days. The 15th May is early enough to open the canneries on the north side. I have been connected with the industry 27 or 28 years, and on the average the opening of the season has been past the 20th May; we could not open any sooner on account of the ice and storms. Even this spring we lost most of our traps when we put them out.

Q. Have you at Etang du Nord, as a rule, fished up to the very last of the season?—A. Not generally; sometimes we did.

Q. A good many canners I know close down before the end of the season?—A. We have the last couple of years, I think, fished up to the end of the season, the 10th July.

Q. But you would cut out September fishing?—A. Yes.

Q. To what do you attribute the decline in the size of the lobsters, overfishing?—A. Yes, overfishing, I think.

Q. It is not due to the growth of a smaller race of lobsters?—A. No, I think not.

Q. An expert has suggested that a minimum size limit of 9 inches be established for the waters north of Cape Breton and of 10 and 10½ south and west of Canso. What do you say as to that? Do you know anything of the conditions on the Atlantic

9-10 EDWARD VII., A. 1910

coast?—A. Yes, I was born and brought up there. That would not suit them. They get about the same size lobsters as down here.

Q. Different size limits and seasons in adjoining waters are said to be unsatisfactory and to encourage violations of the law. What is your opinion?—A. I should think they would sure. Down in Nova Scotia they have a longer season than we have here.

Q. Where they have the live lobster trade their season begins earlier and they fish very much longer?—A. They commence 15th December and fish along there. I should say two months is long enough in the gulf.

Q. You do not fish two months here? What is your average number of fishing days?—A. I could not say exactly.

Q. Between 35 and 40 would you say?—A. Certainly not more than that.

Q. Is it a fact that the larger the lobster the less number it takes to fill a pound can?—A. Well, yes, I suppose so. But there is a medium sized lobster—

Q. That is the most profitable?—A. The most profitable.

Q. What is the most profitable lobster for canning purposes?—A. The lobster about 10 to 10½ inches.

Q. It is estimated that it takes nine 7-inch lobsters—which lobsters have never been afforded an opportunity of reproduction—to fill a pound can. Will not the taking of such lobsters, and berried lobsters as well, soon deplete the fishery?—A. It looks as though it would deplete it.

Q. It has been stated that a strict enforcement of the 8-inch size limit together with the assistance of hatcheries and pounds would maintain the industry?—A. I think it would.

Q. Could a size limit of 10½ inches be maintained here without detriment to the canning industry?—A. Not here.

Q. You would not favour a minimum size limit of 9 inches?—A. I think 8 inches would be better.

Q. The policy contemplated by the department is that the large lobsters should be taken and the small ones allowed to escape. Is there any kind of trap adapted for that purpose?—A. Yes, that the small ones could get out of.

Q. Why is that not done?—A. The small ones do not go out of the traps. They come in over the boat and are held with the rest. But we never see many here under 7 inches; there may be an odd one, but not many.

Q. You think the trap in use is best adapted to the needs of the fisherman?—A. I think so.

Q. Would any object be gained by keeping the slats farther apart?—A. I do not think it.

Q. Is it true, as stated, that 30 per cent more lobsters by count are required in the fall than in the months of May and June to fill a pound can?—A. I think so.

Q. Is it true that the size limit has never been recognized in this district?—A. I don't think it has.

Q. What disposition is made of the lobsters taken below the size limit?—A. They are canned. There are never many taken here.

Q. Do you think lobster fishing should be kept out farther from the shore, and would this give better protection to the schools of immature lobsters?—A. I think that would be a good idea.

Q. Why do you think so?—A. The fishermen get bigger lobsters outside, and they would not lose their traps, which get broken up in the storms. In fact, they have to go out now to get the fish; they don't get many close to the shore.

Q. Is it the practice while off shore in the spring to bring the traps closer in?—A. In some places. At other places they go out seven or eight miles and keep well out all the season.

SESSIONAL PAPER No. 22a

Q. Why would you prevent people from fishing early in the season?—A. Because on the north side they lose their traps if they put them out.

Q. When is the lobster fishing at its height here?—A. From the middle of May to the middle of June with us.

Q. Is it the same in that respect in the bay as at Etang du Nord?—A. I think in the bay on the south side it is a little earlier.

Q. In your opinion, would a short open season without any restriction as to size result in a depletion or an increase in the supply of lobsters?—A. I think it would result in an increase.

Q. Have any live lobsters been shipped from this district?—A. There have been a few, but it has not been a success.

Q. Why?—A. The lobsters died in transit.

Q. What facilities would be needed to promote the live lobster trade?—A. There would have to be a steamer to connect with the Boston boat, I suppose from here to the Strait of Canso.

Q. That would involve cold storage facilities?—A. Yes.

Q. It is suggested that in a few years the canning industry will be replaced by the live lobster trade?—A. Well, it may, but I don't think it will be done away with altogether, not for a great number of years anyhow. They would not be able to find a market for all the live lobsters during the season they are caught. Take all the lobsters that are around the Gulf and put them into the American market; it would flatten the market down so that they would not be able to sell those lobsters.

Q. What is the capacity of your factory?—A. It is large enough to pack 2,000 cases.

Q. How many cases did you pack last year?—A. Last year 300, this year nearly 400.

Q. How many pounds of green lobsters does it take to a one pound can?—A. It varies, you know. The larger the lobsters the more pounds it will take. Take medium and smaller-sized lobsters, the waste would be less.

Q. How many lobsters does it take to fill a pound can?—A. In count? It took this year about $5\frac{1}{4}$ to $5\frac{1}{2}$. Last year it took nearly a lobster more—about $6\frac{1}{2}$.

Q. Is there anything you would like to add other than what you have already stated?—A. I think the ground has been well gone over.

Witness discharged.

Mr. WILLIAM C. LESLIE, Packer, Bryon Island, sworn and examined:—

By the Commissioner:

Q. How many people are engaged in the lobster fishery on Byron Island?—A. All over the island? There are forty boats, that is eighty men. There are some girls employed in the factories there. In all there are about 160 people, all imported. That is they come from Grindstone Island.

Q. How many factories are there in the island?—A. Three.

Q. Who are they owned by?—A. Delaney Brothers, William Leslie & Co., and Townsend Dingwell.

Q. Is the annual catch decreasing or otherwise?—A. It increased this year over last on account of finer weather, but the catch was smaller and has been getting smaller than it was ten years ago.

Q. Then you would say the annual catch is decreasing?—A. It has a tendency to decrease. Well, there were some years that it increased through local conditions such as the weather, but as a general tendency it is decreasing.

Q. Is the total annual catch maintained by the natural supply of lobsters or by

9-10 EDWARD VII., A. 1910

the aid of increased gear and closer fishing?—A. Well there is not much increase of gear or harder fishing there because the conditions are such that only a certain number of boats are engaged in order to maintain the standard at about an average; that is keep it up and not overfish the ground.

Q. You think an attempt has been made by the canners on the Bryon to preserve and protect the fishery in their own interest?—A. In their own interest.

Q. The fishing ground is isolated and not meddled with by people from elsewhere?—A. Last year the island was overstocked and this year we cut down the number of boats again.

Q. Then the number of traps has not increased in your district?—A. Not during the last three or four years.

Q. But it has increased—A. Over previous years.

Q. Is it your opinion that the supply of lobsters has been kept up by taking smaller lobsters that were formerly rejected and by using an increased amount of gear?—A. We are using the same kind of trap that we have used for the last ten or twelve years. The gear is not increasing and the number of lobsters is steadily diminishing on the average. No attempt has been made to keep the supply up by closer fishing.

Q. And yet the lobsters are decreasing you think?—A. Yes.

Q. Do the fishermen own the gear and boats employed?—A. Yes.

Q. They take their own material with them?—A. They go on in the fall mackerel fishing and build their traps. They buy the rope.

Q. Then they own all their gear?—A. They own all their gear.

Q. What do you think of the idea of licensing the fishermen?—A. I do not see the practical utility of it.

Q. It has been suggested that if licensed the fishermen would observe the law and report any violations coming under their observation?—A. I do not think there would be any such tendency.

Q. Do you approve of the appointment of a Fisheries Board, and if so how should it be constituted?—A. I approve of the suggestion provided practical fishermen, people that know the fishing industry, be members of the board. As far as the Magdalen Islands are concerned we are so different from Nova Scotia that if such a board was constituted there would have to be some special representation for us.

Q. How does the price of lobsters this season compare with that paid when the industry was started as far as your recollection takes you back?—A. The price has been steadily increasing until this year. It has had an upward tendency all the time.

Q. What was the price when your connection with the lobster industry began?—A. I can remember when we paid 75 cents a hundred.

Q. Is it to your knowledge that the price was less than that previously?—A. By hearsay.

Q. What is the price now?—A. We paid \$2.25 per 100 lobsters by count this season.

Q. Speaking from your own observation what are the spawning months for lobsters?—A. I have seen spawn lobsters practically at all seasons of the year, but the majority, I imagine, spawn during the latter part of July and the first part of August.

Q. Do you think the lobsters come towards the shore to spawn?—A. As a general rule, yes.

Q. Is there any period of the year when lobsters are not fit for food?—A. During the time of shelling I should say the meat is soft and flabby and not like it is now.

Q. When would you fix that time?—A. That would be some time about the latter part of July and the first part of August.

Q. At what size is the lobster fully matured?—A. I have seen lobsters not over 9½ or 10 inches long that have certainly not shelled the previous year. They should be fully matured I think. Then there are others I have seen with soft shells which

SESSIONAL PAPER No. 22a

must have been 13 or 14 inches long. So there is no standard size for a matured lobster.

Q. At what size would you expect to find them able to reproduce themselves?—

A. Below 8 inches they would carry spawn.

Q. You have seen lobsters below 8 inches with spawn?—A. Yes, sir.

Q. Could you venture to say what percentage?—A. I remember measuring one a little over 7 inches that had berries.

Q. But there are very few of that size with berries?—A. Yes. This lobster was fairly berried considering its size.

Q. That would be an abnormal condition?—A. An abnormal condition.

Q. What size would you fix as a rule?—A. The ordinary spawn lobster seems to be about 8½ or 9 inches in size, omitting the smallest of them.

Q. Are you able to tell me whether the lobster spawns every year, or twice a year or every two years?—A. No. That is, I have no proof.

Q. What is the average size of the berried lobsters taken in your district?—A. Between 10 and 10½ inches.

Q. What is the proportion of female lobsters below 8 inches bearing eggs?—A. I would say practically nil.

Q. What proportion between 8 and 9 inches bear eggs?—A. I should think about 3 per cent.

Q. What do you think of the idea of raising a fund for the purchase of seed lobsters by increasing the canners' fee from 2 cents to 25 cents a case?—A. The increase in the fee would be too great for the industry if you had to buy all the seed lobsters; it would be too heavy a tax on canning.

Q. Is the existing regulation for the protection of the berried lobster observed?—A. No, sir.

Q. Would you suggest any change in the present regulations?—A. Nothing further than a stricter enforcement of the regulations so far as berried lobsters are concerned. I would suggest the building of a hatchery in order to take care of the spawn of the berried lobster; in fact, we had the promise of one here on the north side. I do not know whether it will be built or not.

Q. About what percentage of the lobsters found in the traps bear eggs?—A. About 4 per cent.

Q. Is that from actual count?—A. From actual count; that is if the fishermen told the truth. I asked them to make a count and they reported the number and said about 4 per cent.

Q. What do the fishermen do with the berried lobsters found in the traps?—A. They bring them ashore.

Q. Is the practice of stripping or washing the eggs from the female lobster followed here?—A. Only when the manager of the factory tells the fisherman he will not take the berried lobsters. Then it is done. You notify the fishermen you will not accept the spawn lobsters and they will wash them off outside and bring them in in spite of you.

Q. Does the canner make any examination of the lobsters when they are brought in for the purpose of detecting those with berries?—A. The lobsters are dumped on to the wharf and it is very difficult to notice those with berries unless one happens to fall on its back. We pick them out in that way. But, as a general rule, we don't go over the lobsters to find out whether they have spawn on them or not.

Q. If the canners refused to accept the berried lobsters would it not induce the fishermen to return them to the water?—A. No, sir.

Q. What would happen?—A. The fishermen would wash the berries off and bring them to shore.

Q. Would it be possible to get the fishermen to undertake to return to the water all berried lobsters taken in their traps?—A. I do not think so.

9-10 EDWARD VII., A. 1910

Q. It has been suggested that one method of protecting the seed lobsters taken by the fishermen would be for the government to buy them at a slight advance on the price paid by the canners, these lobsters to be liberated at once or placed in pounds until the close of the season. Which proposition would you consider the most effective?—A. The first proposition is practically of no use because the government would be buying the same lobsters over and over again. The lobsters would be brought to the wharf and let go and the fishermen would set their traps around the wharf and catch them again. The second proposition would certainly be the more valuable of the two. The lobsters, though, would have a tendency, unless the pounds were very large, to destroy each other.

Another suggestion is for the department to buy the berried lobsters and remove and place the eggs in a hatchery to be hatched out, preserving the lobsters themselves in pound or crates until the close season arrives; what do you think of that?—A. I don't see the necessity of leaving the lobsters in crates unless it is to bear berries another year. I believe the most suitable way of keeping the supply of lobsters up to the present standard would be by means of a hatchery.

Q. Are you aware of any case where a canner has refused to take a fisherman's catch of lobsters?—A. No.

Q. What do you think of the recommendation to establish temporary reserves?—A. I do not think it is practicable here.

Q. You are speaking merely of one section?—A. As far as other districts are concerned, with hatcheries in successful operation there would be no need of such a thing.

Q. Is the present regulation restricting the number of canning licenses satisfactory to the lobster fishermen?—A. I think it is satisfactory in the Magdalen islands. With the number of licenses there are at present, everybody has a chance to pack or sell their fish.

Q. Are you in favour of limiting the licenses to can lobsters or would you grant a license to every man competent to pack?—A. There are so many things to look at in considering that matter. There is the market to be considered. The worst thing for the market value of the lobster is to have everybody packing it. It needs both a suitable building and a competent person to put up lobster fit for the market. If everybody were allowed to pack without any restriction as to the canneries, the quality of the fish going on the market would deteriorate, the price would drop and it would hurt the industry.

Q. The question naturally follows: How would you determine the fitness of an applicant for a license to put up lobsters?—A. He should have a suitable plant and experience in packing. A man who has never packed lobsters cannot put up a good product. Besides that it needs a suitable plant to put up good fish. You want to be handy to the water with a good clean building and a good boss—to have everything so the fish can be properly canned and marketed in first-class condition.

Q. What market in this district would the fishermen have for their lobsters if the canneries were closed?—A. None.

Q. If the present size limit were strictly enforced what effect would it have on the canneries?—A. On the north side of the island, practically no effect. On the south side it would tend to decrease the supply being packed.

Q. Do you mean solely in the bay?—A. From Amherst to Old Harry.

Q. Are the existing penalties, in your opinion sufficient to deter packers from violating the regulations if they were enforced?—A. Yes, if strictly enforced.

Q. In the event of persistent violation of the regulations should the canner's license be revoked?—A. Yes.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further license be discouraged?—A. I think so, because the number of licenses has fallen off. The number has been greater than at present, but it has fallen off voluntarily.

SESSIONAL PAPER No. 22a

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. In certain districts. There are practically no undersized lobsters on the north shore of the island. I think the fishery overseer measured 890, if I remember right, at my factory and there were only 25 under 8 inches. On the south side, though, the more fish put up the more undersized lobsters would be packed.

Q. Should the shipment of live lobsters be favoured in preference to canning?—A. As a general rule, I think not.

Q. Would you favour closing down the canneries for a number of years?—A. Where hatcheries exist it is unnecessary. Notice would be required to dispose of your gear in the event of closing down, and it would take three years to use up the gear on hand. If a hatchery were built, the number of lobsters would be increased at the end of two years.

Q. Would you refuse a license to an alien?—A. If that also means fishermen and inside help, yes. If it refers only to the management, no.

Q. Were abnormal market conditions responsible for the reduced price paid by the canners this year to the fishermen?—A. Yes, there was an abnormal depression in the market.

Q. Do you know of any instance of failure on the part of canners to operate their canneries when there was no shortage in the supply of lobsters?—A. No.

Q. Which branch of the lobster industry is the more remunerative to the fisherman and the least destructive to the lobster industry, the canning or the live lobster trade?—A. Taking the situation on the Magdalen islands the live lobster trade is really impracticable. The canning industry is the only thing by which the lobster fisherman can derive any benefit.

Q. Who fixes the price paid for lobsters?—A. It is a matter of mutual agreement between the packer and the fisherman.

Q. Are you aware of any complaint by the fishermen that the price paid by the canner was not satisfactory?—A. They always try to obtain as much as they can, but to my knowledge they have never been compelled to fish at a low price.

Q. There has been no combination of canners here to put down the price?—A. No. As a general rule everybody pays practically the same price.

Q. There is no agreement then among the canners as to price?—A. No mutual understanding even, because some packers pay 5 cents a hundred more and some 5 cents a hundred less.

Q. Could the fishermen make more money if allowed to can?—A. I think not; they have tried it and given it up.

Q. Then you think the method by which fishermen can on the co-operative plan, as aimed at by the department, would not succeed here?—A. That has been tried here and found practically not a success. Most of those who went into it could not pack their fish.

Q. Is it your opinion then that for a certain class of fishermen it is more profitable for them to fish than to pack?—A. The fishermen find it so themselves. It was the only experience we have had, that a large proportion of those who have tried it have gone back to fish by the hundred.

Q. In your opinion have the government hatcheries helped to maintain the supply of lobsters?—A. Yes.

Q. Could you give any instance of that?—A. The first hatchery that was built at Wood's Hole, Massachusetts, tended to greatly increase the supply there, and those built on Pictou Island and other places in the Northumberland Straits, have had, I believe, the same good results. By reports we received from there last year the lobster fishery has been good—better than it ever was in fact—and they attribute it to the hatcheries.

Q. Then from your observation of the excellent results obtained from the operation of the hatcheries you would recommend an increase in their number and their

9-10 EDWARD VII., A. 1910

location especially on the Magdalen Islands?—A. Yes, especially on the Magdalen Islands.

Q. Have you anything to say as to the value of pounds for breeding lobsters?—

A. I have had no experience with them, but I should imagine that pounds would not be nearly as suitable as hatcheries, one reason being that when the spawn is deposited by the lobster it is more apt to be destroyed by other fish than if placed in hatcheries and only put out when the young fry are better able to take care of themselves.

Q. Would you favour any reduction in the size limit for this district?—A. No. An 8-inch lobster can be packed and it is mature enough to carry spawn. Therefore, I think that size would be suitable. Anything under eight inches is too small to pack.

Q. Does a difference in the temperature of a water appreciably retard the growth of a lobster at a given age?—A. I do not know. We find the lobsters larger as a general rule north of Bryon Island—the farthest north we get—than any other part of the island.

Q. Is that because lobsters have not been fished there to the same extent?—A. It may possibly be.

Q. Has there been a noticeable decline in the average size of the lobsters caught in your district within the last ten years?—A. No, sir. Well, we can tell that by the average to a pound can.

Q. Speaking of Byron Island there has been——A. No practical decrease in the size during the past ten years. We can tell that by the average canned during that time.

Q. What is the average number to a can?—A. This year it took four and a half lobsters to make a can and last year about four and three-quarters. They average about four and a half as a general rule. Four years ago our lobsters averaged five cases to the 1,000 lobsters. That is a little over four, four and a half.

Q. To what cause do you attribute the decline in size where it does exist?—A. To over-fishing.

Q. It is the natural result of persistent overfishing?—A. Yes.

Q. It is not due to the growth of a smaller race of lobsters?—A. No, because you get an isolated instance of a large lobster even among small ones. You get an odd instance of a lobster over twelve inches. That is one that has escaped in other years I think.

Q. Different size limits and seasons in adjoining sections of the shore are said to be unsatisfactory and to encourage violations of the law; what do you think about it?—A. I certainly think they would. That is where the fishing districts naturally come together; that does not exist here.

Q. Is it in the interest of the lobster fishery generally that lobsters should be taken before they have reached the age at which reproduction takes place?—A. No, sir.

Q. Is it the fact that the larger the lobster the less number it takes to fill a pound can?—A. Yes. There are certain very large lobsters that have very little meat in them. The best size is the lobster of ten or ten and a half inches. The light shelled lobster is always meatier. I do not know how it is.

Q. So that reducing the size limit would necessitate taking an increased number of small lobsters to maintain the pack?—A. Yes.

Q. It is estimated that it takes nine seven inch lobsters which have not reached the age of reproduction to fill a one pound can. At that rate what effect will the continued fishing of these immature and berried lobsters have upon the industry?—A. Total extinction unless the spawn is protected by hatcheries or some other means.

Q. Do you concur in the statement that a strict enforcement of the 8-inch size limit, together with the assistance of hatcheries and pounds would perpetuate the industry?—A. Yes, sir, I believe it would. I think the fishery would have a tendency to increase, if anything, with the same amount of traps and gear.

Q. Would you favour reducing the size limit to 7 inches, or would you abolish the size limit and shorten the season, in each case strictly enforcing the berried lob-

SESSIONAL PAPER No. 22a

ster regulation?—A. As far as the size limit goes, I think 8 inches is all right, but the regulation as regards berried lobsters should be strictly enforced.

Q. How would you enforce it?—A. It would not be necessary to enforce it if a hatchery were built here.

Q. There must always be canneries that are a long distance from the hatchery?—A. But the spawn from those canneries would be collected and taken to the hatchery.

Q. There is a limit to the distance they can go for spawn?—A. I do not think there would be any difficulty in collecting the spawn around Bryon Island.

Q. How would you enforce the regulation in Bryon Island with regard to berried lobsters?—A. Unless you take the berried lobsters at the factory, there is no way of preserving them. The factory would have to offer some special compensation for letting the spawn lobsters go or else afford some special opportunity of getting the spawn to the factory. We could, if we had to, get the spawn from Bryon to Grosse Isle every two days.

Q. Could a size limit of 10½ inches be maintained without detriment to the lobster industry?—A. Not very well on the south side of the island. It might be possible to do it on the north side.

Q. The departmental regulations contemplate the taking of large lobsters only and letting the small ones escape. What kind of trap would be the best adapted for that purpose?—A. A trap with laths sufficiently wide apart to let a small lobster out. The ordinary traps have laths an inch apart, and they very seldom take lobsters under 7 inches. I do not know whether it is because there are none at Bryon Island, but we seldom see a lobster under 7 inches. In any case, our laths are possibly an inch or an inch and one-eighth apart.

Q. Do you concur in the statement that 30 per cent more lobsters, by count, are required in the fall than in the months of May and June to fill a one pound can?—A. I would not like to commit myself to the statement that it takes 30 per cent more lobsters in the fall to fill a one pound can.

Q. Is it true that the size limit has never been recognized in this district?—A. It is necessary to recognize it because we get practically all our fish over the limit.

Q. What becomes of the lobsters below the size limit that are taken?—A. Where they are taken they are boiled and packed.

Q. What part of the season is the fishery most actively prosecuted?—A. This year we packed on May 12 and closed the factory on July 5.

Q. Is the present close season regarded as satisfactory?—A. Yes.

Q. Does your statement also apply to fall fishing?—A. Fall fishing is practically of no use on the north side of the Magdalen Islands.

Q. Is it of any use on the south side?—A. Not in order to perpetuate the lobster fishery. I consider it detrimental to the lobster industry all over the islands.

Q. Do you think that a reduction in the open season would tend to increase the supply of lobsters and perpetuate the fishery?—A. My experience during the past has been that if we can get from 25 to 30 days out of the two months and 10 days allowed us by law—out of the practically 65 fishing days we have legally—we are satisfied. That surely is protection enough as far as length of season is concerned. This year we had an exceptionally fine season. One of my boats fished 40 times. I have never known that to happen before since I have been on Bryon Island.

Q. One proposition made is to do away with the size limit altogether and shorten the season in return?—A. If the season is to be shortened we would want it done at the front rather than at the rear. The open season commences about the 1st of May instead of 20th April; the first 10 days are of no practical use to us.

Q. The shortening up at the beginning of the season seems to be a precaution to save the gear rather than the lobster?—A. Well, we cannot fish in the early part, there is no use trying. One year out of ten we may get out our gear before the 1st of May.

9-10 EDWARD VII., A. 1910

Q. When do you get your best catch here?—A. From May 20 to June 1.

Q. Is it practicable to maintain a close season during the whole breeding period of the lobster?—A. No, I should think not, because they carry spawn at all seasons of the year, in my experience, or some of them do.

Q. I understood you to say that you would not favour fall fishing?—A. I am not in favour of it.

Q. Are any live lobsters shipped from this district?—A. A few have been by way of experiment only, but it did not turn out sufficiently remunerative to be encouraged.

Q. And you say the shipment of live lobsters should not be favoured in preference to the canning industry?—A. I think that the canning should be preferred as a general rule to the shipment of live lobsters on account of the increased number of people employed. It would give the greatest good to the greatest number I should think.

Q. Are the existing facilities adequate for the profitable handling of live lobsters?—A. No.

Q. What facilities are required to make that trade commercially feasible here?—A. Cold storage and quick communication between here and Hawkesbury to connect with the boats to Boston so as to give a satisfactory shipment.

Q. Then the live lobster trade is not likely to supplant the canning industry at the Magdalen islands?—A. Not in the Magdalen islands.

Q. What is the capacity of your cannery on Bryon island?—A. We could handle about 1,200 cases.

Q. How many cases did you pack last year?—A. Last season 385. This season 400.

Q. How is the pack going to turn out on the Islands this year?—A. It is fully as good as last year, a little better if anything.

Q. You have already given me the number of pounds of green lobsters it takes to fill a pound can?—A. Yes, $4\frac{1}{2}$ lobsters in count. I should think of the lobsters we get It would take $5\frac{1}{2}$ to 6 pounds in weight to fill a pound can.

Witness discharged.

JOHN BALLANTYNE, packer, Grindstone Island, called and sworn:—

By the Commissioner:

Q. How long have you been connected with the lobster industry?—A. I was practically connected with it for 35 years.

Q. You were one of the first of the local residents to begin the industry?—A. Yes, among the first of the English-speaking residents. William Leslie and myself were the first.

Q. You have heard the evidence given this afternoon by the several witnesses. Do you concur in it?—A. With the most of it I agree. As to the protection of the lobster fishing I would like to say something. These lagoons should be shut up entirely. There is no sense or reason that I know of in allowing fishing in them at any time. I also think that a line should be drawn from the mouth of House harbour—from the buoy here—to the buoy at Grand Entry and all inside of that line protected. If that were done you would see an increase in the fishery in no time.

Q. You would allow no fishing inside that limit?—A. No fishing of any kind. As to September fishing, I am most emphatically opposed to it. One reason is that the fish then are not of the same quality; they are not so good. It is the small outside

SESSIONAL PAPER No. 22a

factories that pack them and the lobsters are not put up in the same way. This deteriorates the quality of the pack going from the Magdalen islands. It hurts both the price and the reputation of the fish packed on the Magdalen islands. Another thing is that it encourages boodling as the difference in price must be considered. Mr. Leslie, when giving his evidence, said that he paid 75 cents for lobsters when he first commenced to pack, but you must understand that he owned all the boats and gear, and 75 cents at that time was equal to about \$1.50. He is now paying \$2.25 and the fishermen own the boats and gear so that the increase in the price is not so great as the figures would appear to show without that understanding. When I commenced I paid 40 cents for fish from inside the bay and 30 cents for fish from outside, but I owned all the gear. That makes quite a difference. The price has increased to \$2.25, but the fishermen own the boats, traps and everything so that the price has not increased you might say over 50 per cent in 25 or 30 years.

Q. In those days what price did you get for your lobsters?—A. I got from \$3.75 to \$5, except the first year I packed here. I got as high as \$15 before I knocked off.

Q. But the cost of material was not as great then?—A. No, it was not, I must admit that.

Q. And labour generally did not cost so much?—A. Labour generally was as high as the price of lobsters was cheaper then.

Witness discharged.

Mr. EDWARD CHIASSON, packer, Etang du Nord, called and examined:—

By the Commissioner:

Q. How many persons are engaged in the lobster fishery in your district?—A. One hundred and fifty fishermen, or one and a half per boat.

Q. How many men, women and children are employed in the canneries?—A. About two hundred.

Q. What would you put down as the total pack of lobsters in Grindstone island?—A. About 2,000 cases.

Q. Is the pack decreasing or otherwise?—A. We are packing less. Some years ago we used to pack more with less fishermen.

Q. Is the total annual catch maintained by the natural supply or by the aid of increased gear and closer fishing? You are keeping up the supply by putting out more gear?—A. Yes, and employing more fishermen.

Q. Has the number of traps increased?—A. Yes, the number of traps has increased.

Q. Are you packing lobsters now that formerly you would not have packed?—A. No, not on the north side. The lobsters have kept of a pretty good size.

Q. What is the average depth of water in which you fish on that shore?—A. We go out to 14 fathoms.

Q. That is a good way off shore?—A. Yes.

Q. Do you set traps around the White Horse and Pierre Gros Cap reefs?—A. We set traps all round those reefs.

Q. On what basis is the lobster fishery carried on; do the fishermen own the boats and gear?—A. No, we furnish most of the boats and gear.

Q. But there are some fishermen that fish that way?—A. Very few fishermen furnish their gear.

Q. What do you think of the idea of requiring the fishermen to register and take out a license at a nominal fee?—A. I don't think there is anything in that.

9-10 EDWARD VII., A. 1910

Q. It is thought by some that licensing the fishermen would make them observe the law better and report any violations they happened to see?—A. I daresay it would be a good thing.

Q. What do you think of the proposal to create a Fisheries Board to advise the department as to the best regulations and laws to be enforced throughout the maritime provinces?—A. I don't think there is anything in that.

Q. How does the price paid for lobsters to-day compare with the price paid when you first began packing?—A. When we first began they used to pay 60 cents per hundred. Now we pay \$1.25. Last year we paid \$2.

Q. When you began packing did the fisherman supply his own gear or did you?—A. Some supplied their own gear.

Q. The same as now?—A. I paid 60 cents then to those we furnished gear to and this year \$1.25 and \$2 to those that furnished their own gear.

Q. From your experience can you say what are the spawning months for lobsters?—A. I am not very well posted, but I have heard it is from July 15 to August 15.

Q. Do you think the lobsters come in towards the shore to spawn in the warmer water?—A. I think so.

Q. Is there any time of the year when lobsters are not fit for food?—A. Yes, sir. When they commence to spawn they are no good to eat.

Q. Why are they no good?—A. They are too soft, just like milk.

Q. Do you think the female lobster spawns every year?—A. I think so.

Q. What was the size of the smallest female lobster you ever saw with eggs on her?—A. I do not see any very small ones—nothing smaller than 9 inches I mean—on the north side.

Q. What would be the average size of the lobsters taken with eggs on them?—A. There are some big ones and some small ones—I daresay from 8, 9, 10 and as high as 12 inches with eggs on them. I saw some pretty big lobsters with eggs on them.

Q. What is the largest lobster you ever saw caught here?—A. I saw a lobster that would weigh five pounds.

Q. What do you think of the idea of requiring the canners to pay 25 cents instead of 2 cents a case and in that way raising a fund to buy the seed lobsters from the fishermen?—A. I don't believe in that. It is too much, 25 cents a case.

Q. Do you think the present fee could be increased for that purpose?—A. I daresay it could be increased. Instead of 2 cents they could probably pay 4 cents.

Q. Are the existing regulations for the protection of the berried lobster enforced?—A. I guess so. Of course I always told my fishermen not to bring any. Outside of that they may have taken the spawn off and brought some.

Q. Is there anything you would like to suggest in connection with the regulations?—A. I would suggest to commence fishing about May 10 and keep it up until July 10.

Q. And stop fall fishing?—A. And have no fall fishing. The objection I have for September fishing is that there are too many bad fish which spoils the market and spoils everybody.

Q. Out of every 100 lobsters taken in the traps how many are female lobsters with eggs on them?—A. About 5 per cent.

Q. What do the fishermen do with the berried lobsters?—A. Sometimes they bring them in, sometimes they do not. As I told you they take the spawn off some way or other. I never saw them doing it but I have heard people say they do.

Q. The fishermen brush the eggs off?—A. They brush them off. The real fact is that sometimes they bring a few but of course while I run the factory I am not always there to count the lobsters myself.

Q. Do the canners make any objection to taking the berried lobsters?—A. Yes, I believe the canners make all the objection they can against taking spawn lobsters.

Q. But they do take them nevertheless?—A. Yes, they do take them sometimes.

SESSIONAL PAPER No. 22a

Q. Do you think that the canners examine the lobsters for the purpose of finding out whether any of them have been berried or not?—A. They do not examine particularly.

Q. If the canners refused to take the berried lobsters would that not cause the fishermen to put them back in the water?—A. No. I might refuse myself and my neighbour might take them. Next year what would happen? I would not get any fishermen and the other fellow would get them all.

Q. Do you think it is impossible to get the fishermen to return to the water all the berried lobsters taken in their traps?—A. The fishermen have the law in their own hands and if everybody was willing to do it all would do it.

Q. As long as one does not do it the others do not want to do it?—A. Why of course.

Q. It has been suggested that one method of protecting the berried lobsters would be for the government to buy from the fishermen at a slight advance on the price paid by the canners all such lobsters taken in the traps, these lobsters to be liberated at once or placed in pounds and retained there until the close of the season. What, as a practical fisherman, is your opinion of this suggestion?—A. That would be a good thing in my opinion. That would be the best thing I believe.

Q. Then it has been suggested also that the department buy the berried lobsters, remove the eggs and place them in a hatchery to hatch out?—A. That is a good thing too.

Q. Either of these suggestions would be good you think?—A. Yes.

Q. At what time of the year are the berried lobsters most numerous?—A. I think in July.

Q. Do you know of any fishermen who have lost their catch of lobsters by reason of the canners refusing to take them?—A. No.

Q. What do you think of the idea of closing down in certain sections of the coast and not allowing any canning?—A. I don't think there is any need of doing that. Of course I am only speaking for the Magdalen Islands.

Q. Do you think that the regulation restricting the number of licenses to can is satisfactory to the fishermen?—A. I think every man should be allowed a license to can providing he has the proper factory and is himself competent to can.

Q. How would we decide who were qualified to can and who were not? What qualifications would you insist upon?—A. Insist upon having no less than ten boats fishing and having a factory fit to put up the lobsters. A man should understand how to put up lobsters and be a good packer. That is what I would require. Of course another man has just as good a right as I have to pack lobsters.

Q. Up to a few years ago that was the rule, everybody could get a license to can?—A. Yes, but they nearly all gave it up. They did not do anything, they did better at fishing.

Q. Would there be any market here for lobsters if the canneries were closed?—A. No.

Q. Do you think that if the present size limit of eight inches were enforced strictly it would mean the shutting down of the canneries?—A. I guess so, not on the north side but on the south side.

Q. Do you think the existing penalties are sufficient to properly enforce it?—A. I think so.

Q. Do you think there are enough canneries, in the interest of the preservation of the lobster industry, and should the issuance of further packing licenses be discouraged?—A. Every man should get a license under certain restrictions. Of course there are plenty of canneries in one way, but providing a man is able to can lobsters he ought to have a license.

Q. Would an increase in the number of canneries mean an increased pack of small lobsters?—A. I think so, that is what it would mean.

9-10 EDWARD VII., A. 1910

Q. Do you think that aliens should be refused canning licenses?—A. If they put up their pack in the same way as I and my neighbour do and employ native labour they should be given the privilege.

Q. The canners have reduced the price paid for lobsters to the fishermen?—A. Yes, we reduced the price this year on account of the market not being as good as last year, but we paid the full value, we always have.

Q. Who fixes the price paid for lobsters?—A. The fisherman and the packer.

Q. They agree to it?—A. Yes, they agree to it.

Q. Do you think the packers on the Magdalen Islands have ever combined to beat the price down?—A. No. I have never known that. I have known the fishermen themselves to join together to put up the price and they did put it up.

Q. Are you aware of any complaints made by the fishermen that they do not get a satisfactory price from the canners?—A. Yes, that is natural.

Q. Do you think the fishermen would make more money if they were all allowed to can?—A. I don't believe it.

Q. You think some of them would make less?—A. Some of them would make less.

Q. There have been cases here where two or three fishermen have joined together and packed lobsters?—A. Yes.

Q. Is that done still?—A. By very few; there are not many now.

Q. Do you think a hatchery should be established here?—A. Yes, it is my belief they have done good where they have been established.

Q. Would you favour any change in the regulations for the Magdalen Islands as to size limit?—A. Well, as I have already said, I would favour commencing on the 10th of May instead of the 20th April, and fish until the 10th July.

Q. How about fall fishing?—A. I don't call it any good.

Q. Do you think it does harm?—A. I am not prepared to say. In one way it does harm. It is hurting the market owing to bad fish being packed. Then my belief is that if you get the lobsters in the fall you won't get them in the spring.

Q. If allowed to remain until the spring they would be more fully grown and be larger and better?—A. That is my belief. We never pack on the north side in the fall.

Q. Has there been any noticeable decrease in the size of the lobsters since you first had knowledge of them?—A. Not that I know of. I do not see much difference.

Q. You think that the lobsters you are packing at Etang du Nord are as good as they were 15 years ago?—A. Yes.

Q. And as good as 30 years ago?—A. I cannot say.

Q. How far back does your knowledge extend?—A. For 15 years.

Q. What do you think of the effect of having different size limits and seasons on adjoining sections of the coast?—A. Here in the bay on the south side they generally knock off fishing before the 10th July; they give it up about the last of June. On the north side we carry on fishing the whole season, and always get a few lobsters.

Q. How many lobsters does it take to fill a pound can, in your experience?—A. It takes about 5. It would take about five this year and last year it would take more—5½ to 6.

Q. Does it take more lobsters towards the first week in July than it does the first week in May?—A. The lobsters were a little better this year at the end of the season than at the beginning. Some years it is that way.

Q. Do you think that the trap in use is the best one that could be adopted for the purpose of taking large lobsters and allowing the small fellows to escape?—A. The trap they have on the north side is all right.

Q. What distance is there between the slats?—A. About an inch, the width of a slat.

Q. Has any attempt been made, as far as you know, to enforce the regulations in this district?—A. I do not know; I think there has been some attempt made.

SESSIONAL PAPER No. 22a

Q. What becomes of the lobsters below 8 inches in size that are taken?—A. They are bought the same as the others.

Q. Do they count in with the hundred?—A. They count the same as the big ones.

Q. Do you think lobster fishing should be kept farther out from the shore?—A. I think so. If possible, that would be a good thing.

Q. Why would it be a good thing?—A. I believe the fellow that has set his traps away outside would get more lobsters than the one that has set his traps too close in to the shore, especially at the first going off. Afterwards the lobsters commence to come into shore.

Q. Do you think you get better lobsters at first farther off shore?—A. Yes.

Q. And as the season advances you get the lobsters farther in near the shore?—A. Yes.

Q. What is the best time for your fishing?—A. About from May to June 15.

Q. Are the present regulations regarding the close season satisfactory, is the 10th July a good time to cease fishing?—A. Yes, that is a good time to knock off.

Q. Do you think a reduction in the length of the open season would be an advantage?—A. I think so, because the lobsters will have more time to seed up on the bottom, and when the fishermen set their traps they will get more of them. They will begin early and according as the lobsters come in they will get a very small catch. If they wait until later they will get more lobsters in a shorter time.

Q. It has been suggested that fall fishing should be allowed in some districts owing to the delay in commencing to fish in the spring caused by the ice running on the coast. What do you think of that?—A. All could fish in the spring, if not on the 1st of May on the 15th, but I would not allow fishing in the fall.

Q. Are any live lobsters shipped from here to the market?—A. There have been a few shipped by Mr. Baker, but I never shipped any myself.

Q. How were they shipped and to where?—A. They were shipped by steamer in boxes to Boston.

Q. Did they reach their destination?—A. They reached there, but I think those who made the shipment had quite a loss. They did not find it successful; it is too far with the existing means of transportation.

Q. If cold storage and a swifter means of getting the lobsters to market were provided, the live lobster trade could be profitably carried on from here?—A. The live lobster trade would be a good thing if we had a good way to carry it on; there would be more money in it.

Q. What is the capacity of your factory?—A. I can pack in my factory 1,500 cases.

Q. How many cases did you pack this year and last?—A. Last year I packed 355 cases; this year, 357.

Q. Have you any idea of the total weight of the lobsters you took in?—A. I never weighed any.

Q. Do you know how many pounds of green lobsters it takes to fill a pound can?—A. I think it takes about 5 pounds.

Q. You have told us that last year it took about 5 lobsters. Will they run a pound?—A. Sometimes they run more than that.

Q. Is there anything more you wish to say?—A. No, I do not know any more to say.

Witness discharged.

The commission adjourned.

9-10 EDWARD VII., A. 1910

AMHERST ISLAND, MAGDALEN ISLANDS, July 14, 1909.

P. J. SAVAGE, packer, Amherst Island, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the canning business?—A. Since 1892.

Q. What number of canneries do you own?—A. Two.

Q. That does not include the factory at Etang du Nord?—A. It does not include that. There is a factory there, but it is not in operation.

Q. What number of boats do you employ?—A. This year 57 boats.

Q. Are they fished by two men to a boat?—A. Two men to a boat.

Q. How many hands do you employ in your factories in various capacities, inside and outside?—A. There are about 35 at West Cape factory and at the other factory at Grindstone about 20.

Q. What was your total pack of lobsters this year?—A. 980 cases.

Q. And last year?—A. As far as I can remember, 735 cases.

Q. What was the largest pack you ever made?—A. 1,400 cases in one factory.

Q. That was the West Point factory?—A. Yes.

Q. At that time you were only running one factory?—A. Only one.

Q. Are you employing a larger number of boats to-day than you were when you began with that factory?—A. Yes. At first we started with 15 boats.

Q. At the time you made the big pack you spoke of, how many boats were you running?—A. That year we were running 28 boats, I think.

Q. Did the pack continue good there for some time?—A. For three years I think.

Q. And then it gave out?—A. And then it gave out.

Q. And has it been giving out ever since?—A. It has been giving out and coming on again, one year less and another year more.

Q. But on the whole what has been the tendency?—A. It has been about an average.

Q. You are holding your own at present?—A. Yes.

Q. Do you require a larger number of boats and a larger number of traps to catch the same amount of fish?—A. Yes, we do, but the weather is much different to what it was a few years ago.

The seasons have been rougher lately?—A. Much rougher. If it had been a fine season this year, for instance, the pack would have been one-third more than it was.

Q. Did you meet much loss of gear this year?—A. Yes, considerable. I guess we lost about 4,000 traps.

Q. What number of traps were you fishing this year?—A. About 9,000 or 10,000 traps.

Q. Do you own all the traps that are fished by the boats employed by you?—A. There are very few that we don't own.

Q. There are very few fishermen that fish their own traps?—A. Very few.

Q. Are you fishing more traps at Amherst than you formerly did?—A. Not more than we have been doing for 7 or 8 years.

Q. On the whole, do you think the number of traps has been increased?—A. It has been.

Q. Is the average run of lobsters smaller to-day than when you began canning in 1892?—A. I don't think so.

Q. Do you think that the average is keeping about the same?—A. About the same, yes.

SESSIONAL PAPER No. 22a

Q. Do you think that is true of the fishery since the beginning?—A. Since I began, yes. When the fishery first started the lobsters were of course very much larger. They had never been fished before.

Q. Your opinion is that when the lobster industry first began here the lobsters were much larger?—A. It is.

Q. The lobsters had never been fished before and they were large?—A. That is right.

Q. But since catching those originally large lobsters the supply has remained at about an average?—A. About an average, yes.

Q. What do you think of requiring the fishermen to register and take out a license?—A. I don't think it would have any effect at all.

Q. How does the price paid for lobsters to-day compare with that paid when you started in? What arrangement have you with the fishermen as to the price to be paid for lobsters?—A. We paid \$3 a hundred to those who furnished their own gear and to the others that I furnished the gear to, \$2.25.

Q. How does that compare with what you paid when you first started packing?—A. Then we were paying 50 cents a hundred.

Q. But some of the fishermen furnished their own gear then?—A. None then.

Q. You furnished all the gear then?—A. All the gear.

Q. It has been suggested that a Fisheries Board should be created to advise the department in regard to the laws and regulations to be enforced with respect to the lobster and other fisheries. Would you approve of that suggestion?—A. I think it would be a very good thing, yes.

Q. How do you think that board should be constituted?—A. I would have to consider that, I could not say right off.

Q. During what months do the lobsters spawn in your opinion?—A. I think in June and July.

Q. Do you think the lobsters come in towards the shore to spawn?—A. I don't believe it.

Q. Is there any time of the season when lobsters are not fit for food?—A. Well, I have not studied that.

Q. You know there is a time when their shells are soft and they are very thin and watery. You would not say they are not fit for food then?—A. I would not say they are not fit for food.

Q. At what size do you think a lobster is fully grown and old enough to reproduce itself?—A. I could not say.

Q. You would not like to express an opinion as to whether the lobster spawns every year or not?—A. No.

Q. What is the smallest lobster you ever saw bearing eggs?—A. I could not say, I have not studied the question enough.

Q. What is the average size of the berried lobsters taken in your district?—A. That I could not say either.

Q. What would you think of the proposition to require the canners to pay an increased fee, instead of the 2 cents a case now paid, and in that way realize a fund for the purchase of berried lobsters from the fishermen?—A. I don't believe in that.

Q. Is the existing regulation for the protection of the berried lobster observed?—A. I think pretty well.

Q. The evidence goes to show that in a great many places the regulations as to size limit and berried lobsters are not observed.—A. Well, I don't know about the small lobsters but the regulation in regard to egg lobsters I think is observed.

Q. Would you suggest any change in the regulations?—A. Well, I don't see any that would be for the better.

Q. Have you any idea of the percentage of lobsters taken in the traps that bear eggs?—A. No, the fishermen would have a better idea.

9-10 EDWARD VII., A. 1910

Q. What do you think the fishermen do with the berried lobsters they take in their traps?—A. I have no idea.

Q. Do you know whether they follow the practice of washing or stripping the eggs off?—A. I have heard so, but I don't know it personally.

Q. Do the canners generally make any scruple about accepting berried lobsters?—A. I don't attend much to the factory myself and I don't know.

Q. You cannot say whether the canners make any examination for the purpose of detecting berried lobsters?—A. No doubt they do, but I cannot say.

Q. Do you think if the canners refused to take berried lobsters it would have the effect of inducing the fishermen to return them to the waters?—A. That I could not answer.

Q. Do you think it would be possible to get the fishermen to return to the water all the berried lobsters they take in their traps?—A. It would be very difficult.

Q. What do you think of the idea of the government buying the seed lobsters from the fishermen and then liberating them or placing them in pounds until the close of the season?—A. That would be all right I think.

Q. Take for instance at West Point. Is there any place there where you could make a pound in which to hold lobsters?—A. There is no place there, there are no suitable places on this island.

Q. It has also been suggested that the department should buy the seed lobsters and remove and place the eggs in a hatchery to be hatched out.—A. That would be my idea to take the eggs from the factories and hatch them out in hatcheries.

Q. Have you any idea at what period of the season berried lobsters are most numerous?—A. I have not.

Q. Are you aware of any fishermen having lost their catch of lobsters owing to the refusal of the canner to accept them?—A. No, I am not aware.

Q. The fishermen in some places have complained that by reason of the canners not taking the lobsters they have been thrown back on their hands, and in that way they have suffered loss?—A. It has not come to my knowledge.

Q. What do you think of the idea of establishing reserves at various points along the coast for the breeding of lobsters in which fishing should not be allowed for a term of years, the location of these reserves to be changed from time to time?—A. I don't see the good of that at all.

Q. Are you in favour of limiting the number of licenses to can lobsters, and, if so, what limitation would you suggest, or would you favour issuing a license to every man competent to pack?—A. That would be my idea at present.

Q. How would you establish his competence to pack?—A. According to his means. That would be the only way.

Q. Then there would have to be a sort of standard factory to the requirements of which he would have to conform?—A. Yes, I would require that.

Q. How would you determine the fitness of an application for a canning license?—A. He ought to be competent to put up lobsters, I suppose.

Q. You would have to be satisfied that the applicant was competent to pack properly and had sufficient capital for the purpose?—A. And sufficient capital to do it.

Q. And his cannery would have to come up to a certain standard?—A. Yes.

Q. That standard to be fixed by the department or the fishery inspector?—A. Either.

Q. What market would the fishermen in this district have for their lobsters if the canneries were closed?—A. None.

Q. If the present size limit of 8 inches were strictly enforced what effect would it have upon the canneries?—A. Considerable.

Q. You think they do take undersized lobsters at the canneries?—A. I don't know much about it, but likely there are some undersized.

Q. Then if a strict enforcement of the size limit were made it would reduce the output of the canneries?—A. That is what I mean.

SESSIONAL PAPER No. 22a

Q. It would not cripple them?—A. No, it would not.

Q. A strict enforcement of the size limit would not close the factories here?—A. No.

Q. It has been stated by some very credible witnesses that a strict enforcement of the size limit in some districts would have the effect of closing up the canneries?—A. I don't think that would be the case here. On the south side I don't think it would; it might on the north side of the island where they get them smaller.

Q. Where you are fishing it would not cripple you?—A. Not on the south side of the island; it might on the north side.

Q. It might in the bay here, too?—A. Yes.

Q. Are the existing penalties, if strictly enforced, sufficient to deter packers from violating the regulations?—A. Yes, I think so.

Q. In the event of persistent violation of the regulations by a canner should his license be cancelled?—A. No.

Q. If it were found that the canner was continually violating the regulations do you not think he should lose his license?—A. If he persisted in doing it I should think so.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further packing licenses be discouraged?—A. I don't see that it would affect the fishery. There would be very few new packers.

Q. How many packers have gone out of the business?—A. Quite a number. There might be one or two opening and three or four closing.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. I don't think so.

Q. Ought the shipment of live lobsters to be favoured in preference to the canning of lobsters?—A. It would be preferable if it were possible to do it.

Q. In the interest of the lobster industry would you favour closing down the canneries altogether for some years?—A. No.

Q. Would you refuse a canning license to an alien?—A. That does not affect the position at all.

Q. As long as the lobsters are packed in this country is there any serious objection?—A. Not that I see.

Q. It has been stated that in certain districts lobster canners could not continue packing and observe the size limit?—A. That might be so in some parts.

Q. It has been alleged that in some cases fishermen have suffered injury by the failure of those holding canning license to operate their factories although a sufficient supply of lobsters was available. Have any such instances come under your notice?—A. Not to my knowledge.

Q. The canners reduced the price paid for lobsters this year, did they not?—A. Yes, that was done this year. The price was reduced about one-quarter.

Q. Why was that reduction made?—A. On account of the bad market.

Q. Which branch of the lobster industry do you think is the most remunerative to the fishermen and the best calculated to maintain the supply unimpaired, the canning or the live lobster trade?—A. We have had no experience with the live lobster trade because none has been done here.

Q. Who fixes the price paid for lobsters?—A. Every packer.

Q. Is it to your knowledge that there is any combination on the part of the packers to keep down the price, or is there competition?—A. There is more or less competition, but not to affect the price of lobsters to any extent.

Q. Could the fishermen make more money if they were allowed to can?—A. They have tried that and given it up.

Q. There have been cases where the fishermen have combined together and operated a factory?—A. I have supplied them in order to do so and they had to give it up.

9-10 EDWARD VII., A. 1910

Q. From your experience can you say whether the government hatcheries have helped to maintain the supply of lobsters?—A. Not on this island; we have never had any.

Q. Have you any observations to make with respect to the value of pounds for lobster breeding purposes?—A. I have no information on that subject.

Q. Would you object to raising the size limit here to 9 inches?—A. I would not care about it.

Q. Would you favour any reduction in the size limit?—A. For the eastern side of the island or Pleasant bay, but not towards the western side.

Q. Has there been any noticeable decline in the average size of lobsters caught in your district within the last ten years?—A. No, I don't think so.

Q. But there has been a decrease in size since the beginning of the fishery?—A. Yes.

Q. To what cause do you attribute the decline in the size of the lobster, to over-fishing, or is it due to the growth of a smaller race of lobsters?—A. I don't think it is due to over-fishing. I think in some years they are larger than in other years.

Q. What reasons is there for adopting a smaller size limit in one district than in another?—A. Because the lobsters are smaller.

Q. Were they always smaller?—A. The lobsters are always smaller in the bay.

Q. Since the beginning of the fishery?—A. Since about 10 or 15 years.

Q. Why should the lobsters be smaller in the bay?—A. I cannot account for that.

Q. Don't you think it is because in the bay the lobsters have been more thoroughly fished out?—A. I don't think they come in. They are getting lobsters larger at Entry island than they are in the bay. There are some seasons the large lobsters do not come into shore.

Q. Have you any idea how many lobsters it takes in your canneries to fill a pound can?—A. It all depends upon the run. Sometimes it would go four or five, and other times as high as six.

Q. And it varies with different seasons?—A. Well, not a great deal, but it does vary. For instance, the May lobsters are larger.

Q. Than those taken in June and July?—A. Yes.

Q. Do you think the lobsters taken in deep water are larger than those taken in shoal water?—A. They are. That shows the large lobsters do not come in shore.

Q. Would you favour reducing the size limit to 7 inches and prevent the taking of berried lobsters, or would you shorten the season?—A. No, the season is short enough as it is.

Q. Do you think that the regulation prohibiting the taking of berried lobsters could be more strictly enforced?—A. By going to some expense, I suppose, but it would be pretty hard.

Q. Could a size limit of 10½ inches be maintained without detriment to the lobster industry?—A. I think that would be detrimental to the lobster industry.

Q. Have you any idea what kind of trap would best promote the escape of the small lobsters?—A. I have not seen any; I could not recommend any.

Q. Is it true that the size limit has never been enforced in this district?—A. I think it has been pretty well enforced.

Q. Do you think that lobster fishing should be kept farther out from the shore?—A. It would be a hard matter, I think.

Q. During what proportion of the open season is the lobster fishery most actively pursued here?—A. In May and June.

Q. Do you generally can up to the very close of the season?—A. To the end of the season, to the 10th July.

Q. Is the present regulation regarding the close season satisfactory? Fishing in September is allowed here under the regulations as they stand. What is your opinion of September fishing?—A. I think it is good.

SESSIONAL PAPER No. 22a

Q. Do you operate in September yourself?—A. We do in the bay here.

Q. What sort of lobsters do you pack in that month?—A. They are of small size.

Q. Are they as full of meat as the lobsters caught in the summer?—A. Just as full.

Q. And do they make as good a pack?—A. Just as good a pack as the May lobsters.

Q. Have any live lobsters been shipped from this district?—A. There was an attempt made to ship some this summer, but they did not get any farther than here. We tried to pack them in barrels, but they were so feeble that we did not send them any farther. They came from West Point by steamer. They were not very long in coming and they had been put in barrels the night before.

Q. Do you think where it is possible to carry it on that the shipment of live lobsters should be favoured in preference to the canning?—A. I don't think so, not for these islands.

Q. You think that the Magdalens will always carry on the canning industry owing to their isolated position?—A. Yes.

Q. Is there anything else you would like to state of your own accord?—A. No.

Witness discharged.

PAULET CYR, fisherman, Amherst, was called and examined. The witness's testimony was given in French and translated as follows:—

I am 35 years old and reside at Amherst. I have been engaged in fishing for 15 years. I fish cod and mackerel when not engaged in the lobster fishery. I have fished lobsters in Pleasant bay and I have fished at Entry island, West Point and Grosse Isle also. There are seven or eight boats engaged in lobster fishing in Pleasant bay. We fish at a distance of a mile to a mile and a half from the shore in three or four fathoms of water and shift our traps from time to time during the season. We fish closer in-shore towards the end of the season. The quantity of lobsters has diminished greatly in the months of May and June during the last 15 years. Fishing in the beginning of September is fairly good, but by the 15th the lobsters have commenced to leave the ground. The lobsters are about the same size now as when I began to fish, the average being from 9 to 10 inches. We caught the same quantity of lobsters in the beginning with a smaller amount of gear than we are using now. Many more traps are fished now in the same ground than when I commenced to fish. The idea of the trap now in use is to make it more complicated so that the lobsters shall not have the same chance to escape as in the case of the old trap. We always caught the small lobsters in the bay. There are fewer lobsters taken to-day but there is a larger percentage of small ones. I fish with my own boat and traps but there are other fishermen who fish with traps and gear belonging to canners. We get more for our lobsters than when I began to fish. I received 50 cents a hundred when I commenced to fish first, using the factory gear. Last year we got \$2 fishing with our own gear per hundred. We engaged ourselves in the spring to fish at that rate. I am not forced to fish for R. J. Leslie & Co., and if not satisfied with the price I can sell to another packer. The size limit is not strictly enforced and undersized lobsters are delivered at the factory. Sometimes we throw the berried lobsters back into the water. We know it would be better to return all the small and berried lobsters to the water, but we have a good deal of trouble to catch them and want to make all the money we can. If the fishermen were not paid for these lobsters they would not take them. We deliver all the berried and small size lobsters we take at the factory and they are never refused. We take some berried lobsters at the commencement of the season but the great majority are caught towards the close of the season in July. From the 10th to the 15th July the lobsters are not good to eat because they change their shell and contain very little meat. I have only found eggs on good sized lobsters. I have seen

9-10 EDWARD VII., A. 1910

eggs on 7-inch lobsters. I think it will be better to put the fall fishing ahead 10 or 15 days to the middle of August rather than the beginning of September.

Witness discharged.

ALCIDE GAUDET, manager, called and examined:—

By the Commissioner:

Q. You are a resident of Amherst island?—A. Yes.

Q. What is your occupation?—A. I am manager of a lobster factory.

Q. How long have you been manager?—A. 23 years. Well, interested in it for that time.

Q. How many boats are employed by your cannery?—A. We have two canneries on this island.

Q. You direct both?—A. Yes, and 43 boats are employed.

Q. How many men are employed in the boats?—A. Two men to each boat.

Q. How many men, women and children are employed in connection with the canneries ashore?—A. About 50 at the two canneries.

Q. What is, approximately, the total pack of lobsters in the two canneries?—A. About 800 cases this year.

Q. And last year?—A. I should say 100 cases more.

Q. What was the largest pack you ever made in the two canneries?—A. Something over 2,000 cases.

Q. How long ago was that?—A. About 15 years ago.

Q. Had you the same number of boats employed in the fishery then?—A. Not so many.

Q. Nor as many traps?—A. No, sir.

Q. What number of traps do you fish in connection with these two canneries to-day?—A. About 8,000. At least we own that number; we don't fish that many. We fish between 6,000 and 7,000.

Q. How many traps did you fish in the good years of your packing?—A. Between 4,000 and 5,000.

Q. So that you require a greatly increased number of traps to-day to produce a smaller pack?—A. Yes.

Q. Do you take lobsters to-day that your factories would have rejected 15 years ago?—A. No.

Q. Do the fishermen own the gear and boats employed in the fishery or do you?—A. We have 16 fishermen that own their gear and the balance are fishing our gear.

Q. What do you think of the suggestion that the fishermen should be required to register and take out a license at a nominal fee; how do you think it would work?—A. Well, I don't know whether it would make any difference or not the way things look now. It is pretty hard for me to say. In many cases it would simply mean—

Q. The idea underlying the suggestion is that the fishermen would be compelled to be honest and observe the law. Do you think the fact of their having a license would make any difference?—A. I don't think so.

Q. It has been thought that giving the fishermen a slip of paper constituting them lobster fishermen for the season would cause them to observe the law and report any violations coming under their notice. Do you think that such would be the case?—A. I doubt it very much.

Q. How does the price of lobsters to-day compare with that paid when the industry was first started?—A. Well, at first we paid 50 cents a hundred for the lobsters to the fishermen that we furnished the gear to and \$1 to those fishermen that furnished their own gear. To-day we pay \$1.50 to \$2.50.

SESSIONAL PAPER No. 22a

Q. You are paying a little less this year than you did last year?—A. Yes, we paid more last year.

Q. Why are you paying a lower price this year?—A. Owing to the state of the market.

Q. Would you approve of the creation of a Fisheries Board for the management of the lobster and other fisheries in the maritime provinces? You know what is meant by that?—A. Yes, I would think such a board should be constituted.

Q. Do you think the fishermen should be represented on that board as well as the mercantile community?—A. Yes, I don't see any objection.

Q. Speaking from your observation as an experienced fisherman, what are the spawning months for lobsters?—A. I believe they carry spawn the whole season.

Q. At what time do you think the lobsters drop their spawn?—A. I think they drop them the last part of July and the first part of August.

Q. Do you think the lobsters come in towards the shore to spawn?—A. I think so, to the soft bottoms.

Q. Is there any time during the season when lobsters are not fit for food?—A. Well, those that are right soft in the shell are not fit, but you always have a big number of lobsters that are fit to eat at any time of the season.

Q. At what size do you think the lobster is fully matured?—A. I believe the lobsters from 8 to 10 inches are a pretty good size.

Q. Did you ever see any lobsters smaller than 8 inches with eggs on them?—A. I don't believe so. I have never remarked particularly enough to measure them, and I don't believe I ever saw lobsters inside of 8 inches with spawn on them.

Q. What would be the average size of the lobsters you have seen with berries attached to them?—A. They would average fully 10 inches or more.

Q. Is the existing regulation for the protection of the berried lobster observed?—A. Well, not all together.

Q. Do you think any fishermen observe it at all?—A. Not much.

Q. Is the regulation with regard to the size limit observed at all?—A. Yes, to a certain extent.

Q. But not thoroughly?—A. No, sir. It is to a certain extent.

Q. Were the regulations ever observed?—A. I believe they were always about the same.

Q. You think that in the beginning the regulations were not more strictly observed than they are now?—A. No.

Q. Then it has always been the same thing?—A. Less, if anything.

Q. You think the regulations are better observed now than they formerly were?—A. I know that I have seen them throwing small lobsters away more frequently than before, but they did not amount to a big quantity.

Q. Out of every 100 lobsters found in the traps, how many are egg bearing?—A. Sometimes you will find two or three out of a hundred and other times you will not find one in a hundred. I have seen lobsters spawning early in the spring.

Q. But the spawn would not be so ripe?—A. No.

Q. Did you notice a difference in the appearance on the spawn at the various seasons?—A. Oh, yes, you can tell.

Q. How can you tell?—A. They are bigger and turning red.

Q. You know then that the lobster is about to spawn?—A. Yes.

Q. At what season?—A. In July.

Q. What do the fishermen do with the berried lobsters found in the traps?—A. Well, I have heard that they sometimes strike the lobsters on the water and get the spawn off and then bring them to the factory. Sometimes they bring the lobsters in with the spawn on and they are packed that way.

Q. And do the canners make any scruple about accepting berried lobsters?—A. Well, not very much.

9-10 EDWARD VII., A. 1910

Q. What is the reason for your not making any objection?—A. Well, the lobsters are so scarce that we take anything that comes along.

Q. Have you ever been told that if you did not take the berried lobsters, somebody else would?—A. Yes, I have had a man tell me that.

Q. I have heard canners give as a reason for accepting berried lobsters that they were told: 'If you do not take them I will sell to somebody else'?—A. I had a man tell me the same. It was John Buck, Grindstone island. He told me that he had a lobster factory on the north side of the island and would not take any spawn lobsters. He used to throw them in the water and the fishermen at the other factory alongside used to fish those lobsters, and he lost quite a lot in that way.

Q. Do the canners make any examination for the purpose of detecting berried lobsters, or is delivery made at the cannery under conditions which render it almost impossible to separate them?—A. Well, the only practical way would be at the fishing ground, because when the lobsters are brought into the factory sometimes they are weak and sometimes they are dead.

Q. It is too late then to take any action?—A. Yes.

Q. As a rule at the factories they receive a large quantity of lobsters and do not stop to cull them. Do you think the berried lobsters could be separated from the others without unnecessary expense and delay?—A. I think so.

Q. If all the canners were to unite in refusing to accept berried lobsters, would it not have the effect of causing the fishermen to return them to the water?—A. Yes.

Q. Would it be possible to get the fishermen to do that?—A. The only possible way is by means of an arrangement among the canners, a universal arrangement not to accept them.

Q. What do you think of the proposition to purchase from the fishermen the seed lobsters taken in their traps and then liberate them at once or place them in pounds until the close of the season?—A. At our West Point factory, Entry island, we could not do that, or at Dead Man's island either. Where it is practicable it would be of advantage, but there is no place I could suggest where it could be done.

Q. At what period of the season are berried lobsters taken most numerous?—A. I believe there are more about the middle of July, but they are taken at all times.

Q. Are you aware of any fishermen having lost their catch of lobsters by the canners refusing to take them?—A. No, sir.

Q. What would you say as to the wisdom of establishing reserves for certain periods at various points in succession along the coast?—A. I would not believe in that.

Q. Is the present restriction of the number of canning licenses satisfactory to the fishermen?—A. I believe it has reduced the number of canneries and made things a little better.

Q. You think the regulation has reduced the number of canneries?—A. I am not sure that it did, the number has been reduced for some reason.

Q. Are you in favour of limiting the number of canning licenses, and if so, what limitation would you suggest, or would you give a license to every man who is qualified to pack?—A. That is a point I cannot decide. I believe there are plenty of licenses already granted, but to say that we should have a license and our neighbour not, is something I cannot comprehend. I don't know what to say about that, but I know there are plenty of licenses already granted.

Q. The number of licenses has fallen off greatly from what it was at one time. What has led to that, do you think?—A. It is more the decrease in the fishing.

Q. And the fact that a great many people went into the canning business who did not know much about it and found it unprofitable?—A. It pays better to fish and to sell their fish than to—

Q. Than to can on their own account?—A. There is no doubt about that.

Q. How would you determine the fitness of an applicant for a license to put up lobsters in a satisfactory manner?—A. I believe a man ought to have some past ex-

SESSIONAL PAPER No. 22a

perience about lobster packing before being allowed to go into the business. That, of course, it pretty nearly settled now because those that did not know anything about it do not pack any more.

Q. Do you think that it would be wise to have an inspection of the product of lobster canneries? Do you know of canneries where a little inspection would be desirable?—A. There have been some, but those things have changed a little. The places where they used to pack with almost no buildings at all have disappeared and the business is on a better footing.

Q. You think the business is on a better footing and that those engaged in it are more careful of the pack?—A. Yes, sir.

Q. They have been obliged to be more careful?—A. Yes, the market has brought that about.

Q. What market would the fishermen in this district have for their lobsters if the canneries were closed?—A. None. Under the present circumstances I don't see any market for them.

Q. If the present size limit of 8 inches were strictly enforced what effect would it have on the canner?—A. It would certainly diminish his pack some.

Q. In some places the evidence is that a strict enforcement of the size limit would close up all the canneries; that would be the case here?—A. I don't think so; the canneries would not close.

Q. Are the existing penalties adequate, in your opinion, if strictly enforced?—A. I think the present penalties are enough if they were enforced.

Q. Do you think a canner's license should be cancelled if he persistently violates the law?—A. I think it ought.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. I would suppose so.

Q. If the present canneries are packing a certain quantity of undersized lobsters an increase in their number would mean a proportionately greater pack of undersized fish?—A. It would.

Q. Do you think the lobster fishery has reached such a low point that it would be wise to close down everywhere for a term of years?—A. This year there were less lobsters packed on account of the storm, but I believe had the weather been an ordinary season we would have packed fully as many as we did several years ago.

Q. Was your loss of traps great this year?—A. Yes.

Q. What percentage of traps was lost?—A. Two-thirds of our traps.

Q. When did the storm take place?—A. On the 17th May.

Q. Would you refuse a canning license to an alien?—A. I would think so, especially in the present stage of things. When it has already gone so far I do not think foreigners should have any more licenses.

Q. Would it be possible to observe the law with regard to size limit and still continue canning in the Magdalen islands?—A. It is pretty hard for me to tell. I know if the regulations were strictly enforced it would make a difference.

Q. It would make a considerable difference to those canning in the bay, but not to the canners at West Point would it?—A. No, our lobsters there are of a good size. I don't think it would make much difference.

Q. Do you think it would put the canners out of business altogether?—A. I don't think it would.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of those holding canning licenses to operate their factories although enough lobsters were offered for the purpose. Have any such instances come under your notice?—A. I think the fishermen always find a sale for the lobsters easy enough. There are always more buyers than there are fishermen.

Q. Who fixes the price paid for lobsters?—A. Well, the fishermen do, more than the packers. Of course the packers have something to say, but there is a sufficient number of packers who want to buy, that put up the price to the full value.

9-10 EDWARD VII., A. 1910

Q. There is no combination or arrangement on the part of the various cannery in the Magdalen islands to keep the price down, is there?—A. No, sir.

Q. There is competition then?—A. Oh, yes, it is right in its full life here.

Q. Are you aware of any complaints by fishermen that the price paid by the canner is not sufficient?—A. No, sir, not here. We had to put our price lower and the fishermen felt they should have more, but they understand fully that the market was the cause of it, and they were well satisfied with the price paid.

Q. Do you think the fishermen would make more money if allowed to can for themselves?—A. No, sir.

Q. Would the co-operative plan be a success here?—A. It has been tried here by the fishermen. I don't believe it is any benefit to them to get a license to can because they have done it here and given it up. They got tired of the experiment and went back to fishing. We have advanced them ourselves packing material.

Q. From your experience can you say whether the government hatcheries have helped to keep up the supply of lobsters?—A. There are no hatcheries here and I can only speak of what I have heard. I have heard that they did but I do not know from actual experience.

Q. Then from what you have heard as to their successful operation you would recommend the establishment of a hatchery here?—A. Yes.

Q. In the lagoons on these islands you have natural pounds, have you not?—A. Yes, there is one back of this harbour.

Q. Do the lobsters go into them to spawn?—A. They are going into the lagoons about this time, about July 15.

Q. Why do lobsters go there?—A. I believe they go in to spawn.

Q. How long do they remain in the lagoons?—A. About a month and a half or two months.

Q. Coming out about when?—A. About the last of August and the first part of September.

Q. You believe those lagoons are a natural spawning ground for the lobsters?—A. I think so.

Q. Would you advocate opening the lagoons to fishing or keeping them closed as is the case at present?—A. I think for the benefit of the preservation of the lobsters in the future they are better closed.

Q. Do you find many lobsters in your traps that are less than 7 inches in size?—A. Very few.

Q. Speaking regardless of measurements or anything else, what would you say would be the average run of the lobsters here in the bay?—A. I think the average is between 8 and 9 inches.

Q. And what would be the average at West Point?—A. A little larger than that.

Q. Would you favour increasing the size limit to 9 inches?—A. No, sir.

Q. It was 9 inches originally?—A. Yes.

Q. Would you favour a reduction in the present size limit?—A. I think they should be taken down to 7 inches.

Q. All over that?—A. I think so.

Q. Are you getting a smaller run of lobsters in your factory to-day as compared with the lobsters of ten years ago?—A. There is not very much difference in ten years, they are a little smaller.

Q. Yes, but there is a big difference compared with the early days when lobster fishing began?—A. Yes, there is a big difference.

Q. Do you remember when lobsters were first packed on the Magdalen islands?—A. Yes, over thirty years ago, perhaps thirty-five.

Q. Were lobsters very abundant then?—A. Yes.

Q. Were any regulations in force when lobster packing began?—A. There was a limit in the open season, but I don't know of any other regulations. I remember twenty-five years ago there were regulations then.

SESSIONAL PAPER No. 22a

Q. What were the regulations twenty-five years ago?—A. They were not to take any spawn lobsters and the size limit I think was 9 inches.

Q. To what cause do you attribute this decline in the size of the lobsters? Is it the natural result of over-fishing?—A. It is certainly over-fishing, or it may be that these lobsters have gone to some other ground.

Q. Different size limits in adjoining sections of the shore are said to be unsatisfactory and to encourage violations of the law. What is your opinion?—A. I don't think there should be any difference in size.

Q. Is it the fact that the larger the lobster the less number it takes to fill a pound can?—A. I guess it is.

Q. Some people claim that a very large lobster does not yield proportionately as much meat as a medium-sized lobster.—A. Not in proportion to the size but they are always bigger.

Q. As a rule it will take fewer large lobsters to fill a pound can than small ones?—A. Yes.

Q. You do not think that the very large lobsters throw their shell every year?—A. I don't think so.

Q. If it is true that nine 7-inch lobsters, which have not been afforded an opportunity of reproduction, are required to fill a pound can, what effect will the taking of so many of immature size and berried lobsters as well have upon the fishery?—A. It will certainly decrease it.

Q. Would you favour reducing the size limit to 7 inches and stop the taking of berried lobsters, or would you favour shortening the season, and abolishing the size limit in each case, strictly enforcing the berried lobster regulation?—A. There is no quantity of lobsters packed smaller than 7 inches. I don't believe there is one box during a whole season of lobsters smaller than 7 inches packed. That is why I thought that if the size was brought down to 7 inches and you enforced the protection of the berried lobster the seasons could remain the same.

Q. In return for allowing 7-inch lobsters to be caught could not some time be taken off the season?—A. It is already short enough.

Q. But you would get an increased number of lobsters without violating the law, would you not?—A. Not many.

Q. And then you would have the hope of improving the lobster fishery in a few years?—A. There are years when we do not pack until the 12th and 15th May. That makes the season very short.

Q. How many fishing days do you reckon you get each season?—A. Some years as low as 25, I don't believe we have had that this year. The season for fishing being so short and storms on half the time, makes it very difficult.

Q. Could a size limit of 10½ inches be maintained here without detriment to the lobster industry?—A. No.

Q. You do not see many lobsters in the bay over 10½ inches?—A. No.

Q. What kind of trap is best adapted to taking the large lobsters and allowing the small ones to escape?—A. A trap that will catch the big ones and leave the small ones.

Q. Could that be facilitated by any special kind of a trap?—A. Well, there is no means but having the slats put farther apart. There would be some small lobsters caught with a larger space but some would escape.

Q. Would you advocate any change in the trap in that respect?—A. I would not.

Q. Is it true that 30 per cent more lobsters in number are required in the fall than in the months of May and June to fill a one-pound can?—A. Not that many, but there is some difference.

Q. Is it true the size limit has never been recognized in this district?—A. It has been recognized.

Q. There has been some attempt to observe it?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Have you warned your fishermen yourself not to bring in undersized lobsters?
—A. Yes.

Q. Did you make any attempt to see that they observed the size limit?—A. Perhaps we are not as strict as we ought to be, but we have told them that we do not want any small lobsters.

Q. Have you been visited by the officers of the law and warned?—A. Yes.

Q. Were you ever fined?—A. No, sir.

Q. Did you ever know of anybody being fined?—A. I have heard of Ogilvy being fined, but that was before my time.

Q. Do you think that lobster fishing should be kept farther off the shore, and would this enable the immature lobsters that come in near the shore to be better protected and restrict the catch more to full grown lobsters?—A. There are places or localities where that could be done but here it would simply mean that we could not fish at all. If we were compelled here to go beyond a quarter of a mile we would get no fish at all because the lobsters go right into the shore.

Q. During what portion of the open season is the fishery most actively prosecuted?
—A. From the 10th of May down to the 15th of June.

Q. Is the present regulation regarding the close season satisfactory?—A. I think it is, but we should be allowed to fish ten or fifteen days earlier in the fall. I mean begin about the 20th August instead of 1st September.

Q. You think the fall fishing should begin earlier than it does now?—A. Yes, by ten or fifteen days.

Q. Do you think that fall fishing is of any real advantage?—A. I cannot say. I don't know whether it is any advantage or not. I believe it will be this year because there is nothing else.

Q. Could you fish on the north part of the Magdalen Islands in September?—A. They do not, I think.

Q. Do you think the quality of the lobsters packed in the month of September is equal to those put up in the months of May and June?—A. As far as I know it is. It might be a little inferior, it is certainly no better.

Q. If you had an increased number of fishing days in July do you not think it would do away with the necessity of any fall fishing?—A. After the 10th or 15th July there is no fishing.

Q. Do you generally fish right up to the very last day of the season?—A. Up to 10th July. I think myself that fall fishing should exist.

Q. Don't you think it is burning the candle at both ends?—A. I think for this year it should be allowed, but I believe that fall fishing is no good in general.

Q. This is an exceptional year owing to the short season, the great loss of gear and the bad condition of the fishery in general.—A. I would not like to say one way or the other, but I do not think it is much good.

Q. Are any live lobsters shipped from this district?—A. None.

Q. Should the shipment of live lobsters be favoured in preference to canning?
A. I don't think so.

Q. Are the existing facilities adequate for the proper handling of live lobsters?
A. There are no facilities. As I say I believe that if there are, it would certainly pay to ship live lobsters but at present I don't see any chance to do it.

Q. It has been said that in a few years the live lobster trade will replace canning altogether?—A. I don't think that will be the case here.

Q. Have any shipments of live lobsters been made by the fishermen in this district?—A. I think there have been some shipped but they were all dead when they reached Halifax.

Q. Is there any other matter that you would like to refer to?—A. No, sir, there is nothing I think of now.

Witness discharged.

Commission adjourned.

CAP D'ESPOIR, July 20, 1909.

J. W. WINDSOR, packer, Montreal, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing, how many canneries do you control and where are they situated?—A. I have been packing lobsters for 35 years.

Q. How long on your own account?—A. I suppose about 30 years for myself. As to factories I have two at Miscou island, New Brunswick, one at Mal Bay, one at Newport, one at Little River west, one at Cap D'Espoir, one at Perce and several others not now in operation.

Q. Roughly speaking, what would the output of those canneries represent this year and what is the best pack they ever turned out?—A. I suppose the output of those places this year, roughly speaking, would be about 2,000 cases. As to what they have done in the past at the Cape alone, the output would be 1,400 cases in early years. From Miscou island has been shipped as many as that and more. When we opened the factory at Mal Bay we got as many lobsters out of 400 or 500 traps as can be got to-day out of 2,000.

Q. How along ago was that?—A. That is about 20 or 25 years ago.

Q. What other canneries are licensed in your immediate neighbourhood?—A. At Miscou there are five, two of Loggie's, and one each of Macgregor, Young and Ward.

Q. How many boats do you employ?—A. 40 or 50.

Q. What number of traps do you fish altogether now?—A. Roughly speaking, about 10,000 traps.

Q. What number of hands do you employ afloat and ashore?—A. I should say a couple of hundred hands on this side from Newport to Gaspé and about 75 to 100 on the New Brunswick shore.

Q. Is your annual pack decreasing or otherwise?—A. This year it was better than last year. It has been decreasing for the last few years.

Q. Do you keep up your pack by the aid of increased gear and closer fishing?—A. I suppose we do.

Q. How does the present number of traps compare with the number you fished at the beginning in the same number of factories?—A. We had a less number originally.

Q. For a much larger pack?—A. Yes.

Q. Are you fishing a larger number of traps than you used to fish formerly?—A. Not very many unless we go back several years. In the early history of our packing we would have considerably less traps. The first year we put out traps at the Cape we had 1,400 or 1,500 cases, but that year we had a large number of trawls. Now we do not trawl at all.

Q. How was the weather this year?—A. It was all right except for two storms. There was one on the 23rd June which lasted for about a week that finished everything. Up to that time the weather had been all right and it would have been a favourable season but for that storm.

Q. Did you lose many traps then?—A. We lost everything almost, it practically closed the fishery.

Q. Is it your opinion that the supply of lobsters is being kept up by taking lobsters that formerly were rejected, as well as using an increased amount of gear?—A. Yes, I suppose so. My opinion is that, as in the case of the British Columbia salmon,

9-10 EDWARD VII., A. 1910

every four or five years we have an increase. We have had two poor years, last year and the year before. This year helped us out.

Q. In your opinion the lobsters run a little like salmon in British Columbia, there is a series of good years and a series of bad?—A. Yes, I have come to that conclusion, I have noticed that. The lobsters seem to leave the shore and come back again. Then I notice if we get the lobsters in the spring the moment we put out our traps that is a good year. We don't have as good a year if we don't get them at the start. If they do not come in at the start they will not come at all in any quantity.

Q. How many pounds of lobsters does it take to the pound can?—A. They have varied a little this year. At one of our factories it took four and two-third pounds to the can and 224 pounds to the case, while at the Perce factory they only panned out 240 pounds to the case. There were better results towards the end of the season than at the start. The lobsters are very empty at the start, much more so than at the end of the season. You get better results in the middle of May and in June than you will at the first of May.

Q. When lobsters come in first they are not in as good condition as they are a few weeks later?—A. They are not as full.

Q. Do the fishermen own the boats and gear or do you supply the outfit?—A. I supply the outfit generally. There may be one or two outside who have their own flats, but we supply everything practically.

Q. It has been suggested that for the better control of the lobster fishery, the fishermen should be required to register and take out a license at a nominal fee. What do you think of the idea?—A. It might work where the fishermen supply all the traps and sell their lobsters to the cannery; but where the canner himself supplies his own gear I do not see that it would work at all.

Q. Do you think that this would have the effect of inducing the fishermen to observe the law and report any violations they happened to notice?—A. It is my opinion now that the fishermen generally see that it is to their interest to throw overboard all spawn lobsters. I have seen very few spawn lobsters this year.

Q. The creation of a Fisheries Board for the management of the lobster and other fisheries in the maritime provinces has been suggested, would you approve of this suggestion, and, if so, how should such a board be constituted?—A. I should think you could get level-headed men that would do their duty as they ought and not be inclined to favour any one.

Q. Such a board, of course, would be entirely independent?—A. The best men you could have for that board would be men who are directly interested in the fisheries. I should think the largest operators would be the better men.

Q. The fishermen would have to be represented on a board of that kind?—A. Some of the fishermen are pretty good men. I do not think there is any need of anything of that kind on this coast, but in Prince Edward Island and New Brunswick, where the fishing is more congested, it might be needed.

Q. How does the price now paid for lobsters compare with the price paid when the industry was first started?—A. When we commenced at Miscou first we bought lobsters and furnished the gear, as we do now, at 12½ cents per hundred pounds, and we boarded the men. To-day we buy them at Miscou for \$1 per hundred weight and board the men. On the Gaspé side the lobsters to-day cost me \$1.50 a hundred weight and the men board themselves.

Q. You have some fishermen employed on wages?—A. Quite a number on wages, and they produce the cheapest lobsters. They have proven so this year at any rate.

Q. They were imported men, were they not?—A. The imported men were paid by the hundred weight.

Q. From your observation as a canner, what are the spawning months of lobsters?—A. I think they spawn all the time, but I should say from the 1st July on.

SESSIONAL PAPER No. 22a

Q. Do you believe that the lobsters approach the shore for the purpose of spawning?—A. I think they approach the shore for the purpose of spawning, getting under the rocks and places of that kind, it might be for warmer water.

Q. Is there any part of the season when lobsters are not fit for human food?—A. I should say when they are casting their shell.

Q. At what size do you consider the lobster to be fully matured?—A. I should think from eight to ten inches.

Q. What is the smallest lobster you have ever seen bearing berries?—A. I would not like to say they were under seven or eight inches. I do not think I have seen them six inches; seven or eight inches is the smallest I have noticed.

Q. Could you from your observation state whether the lobster spawns every year or every two years?—A. I could not say.

Q. What proportion of the lobsters taken in the traps is below the legal size limit?—A. This year our lobsters are of very good size generally. I should say the percentage of lobsters under the legal size would be small, that is for Gaspe. For New Brunswick I could not speak so well because I have been there very little. Speaking generally, there is a very small proportion below the legal size.

Q. Could you give the size in inches of the balance of the lobsters packed by you?—A. The bulk of the lobsters I should say would be from 8 to 10 inches.

Q. What percentage would be over 10 inches?—A. There would be 5 per cent over 10 inches.

Q. What is the average size of the berried lobsters taken in your district?—A. I would say the average size would be 8 or 9 inches.

Q. What is the size limit in your division and what is the open season for lobsters?—A. The size limit is 8 inches and we fish from the 20th April to the 10th July.

Q. What has been your practice with regard to the taking of berried and undersized lobsters?—A. Our instructions to the fishermen are to liberate the berried lobsters and the small lobsters also, but it is very hard to get the fishermen to comply with that when they are fishing by the hundred pounds; they are anxious to get everything they can. But as far as the berried lobsters are concerned, our fishermen now are waking up to the fact that it is to their interest to liberate all spawn lobsters.

Q. What would you think of a proposition requiring the canners to pay an increased fee, instead of 2 cents a case as at present, and in that way realizing a fund for the purpose of purchasing the seed lobsters from the fishermen?—A. I have very little faith in hatcheries. I think if a person could get the fishermen to liberate the seed lobsters and then pay them for any they released, it would be a good plan. That is, if you could get them to be honest about it, if they would brush off the spawn from the lobsters and then put them back on you again.

Q. Have the regulations for the protection of the lobster ever been observed in your district?—A. Strictly speaking, no; they could not be. You would want all the officials in the country to enforce the regulations taking into account the size of the lobsters and other regulations.

Q. What would be the effect of strictly enforcing the present regulations?—A. You could not continue to can lobsters and throw out every lobster under the legal size. The fishermen would not stay by the business I imagine.

Q. Have you any change in the existing regulations to suggest?—A. Yes, I would suggest that we should shorten the open season.

Q. At the beginning or the end?—A. At the end. I think that you might open as soon as you can because in this country conditions regulate that all right. Although we are allowed to open on the 20th April we very seldom commence then although some times we might. I would let the fishermen commence when they liked, as soon as they can, but finish say 20th June.

Q. Have you kept any record of the number of days that you fish in a season?—A. Yes, very minutely.

9-10 EDWARD VII., A. 1910

Q. What is the average number of fishing days each season?—A. If you take out the bad weather and all that, I would say thirty-six days one season with the other.

Q. What percentage of the lobsters taken in the traps in your neighbourhood bear eggs, and during what period in the season are berried lobsters most numerous?—A. Our percentage is very small, especially this year. I have noticed fewer berried lobsters this year than for a number of years back.

Q. That might be because the fishermen are more careful about bringing them in?—A. That might be too. I tell my fishermen right along to liberate these small lobsters and berried lobsters because we do not want them. We look after the industry ourselves.

Q. Would it be a difficult thing to keep the run of the small and berried lobsters where you are handling a large quantity?—A. Very difficult.

Q. Is the practice of stripping or washing the eggs from the female lobster followed by the fishermen here?—A. Not that I know of.

Q. Do the canners make any scruple about accepting the berried lobsters?—A. When the lobsters are brought in everything is weighed. If there happens to be spawn lobsters in the lot they pass with the others. But we generally remind the fishermen, if they find them to be careful and liberate them.

Q. If the canners refused absolutely to accept berried lobsters from the fishermen what would happen?—A. As far as this coast is concerned I think we could have that law enforced here because I have seen very few berried lobsters brought in. We might have some chance of enforcing the law here but I am not so sure of Miscou. There is quite a spawning ground out there.

Q. Has it been your practice to make any examination for the purpose of detecting the berried lobsters when delivered at the cannery?—A. No more than to glance at the lobsters when weighing them and seeing them. When we are shelling the lobsters we can tell those that are berried by the amount of coral.

Q. It is very difficult to detect the berried lobsters before they are boiled is it?—A. That is right.

Q. If the canners refused to accept the berried lobsters would it not have the effect of inducing the fishermen to return them to the water?—A. Once they are brought ashore, after they have been out of the water any time, it is no use returning them. It should be done immediately the lobsters are taken out of the traps.

Q. What I understand you to say is this: It is too late when the berried lobsters have reached the weighing table to return them to the water, they would hardly survive, they should be returned when they are taken out of the traps?—A. Yes, because it is sometimes some hours before the lobsters are brought in.

Q. Do you think it would be possible to get the fishermen to undertake to return to the water all the berried lobsters taken in their traps?—A. I think it is possible on the Gaspé coast to have that done. They are waking up to the necessity of that now themselves.

Q. What would you say as to the proposition that the government should buy the seed lobsters from the fishermen and then liberate them at once or place them in pounds until the fishing season is over?—A. I do not see how that could be done on this coast. There is no place where you could keep them at all on the Gaspé coast because it is so very exposed. I do not think it is practicable to carry out that suggestion. The only thing would be to liberate the seed lobsters from the traps the moment they are taken and give them their freedom. If you could get the fishermen to do that it would be the best thing.

Q. Do you know of any case where fishermen have lost their catch of lobsters by the canners refusing to accept them?—A. I have known of nothing of the kind.

Q. There is competition here as to the price paid for lobsters? The fishermen are not tied down, if they do not sell to one canner they can to another?—A. Certainly.

Q. There is no combination on the part of the packers here to keep down the price?—A. Not at all, nothing of the kind.

SESSIONAL PAPER No. 22a

Q. The Lobster Commission of 1898 recommended that temporary reserves should be established at various parts along the coast where fishing should not be allowed for one or two years, such reserves to be changed from time to time. What do you think of that idea?—A. I do not think that would work very well. There is a lot of money invested in lobster packing and so long as a man is interested in it he must keep the business up or get into something else; he cannot drop it for two or three years and then go back again into it.

Q. Is the present regulation restricting the number of canning licenses satisfactory?—A. It is satisfactory to me here.

Q. It has not been strictly enforced anyway?—A. That is what is the matter.

Q. Do you think there is any good reason why every man who wants to can should not be granted a license?—A. You would have too many factories then. I think there are quite enough factories in operation now.

Q. The thing has settled itself, a good many have gone out of the business?—A. Yes.

Q. How would you establish the fitness to can of an applicant for a license?—A. Lots of men might want to go into the cannery business who do not know anything about it at all. A man going into business should be thoroughly practical and competent. I think that canneries should be compelled to conform to a certain standard.

Q. Would it be possible or right to establish a standard of fitness for a license to can?—A. I certainly think it would.

Q. Supposing you were told to fix a standard, what would be the main point you would insist on?—A. I should insist on cleanliness, first, last and all the time. You would want to have a suitable building properly equipped for the business.

Q. What equipment would you insist on?—A. Where the lobsters are handled on tables and such like, they should be of such material as to ensure that there should be no fear of dirt. I should say that the pans or trays that the meat is handled on, after it is shelled on the packing table, should be either porcelain or some material of that kind, different from the ordinary packing tables as used in the factories generally to-day. The packing and cracking tables should be made of proper material or properly covered. I would suggest that the packing table itself should be covered either with plate glass or marble. In my new cannery at Newport I have installed an enamelled tray about 6 feet long and about 2½ feet wide by 5½ inches deep, with a drainer in the centre. We find this to work very nicely. It has a nice appearance and is easily kept sweet and clean. While the character of the equipment in lobster canneries has much improved on what it used to be, there is still room for improvement. A few years ago the lobsters were boiled and allowed to stand on coolers exposed to the air until the next day, and sometimes two days when there were lots of lobsters. Now it is pretty generally known that the sooner lobsters are canned when they are cracked and opened, the nicer and brighter product is put up. In our own case we never carry lobsters over from one day to the other, but within a few hours after they are brought to the factory they are sealed up and bathed.

Q. Should not the product of the canneries be subject to inspection?—A. Yes.

Q. How is it in the case of the other canneries where you put up fruit and vegetables, is there any inspection?—A. Yes, there is a government inspection.

Q. Should the inspection of the product of lobster canneries be made by the existing staff?—A. I think so.

Q. It has been asserted that if the catch of lobsters were still further curtailed, the canneries would have to shut down. What is your opinion on that point?—A. In answer to that I would say the season here regulates itself. Even without any government rules, so far as Gaspé is concerned, the season regulates itself. It does not pay us to pack after 20th June; for years it has not.

9-10 EDWARD VII., A. 1910

Q. Would there be any real hardship to the fishermen in cutting them off at that time?—A. No, they go into the cod fishing and other industries and are very glad of it. They get the cream of the fishing and then close up.

Q. It is during the last three or four weeks of the season that the damage is done in taking lobsters?—A. That is right. After the 20th of June the lobsters would have their freedom. It is to the interest of everybody that we should close at that time to protect the lobster fishery.

Q. Your idea is that if the season were shortened it would eventually lead to an increased catch of lobsters and the fishery would benefit?—A. That is right.

Q. You would not object yourself to closing down on the 20th June, because it would, in your opinion, eventually lead to an increased catch of lobsters and more than make up for the shortening of the time?—A. Yes.

Q. In your opinion the most easily enforced regulation would be that of shutting down on 20th June?—A. Yes, and not give any extension of time afterwards for all the politicians in the country.

Q. What market would the fishermen in your district have for the lobsters if the canneries were closed?—A. No market at all that I know of. It would not be practicable to ship to any market with the existing facilities, it is too far away. I have often remarked to the inspectors that if the regulations were strictly enforced we would have to close right away; we could not measure and pick out illegal or small sized lobsters. If we can get the fishermen interested enough to throw these lobsters overboard right away, they can do it. We must educate them into seeing that it is to their interest not to catch small sized or berried lobsters. The fishermen have complained to me that if the size limit were enforced strictly they would give up fishing.

Q. Are the existing penalties, if strictly enforced, sufficient to deter packers from violating the regulations?—A. I should think so.

Q. In the event of a canner persistently violating the law would the preservation of the lobster industry demand the cancellation of his license?—A. Yes, by all means, if a man persisted in violating the law.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further packing licenses be discouraged?—A. Yes, I think there is a sufficient number of licenses now.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. I should think it would, you have got to fish all the harder. We do not use nearly as many traps ourselves as when we were in competition with others.

Q. In the interest of the lobster industry would you favour a general closing down for some years?—A. I do not think it is practicable.

Q. Would you refuse a canning license to an alien?—A. I certainly would refuse a license. I think the Americans are fishing all our waters now. Take the Portland Packing Company, time and time again I have brought that matter before the government.

Q. The canners this year reduced the price paid for lobsters did they not?—A. This year the price had to be reduced on account of the market conditions. The last two or three years, prices for lobsters have been very high. The market price in 1907 went up very high. In 1908 there was an upheaval and this year in order to save ourselves we had to reduce the price slightly.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of those holding canning licenses to operate their factories although a sufficient supply of lobsters was available?—A. That has not been the case in our district.

Q. Which branch of the lobster industry do you think is the more remunerative to the fishermen and best calculated to maintain the supply unimpaired, the canning or the live lobster trade?—A. We have never dealt in the live lobster trade in this district at all.

SESSIONAL PAPER No. 22a

Q. How is the price paid for lobsters established?—A. The market conditions fix the price.

Q. Are you aware of any complaints made by the fishermen that the price paid by the canners is not satisfactory?—A. No.

Q. Could the fishermen make more money if they were allowed to can?—A. In my opinion the fishermen could not carry on the canning industry at all.

Q. What would you think of the policy of encouraging the fishermen to co-operate in canning?—A. I would not encourage it at all.

Q. Are there any co-operative canneries in your district and how have they succeeded?—A. We have none.

Q. From your experience can you say whether the government hatcheries have helped to maintain the supply of lobsters or not?—A. We are not close enough to them to express an opinion. Personally I have very little faith in hatcheries.

Q. The system of placing berried lobsters in tidal pounds for the purpose of hatching out has been successfully tried in Cape Breton and on the eastern coast of the United States. Have you any observations to make with respect to the value of this method of breeding lobsters?—A. I have not studied the subject sufficiently to be able to express an opinion.

Q. You will venture to say that so far as the Gaspé coast is concerned the facilities for establishing pounds do not exist?—A. We have nothing of that kind.

Q. Would you favour an increase or a reduction in the present size limit?—A. I think I would just leave it as it is.

Q. When was lobster canning first introduced into your neighbourhood?—A. I should say about 35 or 40 years ago. I was about the first to can. My father canned the first lobsters ever put up in the Baie des Chaleurs.

Q. What were the regulations then in force?—A. No regulations whatever as to time, size or anything else.

Q. To what cause do you attribute the decline in the size of the lobster?—A. Over fishing in former years I should say. Then they fished all the season through.

Q. An expert has suggested that a minimum size for lobsters of 9 inches be established for the waters north of Cape Canso and 10 or 10½ inches for the waters south and west of Canso?—A. As I have already stated, my idea would be to leave matters as they are with regard to this district. As to districts outside I have no opinion to offer.

Q. Do you think that different sized limits and seasons in different sections are unsatisfactory and tend to encourage violations of the law?—A. I would not care to express an opinion.

Q. Is there any reason for having a smaller size limit in your district than in other districts?—A. No, sir.

Q. When lobster canning was first introduced were not the lobsters about the same size all over the coast?—A. They were always the same all over.

Q. Is it in the interest of the lobster fishery that lobsters should be taken before they reach the age at which reproduction takes place?—A. I should think it would be in the interest of the fishery that they should not be taken.

Q. Is it invariably a fact that the larger the lobster the smaller number it takes to fill a one pound can?—A. As far as weight goes, it may take a little more in weight than the smaller ones. Some times the smaller lobsters are fuller of meat.

Q. It is estimated that it takes nine 7-inch lobsters, which lobsters have not been afforded an opportunity of reproduction, to fill a one pound can; if this is correct, what effect must continued fishing of such immature lobsters have upon the industry?—A. I should say that where they continue to take nothing but those small lobsters they are going to injure the fishery. That would be inside Northumberland Straits.

Q. The statement has been made authoritatively that the strict enforcement of
22a—4½

9-10 EDWARD VII., A. 1910

an 8-inch limit, together with the assistance of hatcheries and pounds, would perpetuate the lobster industry; do you concur in that?—A. I have already expressed my opinion about hatcheries, but in this district it is not possible to carry on the industry and limit the size exactly to 8 inches.

Q. Could a size limit of 10½ inches be maintained without detriment to the lobster industry?—A. No, you could not do that at all.

Q. What kind of trap is best adapted to allow the small lobsters to escape? A good many people think we ought to open the slats of the trap a good deal wider than they are at present. You leave an inch space between the slats in your traps, do you?—A. About an inch.

Q. Would the small lobsters escape with the openings in the traps made larger?—A. You would have to make the openings considerably larger, I imagine. I don't think I would alter the trap any.

Q. Is it the case, as stated by some persons, that 30 per cent more lobsters in number are required in the fall than in the months of May and June to fill a one pound can?—A. We do not have any fall fishing in this district, and I have already expressed my opinion that it takes less lobsters in the latter part of the season than it does in the first.

Q. Do you think that lobster fishing should be maintained farther off shore and would this enable the schools of immature lobsters which come inshore to be better protected?—A. Yes, I think that is all right.

Q. Do you fish farther off shore in the beginning of the season than you do towards the end?—A. Yes. Provide for a depth of water to be fished in if you want to, say anywhere from four to ten fathoms, and not go inside that.

Q. You would prevent the catching of small lobsters and berried lobsters coming in close to shore?—A. I think that is a good thing. You see the fishermen run in after the lobsters and put their traps anywhere and everywhere along the shore. You might just as well trawl.

Q. During what period of the season is the fishery most actively prosecuted?—A. During the month of May on the Gaspé coast.

Q. Is the present regulation regarding the close season satisfactory?—A. Yes, so far as I am concerned.

Q. What, in your opinion, would be the ultimate effect of a shorter open season with no restriction as to size limit?—A. I think that would be all right.

Q. It has been said that in a few years the live lobster industry will do away with canning altogether; what is your opinion?—A. With the present facilities it would not affect the Gaspé coast we are too far away from the market.

Q. Is it the case that canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen, who would, in case of refusal, go to other canners less scrupulous?—A. We have not had that experience in this district. I control all my own traps and gear.

Q. Is there any other matter connected with this investigation that you would like to explain?—A. I suppose it may seem narrow, but you take the large American concerns, with the amount of capital they have at their disposal, and they can kill the small Canadian packers. Their means are so much greater that they are ruining our finest fisheries. It is not the small men on the Gaspé coast and northern New Brunswick who are doing it all. Burnham & Morrill and the Portland Packing Co. are going into the business heavily equipped, and it has been that way from the start.

Q. Like a great many other industries, the lobster fishery has a large investment of foreign capital. But do not these firms employ Canadian labour?—A. To some extent they do. But these American firms have done more than the Canadian to

SESSIONAL PAPER No. 22a

fish out our waters. I have had American people say to me in Boston: 'You come over here and try to operate and we will show you how quickly you will have to get out.'

Witness discharged.

Commission adjourned.

PORT DANIEL, July 21, 1909.

JOHN A. SULLIVAN, manager, Port Daniel, called and sworn:—

By the Commissioner:

Q. You are the agent here of Messrs. Hoegg & Co.?—A. Yes, sir.

Q. And you manage the lobster factory?—A. Yes, sir.

Q. How long have you been engaged in lobster packing?—A. This factory has been running 30 years.

Q. Have you always been connected with it?—A. No, but I have been here about 27 years.

Q. Before that were you engaged in the lobster industry anywhere else?—A. I did work as a hand outside with a man by the name of Foy when he started. This company bought the place from Foy. That was a good while ago.

Q. How many boats do you employ at this cannery?—A. We employ about 30 boats, I think.

Q. And what number of hands afloat and ashore?—A. About 68 altogether.

Q. What is the capacity of your cannery?—A. We could pack if we got the fish 1,000 cases. We can always get plenty of hands if we get the fish. We can pack more than 1,000 cases without any trouble.

Q. Are there any other canneries in this neighbourhood?—A. Not right around here.

Q. How many canneries are there on this coast?—A. There are five canneries on this side.

Q. Is your annual pack decreasing?—A. Yes.

Q. What did you pack this year?—A. We packed 788 half cases and last year, to show you that it increased, we packed 567 half cases.

Q. You had a little better output this year?—A. We are about 200 half cases better.

Q. What was the largest pack you ever made here?—A. As near as I can remember—it was a good while ago—it was about 1,230 half cases.

Q. How long ago would that be?—A. That must be seven or eight years ago.

Q. Are you keeping up your pack by the aid of increased gear and closer fishing? Are you fishing more gear now than when you began to pack first?—A. I don't know that we are. Formerly the lobsters were plentiful and they did not require so much gear. Now people have to fit out themselves and the cost is pretty high, and they don't fit out very many traps. I think each man has about 60 traps, sometimes a little less and sometimes a little more. On the average, about 60 traps.

Q. Is it your opinion that the supply of lobsters is being kept up by packing lobsters that formerly were rejected and by using an increased amount of gear? Are you packing smaller lobsters than when you began?—A. I believe we are, for when we first started here in my time the lobsters were big black fellows, and it is only seldom we get them now. Still we got a fairly good run of lobsters this summer. Mr.

9-10 EDWARD VII., A. 1910

Veit told me to weigh one of the largest, a 12-inch lobster. I put it on the scales and it weighed 3 pounds.

Q. Do the fishermen own their own boats and gear or do you supply the outfit?—

A. Part of them. Part own their own gear and we own the other part. The fishermen get the gear mostly from us in the spring. We supply them and they buy their own gear.

Q. Then they are fishing their own gear?—A. Yes, their own gear.

Q. From your observation as a canner what do you consider the spawning months of the lobster to be?—A. Well, we find them from the time we commence in the spring until we are done on the 10th day of July. We will not find any more then than when we started, but there are always a few right straight along that we come across.

Q. Do you find more spawn lobsters later in the season?—A. Well, I did not this year. I did not find any more spawn lobsters from the time we commenced till we finished; there was the same number right straight along.

Q. The eggs are riper at a certain part of the season?—A. I would say that by the time we knock off the eggs are more ripe.

Q. That is about the 10th July?—A. Yes.

Q. Do you believe the lobsters approach the shore for the purpose of spawning or what is it that brings them in?—A. They come in in the spring to feed. That is what fetches them for we will get no lobsters here until we get a rush of herring, and after that we get the lobsters. You may be sure that when the herrings come in the lobsters will be in also. Before that they are not.

Q. Do you think lobster fishing should be maintained farther off shore and would that enable the schools of small lobsters which come inshore to be better protected?—

A. I do not think so for this reason: That the lobsters apparently have their ground in the spring and they will come into that ground. They will come into 5 or 6 fathoms of water and remain there. There is where we get the heft of our lobsters, and after it gets nice and warm and calm in June they get in close under the rocks.

Q. What do you think brings them in to the shallow warm water?—A. I believe it is natural they should come in there under the rocks. Apparently that is their home.

Q. Can you give me any opinion as to whether the lobster spawns every year, or twice a year, or every two years?—A. Well, I would say, if I were going to say anything, that she spawns once a year, and that is all.

Q. What is the smallest sized female lobster you have known to carry eggs?—A. Well, I have never noticed any that I would say were less than 9 inches.

Q. At what size would you consider the lobster to be fully matured?—A. Some of them grow very large.

Q. But the idea of the question is to show at what time the lobster has reached an age or size at which it can reproduce?—A. Well I would say a 14-inch lobster would be a fully matured lobster. Of course that is taking them in general. Some will go larger than that and some smaller.

Q. Is there any part of the season when lobsters are not fit for food?—A. Well, I don't know of any up to July 10. They are better on July 10 than when we get them in the spring. They are fuller, there is more meat on them and they are in better condition for food then. I have noticed that and I made the remark this summer that we were packing better lobsters than we did in the spring when they first came in.

Q. Do you think that when the lobster has cast his shell he is as good for food as previously?—A. I would not think so.

Q. What is the average size of the lobsters that you find with berries on?—A. Well I would say they would run about from 8 to 9 inches.

Q. Do you see many large female lobsters that carry eggs?—A. Well some 10 and some 9.

SESSIONAL PAPER No. 22a

Q. Of the lobsters taken in your neighbourhood in the traps how many per hundred would bear eggs?—A. We do not expect to find any more than from 8 to 10. This summer I have seen very few to tell you the truth. Some days we would have a very good catch, a good many thousands of pounds, and you would see an odd one come ashore here.

Q. Is the practice of stripping or washing off the eggs from the female lobster followed by the fishermen in this neighbourhood?—A. I could not tell you. I do not think it is or very little if there is any. To the best of my opinion there is very little of it done.

Q. Do you think it would be possible to get the fishermen to undertake to return to the water all the berried lobsters taken in their traps?—A. Certainly it is an injury to the fishermen to take them. They understand perfectly well that if they take all the female lobsters and the spawn lobsters they cannot have a good catch next year and they should themselves protect them as much as possible.

Q. If the canners refused to accept berried lobsters would it not have the effect of inducing the fishermen to return them to the water?—A. Certainly it would.

Q. Do the canners make any scruple about accepting berried lobsters?—A. I can only speak for myself. I don't want to see a spawn lobster come to the factory. I have told the fishermen to be careful and they are; I don't see many. I must say they are very good. Of course sometimes they will bring in a small one.

Q. If the canners absolutely refused to accept these lobsters from the fishermen, what would happen?—A. Well all they would have to do would be to throw them out. They could not do anything else, they have got to throw them back into the water again.

Q. Some canners have told us that if they did not accept the berried lobsters the fishermen would say: 'We will take them to some other canner that will,' and they complain they lose their fishermen then?—A. That does not occur here for the reason that there is no other canner right around here.

Q. Has it been your practice to make any examination for the purpose of detecting berried lobsters when the catch was delivered at the factory?—A. I always tell the fishermen to be careful and they don't fetch the small lobsters. In fact we don't want them and there are not many at all.

Q. It has been suggested that one method of protecting berried lobsters would be for the government to buy from the fishermen at a slight advance on the price paid by the canners, all these lobsters taken in the traps, such lobsters to be liberated at once or placed in pounds until the close of the season. What is your opinion of these suggestions and what do you think would be the most effective?—A. There are lots of fishermen that come across spawn lobsters who would throw them away if they had some inducement. Or, if this washing business is going on—of course I don't know anything about it—they would save the eggs and fetch them in.

Q. What would you think of a proposition requiring the canners to pay a larger amount than the present fee of 2 cents and in that way realizing a fund for the purchase of seed lobsters from the fishermen?—A. Well, I don't know how that would work.

Q. The present fee of course is very small. Supposing it were increased with the view of establishing a fund to pay the fishermen something extra for the berried lobsters?—A. It does not seem to me that it would work very good.

Q. What is the size limit in this division?—A. Eight inches.

Q. And what is the open season during which you may fish?—A. From April 20, I think, to July 10. We never commence on April 20. I think it was May 5 before we commenced to catch lobsters and pack them this spring. The 1st of May is lots of time to commence and we made a better pack than we did last year and the last three or four years when we commenced earlier.

Q. What proportion of the lobsters taken in the traps do you think is below the

9-10 EDWARD VII., A. 1910

legal size limit of 8 inches?—A. Well, Mr. Veit was here this year and he measured them as they came out of the water and found they ran very good.

Q. Have you any idea yourself what proportion?—A. No, I have not very much idea. Of course it would be only a small percentage; there would always be some.

Q. What would you put as the average size of the lobsters you catch here?—A. The average size, taking them one with the other, would run about 9 inches.

Q. Is that a smaller average than you used to pack when you began first?—A. Oh, yes.

Q. Would a strict enforcement of the present size limit compel you to shut down?—A. I don't think it would.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. I believe it would.

Q. Would you favour any increase or decrease in the present size limit?—A. No; I think the way the thing is running the size is all right.

Q. Has there been any noticeable decline in the average size of the lobsters caught in your district during the last 10 or 30 years?—A. Oh, yes, there has.

Q. Is the decrease still continuing?—A. No, I find this year showed up much better than it did last year, and last year showed up better than the year before.

Q. When was lobster canning first introduced in this neighbourhood?—A. I think somewhere about 31 or 32 years ago.

Q. Who began the lobster packing here?—A. As I said it was Mr. Foy. He started upon a very small scale and then my people bought him out.

Q. What were the regulations then in force?—A. Well, I could not say. I was pretty young in those times and I do not remember what regulations there were. I don't think there were any regulations then, they were introduced afterwards. The packer used to buy the lobsters by the hundred, as I remember. It is quite a long time ago and I was quite a young fellow then. I was working for him and did not have very much interest in the matter only for my little pay.

Q. When lobster canning was first introduced, were not the lobsters everywhere around the coast about the same size?—A. All about the same size and you would find them everywhere and lots of them.

Q. To what cause do you attribute the decline in the size of the lobster?—A. It is the packing, of course.

Q. Is it the result of overfishing, do you think?—A. Of course. I don't believe the lobster is like any other fish; I believe you will fish them out. Codfish or herring it does not appear to affect them the same as it does the lobster.

Q. Then you think this decrease in size is the natural result of overfishing?—A. Yes, sir.

Q. It is not the result of any other cause?—A. No.

Q. Do you think that different size limits and different seasons in adjoining sections of the coast tend to encourage violations of the law?—A. I think as far as possible the regulations should be uniform right throughout the coast. When one is shut down, all hands should shut down.

Q. Is there any reason for having a smaller size limit in this district than in any other division?—A. Not that I know of.

Q. Do you think it is in the interest of the lobster fishery that lobsters should be taken before they have reached maturity?—A. Certainly not.

Q. What disposition is made of the lobsters taken below the size limit?—A. Well, of course with regard to the canning of them they are only second class goods to begin with. The way we can here, we trace them all out and put the best meat in the first quality cans. Then the little ones with the small meat go into the second quality cans.

Q. Is it invariably a fact that the larger the lobster the smaller number it takes to fill a pound can?—A. Well, I don't know, I don't think so. If you take some of these big lobsters I can't say but what they are pretty full, but I think with a medium sized lobster you will do better than with a big one.

SESSIONAL PAPER No. 22a

Q. What would you call a big one?—A. A lobster from 10 to 12 inches in size.

Q. It has been estimated that it takes nine 7-inch lobsters, which lobsters have never been afforded an opportunity of reproduction, to fill a one pound can. If this is so, what effect must the continual fishing of these lobsters have upon the industry?—A. I think it will be ruinous.

Q. The statement has been made authoritatively that the strict enforcement of the 8-inch limit would put the lobster canners out of business. It is not so here?—A. I don't think so. I would not say so.

Q. It has also been said that a strict enforcement of the 8-inch limit, together with the assistance of hatcheries and pounds, would perpetuate the lobster industry?—A. I think it would.

Q. Would you be in favour of reducing the size limit to 7 inches, as has been suggested, or abolishing the size limit altogether and shortening the season?—A. I would not be in favour of that.

Q. Always enforcing the berried lobster regulations?—A. Certainly

Q. Could a size limit of 10½ inches be maintained here without detriment to the lobster industry?—A. No.

Q. Is it the case as stated by some one, that 30 per cent more lobsters in number are required in the fall to fill the same number of cases than would be required in the months of May and June?—A. I could not say anything about that because we have never fished here in the fall.

Q. How many pounds weight of green lobsters of each size does it take to fill a pound can and how many lobsters of each size would that represent in number?—A. It takes about six pounds of green lobsters to make a can of meat. Coming on in July it may take a little less.

Q. What would you think of the idea of requiring the fishermen to register and take out a license at a nominal fee?—A. I think we pay a license for the fishermen and that ought to be sufficient.

Q. Do you think that plan would have the effect of leading the fishermen to observe the law and report any violations they happened to notice?—A. I don't think it would have any such effect.

Q. Have the regulations for the protection of the lobster ever been observed in your district?—A. Certainly they have.

Q. What would be the effect of strictly enforcing the present regulations?—A. I think such a thing would be impossible to do. I think if the lobsters are watched closely and none of these small lobsters and spawn lobsters taken, it would benefit the fishing, it is reasonable to think so.

Q. Are the existing penalties, if strictly enforced, sufficient to deter the packers from violating the regulations?—A. I think so.

Q. In the event of persistent violation of the regulations by a canner would the preservation of the lobster industry demand the cancellation of his license to can?—A. I think so.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further licenses, in your opinion, be discontinued?—A. Yes, I think there are plenty of factories now for all the lobsters there are.

Q. In the interest of the lobster industry would you favour a general closing down for some years?—A. No, I would not.

Q. The conditions have not reached that extreme here yet?—A. No.

The Lobster Commission of 1898 recommended that temporary reserves should be established in various sections along the coast—that is that we should stop fishing in certain districts for a year or two but continue it in others and change them all round in that way?—A. I don't think that would work.

9-10 EDWARD VII., A. 1910

Q. During what period of the open season is lobster fishing most actively prosecuted here?—A. In the month of May. We get more lobsters in May than at any other time in the season.

Q. Is the present regulation requiring you to stop fishing on July 10 satisfactory?—A. I would say so.

Q. Do you think that a reduction in the length of the open season would be of advantage, that it would lead to an increase in the supply of lobsters and perpetuate the fishery?—A. I don't think it.

Q. What in your opinion would be the ultimate effect of a shorter open season with no restriction as to size limit?—A. I think it would clean the lobsters out in no time.

Q. It has been asked that fall fishing be allowed in some districts owing to the delay in commencing fishing in the spring caused by ice remaining on the coast?—A. I think one season is quite sufficient, at least so far as this coast is concerned. The weather is so rough in the fall the gear would be all lost and there would be nothing made out of it.

Q. Is the present regulation restricting the number of canning licenses satisfactory?—A. I think that is a good idea. I think there are quite enough in the canning business now.

Q. Would you favour issuing a license to any man competent to can?—A. I don't think that would work.

Q. Would it be possible or right to establish a standard of fitness for a license to can?—A. Well, I think if they issue more licenses they ought to have a standard for those who want to pack. But I think there are licenses enough at the present time.

Q. Should the product of the canneries be subject to inspection? Would you object to have your work inspected?—A. No, sir.

Q. In your opinion should the pack generally be inspected in the interest of the consumer?—A. I would say probably that would be all right. There is one thing certain, the cleaner you can keep a thing the better.

Q. Do you think that the inspection of canned lobsters could be made by the existing staff?—A. I think it could. There would be no need of anybody else.

Q. Would you refuse a canning license to an alien?—A. Why not give them just the same chance as anybody else as long as they are paying their license and taxes and employing all their labour here. They don't import anybody, not into this factory. It is all Canadian labour that runs this factory. The only foreign thing is the money.

Q. Could not the fishermen make more money if they were allowed to can?—A. No, sir.

Q. Have they ever tried the experiment here?—A. There has been one or two tried it, but it has always proved a failure.

Q. What price was paid for lobsters in this district this year?—A. \$2.35 a hundred weight out of the boats for green lobsters. That is what we paid this year.

Q. What was it last year?—A. The same price. The year before it was \$2.25. Lobsters are down on the market but we have kept the same price, we have given the fishermen the benefit of it.

Q. How does the price to-day compare with the price paid when you began packing?—A. There is a big difference. We used to pay 35 cents a hundred pounds and to-day the price is \$2.35. At those times the prices on the market were lower. Canned lobsters were down to \$4.50 and \$5 a case. To-day it is different; one thing has gone with the other.

Q. Are you aware of any complaints made by the fishermen that the price paid for lobsters by the canners is not satisfactory?—A. All our fishermen are satisfied. They are here and can speak for themselves. Naturally they look to get as much as they can but I think they are getting good money.

SESSIONAL PAPER No. 22a

Q. How is the price established, is it a matter of agreement between you and the fishermen?—A. Certainly it is. They asked me what the price was going to be in the spring. I told them \$2.35.

Q. If they like to fish for \$2.35 they can; if not they can go somewhere else?—A. Yes, but they are always satisfied.

Q. Do you know what the other canners are paying?—A. I don't know. I did not bother with any of the rest of them. I put my price in the spring and let them run on that. If anybody comes along and tries to pay more it is natural we have to pay as much, but we mostly pay as good as anybody.

Q. Then there is competition in the matter?—A. Yes.

Q. There is no attempt on the part of the canners to combine in order to keep the price down?—A. Not with us.

Q. Is it the case that fishermen have ever lost their catch of lobsters by the canners refusing to accept them?—A. Not here. Sometimes in a storm if we are collecting lobsters and cannot get there the fishermen may lose a few that way, but that is owing to bad weather. We make a point of getting there generally.

Q. Would you approve of the establishment of lobster hatcheries?—A. I think so. I think it would be an improvement to the fishing.

Q. And result in saving the berried lobsters?—A. Certainly. If there was some place where the berried lobsters could be taken, the fishermen would be more careful and would fetch them ashore.

Q. Have you anything to say in regard to the establishment of pounds?—A. I have had no experience of pounds. We have not got anything of that sort here.

Q. Do you know whether the trap in use is the best trap for the purpose? Do you think that the escape of small lobsters would be facilitated if more space was allowed between the slats?—A. I don't think that would make any difference at all. We have tried mostly all kinds of traps and we find the one we are using at the present time is the most suitable.

Q. Is that what is called the parlour trap?—A. No, we do not use the parlour trap, just the plain trap with a head in each end.

Q. What is the size of your head?—A. It is about 4½ to 5 inches.

Q. And how far apart do you allow the openings in the slats?—A. About an inch and a half, that is about the width of a lath. We use one lath to gauge the width of the others.

Q. Is there anything else that you would like to say?—A. Nothing only regarding this hatchery. I would like to see it put in the right place to give it a good fair chance.

Q. Where do you think the hatchery should be placed?—A. I think it should be put here at the point, inside the southwest point, which is the nicest place on the whole coast to put it. The water is always nice and clear no matter what kind of a storm there may be. This is the right and proper place for it.

Q. Have your fishermen ever compelled you to accept undersized and berried lobsters?—A. No, they have never insisted on anything of that kind.

Witness discharged.

THOMAS MACKENZIE, fisherman, Port Daniel, called and sworn:—

By the Commissioner:

Q. In what district do you pursue your fishing?—A. In Port Daniel bay.

Q. Have you always fished in this place?—A. Always in this place.

Q. How many people are engaged in the lobster fishery in this neighbourhood, roughly speaking?—A. About 30, I suppose. There are generally only one man to a boat here. In the case of Mr. Sullivan's men two fish to a boat.

9-10 EDWARD VII., A. 1910

Q. Have you always fished for this hatchery?—A. Not always. I fished a few years ago for Mr. Foran in Shigawake.

Q. Is the annual catch of lobsters decreasing or otherwise; are you getting fewer lobsters than when you begin?—A. Yes, sir; fewer lobsters.

Q. Are you keeping up the catch by using a larger amount of gear or fishing harder than you used to do?—A. You have got to use more gear.

Q. To catch the same amount of lobsters?—A. To catch the same amount of lobsters.

Q. Has the number of traps increased in your neighbourhood since you began fishing?—A. No, I would not say that they have. There are fewer fishermen now than there formerly were when the lobsters were plentiful.

Q. There are not so many fishermen?—A. Not so many fishermen.

Q. Why have they gone out of the business?—A. Some have gone to farm and some have left the country.

Q. But the number of traps has increased since you first began fishing, has it not?—A. Well, I suppose there are more factories now and they are fishing a larger number of traps.

Q. Is it your opinion that the supply of lobsters has been kept up by taking a smaller size than you used to take when you started to fish?—A. Well, partly that. The lobsters are not so big as they formerly were, and, of course, to keep the supply up you have got to take smaller ones.

Q. Do you own your own boat and gear?—A. Yes, sir.

Q. It has been suggested that for the better control of the fishery the fishermen should be required to register and take out a license at a small fee; what do you think of that?—A. I don't see that that would make any difference.

Q. You do not see that there is anything to be gained by adopting that plan?—A. I don't see that there is anything to be gained by that.

Q. Do you think that by giving a license constituting these men lobster fishermen for the season they would be more likely to observe the law and report any violations they happened to see?—A. Oh, no. I think every man fishes his own gear and tries to do all he can. If the fishermen were licensed I believe they would take everything they could to make up for the license fee.

Q. How does the price now paid for lobsters compare with that paid when you first began fishing?—A. The price is higher now. Men can make more money now than they could when I began.

Q. Though lobsters were more plentiful then?—A. More plentiful.

Q. Speaking from your observation as a fisherman, what do you think are the spawning months of the lobster?—A. When we first began here we used to fish throughout the whole season until the fall and storms compelled us to stop, and I never noticed that there was more spawn lobsters later in the season than there was at the first fishing in the spring. We begin about May generally. The 1st of May to the 10th was the time when we got out our gear, and I never noticed that there were any more later in the season than there would be in the spring.

Q. Do you think there is any particular month when you find more berried lobsters, or lobsters with riper eggs, than at any other time?—A. Yes, in the summer season, about July the eggs will be riper, but I never noticed there were more berried lobsters than at any other time.

Q. You find them all through the season carrying berries?—A. Yes.

Q. But you think the eggs are riper in July and August?—A. July and August, yes.

Q. Do you think the lobsters come inshore for the purpose of spawning, or what brings them in?—A. I think it is to feed.

Q. Is there any time of the year when lobsters are not fit for food?—A. Well, I should say not except when the lobsters lose their shell.

SESSIONAL PAPER No. 22a

Q. Do you think they all lose their shell?—A. I think they do up to a certain age.

Q. And after that age?—A. I don't think so.

Q. At what size do you consider a lobster fully matured?—A. I would say about 10 inches.

Q. Have you not seen smaller lobsters than 10 inches with berries on them?—A. Yes, I have seen them probably down to 8 or 9 inches.

Q. But not many below that?—A. Oh, no, sir, none below that.

Q. What would be the average size of the berried lobsters that you see?—A. About 12 inches.

Q. Of your total catch what proportion would there be of female lobsters bearing eggs?—A. There are not more than 9 or 10 per cent.

Q. There are no berried lobsters exported from here?—A. No.

Q. What do you think of the idea of requiring the canner to pay an increased fee, instead of the 2 cents a case as at present, and in that way raising a fund for the purchase of the seed lobsters from the fishermen?—A. I don't think it would make any difference.

Q. Is the existing regulation for the protection of the berried lobster observed; what is the practice here in that regard?—A. I believe the regulation is observed as near as can be done. The packers won't receive the berried lobsters if they see them.

Q. It is your practice to throw them overboard when you get them?—A. Yes, sir, to throw them out.

Q. Is the practice followed here by the fishermen of stripping the eggs off the lobster by striking the fish on the water or brushing the eggs off with their mitt?—A. I have seen it done, but not of late years. When that law was first passed I seen some fishermen do that, but not many. I have never seen it but the once.

Q. What disposition do the fishermen make of the berried lobsters they find in their traps?—A. They simply throw them out as they take them out of the trap.

Q. Do the canners make any objection to receiving berried lobsters?—A. Yes, I have seen canners refuse to receive them and heard them tell the fishermen to put them into the water again.

Q. If the canners refused absolutely to take berried lobsters would it not have the effect of inducing the fishermen to return them to the water?—A. Yes, sir, it would.

Q. Do you think it would be possible to get the fishermen to return to the water all the berried lobsters they take, could you trust them to do it?—A. I would not say you could trust all the fishermen, but there are a great many that understand it is to their interest to return the berried lobsters to the water and they do so. Then, again, if the packers won't receive the berried lobsters, of course, they have got to put them out.

Q. What would you think of the government buying from the fishermen, at a slight advance on the canners' price, all the berried lobsters in the traps, those lobsters to be liberated at once or placed in pounds until the close of the season; what would you think of that?—A. Oh, I don't think it would amount to anything.

Q. The suggestion has also been made that the department should buy the berried lobsters and place the eggs in a hatchery to be hatched out?—A. That would be a good idea; I would favour that.

Q. Are you aware of any fishermen having lost their catch of lobsters by the canners refusing to take them?—A. No, sir, not now. They have been refused owing to the fishermen fishing more lobsters than the canners could pack, but it is not so now. That was in the early days.

Q. What would you think of the idea of establishing temporary reserves at various points along the coast for the breeding of lobsters wherein fishing should not be allowed for a certain length of time?—A. I don't know that that would be of any advantage.

9-10 EDWARD VII., A. 1910

Q. Do you think that the present regulation restricting the number of canning licenses is satisfactory to the fishermen?—A. Yes, I believe it is satisfactory the way that the canning is done.

Q. Are you in favour then of limiting the issuing of licenses to can lobsters?—A. I think that any one that could pack and wanted to pack should get a license; one man should be as free as another.

Q. But there are lots of men who might go into the canning business not knowing anything about it, and would put up a poor product; how would you regulate that?—A. By inspection.

Q. You would determine the fitness of an applicant for a license to put up lobsters by inspection?—A. Yes.

Q. What market would the fishermen in your district have for the lobsters if the canneries were closed?—A. We would have no market.

Q. If the present size limit were strictly enforced what effect would it have upon the canneries here, would it cause them to shut down?—A. It would not cause the factories to shut down here.

Q. Are the existing penalties, if strictly enforced, sufficient to deter the packers from violating the lobster regulations?—A. Yes.

Q. Would you cancel the license of a packer who persistently violated the regulations?—A. Yes.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. Yes, sir, it would.

Q. Would you refuse a canning license to an alien?—A. No, because it is only their money that comes into the place. The labour is Canadian and the gear is of Canadian manufacture.

Q. What branch of the lobster industry do you think is the most remunerative to the fishermen and the best calculated to maintain the supply unimpaired, the canning or the live lobster trade?—A. I have had no experience with the live lobster trade.

Q. There are no facilities here for exporting live lobsters?—A. No.

Q. Who fixes the price paid for lobsters, how is it fixed?—A. It is fixed between the fishermen and the packers.

Q. Are you aware of any complaints made by fishermen that the price paid them by the canners is not satisfactory?—A. Well, they do complain sometimes, but we are getting a fairly good price.

Q. Do you think fishermen would make more money if they were allowed to can?—A. It wants experienced men that way. Of course if all the fishermen were to co-operate and hire a canner I believe they would make more money out of it.

Q. But they would also have to face more risk?—A. They would have to take all the risk themselves then.

Q. Have you had any experience as to whether the government hatcheries have helped to maintain the supply of lobsters?—A. No, sir, I have not.

Q. Are you in favour of the establishment of hatcheries?—A. Yes, sir.

Q. Do you know anything about the placing of lobsters in pounds?—A. No, sir, I do not.

Q. What proportion of the lobsters caught in your district are below 8 inches in size?—A. Not more than 6 or 7 per cent.

Q. Would you favour an increase in the size limit to 9 inches?—A. No.

Q. Would you favour any reduction in the present size limit?—A. No, because anything under 8 inches for all there is of them that get into the traps it would not make any difference.

Q. Has there been any noticeable decline in the average size of the lobsters caught in this district during the last ten years?—A. Yes, they are getting smaller.

Q. Has the great decrease in size taken place in the last ten years or previous to that?—A. Previous to that, it was before that.

SESSIONAL PAPER No. 22a

Q. When there was unlimited fishing with no restriction?—A. Unlimited fishing. Everything was taken and it has run the size down.

Q. Do you think that the decline in size has been arrested?—A. I think it is stopping.

Q. You think that it has reached a balance now and the lobsters are not getting any smaller?—A. I think it has reached a balance and the lobsters are not getting any smaller. For the last two years I find that the catch is a little on the increase, they are a bigger size.

Q. On the Pacific coast, where there are numerous salmon canneries, the experience is that they have a good run about every third year and that the intervening years are poor. Do you think that something of that kind exists in connection with the lobster fishery?—A. Yes, I believe there is.

Q. Do you believe there is a regular rotation in connection with the run of lobsters or that these good and poor seasons occur inadvertently?—A. I think it is a regular thing. You will have two or three years and then probably one poor year.

Q. That might be simply due to the fact that you had fine weather for two or three seasons and made better fishing and naturally the fishery would not be so good for a few years afterwards?—A. That will happen three or four times in nine or ten years. There will come a bad year and it looks as if it were a sort of rotation.

Q. Then the decline in size in your opinion, is the natural result of overfishing. it is not due to the growth of a smaller race of lobsters?—A. Oh, no.

Q. What do you think about having different size limits and different seasons in adjoining sections of the coast, do you think that sort of thing is apt to lead to violations of the law?—A. I think so. They should be all alike. If one stops all should stop and they should have the same size limit. I don't see why one should take a small lobster and another one not be allowed to.

Q. You think that in the original condition of the lobster fishery the lobsters would be the same size everywhere?—A. Yes.

Q. Some people claim that on certain bottoms the lobsters are of a smaller size, that where they have a sandy bottom the lobsters never were as large.—A. Well the experience around here is that the lobsters are just as large on a sandy bottom as on rock. On this sand in the harbour there were terrible large lobsters we used to get at the first fishing.

Q. Do you think it is in the interest of the future of the lobster industry that lobsters should be taken before they have reached the age of maturity?—A. No, I would not say it was.

Q. It is stated authoritatively that a strict enforcement of the 8-inch size limit, supplemented by complete protection for the berried lobster and the assistance of hatcheries and pounds, would perpetuate the lobster industry; do you think that?—A. Yes, I do.

Q. Could a size limit of 10½ inches be maintained in this district without detriment to the lobster industry?—A. No.

Q. You know what that would mean. The canneries would have to close down and the lobsters would be exported alive. You have no facilities for doing that?—A. No.

Q. What do you think of the kind of trap now in use? Would more small lobsters escape if there was a greater distance between the slats?—A. I believe they would.

Q. Do you think it would be wise to increase the width between the slats?—A. As they are now, a 7-inch lobster will go through them.

Q. Do you think that when the trap is disturbed the lobster tries to escape?—A. Yes. You take the old-time trap and after a storm you don't find any lobsters when you go out. You take the parlour trap and put it out there and the lobster that gets into it before the storm is there after the storm is over; he is there to stay.

Q. That was the object of the parlour trap—to retain all the lobsters that entered?—A. That was the object of the parlour trap.

9-10 EDWARD VII., A. 1910

Q. But the parlour trap is not used generally on this coast?—A. No, sir.

Q. Is it your opinion that a larger percentage of lobsters will be required to fill a pound can in the fall than in the months of May and June?—A. No, I would not say it would.

Q. In the early years you used to fish throughout the season?—A. Throughout the season.

Q. How did you find the lobsters in the fall?—A. Just as good as they are in the spring. But during the soft shell period the lobsters get poor then. According as the season advances they improve, the same as they do from the spring till July.

Q. Is the statement true that the size limit has never been recognized in this district; do you think there has been any attempt to comply with the law or to enforce the law here?—A. Yes, sir, there has.

Q. What disposition is made of lobsters taken below the size limit?—A. They simply throw them overboard as they take them out of the traps. I have seen men measuring them as they took them out.

Q. Do they have a mark on the boat?—A. They have a mark and measure the lobsters and throw the undersized ones out.

Q. Do you think that lobster fishing should be kept farther off shore; do you think you get smaller lobsters inshore than you do away off?—A. No. In the first of the season we get the lobsters outside and then they move in and we get them as big inside as we do out.

Q. You start the fishing out in deep water and then follow the lobsters with your traps as they move in?—A. Follow them in with the traps.

Q. During what portion of the season is the fishery most actively prosecuted?—A. The month of May. The height of the fishing is in May.

Q. Do you think a reduction in the length of the open season would be an advantage?—A. I don't think so.

Q. Some people have suggested cutting off July altogether, would that make much difference to you?—A. There are not many caught in July anyway, so it would not make much difference. Of course the fewer that are caught the more we expect to catch next year.

Q. You do not think it is possible to maintain the close season for the whole of the breeding period of the lobster?—A. I don't think it is.

Q. It has been asked that fall fishing be allowed in some districts where in spring they do not commence to fish early owing to the ice remaining off the coast?—A. I do not favour fall fishing.

Q. You would have one season and make no change?—A. No change.

Q. Are any live lobsters shipped from this district to the market?—A. No.

Q. Are the existing facilities adequate for the profitable handling of live lobsters?—A. They have not been.

Q. What do you think is required to make it profitable to ship live lobsters profitably?—A. Well, I suppose we would have to have vessels with tanks and rapid transit.

Q. It has been said that in a few years the live lobster trade will do away with canning altogether; does that apply here?—A. No, sir, that applies down in Nova Scotia.

Q. Have you any further suggestion to make?—A. No, sir, nothing that I can think of.

Witness discharged.

Commission adjourned.

PORT DANIEL WEST, July 21, 1909.

J. E. ALEXANDER, packer, Port Daniel West, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. Since 1891.

Q. How many canneries do you control?—A. Three.

Q. Where are they situated?—A. One in Shigawake, one in Port Daniel and one in L'Anse à la Barbe, Bonaventure county.

Q. What other canneries are licensed in your immediate neighbourhood?—A. There are the Hoeggs at Port Daniel, Mr. Foran above me, and Mr. Chatterton packs for me in Hopetown.

Q. Speaking of the cannery in this neighbourhood, what is its capacity?—A. We could pack 1,000 cases if we had the lobsters.

Q. How many boats do you employ?—A. We buy the lobsters from the fishermen.

Q. You have nothing to do with the boats and gear yourself?—A. No, sir.

Q. You buy the lobsters from whoever offers?—A. Yes, we supply the fishermen with what they want in the spring and whoever has lobsters is supposed to fish during the season with us.

Q. What number of hands have you engaged afloat and ashore?—A. About 12 boats fishing for us, single. In the cannery we employ about 10.

Q. Is your annual pack decreasing or otherwise?—A. It has decreased since the time I began.

Q. What is the largest number of cases you ever packed in any season?—A. Between 500 and 600.

Q. What did you pack this year?—A. At L'Anse à la Barbe I did not run this year. In Shigawake we have not put them all up yet. When I was speaking of 500 or 600 cases it was for all the canneries. I do not remember just what number we put up here at any one time. This year we did not put up 100. We have had more traps out before than we had this year; we did not fish as many traps this year.

Q. Has it been difficult to get fishermen?—A. To a certain extent; quite a number are not fishing to-day that used to fish.

Q. I suppose the railway and other works under construction have taken the men away?—A. The men are going in more for farming.

Q. There is not so much fishing done as there used to be?—A. There is not as much.

Q. Did you ever fish more traps than you are fishing now?—A. We had a good many more traps than we have to-day.

Q. Is it your opinion that the supply of lobsters is being kept up by packing lobsters that formerly were rejected as well as by using an increased amount of gear?—A. I think they are taking a little closer in size than they were at the first go off.

Q. From your observation as a canner what do you consider the spawning months of the lobsters to be?—A. We see spawn from the first.

Q. All through the season?—A. Yes, sir.

Q. Do you think there are a larger number showing spawn at a particular time of the season?—A. I think there are a little more at the latter end of the season. About July I think there are a little more then.

Q. Do you believe that the lobsters approach the shore for the purpose of spawning or what brings them in?—A. It is very hard to tell, but it looks as though they

9-10 EDWARD VII., A. 1910

came in because the water was warmer. We get both kinds at the latter end of the season and we don't get any kind outside.

Q. They all come in?—A. They all come in.

Q. Do you think lobster fishing should be maintained farther off shore, and would this enable the schools of immature lobsters which come inshore to be better protected?—A. It does not make any difference, I think, here.

Q. From your observation can you tell whether the lobster spawns every year or twice a year or every two years?—A. I could not say. It looks as though they do not spawn every year because we find some females without the sign of spawn throughout the season.

Q. What is the smallest size at which you have known a female lobster to carry eggs?—A. I have never observed that close enough to say.

Q. At what size would you consider the lobster to be fully matured, can you give us an opinion?—A. No.

Q. Is there any part of the season when lobsters are not fit for food?—A. Not that I know of.

Q. Not even when casting their shell?—A. I have never seen them casting their shell.

Q. Could you give me any idea of the average size of the berried lobsters taken in your district?—A. No, sir, I could not say.

Q. You could not state the percentage of lobsters taken in the traps that bear eggs?—A. No, sir.

Q. Is the practice of stripping or washing off the eggs from the female followed by the fishermen here?—A. I don't know.

Q. Do you think it would be possible to get the fishermen to return to the water all the berried lobsters taken in their traps?—A. I always tell them to do it.

Q. If the canners refuse to accept these berried lobsters would it not have the effect of inducing the fishermen to return them to the water?—A. I think it would.

Q. Do the canners make any scruple about accepting the berried lobsters?—A. I could not say. I know I always told the fishermen not to bring them in.

Q. I suppose they do occasionally bring them in?—A. There is an odd one you will find after they are cooked but not many.

Q. Do you think that the regulation with regard to berried lobsters is being more carefully observed than it used to be; are the fishermen beginning to realize that it is unwise to destroy the egg bearing lobster?—A. I could not say as to that. I know there are some fishermen who have said they don't want to bring them in.

Q. Has it been your practice to make any examination of the lobsters when they are brought in?—A. There are a lot of them under size. If we do not take the undersized lobsters we might as well shut up at once.

Q. If the canner absolutely refused to accept them from the fisherman he would have to shut up?—A. That is refuse to accept the undersized lobsters. The spawn lobsters I always told the boys that are weighing them not to bring them in. There are a certain few that come in but my orders are not to bring in any spawn lobsters.

Q. You say your instructions are when weighing the lobsters to reject or return those with berries?—A. Yes.

Q. These suggestions have been made in the interest of protecting the berried lobsters. To buy from the fishermen all the seed lobsters taken in their traps at a slight advance on the price by the canners and then to either liberate them at once or place them in pounds until the end of the season. What is your opinion of these suggestions and which would you think the most effective?—A. It is pretty hard to say. Of course if they could be placed in pounds where they could not get out and held until the berries would come off it would be all right. If let go the fishermen might keep bringing them in.

Q. They would be caught in the traps and paid for over and over again?—A. They might.

SESSIONAL PAPER No. 22a

Q. What would you think of the proposition requiring canners to pay an increased fee, instead of the 2 cents a case now charged, and in that way realize a fund for the purchase of the seed lobsters from the fishermen?—A. I would not care for that at all.

Q. You would prefer that somebody else should pay?—A. Yes, I think that \$2 a hundred is enough for the license.

Q. What is the size limit in your division?—A. Eight inches I think.

Q. And what is the season during which you may fish?—A. From the 20th April to 10th July.

Q. Could you tell me what proportion of the lobsters taken in the traps is below the legal size limit?—A. I could not say. The inspector, Mr. Veit, came along one day and he measured them, but I never measured them myself.

Q. And you would not care to say what the proportion is?—A. I could not say. I never asked Mr. Veit what they were when he measured mine here.

Q. You have never remarked the proportion in the cannery for yourself?—A. I never measured them, sir, I could not begin to say.

Q. If the present size limit were strictly enforced what effect would it have upon the canner?—A. As I was saying I think we would mostly close up. The fishermen would not think they got enough to pay for their time fishing.

Q. Then you do take the undersized lobsters?—A. Yes, sir.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. It would have that tendency. The more traps that were set the more lobsters would be caught.

Q. It is stated in certain districts that no lobster canner could continue packing and observe the law regarding the size limit?—A. I think that is right.

Q. You would say then that the percentage of undersized lobsters is pretty large?—A. In some cases. There are some days when there are not many and there are other days when there are a lot of them.

Q. An 8-inch lobster is not a very large lobster?—A. It is not very large.

Q. If the law were strictly enforced would it handicap you very much?—A. Of course I never measured them to know just exactly, but that is my opinion of it. I might be wrong, but I am under that idea.

Q. Would you favour an increase or decrease in the present size limit?—A. Of course I do not think there is so much in the size of the lobster as there is in the spawn lobster.

Q. You do not believe in taking the spawn lobsters?—A. No.

Q. You do not think it is as serious to take small lobsters?—A. No.

Q. Has there been any noticeable decline in the size of the lobsters caught in your neighbourhood within the last ten or the last thirty years?—A. There has been a decline in the size.

Q. The lobsters do not run as large as they originally did?—A. No, the lobster is not quite so large.

Q. Do you think that the decrease is still continuing?—A. I hardly know. The run last year appeared to be as good as the last few years I think.

Q. You made a better pack this year than you did last year did you not?—A. A little better.

Q. When was lobster canning first introduced into this neighbourhood, how long is it since you first began to pack here?—A. It must be thirty years.

Q. To what cause do you attribute the decline in the size of the lobster?—A. I think it is the extra amount that is being caught.

Q. It is the result of overfishing you think?—A. I think so.

Q. Do you think that different size limits and different seasons in different sections are unsatisfactory and apt to encourage violations of the law?—A. I would not think so. Our factory here we generally close up about the middle of June. Take it

9-10 EDWARD VII., A. 1910

up in Hopetown the fishing is as good in the latter end as it is in the beginning. Even if there was a longer close season it would not affect us here. We generally close up as soon as the lobsters get too scarce.

Q. Is there any reason for having a smaller size limit in this district than in other districts?—A. I don't know as to that.

Q. When lobster fishing first commenced do you not think that the lobsters all over the coast were pretty much of the same size?—A. I should think the lobsters ought to travel up and down the shore.

Q. Is it in the interest of the future of the lobster fishery that lobsters should be taken before they have reached the age at which reproduction takes place?—A. You see we are packing the female lobsters all the time, I suppose there are as many females right along in the pack big and small.

Q. Do you not think it must seriously affect the permanence of the fishery if we continue to take immature lobsters before they have reached the size at which they can reproduce themselves?—A. I suppose if it were done too much it might.

Q. What disposition is made of the lobsters taken below the size limit?—A. Well, if they are too small we put them in the water again.

Q. What would you call 'too small'?—A. Something between 7 and 8 inches. Anything smaller than 7 inches would be rejected; in fact I would rather think they would all be put back up to 8 inches. We don't want those small ones.

Q. Is it invariably a fact that the larger the lobster the smaller number it takes to fill a pound can?—A. Yes.

Q. Some people have claimed that there is a medium run of lobsters that are the most profitable to pack; that the larger lobsters are not almost completely filled?—A. In the early part of the season they are not; they are thinner.

Q. It has been estimated that it takes nine 7-inch lobsters, which have not reached the age of reproduction, to fill a one-pound can. What effect is the continued fishing of these immature lobsters going to have upon the future of the lobster industry?—A. I don't know how many small lobsters it takes to fill a pound can; I never took count.

Q. The statement has been made authoritatively that a strict enforcement of the eight-inch limit together with the assistance of hatcheries and pounds would perpetuate the lobster industry; do you concur in that?—A. Of course it is a very hard question to know what it would be in the future.

Q. Would you favour reducing the size limit to 7 inches?—A. I would just as soon keep it at 8.

Q. Would you favour abolishing the size limit altogether and in return shorten the season and more strictly enforce the berried lobster regulation?—A. How much do you suppose they would want to shorten it?

Q. That is a matter for consideration. Take your own case, you say you never pack up to the close of the season and I suppose the other cannery do the same thing?—A. Take it in Hopetown. The fishing is good towards the latter end and the first of the season is not so good. I think it would be a good idea to shorten the season some, abolish the limit and be stricter on the berried lobster.

Q. Could a size limit of 10½ inches be maintained here without detriment to the lobster industry?—A. No.

Q. Is it the case, as stated by some, that at least 30 per cent more lobsters in number are required in the fall than in the months of May and June to fill a pound can?—A. It would not take so many. The farther on they go in our season the less number it takes.

A. Are the cannery compelled to accept undersized and berried lobsters for fear of losing their fishermen who would, in case of refusal, to accept illegal lobsters, go to other cannery less scrupulous?—A. Yes, sir.

Q. If you did not take them somebody else would; that is your belief?—A. Yes, sir.

SESSIONAL PAPER No. 22a

Q. Can you tell me how many pounds weight of green lobsters to each size it takes to fill a pound can?—A. No, sir, I have never gone into that.

Q. It has been suggested that for the better control of the lobster fishery the fishermen should be required to register and take out a license at a nominal fee; what would you think of that?—A. I don't think there is anything in that.

Q. Do you think it would have the effect of leading the fishermen to observe the law more strictly and report such violations as they happened to notice?—A. No, sir.

Q. If strictly enforced, are the existing penalties sufficient to deter packers from violating the regulations?—A. I think so.

Q. In the event of persistent violation of the regulations by a canner would the preservation of the lobster industry demand the cancellation of that man's license?—A. I don't know. I think all hands are taking in the same.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry, and should the issuance of further licenses be discouraged?—A. I think there are too many at it now.

Q. Under the present regulations, new licenses are not being granted, and failure on the part of a canner to operate his factory renders him liable to forfeiture of his license if he intends to resume canning; do you think that regulation is a good one?—A. Yes, sir.

Q. In the interest of the lobster industry would you favour a general closing down for some years?—A. If it could be done in all our waters here it would be all right. But if they closed us down here and allowed them to fish at Miscou, or on the other side, I don't think it would be a benefit.

Q. Would you approve of the creation of temporary reserves, to be moved from place to place along the shore in succession, in which lobster fishing should be prohibited?—A. I would not approve of that.

Q. If you had to close down you would like to have it general?—A. Yes. I think the lobsters follow the bait from one place to the other.

Q. During what period of the season is the lobster fishing most actively prosecuted here?—A. In the month of May.

Q. Is the present regulation regarding the close season satisfactory?—A. Yes, sir.

Q. What change in the regulation would you suggest and why would you advise it?—A. The way it is, as soon as the lobsters get too scarce, we shut up anyway before the close of the season.

Q. At what date have you generally closed down?—A. I could not say. This year we did not fish after the 21st June. I think the factory closed a short time before that. I had to take the lobsters up to Shigawake. It was to oblige the fishermen that I took them; they were not worth packing here.

Q. What in your opinion would be the ultimate effect of a shorter open season, with no restrictions as to size limit?—A. There would be more of the spawn lobsters saved that way, that is if they were taking them.

Q. It has been asked that fall fishing be allowed in some districts where they are not able to commence early in the spring owing to the ice remaining on the coast?—A. I would not advise any fall fishing.

Q. Is the present regulation restricting the number of canning licenses satisfactory?—A. Yes, sir.

Q. Are you in favour of limiting the issuance of licenses to pack?—A. Of course it is this way: You take a man who has his money in the fishing industry, it is not easy for him to turn round and make any use of it when he is only getting a bare living out of it.

Q. Would you grant a license to pack to any one who applied for it?—A. I would not think of it unless there was another man had more than he should have. Where the ground is already well occupied, I don't think there should be another factory,

9-10 EDWARD VII., A. 1910

but where there is a long strip of country not in occupation it would be all right. Of course, there are some places where the canneries are thick.

Q. Do you think it would be possible or right to establish a standard of fitness for a license to can?—A. I don't know about that, what do you mean?

Q. Supposing we had decided to give a license to every man that applied, we would still need to have a provision that the cannery must be up to a certain standard of equipment or capacity; it would not do for lobsters to be put up in any kind of a shack?—A. I think that would be only right.

Q. Would you have any objection to the product of your canneries being inspected?—A. No, sir, not at all.

Q. Do you think this inspection could be made by the existing staff?—A. I think so. I think, for example, Mr. Veit, of Gaspé basin, could inspect each factory as he went along.

Q. Would you refuse a canning license to an alien?—A. No, not if it was not running against some other man in the place. I think the people of the place should have the preference.

Q. Do you think the fishermen would make more money if they were allowed to can?—A. No, they would not.

Q. What do you think of the policy of encouraging the fishermen to co-operate in canning?—A. It may be all right. I have never thought anything about the subject. However, it has never arisen here.

Q. There are no co-operative canneries in this district?—A. No.

Q. What price is paid for lobsters?—A. \$2.35.

Q. And how is that price established?—A. There is no combine, but I generally tell my fishermen in the spring I will pay whatever the rest pay.

Q. You say there is no combination on the part of the canners to keep down the price?—A. No.

Q. How does that price compare with the price paid originally when you began to can?—A. I paid 50 cents a hundred when I commenced.

Q. Of course, your lobsters bring a great deal more now than they did then?—A. They bring a little more, yes.

Q. Are you aware of any complaints made by the fishermen that the price paid by the canners is not satisfactory?—A. No, sir.

Q. I suppose they think they ought to get a little more?—A. They would not make any objection on that score, I suppose. However, there is no big kick, so far as I know.

Q. Do you know of any instance where a fisherman has lost his catch of lobsters through the canner refusing to accept them?—A. No, sir.

Q. Have the canners reduced the price here by reason of abnormal market conditions, or for other causes?—A. We have made no change here, although I have heard it said that in other places they have done so.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of the canners to operate their factories, although a sufficient supply of lobsters was available; has any such instance come under your notice?—A. No, sir.

Q. It has been asserted that if the catch of lobsters was further lessened or curtailed, the canners would have to shut down; what is your opinion on that point?—A. If we got less lobsters we would have to shut down; if they went much less.

Q. What market would the fishermen in this district have for their lobsters if the canneries were closed?—A. There is no other market.

Q. There is no export trade in live lobsters here?—A. No, sir.

Q. Are any live lobsters being shipped from your neighbourhood?—A. Not that I know of.

Q. Should the shipment of live lobsters be favoured in preference to the canning trade?—A. I don't see why.

SESSIONAL PAPER No. 22a

Q. Are the present facilities adequate for the profitable handling of the live lobster trade?—A. You would have to have refrigerator cars and fast trains. There are no facilities of that kind here.

Q. From your experience, can you say whether hatcheries would help to maintain the supply of lobsters or not?—A. I cannot say, I have had no experience.

Q. Have you had any experience of pounds?—A. No, sir.

Q. Are there any places here where tidal pounds could be established?—A. I would not think so on this coast because the storms would wash them all away.

Q. Could you suggest any alteration in the construction of the trap which would permit the escape of immature lobsters? It has been suggested that the slats could be kept farther apart?—A. If they were kept farther apart the small ones could get out, I think.

Q. The creation of a Fisheries Board to advise the department in regard to the management of the fisheries in the maritime provinces has been suggested, would you approve of the idea?—A. It might be a good thing.

Q. Is there any other matter connected with this inquiry upon which you would like to express an opinion?—A. Not that I know of.

Witness discharged.

DAVID JOURNEAUX, fisherman, Port Daniel, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. I have been fishing now about 27 years.

Q. Have you always carried on your lobster fishing on this part of the coast?—A. Yes.

Q. You have no station of the Fishermen's Union here?—A. No.

Q. How many other fishermen are engaged in the lobster fishing in this immediate locality?—A. I cannot tell you.

Q. A considerable number?—A. There is quite a few, I cannot say how many.

Q. Could you give me any idea of the number of boats employed?—A. I cannot tell you that.

Q. How far off shore do you fish and in what depth of water?—A. In the spring of the year we fish in about 60 feet of water.

Q. As deep as 10 fathoms?—A. 14 fathoms sometimes.

Q. When you first put out your traps do you fish as many as later in the season?—A. I just fish the same.

Q. How many traps do you fish yourself?—A. This year I only fished 50, last year I fished more.

Q. Do you move your traps inshore as the season advances?—A. I just move them the once. I move them in from about 12 fathoms of water to about 7.

Q. How far off shore would the fishing be here; you would get about 14 fathoms without going very far?—A. It would be, I would say, about four acres off.

Q. Is the annual catch decreasing?—A. Yes.

Q. Has the catch decreased within the last 10 years?—A. Well, some years it has and more years it has not. Last year it was not as good a pack as a few years ago, and this year I find a better catch than last year.

Q. That is to say a better run of lobsters?—A. A better run of lobsters in the first part of the spring.

Q. Are the lobsters as large as when you first began to fish?—A. No.

Q. Have you to fish now an increased amount of gear to get the same weight of lobsters as you obtained when you began fishing?—A. I guess just about the same.

9-10 EDWARD VII., A. 1910

Q. You think you take the same weight of lobsters now with the same amount of gear as when you began fishing?—A. Oh, no. When we began fishing we took more weight, the lobsters were larger.

Q. Then do you think it takes an increased amount of gear to get the same weight of lobsters to-day?—A. Yes, sir, I do.

Q. Than it did when you first began fishing? Has the number of traps increased considerably?—A. Well, they did three or four years ago, or eight years ago, but not within the last two or three years because the fellows don't fish, a good many of them have quit.

Q. Do you think the same diminution in the size of the lobsters is going on now that went on previous to ten years ago?—A. Well, I cannot say as to that.

Q. Do you think that the decrease is being arrested, that it is not as great as it was?—A. It is not as great as it was years ago. The fishing is better than it was last year, and next year it may be better than this spring.

Q. There is a feeling in some places that the decrease has practically stopped, that it is not going on, that the great damage was done previous to ten years ago when there was a great deal of fishing and perhaps no regulation of the fishery at all, that under the present regulations the decrease is being controlled?—A. I don't know whether it is.

Q. There is less gear here now because there are fewer canners?—A. There are less lobsters taken. There are not as many canners and not as many fishing.

Q. Is there any difference in the trap compared to what it was when you began to fish?—A. No, sir, there is a hoop on each end.

Q. And the same space between the slats?—A. Yes, sir.

Q. And the same sized hoop?—A. No, I used to make my bows four feet long and now I only make them three—the hoop bows. I don't find much difference, but you may pick up a trap with a bow a little bigger.

Q. Is it your opinion that the supply of lobsters is being kept up by taking smaller ones than you formerly took?—A. Yes, sir, I think so.

Q. Do the fishermen own the boats and gear with which they fish, or do these belong to the canner?—A. I cannot tell you about other canners, I know nothing about them. But the fishermen here own their own boats, rigging, nets and everything.

Q. It has been suggested that for the better control of the lobster fishing, the fishermen should be required to register and take out a license at a nominal fee. Do you think this would have the effect of making the fishermen more careful as to the size and sex of the lobsters they took?—A. Well I don't see that it would. When we go out to our traps and the lobsters are getting slack we bring our traps ashore, we don't care whether the factory is closed or not.

Q. When it does not pay you any longer to fish you stop?—A. Yes, sir.

Q. And is it the case generally with most of the fishermen on the coast that they are not compelled to continue lobster fishing, that there are other things to which they can turn their hands?—A. Yes, sir.

Q. How does the price paid for lobsters now compare with that paid when you first began to fish?—A. It is a big difference on the fishermen, but I guess it is as big a difference on the canner too. The first year I fished I got 35 cents a hundred weight fishing for Mr. Hoegg.

Q. But you had less trouble in getting a hundred weight of lobsters then?—A. I had less trouble in getting a hundred weight. Still I do not have as much trouble in getting my \$2.35 now as I did then.

Q. Then you consider you make more money now at the present rate than when you began?—A. Yes, comparing what the canners paid then and what they pay now.

Q. Is there any competition in the matter of price or are you forced to accept any rate that the canners offers?—A. They have all got the same price. They mostly give it to one or the other, you will get no more.

SESSIONAL PAPER No. 22a

Q. Do you think there is any arrangement among the canners to keep the price down to a certain figure?—A. I cannot say as to that, I do not think there is.

Q. You are satisfied with the price you get?—A. I am satisfied with the price, but, of course, we want all we can get out of it.

Q. What are the regulations that you are supposed to observe in this district?—A. We are supposed to take our lobsters 8 inches in size, but we take them smaller. I will tell you that before you ask me.

Q. Then as to the fishing season?—A. We fish from April 20 to July 10.

Q. What is your practice with regard to small and berried lobsters?—A. There is very few small ones that we heave away, but I have hove away spawn lobsters.

Q. Is that your general practice?—A. Yes, sir.

Q. You realize the fact that it is wrong to take the berried lobster, do you?—A. I do, and to my knowledge I just got three spawn lobsters this spring.

Q. You only got three spawn lobsters?—A. That is with eggs on them.

Q. Do you take to the factory everything that you get?—A. No, sir.

Q. You return to the water the very small ones?—A. We do, certainly. A lobster under 6 or 6½ inches is no good; it is no use for anything, it is no use for the buyer or the man that catches it.

Q. Do you expect the canner to take all the lobsters you bring to him regardless of whether they are undersized or have berries on them?—A. That is left to themselves. If they don't take them then they lose them. If they object to taking them we have to put them in the water again.

Q. You understand the necessity for the regulations that exist and realize that it is wrong to violate these regulations?—A. Yes, sir, certainly.

Q. From your observation as a fisherman, what do you think is the spawning season of the lobster?—A. Take from June 20 up to August 1, that is about the time they spawn. I think there are the most spawn lobsters then.

Q. Do you get more spawn lobsters when you move in than when you begin to fish?—A. I don't know whether you do or not. I think it was this spring, the second or third day I fished, that I got a spawn lobster outside. I got three to my knowledge this summer and two were caught outside.

Q. Is there any time of the season when the lobsters are not fit for food?—A. Not that I know of.

Q. Do you see many soft shell lobsters?—A. No, sir.

Q. I suppose you would if you fished much later in the season?—A. Yes, sir, that is the reason I think we don't see many because we quit fishing before they shell.

Q. What is the smallest size at which you have known the female lobster to carry eggs?—A. Well, I cannot tell you, they are generally the big ones.

Q. What would you say was the average size of the female lobsters that pass under your notice?—A. From 7 to 9 inches.

Q. Have you ever seen lobsters of less than 8 inches in size bearing eggs?—A. I cannot say, I have not taken notice of them.

Q. What would you think of the idea of requiring the canner to pay a larger fee and in that way raising a fund for the purchase of the seed lobsters from the fishermen?—A. I don't know. Of course I don't think it is right to take the seed lobster at all.

Q. Is the regulation for the protection of the berried lobster fairly well observed?—A. I think so.

Q. Could you suggest any change in the regulation?—A. Well, I think if it was to finish up after the factories were closed at the end of June. The weather is generally hot about July 1 and the lobsters get pretty well on the beach and I think it is to spawn.

Q. You would favour closing at the end of June?—A. Yes, sir.

Q. When do you knock off fishing yourself?—A. I never fish any later than the 15th or 20th of June.

9-10 EDWARD VII., A. 1910

Q. Is the practice of stripping or washing off the eggs from the female lobsters followed by the fishermen in this locality?—A. I cannot tell you as to that.

Q. Have the canners in your neighbourhood ever objected to accepting berried or undersized lobsters?—A. I cannot tell you as to that.

Q. Have you ever been told by the canner that you should not bring in any berried or small lobsters?—A. Yes, sir, I have been told that.

Q. Is it to your knowledge that the canners makes any examination for the purpose of detecting undersized or berried lobsters?—A. Yes, sir. I heard Mr. Alexander saying here one day not to bring in any of these small lobsters.

Q. Is it possible, in view of the manner in which lobsters are delivered at the factory, to make a strict examination so as to separate the berried fish from the others?—A. I do not think so.

Q. Would there be any great difficulty in doing that?—A. I think there would be a whole lot.

Q. If the canner refused to accept berried or undersized lobsters would it not have the effect of leading the fishermen to return them to the water?—A. They would have to.

Q. Is it the practice in this district to avoid dealing with a canner who is known to be careful about undersized and berried lobsters and to go to other canners who are less scrupulous?—A. I cannot say. I never changed. I fished for Mr. Hoegg until Mr. Alexander came 17 years ago and I fished for him since.

Q. Do you think it would be possible to get the fishermen to return to the water all berried lobsters taken in their traps?—A. I think so. There would be no trouble whatever explaining the matter to them and telling them. I think there would be no trouble at all.

Q. What do you think would be the best way to get them to do that? The fishermen are not all alike?—A. I think for the canner to tell the man that brings the spawn lobsters or small lobsters that he will take no more but report him. I think it is very simple to get them to stop.

Q. Do you think it will be possible to buy from the fishermen all the berried lobsters taken in their traps and have these lobsters placed in pounds and retained until the close of the season?—A. No, sir, it would not pay. It would not pay the fishermen. It would pay them better to heave them overboard as they are doing and let them hatch themselves.

Q. Is there any period during the fishing season when berried lobsters are more numerous than at other times?—A. I have never noticed.

Q. Are you aware of any fisherman having lost his catch of lobsters through the refusal of the canner to accept them?—A. No, sir, they are generally too glad to get hold of them.

The Lobster Commission of 1898 recommended the establishment of temporary reserves at various points along the coast in which fishing should not be allowed for one or two years, the location of these reserves to be changed from time to time; what do you think of that?—A. I would be almost with them there. Of course if the lobsters are taken any smaller than they are taken they are of no use. They would have to close the factories because the fishermen would shut down. It won't pay the fishermen to put the traps out and take them as small as they are taking them.

Q. The recommendation of the Commission in question was that fishing should be closed down in certain sections of the coast for a term of years, and then go on to other sections from time to time, and in that way allow the lobsters to recuperate in the several sections.—A. I don't see that would be any use in the world because if I got out my traps here, and there are no traps out 20 miles away, the lobsters will go on the hunt for bait. Then if I get all the lobsters here I am going to make a big haul.

Q. Are the present regulations restricting the number of canning licenses satisfactory to the lobster fishermen?—A. I think so.

SESSIONAL PAPER No. 22a

Q. Would you favour issuing a license to every man competent to pack?—A. No, sir.

Q. What market would the fishermen in your district have if the canneries were closed?—A. None.

Q. If the present size limit of eight inches were strictly enforced what effect would it have upon the canneries here?—A. Well, I think if they followed up 8-inch lobsters they could go on. It would not compel the canneries here to shut down because we counted them twice this summer.

Q. Would an increase in the number of canneries result in an increased pack of small lobsters?—A. It would certainly.

Q. Would you favour the encouragement of the live lobster trade in preference to the canning industry?—A. Oh, no. There is no way of getting live lobsters shipped from here.

Q. In the interest of the fishery would you favour closing down the canneries for a number of years?—A. Yes, sir. If they closed them everywhere I would be with them.

Q. It has been alleged that in some instances fishermen have suffered injury owing to the failure of those holding canning licenses to operate their factories although a sufficient supply of lobsters was available; do you know of any such cases?—A. No, sir.

Q. Who fixes the price paid for lobsters?—A. Well, it used to be the packers and now you may say it is the fishermen as well as the packers.

Q. And the price is fixed by mutual agreement?—A. Yes, sir, because we will go to one packer and he will say: 'I will pay whatever the other fellow pays.'

Q. Then there is no combination among the canners to keep the price down?—A. No, sir, not a bit.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. No, sir, they would not.

Q. Within your experience have the canners on account of abnormal market conditions, or for any other reason, reduced the price paid for lobsters to fishermen?—A. I don't know, I don't think it.

Q. You have had no experience with regard to hatcheries?—A. No, sir.

Q. Are you in favour of establishing a hatchery in this neighbourhood?—A. I don't think it is any use because the water is too dirty after every little brush of a storm. You can go into twenty fathoms of water and it is discoloured with red mud all along the shore.

Q. Is it the same all along the coast?—A. Right along the coast.

Q. Is it the same too in Port Daniel bay?—A. The very same. I have seen it right along the coast for two miles back. After every storm it is terrible.

Q. What would you say in regard to the feasibility of placing berried lobsters in tidal pounds, with the salt water flowing in and out, for the purpose of hatching out spawn?—A. You cannot do that here.

Q. There are no suitable places here for establishing pounds?—A. No, sir.

Q. Would you favour any change in the size limit in this district?—A. No, I think it is all right the way it is.

Q. Has there been any noticeable decline in the average size of the lobsters caught in this neighbourhood in the last ten years?—A. As I said before some years the lobsters are larger than in others.

Q. The run of lobsters varies?—A. Last year at the first start they ran very small. This year there was a fine run of lobsters.

Q. Then the run is not always absolutely the same?—A. No, sir.

Q. Do you think there is any alteration in the run, do you have good years and bad years in alternation?—A. Yes, sir, I do.

Q. Would you admit the decrease in the size of the lobsters is the result of over fishing in times gone by?—A. Yes, sir, certainly.

9-10 EDWARD VII., A. 1910

Q. What do you think of the system of having different size limits and different close seasons in adjoining sections of the coast?—A. Well, I don't see that it will make much difference. I think the fishing season is all right only, as I say, I would have it closed about the 1st July.

Q. But that closure should be a general one?—A. A general one.

Q. Not for one section only as compared with another?—A. No, sir.

Q. You think you would ultimately benefit by that arrangement?—A. I think so.

Q. Is there any reason why the size limit should be smaller or larger in your division than in any other division?—A. No, sir, I don't think there is any occasion for it at all.

Q. Do you think that when lobster packing first commenced in the Gulf of St. Lawrence, say about thirty years ago, lobsters were very much the same size all over?—A. I think so, and they are pretty much the same size to-day all over I think.

Q. Is it in the interest of the lobster fishery generally that lobsters should be taken before they have reached the age of maturity?—A. No, sir, they should not be.

Q. The statement has been made authoritatively that a strict enforcement of the 8-inch size limit, together with the assistance of hatcheries and pounds, would perpetuate the lobster industry?—A. I don't think the hatcheries are of any use at all except to kill what few you put into it along this coast. It is a muddy coast and I consider the hatcheries are of no benefit in the world. If the fishermen hove the lobsters into the water they would propagate quicker and better than in a hatchery.

Q. Would you alter the present trap in any way so as to allow the small lobster to escape?—A. I don't see that there is any change necessary.

Q. You have never fished hoops here?—A. No, sir, but I have trawled.

Q. You have trawled with cod heads?—A. Alongside the shore in three fathoms of water and the lobster won't let go until you bring him to the surface of the water.

Q. Is it true that a larger percentage of lobsters would be required in the fall than in the month of May and June to fill a pound can?—A. After the spring fishing I don't see any difference.

Q. Do you think that lobster fishing should be kept out farther from the shore?—A. You could not do it.

Q. During what portion of the season is the fishery most actively prosecuted here?—A. In May.

Q. With respect to changes in the season you have already suggested knocking off 10 days in July?—A. Yes, sir, I would.

Q. In your opinion would a shorter open season for fishing with no restrictions at all with regard to the size be advantageous?—A. I would say that cutting off a week and a half or 8 or 10 or 15 days would.

Q. It has been asked that fall fishing be allowed in some districts owing to the delay in commencing the fishery in the spring caused by ice remaining off the shore; what do you think of that?—A. I would not approve of it here.

Q. Is there anything else you would like to suggest?—A. Nothing except that the factories should open about the 1st of May and close about the 1st July. The great majority of the fishermen put their traps out about the 20th April, and the like of that, and some of them keep them out at Hopetown up to the 10th July, whereas they close here the 1st July. I think the factories should be all treated alike, open 1st of May and close down on the last of June or the 1st July. It is not a bit of use to close up the factories on this shore and leave them open on the other shore with just an alleyway between the two shores. As to people packing their own lobsters it requires capital and experience to do that.

Witness discharged.

Commission adjourned.

NEW BRUNSWICK.

LEMEQUE, July 22, 1909.

EUGENE L. ROBICHAUD, canner, Lemeque, called and sworn:—

By the Commissioner:

Q. How long have you been packing lobsters?—A. 32 years.

Q. Have you always packed in the same place?—A. No, I packed for about 15 years at Little Shippigan. Before that on the outside shore at St. Marys. Now I have only one cannery.

Q. Are there many canneries near you?—A. Yes, there are five within about two miles.

Q. How many boats do you employ at your cannery?—A. Seven boats, fishing two men to a boat.

Q. How many hands do you employ in the cannery?—A. About 28 altogether.

Q. What number of cases did you pack this year?—A. 271.

Q. What is the largest number of cases you ever did pack there?—A. The third year we packed 700 and some odd cases.

Q. Is the catch of lobsters getting poorer?—A. It is very hard to tell. There are so many more fishing and so many more traps.

Q. How many traps did you fish this year?—A. 1,600.

Q. How many used you to fish when you began to pack?—A. At first it was 200 to a boat and there was about 1,000 traps. The number grew every year, and there is about 1,600 now.

Q. Are the lobsters as plentiful now as when you began?—A. When we began we fished all the season until the last of August.

Q. There were no regulations?—A. No.

Q. Do the fishermen own the traps and boats or do you supply them?—A. I hire the men by the month.

Q. And you supply all the gear?—A. Yes.

Q. What month do the lobsters spawn in?—A. A good many spawn all the year, but July is the month most of them spawn in. We find some early in the spring with spawn.

Q. Do you find very many lobsters with berries on them here?—A. No, not very many.

Q. What time do you find most of the lobsters with berries on them?—A. It is the same all along, a few every catch.

Q. Do the fishermen here follow the practice of stripping or washing the eggs off the berried lobsters?—A. No.

Q. What do the fishermen do with the berried lobsters taken in the traps?—A. They take them ashore.

Q. How about the little ones?—A. They take every one.

Q. They all go to the cannery?—A. Yes, sir.

Q. The canners make no objection to taking them?—A. No.

Q. If the canners refused to take them what would happen?—A. If they refused to take them the fishermen would put them into the water again.

Q. What would be the best way to save the berried lobsters?—A. I think the best way is to return them to the water again.

Q. If the fishermen do not do that, what would you suggest should be done to save them?—A. If they don't do that we have to pack them.

9-10 EDWARD VII., A. 1910

Q. Do you think it would be possible for the canner to pay a higher fee than 2 cents a case and thus raise money for the purchase of the seed lobsters from the fishermen and hold them in pounds?—A. It is hard enough to stand it as it is. If we have to pay more it would be difficult.

Q. What is the size limit in this district for lobsters?—A. There is no law here, only the season. We can pack any kind of fish we like. The fish warden never told me not to take lobsters, spawn lobsters or anything.

Q. But the law fixes the size limit at 8 inches?—A. Yes, I heard that.

Q. What proportion would you say of the lobsters that come to your factory are less than 8 inches in size?—A. Not many less than that.

Q. How many out of every 100 lobsters would be less than 8 inches in size?—A. In the spring I don't think there would be 5 in 100, but in July or the last of June there are more small lobsters.

Q. When you begin to fish in the spring do you put your traps farther out in deep water?—A. In deeper water.

Q. And it is there you get the bigger lobsters?—A. Yes, sir.

Q. And as the season advances you move your traps in?—A. Yes, nearer the shore.

Q. And it is towards the close of the season when you come into shoal water that you get the smaller lobsters?—A. When they slack outside all the big lobsters come right in to the channel and they stay there during the month, we cannot get them. The small ones come on the reef in shoal water at a fathom or a fathom and a half. That is where we fish. We don't take the big lobsters then and we don't take the female lobsters, they all keep in the channel.

Q. And you fish in the channel?—A. It is no use to put traps in the channel, we cannot take any. After the 15th July we could take them. Twelve months ago in the month of May, we put traps in the channel and after the 15th July we got big fish over a foot long. Every second or every third day I sent a boat to see those traps in the deep water. After a few days we got a few and had to bait the traps. Next day we got 800 pounds in 100 traps. I told my men not to tell anybody we got them. The next day I sent there were none. I sent three days and there were none. So I had the traps taken out. I did not try it again, I thought it was no use.

Q. What is your opinion of the present regulations?—A. I think they are all right, but I would like a longer season, because after July we could get plenty of fish. If every factory was fishing there after July they would kill the female lobsters out. Outside the harbour they do not do much harm. If we had to fish in the harbour in July we would take all the female lobsters.

Q. Is there anything else you would like to say?—A. That is all.

Witness discharged.

PHILIP LUCE, canner, Little Shippigan, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing industry?—A. Eleven years for myself.

Q. And before that?—A. I was 10 or 15 years.

Q. In charge of canneries?—A. Partly in charge and partly fishing.

Q. Where is your cannery situated?—A. Little Shippigan.

Q. And before that where were you engaged?—A. I was working for J. W. Windsor on the Mal bay shore.

Q. Are there many other canneries in the neighbourhood where you are now canning?—A. Yes, sir, there are three or four.

Q. How many boats do you employ yourself?—A. Seven.

SESSIONAL PAPER No. 22a

Q. What number of hands to a boat?—A. We employ two fishermen to each boat.

Q. What number of men women and children are employed in your cannery?—A. Some 30 people.

Q. What would you consider the capacity of your cannery, the canning capacity?—A. About 300 cases.

Q. What was your pack this year?—A. Three hundred cases.

Q. What was the largest pack you ever made in that cannery?—A. My largest pack was about 400 cases with 4 boats.

Q. How long ago was that?—A. That was seven years ago.

Q. Do you think you are obliged now to use more gear and more endeavour to keep up your pack?—A. I think so.

Q. Are you fishing now a larger number of traps than you used to fish formerly?—A. Well not to each boat.

Q. You are fishing more boats?—A. More boats.

Q. What number of traps are you fishing now?—A. About 1,700 traps.

Q. How many did you fish when you first began to can?—A. The year I fished 4 boats I had 1,100 traps.

Q. Is it your opinion that the supply of lobsters is being kept up by taking lobsters that formerly would have been rejected as well as by using an increased quantity of gear?—A. I don't think so.

Q. Do the fishermen own their own boats and gear?—A. We own all.

Q. How are the fishermen paid?—A. Monthly.

Q. They are all wages men?—A. Yes.

Q. Is that the general rule about here?—A. On our shore inside I think. Very few I think outside of that.

Q. From your observation as a canner what do you consider the spawning months of the lobster to be?—A. July.

Q. Do you find a larger number of berried lobsters in the traps during that month?—A. Yes, from about the 1st of July, I think, there is a larger number.

Q. Is it the practice here to begin fishing farther off shore in the early part of the season?—A. Yes, sir.

Q. And as the season advances you move your traps closer in?—A. Yes, sir.

Q. Do you believe that the lobsters come close to shore for the purpose of spawning?—A. Yes, sir.

Q. Do you think it would be possible to maintain the lobster fishing farther off shore?—A. I don't think so.

Q. It has been said that if the fishery could be maintained farther off shore the smaller and berried lobsters would escape, they would go inside. Could you from your observation give us any idea as to the spawning habits of the lobsters? Some people maintain that they spawn every year, others that they spawn twice a year and others again that they spawn only every second year; have you ever come to any conclusion on that point yourself?—A. I don't think they spawn every year, that is not the same lobster I mean.

Q. What is the smallest size at which you have known a female lobster to carry eggs?—A. Between 7 and 8 inches.

Q. Not below 7 inches?—A. I don't think so, not any smaller.

Q. At what size would you consider the lobster to be fully matured?—A. It depends. Some go to quite a size.

Q. I suppose you would consider a mature lobster to be one that was capable of bearing eggs?—A. Yes, sir, certainly. Some of them are quite large.

Q. Is there any part of the season when lobsters are not fit for food?—A. Yes, sir.

Q. What part of the season?—A. I mean at any time when July sets in. From that until about the first of August.

Q. All through the month of July?—A. All through the month of July. At this time of the year anyway.

9-10 EDWARD VII., A. 1910

Q. Could you give us an idea of the average size of the berried lobster?—A. I think they go over 8 inches—between 8 and 9 inches to the average.

Q. Do you find many large lobsters bearing eggs?—A. Yes, sir, there is quite a few. They probably would go over 8 inches, as high as 9. I know they are quite large.

Q. What percentage would you say, of the total number of lobsters taken in your traps are egg-bearing lobsters?—A. If we had to take this season for it we would have very few berried lobsters. We have seen very few this year.

Q. What do you attribute that to?—A. Gales of wind in my opinion. They made their shelter when it was blowing and we were not fishing. I don't know if I am right but that is my opinion. They get into these bays, lagoons and coves.

Q. At what period of the season do you take most of the berried lobsters in your traps?—A. They strike us about the 20th June to the 1st July, from that on to the close of the season.

Q. Is the practice of stripping or washing off the eggs followed here by the fishermen at all?—A. Not that I know of.

Q. Do you think it would be possible to get the fishermen to undertake to return to the water all the berried lobsters they capture?—A. Yes, certainly.

Q. How would you propose to have it done?—A. The packer himself would have to carry that out by weight or by wages.

Q. That leads up to the next question: If the canner refused to accept these berried lobsters, would it not have the effect of inducing the fishermen to return them to the water?—A. Certainly, but you don't want to see them coming ashore in a boat, you want to liberate them at once.

Q. Do you think that by the time they reached the factory it would be impossible or useless to save them?—A. Some days it would be useless.

Q. When a pile of lobsters were caught in hot weather and piled on top of one another they would not survive?—A. And they are apt to die more quickly.

Q. Do the canners make any scruple about accepting the berried lobsters?—A. I don't think so.

Q. If they absolutely refused to accept the berried lobsters from the fishermen what would happen?—A. It is hard to tell what would happen. I suppose the man paid by weight would kick a lot; the wages men would not care.

Q. Has it been your practice to make any examination for the purpose of detecting the berried lobsters when delivered at the factory?—A. I have taken notice how many were generally brought ashore, if they were numerous, but made no objection to bringing them ashore.

Q. It has been suggested that one method of protecting the berried lobsters would be for the government to buy them from the fishermen at a slight advance on the price paid by the canner and then liberate them at once or place them in pounds. What is your opinion as to that?—A. Well, we have pounds, places where they could be kept, I think.

Q. That is tidal pounds where they could be kept?—A. Yes, sir, with a great deal more benefit than hatcheries would do. The lobsters make for themselves places to spawn.

Q. Is it your opinion that the lobsters go into these lagoons or interior channels for the purpose of spawning?—A. For nothing else, for no other purpose.

Q. What would you think of the proposition requiring the canners to pay an increased fee, and in that way raising a fund for the purchase of the seed lobsters from the fishermen?—A. That proposition would not suit us at all, because we pay all our men monthly wages, and I don't see that would be of any advantage.

Q. What is the size limit here?—A. Eight inches.

Q. And what is the fishing season?—A. It is from April 20 to July 10.

Q. When do you really begin fishing here?—A. Well, this year I began May 15.

Q. When do you start, one season with the other?—A. It is not very much before May 10 at any time.

SESSIONAL PAPER No. 22a

Q. As a rule, do you continue canning up to the close of the season?—A. Yes, but this year we did not do it; we had not enough lobsters.

Q. How does this season's pack compare with that of last season?—A. It was short here.

Q. What proportion of the lobsters taken in the traps do you think is below the legal size limit of 8 inches?—A. Well, in the spring of the year, say from about May until the 15th June, I don't know that we get very many under the legal size. After that we get one-half any way or may be more. One sure thing is that they are not all over the size.

Q. If the present size limit were strictly enforced what effect would it have upon the canners here?—A. It would close their establishments.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. It would have that effect.

Q. It would hurry on the end?—A. Yes.

Q. It has been stated that in certain districts no lobster canner could continue packing and observe the law with regard to size limit; that is your opinion here?—A. That is my opinion.

Q. Would you favour any increase or decrease in the present size limit?—A. You would have to come down in size.

Q. Some people have recommended reducing the size limit to 7 inches, others have advised raising it to 9 inches where it was originally?—A. I would favour putting it down to 7 inches.

Q. Do you not think that if that were done you would capture a lot of immature lobsters?—A. We would, but if you put it up to 9 inches we might as well close down. We would simply have to close down.

By Mr. Turgeon, M.P.:

Q. If you reduced the size limit to 7 inches, what effect would it have in three or four years?—A. We would be fishing what we are fishing to-day probably.

Q. You would be doing no worse you think?—A. I don't think so.

By the Commissioner:

Q. But you would be doing it under the authority of the law?—A. Yes.

By Mr. Turgeon, M.P.:

Q. But you think that if the size limit were made 7 inches instead of 8 and were strictly carried out, the law would be observed?—A. It would be carried out.

Q. Would you be inclined to do that?—A. I think that law would be carried out.

Q. And if it were carried out it would not injure the industry?—A. The canner would feel the effects for a year or two but he would get the benefit after a while. He would get the bigger lobsters later on that were thrown out under the 7-inch law.

By the Commissioner:

Q. Do you really can many under seven inches?

Mr. GEORGE WINDSOR.—Anything in sight.

The WITNESS.—That is right, anything in sight. That is about the way to put it.

By the Commissioner:

Q. Has there been any noticeable decline in the average size of the lobsters caught in your district within the last ten years?—A. No. This spring we have had very large lobsters, larger than we had at any time for ten years.

Q. With a good many people the idea is that we have reached the turning point practically. A good many fishermen maintain that during the last five years there

9-10 EDWARD VII., A. 1910

has not been any reduction in the size of lobsters but that if anything the tendency is upwards again?—A. That may be possible. I know that this year was an exceptionally good one for size in the spring of the year.

Q. But as compared with your first recollection of canning the average size is very much smaller than it was then?—A. Yes, we did not get any small lobsters then, they were all big fish.

Q. When was canning first introduced here?—A. I would leave that answer to Mr. Windsor.

Q. Do you know when regulations were first enforced regarding the lobster fishery?—A. Formerly we fished until the 20th August. The only regulations strictly enforced that I remember of were the present ones.

Mr. GEORGE WINDSOR.—We had fall fishing formerly.

The COMMISSIONER.—In the early years there was no regulation at all, you fished when you pleased?

Mr. WINDSOR.—That is right. The canners closed down for a month.

The COMMISSIONER.—In August?

Mr. WINDSOR.—In July and August and fished in the fall again.

By the Commissioner:

Q. When lobster canning was first introduced were not the lobsters all along the coast about the same size?—A. I think so.

Q. To what cause do you attribute the decline in the size of the lobster?—A. To the quantity taken I suppose. Formerly the lobsters were wasted. Men used them for manure as well as anything else. It must certainly have been the amount that was taken.

Q. Then in your opinion is the present condition of the lobster fishery due to overfishing in the past or have you any other reason to offer for the decline?—A. It was due to overfishing in the past.

Q. I suppose you cannot give us any opinion about the condition of the fishery round Cape Canso and the Atlantic coast, you have had no experience down there?—A. No, sir.

Q. As far as possible would you favour a general law providing for a uniform size limit and a uniform close season?—A. The same size limit and the same close season, yes.

Q. Of course there are different conditions outside the Gulf of St. Lawrence from those that exist inside, but within the gulf do you think there is any reason why there should be different size limits and different close seasons?—A. Take the Gaspé coast and this coast the conditions are quite different.

Q. What is the difference?—A. The difference is that there you can get lobsters in four or five fathoms of water while here you could not get one after the last of May.

Q. What depth of water do you begin to fish in?—A. We go as far as five fathoms and that is five miles off shore. We are nine fathoms across the bay where you can throw a stone in lots of places. That is the way with different locations in the gulf I think.

Q. Do you think it is in the interest of the lobster fishery that lobsters should be taken before they have reached the age at which they reproduce?—A. Well, if the law is strictly enforced, that is if the regulations are carried out and the season stopped on the very day and no after fishing allowed, I don't think you can hurt the lobsters or diminish the supply.

Q. Even if you take the small lobsters?—A. Even if you take the small ones.

Q. There would still be enough to keep up the supply?—A. I think that is almost proveable.

SESSIONAL PAPER No. 22a

Q. Do you know how many lobsters of different sizes it takes to fill a pound can?—A. I have never counted them out and weighed them, but you take a 7-inch one and a 10-inch one and it makes a big difference.

Q. The statement has been made authoritatively that a strict enforcement of the 8-inch law, together with the assistance of hatcheries and pounds, would perpetuate the lobster industry; would you concur in the statement?—A. A strict enforcement? Well, I daresay it would. I have no doubt that it would, it cannot surely hurt them.

By Mr. Turgeon, M.P.:

Q. You say you could not carry on the business under those circumstances?—A. We could not carry on business but it may help the fishery.

By the Commissioner:

Q. Do you not think it would have the ultimate effect of bringing the fishery back, not perhaps to its original condition, but to a better state?—A. I suppose it would help to bring it to a better condition.

By Mr. Turgeon, M.P.:

Q. You think it would help?—A. Certainly.

Q. You would have to suffer for a year or two?—A. We would have to suffer severely.

Mr. GEORGE WINDSOR.—It would never do at all. There would be too much violation of the law.

The WITNESS.—If they kept it up.

Mr. TURGEON, M.P.—Supposing it were kept up?

Mr. WINDSOR.—But it would not be.

Mr. TURGEON, M.P.—Let us know what the witness thinks the effect would be.

By the Commissioner:

Q. Would you favour reducing the size limit to 7 inches, as has been suggested, or would you favour abolishing the size limit altogether and shortening the season to compensate for that, in each case enforcing the regulation with regard to berried lobsters?—A. It does not make very much difference——

Q. It has been suggested that the best thing we could do would be to withdraw the size limit absolutely and in return for that shorten the season?—A. It does not make very much difference after the 1st of July what they do with the season.

Q. You think we might cut off the remaining days after the 1st July?

Mr. TURGEON, M.P.—Up to the tenth?

The WITNESS.—I think so. After the 10th there is nothing for the packers.

By the Commissioner:

Q. Do you think it would be better for the lobsters?—A. It would certainly help the lobsters out.

Q. Do you think that enough lobsters would survive if that were done and that the fishery would improve?—A. After a few years it would, in my opinion.

Q. Would you put the limit at the 1st of July; is that the shortest season you can stand?—A. It is short enough as it is, but when you go to cut it, July is a month that we have not very much to get out of it.

Q. Then there is not much use in cutting off July. You see we represent the other side of the question. You speak for the canner, but we are striving to look at it from the point of view of the preservation of the lobster?—A. July is the most hurtful month.

9-10 EDWARD VII., A. 1910

Q. Why is it the most hurtful?—A. One principal reason is the lobsters are hardly fit to can in different locations, and then you get more berried lobsters.

Q. You think there is no doubt about that?—A. I think there is no doubt about that.

Q. Could a size limit of 10½ inches be maintained without detriment to the lobster industry in this neighbourhood?—A. No, sir.

Q. Is it the case, as stated, that at least 30 per cent more lobsters in number are required in the fall than in the months of May and June to fill a pound can?—A. I think so, 25 or 30 per cent. It takes more lobsters.

Q. Is it the case that the canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen who would, in the event of refusal to take illegal lobsters, go to other canners less scrupulous?—A. Not in my case.

Q. Because your men are wages men?—A. Yes, sir.

Q. I have heard it stated by canners: 'I have got to take these lobsters because if I do not my neighbour will, and I will lose my fishermen.' Could you give us any idea of the number of pounds weight of green lobsters of each size that it takes to fill a pound can?—A. I cannot give you any idea of each size.

Q. Could you give us any data on that subject at all?—A. I can give it to you in pounds, but not in number of lobsters.

Q. Well, give it to us in pounds?—A. On the average, 225 pounds probably of green lobsters will make one case of pound cans, 16 ounces to the pound.

Q. It has been suggested that for the better control of the lobster fishery the fishermen should be required to register and take out a license at a nominal fee; what effect would that have?—A. That would not affect us here at all because we have wages men.

Q. I think you said you did not refuse to take berried and undersized lobsters?—A. No.

Q. Are the regulations for the protection of the lobsters ever observed in this district?—A. Not very much.

Q. What would be the effect of strictly enforcing the present regulations?—A. The effect would be the closing down of all the canneries.

Q. Are the existing penalties sufficient to deter the packers from violating the regulations if strictly enforced?—A. Yes.

Q. In the event of persistent violation of the regulations would the preservation of the lobster industry demand the cancellation of the offender's license to can?—A. He would deserve it, I think.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further licenses be discouraged?—A. Certainly we have reached a maximum, and any more should be discouraged I think.

Q. Do you think there is any reason why the department should not grant a license to any man who applies for it?—A. Speaking of our shore, from our point of view, there is no room for what there is.

By Mr. Turgeon, M.P.:

Q. But you think in some districts there might be ample distance to allow that?—A. There might be outside of this place.

Q. You have none here?—A. None here, we could throw a stone from one to the other.

By the Commissioner:

Q. Do you not think the thing pretty well regulates itself?—A. It pretty well regulates itself.

Q. Are there as many canneries in operation as there used to be?—A. My dear man there is double the number.

SESSIONAL PAPER No. 22a

Q. Are they still increasing?—A. Still increasing.

By Mr. Turgeon, M.P.:

Q. There has been no increase in the last ten years?—A. Oh, yes, there has.

Q. No new licenses have been granted?

Mr. GEORGE WINDSOR.—If they have not been granted how do these people get them?

The WITNESS.—They are coming in somewhere.

By the Commissioner:

Q. In the interest of the lobster industry would you favour a general closing down for some years? It has been suggested that there should be a closing down for a term of years?—A. Would the government come to the assistance of the canneries? They would have to come to our assistance, I guess, for the term of years they would close down because we would not be able to stand on our feet.

Q. Would you not be able to turn your attention to other branches of the fishery?—A. There is nothing here to attract our attention.

Q. During what period of the open season is lobster fishing most actively prosecuted with you?—A. In the months of May and June.

Q. The whole of June?—A. Pretty much the whole of June.

Q. Is the present regulation regarding the close season satisfactory, if not what change would you suggest?—A. I have already answered that question by saying I would favour cutting off the season at July 1.

Q. You think that a reduction in the length of the open season would be of advantage and that it would tend ultimately to increase the supply and perpetuate the fishery?—A. I think so.

Q. What in your opinion would be the effect of a shorter open season with no restriction as to size limit?—A. It would depend how short you were going to make it.

Q. The season extends you say from the 10th of May to the 10th July, how many fishing days do you average during that time?—A. I don't think we go over 35 or 40 days on an average.

Mr. GEORGE WINDSOR.—It is owing to locality here.

The WITNESS.—Taking the inside part, our side. On the outside it is different. On the gulf shore they get more.

By the Commissioner:

Q. It has been suggested that fall fishing be allowed in some districts where, owing to the ice remaining on the coast, the season begins later in the spring; what would you say to granting a fall season?—A. I have no use for that.

Q. You are in favour of limiting the issuance of licenses to pack?—A. Yes.

Q. And you would not favour giving a license to any one that made application for it?—A. No, sir.

By Mr. Turgeon, M.P.:

Q. No matter what locality?—A. Well not in our locality. There might be localities that I don't know anything about.

By the Commissioner:

Q. Would it be possible or right to establish a standard of fitness for canneries?—A. Yes, sir.

Q. How would you establish that standard?—A. That is care in packing and cleanliness you mean?

Q. Supposing the government decided to give a license to any one that applied for it, there would have to be some restriction and apparently a standard of fitness should be insisted upon; how would you fix that?—A. I don't know, I am sure.

9-10 EDWARD VII., A. 1910

Q. There are some canneries where one sees a product that is not what it should be. Certainly canning of that character should be stopped in the interest of the consumer as well as of the other canneries. How would you go to work to establish the necessary qualifications?—A. You would want inspectors, I suppose to begin with, to inspect the different factories and then in the factories they should be required to use certain tables and dishes and other requirements up to the standard laid down.

Q. Do you not think that the use of the ordinary wooden table for handling the meat when it is shelled is liable to result in the packing of inferior meat?—A. Yes, in hot weather.

Q. Unless the greatest possible care is observed; how would you remedy that?—A. That could be remedied.

Q. At Anticosti Mr. Menier has erected a building which cost \$17,000 fitted with electric lights and marble slabs.—A. We would have to go to extra expense, it would be pretty hard for us to do it.

Q. Do you not think there might be an improvement in the equipment of lobster factories?—A. I think there could be an improvement.

Q. You think also that the product of canneries should be subject to some inspection?—A. I think so.

Q. Do you think this inspection could be made by the existing staff?—A. It might.

Q. It would mean an increased cost perhaps to the canner if that were not done?—A. The present officers, I don't think we have them in our locality at all.

Q. Would you refuse a canning license to aliens?—A. Yes, I would.

Q. Do you think the fishermen could make more money if allowed to can on their own hook?—A. No, sir; it would ruin some of them.

Q. What would you think of the policy of encouraging the fishermen to co-operate in canning?—A. It would be pretty hard to give an opinion on that. It might help some, I could not say. It might ruin others. I don't know whether it would be helpful to the country.

Q. Are there any fishermen canning on the co-operative plan in this district?—A. I don't know of any.

Q. What is the price paid for lobsters here? If your men are paid by wages there is no question of price involved?—A. I have one boat that is generally fishing by weight and I paid these fishermen this year \$1 per hundred pounds and found them everything. I have paid them other years \$1.10.

Q. The price has been reduced this year owing to what?—A. The depressed market condition.

Q. Are you aware of any complaints made by the fishermen that the price paid by the canners was not satisfactory?—A. I do not know of any.

Q. Is it within your knowledge that there is any combination on the part of the canners to keep down the price?—A. No, sir; there is no combination here.

Q. Do you know whether the fishermen have ever lost their catch of lobsters by the canners refusing to accept them?—A. No, sir, not to my knowledge; that is not the trouble.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of the canners to operate their factories although a sufficient supply of lobsters was available. Has any such instance occurred to your knowledge?—A. Not here.

Q. What market would the fishermen have in this district for the lobsters if the canneries were closed?—A. I don't know of any market.

Q. Do any facilities exist here for the carrying on of the live lobster industry?—A. Not here.

Q. Which branch of the lobster industry do you think is the more remunerative to the fishermen and the least calculated to deplete the fishery, the canning or the live lobster trade?—A. The canning is the most successful here.

SESSIONAL PAPER No. 22a

Q. It is the only branch of the lobster industry here?—A. The only one here.

Q. Do you think the shipment of live lobsters should be favoured in preference to the canning industry?—A. No, I do not think so. To my knowledge that has been tried and was not a success. I think a number of years ago Taylor & Mayo, a Boston firm, shipped by means of a tank with open bottoms.

Q. Would not the lobsters die before they got to Boston?

Mr. GEORGE WINDSOR.—They ran them between here and Bathurst and shipped them by rail, but they died before they got to their destination.

By the Commissioner:

Q. From your experience, can you say whether the hatcheries have helped to maintain the supply of lobsters or not?—A. I don't think they have helped to maintain it.

Q. Have you anything to suggest which, in your opinion, would be calculated to further improve the condition of the lobster fishery?—A. The suggestion I have is that the present regulations should be carried out and harbour fishing should be prohibited.

Q. What am I to understand by harbour fishing?—A. There should be certain boundary lines at the mouth of the harbour.

Q. Inside of which fishing should be prohibited?—A. I think so.

Q. Can you fish anywhere at present?—A. Anywhere. They can come here and fish at these wharfs if they have a mind to.

Q. Is it late in the season before the fish come in here?—A. No, sir, they come in here until the month of July.

Q. Do you find them here in the month of May?—A. No, sir.

Q. When do they begin to come in?—A. About the 15th of June, that is my opinion.

Q. Have you any observations to make as to the value of tidal pounds for breeding purposes?—A. I do not know as to that. Perhaps the pound is preferable to the hatchery.

Q. Do the requisite conditions exist here?—A. Yes, we have good places for them.

Q. The policy contemplated by the department in its regulations is the taking of large lobsters and permitting the small ones to escape. Is there any kind of trap that would be more suitable for that purpose than the existing one? What trap do you use here, the parlour trap or the old fashioned one?—A. We use both here. The parlour trap has only come into use with us a few years ago.

Q. What is the idea in introducing the parlour trap?—A. They seem to hold the fish more.

Q. That is to say all the fish?—A. In the old trap there was a better way for them to get out.

Q. Do you think there would be any advantage in insisting upon a trap with a wider space between the slats?—A. The trap we have now a considerable sized lobster can get out of.

Q. What is the width between the slats?—A. Some of them are made an inch and a quarter apart. The traps are made now that the lobsters cannot get out of them. You will find traps among a lot that are quite wide. That is done with the notice of the packer very probably.

Q. Would you approve of the suggestion that a Fisheries Board should be created for the maritime provinces?—A. If you could get good capable men.

Q. How do you think such a board should be constituted?—A. That would be a matter for a few days thinking.

Q. Is there any other matter connected with this inquiry that you would like to express an opinion upon?—A. No.

Q. Generally speaking you would advise shortening the open season to the 1st of July or the last of June and prohibiting fishing inside the harbour?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Confining fishing to the outside coast, is that what you mean?—A. No, I would not say to the outside coast.

Q. What do you mean then by prohibiting fishing in harbours?—A. I mean that no man should be allowed to fish within certain limits at the mouth of harbours, that there should be proper boundary lines.

Q. Taking this particular instance, where would you put the boundary line?—A. I would say from the lighthouse over to Little Lemeque Point, that is giving them an inside berth. In our case, the middle ground, Miscou harbour to Caraqueet island.

Q. That would be a matter for subsequent delimitation. What effect would it have to fish inside those points?—A. Inside of that you are going to get berried lobsters and soft shelled lobsters.

Q. Inside those boundary lines the lobsters come in to spawn?—A. Yes. If you cut down the season to the 1st July you are not going to get anything inside of that to hurt the fishing.

By Mr. Turgeon, M.P.:

Q. If the season should close on the 1st July there would be no necessity for those boundaries?—A. There would be no need of the boundaries at all.

By the Commissioner:

Q. You think that would obviate your suggestions?—A. I think so. Just after the 1st July they begin to get those lobsters there. If the fishing were to close on the 1st July there would be no necessity for the boundaries.

Q. Is the fishing on the outside coast that you talk of done in the shoal water towards the close of the season?—A. Yes.

Q. Is trawling practised here at all?—A. That is what we call it. There is a hoop with a net and there is bait in it. They take all sizes of lobsters, some very small.

Q. In what depth of water?—A. They fish them from three feet out. They come when there is smooth water right as close as they can get.

By Mr. Turgeon, M.P.:

Q. Do you think their use should be prohibited altogether?—A. The like of that certainly should, and they get mostly all small lobsters. If they go into shallow water they get nothing but small lobsters.

Q. At what depth of water do you think we should limit the placing of traps; would 4 fathoms be too hard on the fishermen?—A. We cannot fish in four fathoms.

Q. But you say you go outside to fish first?—A. If the law is going to cut us down to the 1st July let us do whatever we are doing now.

Q. Then within the 1st July you think there is no necessity for any change?—A. No necessity for having changes in the depth of water we can fish in.

By the Commissioner:

Q. To what depth do you go?—A. Within a fathom or a fathom and a half.

Q. That is some distance off the shore?—A. Quite a distance in some places. It is a mile in some places.

By Mr. Turgeon, M.P.:

Q. Your suggestion would be to make the close season begin on the 1st July?—A. That is my suggestion.

Q. You think it would prevent an excessive destruction of lobsters?—A. Yes. We would make up for it afterwards because we would get more lobsters, I think, in years to come.

By the Commissioner:

Q. Is there anything else you wish to add?—A. No, sir, you have required me to answer a lot of questions here.

Witness discharged.

SESSIONAL PAPER No. 22a

GEORGE WINDOR, canner Bathurst, N.B., called and sworn.

By the Commissioner:

Q. You have heard the evidence of Mr. Luce; do you fully concur in it?—A. Yes.

Q. What would be your idea as to the proper regulations to be enforced?—A. I would ignore the size limit, have no limit at all, and shorten the season.

Q. What would you fix the season at?—A. That would be pretty hard to do; it all depends upon the locality. I would say that the season should be till the 20th of June.

Q. You would do this with a view of improving the fishery ultimately?—A. Yes. Then all harbour fishing should be done away with, and there should be a new staff of officers.

Q. How about hoop net fishing?—A. I don't know a great deal about that. We don't have it on the inside; that fishing is done on the outside shore. Then 'curly' fishing should be stopped. With 'curlies' they get nothing but small lobsters; they do not take any large ones. Another thing that is injurious to the business is for every Tom, Dick and Harry to be catching lobsters, boiling and cracking them, and selling the meat to the factory. The factory men take them because they cannot very well refuse, but they cannot make a good product out of such lobsters as those and it is bad for the sale of the goods.

Q. Is not that practice prohibited by law at present?—A. It is in certain places, but they do not mind it now.

By Mr. Turgeon, M.P.:

Q. The practice is followed, and you think it should not be?—A. It should not be done; that is where the officers are not doing their duty. When merchants employ men at a certain salary and they do not perform their duty they dismiss them and the government should do the same. They are paying a certain man a salary, and if he is not doing his duty they should dismiss him.

Q. You know, then, that this thing is being done?—A. Certainly I know it. I would not make the statement unless I knew it.

Q. Have you any other suggestion to make?—A. I wonder whether the suggestions I am making will be carried out.

By the Commissioner:

Q. They will all have weight, they will all tell in the end?—A. It is no use to make these suggestions unless they are to be carried out.

Q. These suggestions will come before the Marine and Fisheries Committee of the House of Commons, and I think they are honestly desirous of doing all they can to promote the welfare of the lobster industry?—A. I think you have started too late.

Q. Have the officers been round to the factories measuring the size of the lobsters?—A. Yes.

Q. Would you think the taking of those measurements was fairly done?—A. The officer who was at my place measured very fairly. He measured a whole boatload and took tally. The lobsters are much smaller than what they used to be. When I first started here the average weight of lobsters was 2½ pounds.

By Mr. Turgeon, M.P.:

Q. That was 30 years ago?—A. Yes; 2½ pounds was the average weight of lobsters then.

By the Commissioner:

Q. What is the average weight of the lobsters taken to-day?—A. The average weight? It takes five to a pound. It averages about the same in count that it does in weight. I have weighed and counted them.

9-10 EDWARD VII., A. 1910

Q. How long have you been in the industry?—A. I have been 32 years in it here.

By Mr. Turgeon, M.P.:

Q. What year did your father start?—A. He packed the first lobsters put up in the Baie des Chaleurs over 56 years ago.

By the Commissioner:

Q. The first canning done here was the canning of salmon?—A. Yes.

Q. And they gradually went into the canning of lobsters?—A. Yes.

Q. How many boats do you employ?—A. Seven or eight boats with 1,500 or 1,800 traps. The average catch is about 300 cases.

Q. How many canneries?—A. There are four canneries.

Q. How are your fishermen paid?—A. By wages. We used to pay them 15 cents per 100 pounds when I first started fishing. They were not satisfied and we went in for wages. Now the lobsters cost us \$3 a hundred.

Q. Do you consider that the average fisherman employed in that way is as active and energetic as when he is fishing for himself?—A. No, but we cannot get them any other way.

Q. What is the ordinary wages paid to the fishermen?—A. From \$30 to \$40 and board themselves.

Q. You supply the material?—A. We supply everything.

Witness discharged.

EDWARD BURBRIDGE, Fisherman, Miscou Point, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. I started when I was a boy of fifteen, but dropped it for a time and went back to it again. I have been fishing this five or six summers.

Q. What do you do when you are not lobster fishing?—A. I generally go away in the fall and summer.

Q. On what part of the coast do you carry on your fishing?—A. Off Miscou Point.

Q. Do you always fish there?—A. Mostly always fish there.

Q. There is no such thing as a Fishermans Union in this locality?—A. No.

Q. Are there many other fishermen engaged in lobster fishing in that locality?—A. Most of the people about Miscou.

Q. Could you give me any idea of the total number of boats employed in the lobster fishery about Miscou?—A. Some mornings as far as I can notice, we will count eighty all going off in various directions.

Q. How far off shore do you begin to fish?—A. I could not exactly tell you. Round five and six miles it may be in the spring of the year in nine or ten fathoms of water.

Q. Do you fish throughout the season in the same depth of water?—A. No, sir.

Q. Please describe what happens in the course of fishing operations?—A. When the lobsters go from the outside we generally have the inside shore fishing. We commence to lug in our traps then to get the shore lobsters.

Q. Into what depth of water do you move?—A. Two and a half to three fathoms. Down at Miscou the water is shoal.

Q. The bottom is sandy?—A. Close in it is sandy.

Q. And what is the bottom like outside where you begin?—A. It is rocky and there is more kelp.

Q. Is the annual catch decreasing or otherwise?—A. I find it decreasing.

SESSIONAL PAPER No. 22a

Q. In what way?—A. We don't get the amount of lobsters, the amount of weight of lobsters.

Q. Do you get as many lobsters and are they smaller?—A. We never count, it is all by weight. They are all weighed but we find we do not get as much.

Q. Are the lobsters as large now as when you first began to fish?—A. No. The lobsters outside are a very good average in the spring. This spring we would not have to fire two lobsters away that would not be worth while. Inside they are smaller.

Q. How are you fishing, by wages?—A. By hundred weight.

Q. Has the number of traps increased very much in your neighbourhood?—A. No, they keep about the same, 250 to 275 to a boat.

Q. Did you use that many when you began to fish?—A. No, when I began to fish on wages it was 220.

Q. On the whole are there more traps fished round Miscou Point to-day than when you first started fishing?—A. There are more boats and therefore more traps.

Q. Is there any difference between the trap you fish now and the one you began to fish with?—A. I think a little. We have got the patent trap now as we call it.

Q. That is the parlour trap?—A. The parlour trap and maybe the laths are a little closer than before.

Q. Do you think it would make any difference if the laths were kept farther apart?—A. More than likely the small lobsters would crawl out. Sometimes the laths are not nailed to exactly the right allowance that you would allow.

Q. Are the laths closer than when you began to fish?—A. I think so.

Q. Why have the laths been made closer?—A. I suppose it is to hold all the lobsters we get.

Q. Is it your opinion now that you keep up your weight of lobsters by taking much smaller lobsters than you formerly used to take?—A. I think that before we got more lobsters, because we can tell by the hand barrows. To-day we got two or three hand barrows, in those days seven or eight. It shows we got more lobsters then.

Q. It has been suggested that for the better control of the lobster fishery the fishermen should be required to register and take out a license at a nominal fee; what do you think of that?—A. I don't suppose it would make any difference to me but there are some poorer people who would not want to pay any.

By Mr. Turgeon, M.P.:

Q. They would find it a hardship?—A. They find it a hardship as it is now.

By the Commissioner:

Q. How does the price paid for lobsters to-day compare with what was paid when you first began to fish; are you making as good wages as when you started?—A. I think so. The country is prosperous. Before we had to work for smaller pay. About eight or nine years ago the wages were lower but they are now coming up all around in different ways. The wages are a little low this year, but I understand that is due to the market. I was willing to work for lower wages because of that and on the average I did not do too bad. The season is not very long and I would not depend upon lobster fishing for making a living.

Q. Is there any competition among the canners or are you supposed to accept a certain price?—A. No.

Q. If you cannot agree with one man you can go to another?—A. We can go to another and we generally get what we are looking for.

Q. What are the regulations in regard to the lobster fishery? Do you know what the regulation is in regard to the size limit, the taking of berried lobsters, the season for fishing and so on?—A. I think nine inches was the old size limit and it is eight inches now. Of course we know the time of the season. That is to the 10th of July; it used to be the 15th.

9-10 EDWARD VII., A. 1910

Q. And how about the berried lobsters?—A. That is one thing I would like to see, the berried lobsters hove overboard. I will take my oath I did not bring 15 or 20 berried lobsters ashore this season.

Q. What is your practice in regard to the berried lobsters?—A. I don't know what to say about that. There is not much in it for the boss or for the fishermen. They get a little meat out of it. If they did not they would not do it. I think the berried lobsters should be protected, I have always said that.

Q. Have you yourself tried to carry out the regulation in that respect?—A. Whenever we have caught them I would say, 'We had better fire these lobsters away. If they don't do us good this year they will do some other fellow good.' I would tell that to my boss and he would say: 'I would like to see it done, but what is the good of your doing it and some other boat finding the lobsters next day.'

Q. Do you take to the cannery everything you catch?—A. Well, the smallest ones, these of 5 and 6 inches, we would not be bothered with because they will only weigh a quarter of a pound and that is only a quarter of a cent, so we would sooner heave them away.

Q. Do you expect a canner to take from you all the lobsters you bring to the factory regardless of whether they are under-sized or berried?—A. He does but he never looks them over. I don't suppose it is his place to look them over.

Q. Do you not understand the necessity for having some regulations for the protection of the lobster fishery and that it is wrong to violate those regulations?—A. Yes, but it is not enforced. If it was enforced it could not be carried out.

By Mr. Turgeon, M.P.:

Q. But you say that berried lobsters should be protected?—A. Yes.

Q. Then what suggestion do you make in order to have that protection?—A. That is the next thing. There are some fishermen I have been talking with that will say: 'If that law goes into force we will scrape the eggs off, take a brush and scrape them off, or slap them in the water and the spawn will fall off.' I said: 'That would be no good because the crabs will eat the spawn. That is not looking after your own interests for the spawn will be lobsters in a few years to come.' If we could have officers to look after this it would be possible to protect the berried lobsters.

By the Commissioner:

Q. How will it be possible for officers to look after what goes on in the boats outside?—A. There should be a fine put on the fishermen. It is pretty hard to put it on the boss of the cannery because he could not be in the boats and the lobsters are all buried up in our hand barrows. The boss does not know who brings them in. I think if the fishermen were warned——

Q. Do you not think the fishermen understand the importance of protecting the berried lobsters, they have been warned, have they not?—A. They have been warned by the officers.

Q. As to the practice, or evil effects of the practice, of stripping the eggs from the berried lobsters?—A. If there was a fine put on the fishermen I think we would be more careful for what we are making out of it.

By Mr. Turgeon, M.P.:

Q. How do you think a fishery officer could reach the fishermen with certainty?—A. I don't see how he can be at the factory and watch them along the shore.

Q. But you say the berried lobsters are stripped at sea?—A. There is a lot of spawn will stop on. I know, I have seen them doing it.

By the Commissioner:

Q. You can generally tell whether that has been done or not?—A. As it is they are coming in and they are caught as quick as they are coming in.

SESSIONAL PAPER No. 22a

By the Commissioner:

Q. Do you catch as many berried lobsters one season as another?—A. Where I am fishing on the outside we don't find many.

Q. How is it when you begin fishing?—A. They are very few; they don't amount to much.

Q. As the season advances you move farther inshore?—A. We find more towards the middle ground and the shore.

Q. Are there any particular months when you find more berried lobsters than you do in the month of May?—A. We are not bothered much with them then.

Q. What about the month of June?—A. June is the time they are coming along.

Q. And July?—A. The July lobsters are so slack we don't find many now, that is down on the outside shore.

Q. But you fish in July?—A. Not this year.

Q. When do you generally knock off fishing in your case?—A. I think we stopped somewhere about the last of June this year because the lobsters were so slack we could not do anything.

Q. Do they not, one year with another, slacken off towards the end of the season?—A. This last two years they were poor. The year before it was good fishing right up to the end. On the average, the men done well.

Mr. GEORGE WINDSOR.—And there is better fishing after the end——

The WITNESS.—After the end of August the lobsters are thick, in September I think it is, along the shore.

By the Commissioner:

Q. So the lobsters are very numerous along the shore?—A. Yes.

Q. The year you made very good fishing in July, or after that, was the fishing poor at the beginning?—A. That was the year I fished for Mr. Windsor, and that is the year they did so well on the other side.

Q. The lobsters were abundant all through the season?—A. Right through to the last. I saw the accounts this year that there was good fishing.

Q. Do you consider there is any time when the lobsters are not fit for food?—A. Well, not on the outside shore. I understand that in the harbour this year they had to fire half the lobsters away on account of being soft. I have heard the fishermen tell that saw them.

Q. That is lobsters that were soft in the shell?—A. Soft in the shell or cast their shell. We don't get them on the outside at all.

Q. What is the smallest size at which you have seen a lobster with berries?—A. I should say about 8 inches.

Q. What is the average size of the lobsters you find bearing berries?—A. All the way from 9 to 10 inches. They are nice looking heavy lobsters and we hate to lose them on account of the weight.

Q. Out of every hundred lobsters that you catch how many would have berries on them?—A. On an average I would say that out of a 400-pound catch we would get from 5 to 8 a day. That may be 600 or 700 lobsters. We get the heavy lobsters outside and we might have 4 or 5 or 10.

Q. What do you think of the idea of compelling the canners to pay an increased fee and with the money thus raised buying the berried lobsters from the fishermen?—A. My boss, that is Mr. Ward, says that if they would go to work with the money they are paying out on the hatchery business and each man have a crate and save them, let them pay so much a pound for them, and let them go free again, it would be better. He put that to me at different times that it would be better than if the money were spent on a hatchery. The main thing is the berried lobsters.

9-10 EDWARD VII., A. 1910

Q. What is the best way to go to work to save the berried lobsters?—A. I think if the fishermen were put on oath not to scratch off the spawn, because I don't think that does the lobster any good.

Q. Do you think these lobsters could be taken from the fishermen and held in pounds? Are there places where tidal pounds could be established in which these lobsters could be placed and allowed to hatch out their spawn?—A. There are places you could put them in. Right at Point Miscou we have two bays where the tide flows in and out. There is always seaweed there, and I do not think there are any crabs to touch the spawn, and the lobsters could be protected in that way.

Q. Is there any attempt made at all to enforce the regulations?—A. I don't think so.

Q. You expect the canner to take everything you bring?—A. Yes.

Q. And he does so?—A. Yes.

Q. Are there any changes in the regulations which you would suggest?—A. We should come ashore about the last of June or the 1st July. We can do nothing then and are only too glad to bring our traps ashore. We should all come ashore at the same time, on the 1st July, and have 10 days taken off.

Q. Have the cannery in your neighbourhood ever objected to accepting berried lobsters?—A. Not to my knowledge.

Q. Do they ever make any examination for the purpose of separating berried lobsters from the others?—A. No, sir, not to my knowledge.

Q. Where large quantities of lobsters are brought to the factory in barrows and dumped out would it be easy to tell whether there are spawn lobsters among them or not?—A. No, it would be pretty hard to tell. The proper time to do that is when they are taking them out of the traps. It is up to the fishermen not to the boss. The boss cannot look after things except on shore.

By Mr. Turgeon, M.P.:

Q. You made the suggestion to put every fisherman under oath that he would not take berried lobsters?—A. Yes.

Q. And would you fine them for violating their oath?—A. Yes; I would have a fine of \$50.

By the Commissioner:

Q. They are supposed to be fined under the law as it is?—A. Yes, but it is not enforced.

By Mr. Turgeon, M.P.:

Q. Then you think that by putting them under oath——A. It would be stopped. I would be only too willing to fire away every berried lobster for all we are getting out of it. It will give us an increase of lobsters and maybe the fishery will be better later on.

By the Commissioner:

Q. I think you have told us that berried lobsters are more numerous towards the end of the fishing season than at the beginning?—A. Yes.

Q. Are you aware of any fishermen having lost their catch of lobsters by the canner refusing to take them?—A. No, sir, not around here. They are only too glad to take what the fishermen catch.

Q. As a practical fisherman what do you think of the present regulation restricting canning to certain individuals, do you think a canning license should be granted to every one who applies for it?—A. Of course it would be hard on the men that have put all their money into it. I always tried for a license but I never could get one. My father was in the canning business, but I was too late to get in.

SESSIONAL PAPER No. 22a

Q. Do you know anything about shipping live lobsters to the market?—A. I don't think you can do it around here.

Q. It has never been tried to your knowledge and the facilities do not exist?—A. No, sir. I have always wanted to get a license. I could make more money canning on a small scale than I could by fishing.

By Mr. Turgeon, M.P.:

Q. You think that in some place where the licenses are not too thick you could get one?—A. Yes, but if every one were to go into the business it would be hard on the men who have their money invested.

By the Commissioner:

Q. Do you think that the average man is qualified to put up lobsters?—A. I don't think such men could put up the lobsters. Of course I had experience in my father's factory.

Q. Who fixes the price paid for lobsters?—A. That is done by each boss, whatever he can afford to stand.

Q. There is no attempt on the part of lobster packers to keep the price down? If one man does not give you what you want you can go to the next?—A. Yes. Lots of fishermen kick but they will kick about anything.

Q. Do you think that fishing is carried on after the close of the season?—A. Yes, secretly.

Q. And is canning done too?—A. Yes, and it is pretty hard for the overseer to hunt them up. They do it in a blind way, but I know their ways.

Q. Where is that canning done; in the woods and in private houses?—A. Mostly in the houses in a secret way at night. If they are liable to get a visit from the overseer they pile vegetables on top of their cans. I canned myself in that way and I was caught.

Q. And were you fined?—A. Yes. There were so many I could not get clear of it.

Q. If the size limit were strictly enforced how would it affect the canner and the industry?—A. I don't think it would hurt them much. Inside they say it would, but it will not hurt on the outside. We have measured them at different times to see what size they would be and there would only be five or six under-sized lobsters.

Q. What do you think of keeping the lobster fishing farther out from the shore and only allowing them to fish within a certain depth of water?—A. Can they do it, can they make a boundary?

Q. We would say they must fish in a certain depth of water. How many fathoms would you say?—A. No closer than two and a half to three fathoms.

Q. What do you think about the hoop net fishing, have you ever tried it yourself?—A. No, sir, I heard that it took 750 of the lobsters caught in that way to make a box. That is ridiculous because there is no meat in them. That is a really small lobster, we don't want any such lobsters as that. If those lobsters were allowed to grow next year they would give us more money and more money to the packer.

Q. What is the best fishing month with you?—The month of May and first two weeks in June.

Q. When would you shorten the season up to?—A. The 1st of July, no later than that.

Q. And do you think it is possible to enforce the size limit?—A. It is quite a humbug to know which way to measure them. If we have to measure them how are we going to do it?

Q. Do you not think you will soon get used to it?—A. It is not so easy to be enforced. If we have to fire 5 or 6-inch lobsters away and not bring them ashore it would be right. For an exact half-inch we cannot tell because we cannot carry a rule, but if we are in a hurry sometimes we can group three lobsters at a time, because they are so small.

9-10 EDWARD VII., A. 1910

Q. Is there anything else you would like to tell us that we have not questioned you about?—A. There is the harbour fishing which should be stopped. A boundary should be established and it is easy to make one. Look at the Miramichi, there is a boundary from one point to a certain point. The officer could tell that boundary and stand back of it. If he finds a big mouth net within that boundary he orders the fisherman in so many hours to take it up. The lobsters can be treated in the same way and a boundary established from a certain point to a certain point.

By Mr. Turgeon, M.P.:

Mr. Luce said that to fish within the boundary before the 1st July would not be hurtful?—A. Before that would not hurt us, that is the time you get good fish.

Q. One of the best regulations then would be to stop fishing strictly on the 1st July?—A. Yes, and try and do something about the spawn lobsters.

Q. What do you say about the size limit? Do you think that regulates itself and that the fishermen would not be bringing the small lobsters ashore?—A. Not too small lobsters. If they would not bring any below 7 inches it would be all right. You can easily tell these lobsters. Eight hundred or 1,000 of them make 100 pounds weight, and the poor class of people would bring them ashore. They are the people that are interested and would bring them ashore. Of course, we do not get these small lobsters in the month of May.

Q. It is towards the close of the season and in shallow water?—A. In the shallow water the closer we get to the shore we get the smaller lobsters; I tried it this year myself. We would take a line of odd traps and get 16 or 20 lobsters that would not weigh, I suppose, 10 pounds, and four or five of these spawn lobsters.

Witness discharged.

MARCEL GAUVIN, fisherman, called and sworn:—

The witness gave his testimony in French, translated as follows:—

By the Commissioner:

Q. How long have you been fishing lobsters?—A. I have been fishing lobsters for five years. I work at farming when not fishing.

Q. Where do you fish?—A. I fish at Canoe Point and have always fished in the same place. There are about 24 boats fishing lobsters at that place.

Q. Are there generally two men to a boat?—A. Yes.

Q. At what depth of water do you commence fishing?—A. Six fathoms of water in the spring.

Q. Do you always fish in the same depth of water?—A. No, I fish in that depth of water in the first part of the spring. About the middle of June I move into two or three fathoms of water. We find that depth of water about a mile from the shore.

Q. Is the fishing as good now as it was some years ago?—A. No, there are not as many lobsters as when I began fishing.

Q. What number of traps do you fish?—A. 240.

Q. Have you always fished the same number of traps?—A. Yes. There are more traps fishing now than there were five years ago, but in my locality it was always the same number.

Q. Have you always used the same kind of traps?—A. No, at first we were fishing traps with two nets. Now we fish with five nets. The French people call it the five net trap and the English the parlour trap.

Q. Why do you use those new traps?—A. Because we are more lucky.

Q. Do you think those traps are used because they retain the lobsters better?—A. Yes, because in the bad weather we don't lose any, no lobsters escape.

SESSIONAL PAPER No. 22a

Q. How are you paid?—A. I am paid by the month and not by the quantity caught. The gear and traps belong to the boss.

Q. Do you think that if the fishermen took out a license to fish lobsters they would observe the regulations more strictly?—A. It would be about the same.

Q. Has the price paid for lobsters increased or decreased since you commenced fishing?—A. We have always been paid by wages and about the same wages for the last five years, about \$33 a month.

Q. What regulations are enforced with respect to the berried lobsters?—A. We have to throw them into the water when we take them.

Q. And about the small lobsters?—A. The regulation, I think, is between 8 and 9 inches.

Q. Do you follow these regulations?—A. Yes.

Q. Is it your practice to bring berried lobsters to shore?—A. I bring none at all to the shore, and very small lobsters I don't bring ashore. From 5 to 6 inches I throw out.

Q. Do the canners refuse to accept the berried lobsters?—A. I suppose if I brought them they would take them all, but I don't bring any.

Q. Do you find female lobsters all the season?—A. Yes, we find them all the season.

Q. Do you find more female lobsters in May or in June?—A. I believe in June we find more. The small lobsters are about the same, we find them in about the same quantity at all times. In the first part of the spring when we are fishing in deeper water we don't get as many undersized lobsters.

Q. Do you think the lobster comes closer to shore to spawn?—A. I believe they do.

• Q. Is there any period in the season when lobsters are not fit to eat?—A. From the 1st July to 15th July the lobsters are not worth much.

Q. What is the smallest sized lobster you have seen with berries?—A. The small lobsters have none. The 10-inch lobsters I am sure have berries.

Q. What is the average size of the lobsters you get here?—A. The average is from 8 to 9 inches.

Q. Do you think that the regulations are strictly followed?—A. They are not too badly followed where we work.

Q. Is it the practice for fishermen to rub off the eggs from berried lobsters?—A. I have not seen it done. I never heard of it in my district.

Q. Do you think that any effort is made to detect the berried lobsters when they arrive at the factory?—A. I have no knowledge of that.

Q. If the canners were to refuse to accept small lobsters what would be the effect upon the industry?—A. Nobody could compel the canners to take them.

Q. Do you think that if the fishermen did not take the small lobsters the factories would have to close?—A. Yes, because without the medium sized lobsters they take and the small ones we bring in, it would be hardly worth while to keep up fishing.

Q. Do you think it possible to get the fishermen not to take the berried or small lobsters?—A. As far as berried lobsters are concerned they should not be brought to shore at all. If we were to throw out all the lobsters under 8 inches it would be hard on the packers. The fishermen in my district fish by the month so it would be the same for them. In my district nobody fishes by weight it is all by wages.

Q. Do you think it would be a good thing if the government were to buy the female lobsters from the fishermen and keep them in pounds?—A. It would be a good thing. There are little coves which would be very suitable for breeding purposes. There is water enough in these coves as the tide comes in and out.

Q. Do you think that would be the best means of preserving the berried lobster?—A. I believe it would be a very good thing to adopt.

9-10 EDWARD VII., A. 1910

Q. Do you think it possible to stop lobster fishing in the harbours?—A. We always fish outside; we don't fish in the harbours in our district.

Q. Do you think the season should be shortened?—A. It is already short enough; if made any shorter the fishermen will not work.

Q. Do you always fish to the last day of the season?—A. Generally speaking we generally fish to the last day.

Q. Do you think we should give a license to pack to every man who asks for it?—A. I believe there are enough canning licenses already in the interest of the lobster fishery. As far as the people are concerned no doubt many would like to have a license.

Q. Is there any other means of exploiting the lobster industry besides canning? What about the live lobster trade?—A. We would have to send them too far, the distance is too great to enable that to be done successfully.

Q. What remedy would you suggest for the improvement of the lobster industry?—A. If the berried lobsters were collected and preserved in pounds I believe it would be the best means.

Q. Some people claim the best way would be to close the factories for a certain number of years?—A. I don't believe it would be any better. This year at the beginning of the season there were plenty of lobsters, and I believe it was the weather that cut the fishing operations short.

Q. Do you know of any combine among the packers to keep down the price paid for lobsters?—A. No, not here.

Q. Do you think the fishermen would be better off if any one who applied could get a license to pack lobsters?—A. It is hard for me to say.

Q. Do you think any changes could be made in the regulations that would improve the present conditions?—A. My idea would be to stop fishing on the 1st July and fish again later on. Early in July the lobster is worth nothing. I would commence later on in July, say from the 15th to the end of August.

Q. Do you think the end of the industry would come sooner?—A. There are plenty of lobsters in the sea.

Q. Do you think the lobsters are smaller than they were 30 years ago?—A. Since I have been fishing the lobsters are about the same.

Q. Is it to your knowledge that the catch of lobsters has decreased?—A. Yes, there have been more traps used and more berried lobsters brought ashore. There are more traps used now than there were some years ago.

Q. Do you think it is a good thing to take small and immature lobsters?—A. When they are small they are no good.

Q. If we continue to take lobsters before they have had time to reproduce themselves will it not be fatal to the industry?—A. I believe it will.

Q. Do you think it takes more lobsters to fill a pound can in the spring than in the fall?—A. In the fall it would not take as many because the lobster is full after he has cast his shell.

Q. In what month is the fishing best?—A. In the month of May; it commences to fall off in June.

Q. Do you think there are lobster packers enough at present?—A. I believe there are enough in this district.

Q. Have you anything else you would like to add?—A. No, there is nothing else nothing I need suggest.

Witness discharged.

SESSIONAL PAPER No. 22a

PIERRE GUIGNARD, fisherman, called and sworn:—

By the Commissioner:

Q. You have heard the evidence given by the previous witness; have you anything to add to it?—A. No.

Q. How many years' experience have you had lobster fishing?—A. I have had 11 or 12 years' fishing with traps.

Q. Do you find that the supply of lobsters has fallen off?—A. It has, but not a great deal after all.

Q. Do you think that the supply had already fallen off before you commenced fishing?—A. Yes, I believe it had already come.

Q. In your opinion has this decrease about stopped now?—A. I must say that for the last couple of years the catch has been about the same. At the time I commenced there was one factory alone which was packing about 1,200 cases. Now there are three factories that average 1,200 cases. Between these three factories they have got a good deal more traps and more fishermen. In former years there were only 10 or 12 boats, but now there are about 24.

Q. It requires more gear and more boats to make up the same catch that it did some years ago?—A. Yes.

Q. Do you think the regulations are well observed?—A. Yes, I think they are well enough followed. We bring no berried lobsters ashore. As for the small lobsters, those that are any good we bring ashore and those that are small enough to escape from the traps will get out themselves.

Q. What suggestions have you to make in the interest of the fishery?—A. From the 15th July the lobster is worth nothing. It changes its shell in about two weeks, and after that it improves rapidly. Some years when we have taken out traps about the 10th July there is already a good quantity of good lobsters.

By Dr. Sormany, M.P.P.:

Q. Do you not think there are too many traps along the shore, all round the island?—A. Yes, there is a good many of them.

Q. Do you not think that if each license was limited to a certain number of traps it would have better results?—A. Yes. There may be a school of lobsters in deep water and before they can get through the traps there is hardly one left; they are all caught.

Q. Do you think it would be better to limit the number of traps fished by each canner than the number of licenses?—A. Yes.

Q. At how many fathoms do you set your traps?—A. In the spring at five and six fathoms. We move into two or three fathoms. Later in the spring there are no more lobsters to be fished in deep water, they come closer to the shore.

Witness discharged.

ANDREW V. ROBICHAUD, fisherman, called and sworn:—

By the Commissioner:

Q. Where do you fish?—A. I fish at St. Marys, on the eastern shore.

Q. How many seasons have you fished there?—A. I have fished four summers, two lately and two about 14 years ago.

Q. Do you carry on any other fishing?—A. No, when I don't fish I follow driving in the lumbering.

Q. How many fishermen are there in the same district?—A. Six in the same factory; there are not many factories there.

9-10 EDWARD VII., A. 1910

Q. How many fishermen to a boat??—A. Three boats, two fishermen in a boat.

Q. When do you commence to fish?—A. I commence in the first week in May.

Q. At what depth do you fish when you commence?—A. Six and a half to 13 fathoms.

Q. How many traps do you fish?—A. 250 last season.

Q. Did you always fish the same number of traps?—A. I fished 250 this year at first, but at the end I had only 210. Last year I had 250 all the summer, always the same number of traps and about the same depth of water.

Q. Are you paid by wages or by weight?—A. I am paid by wages by the month. The gear belongs to the packer.

Q. Do you fish in the same depth of water all the season?—A. No, when the fish begin to slacken we move our traps farther into the shore in $4\frac{1}{2}$ fathoms.

Q. Do you make more than one change?—A. Sometimes we move two or three times until we find the lobsters.

Q. Is it the practice to go closer to the shore as the season advances?—A. Yes, because the lobsters themselves go closer to the shore.

Q. Do you think the fishing has fallen off?—A. I believe it has, according to my judgment.

Q. Do you think that on the average the lobster is as big now as it was?—A. No, far smaller.

Q. Has the number of traps increased?—A. They have doubled during the last 14 years.

Q. Do you fish the same kind of traps now?—A. No, we don't fish the same kind of traps. I don't, this summer. I fished the five-net trap this summer.

Q. Why do you fish the five-net trap?—A. Because it is better for the lobster fishing. We get more lobsters with these traps than with the others. We hold them in the trap and they cannot get out. When we had only the two net traps there was a hole at both ends and they got out.

Q. Even large lobsters as well as small ones?—A. Yes, because the hoops were 5 inches long.

Q. Do you think it is fair to say that you fish with a parlour trap so as to catch the small lobsters, because out of that trap nothing gets out?—A. The smallest can get out through the laths if they are small enough, because there is a space between the laths.

Q. What size lobster do you think will escape?—A. I should say about 4 or 5 inches would go through that by my judgment.

Q. And the other lobsters would remain?—A. And the others would remain.

Q. Are all the fishermen hired by the month?—A. In my district they are all hired by the month. Some of them have contracts and sell by weight, but very little. Some of them have 25 or 40 traps, and so on, with hoop fishing besides that.

Q. Do you think that if every fisherman had to take out a license to fish it would make any difference in his observance of the law?—A. I don't know exactly, but I think they have licenses enough now for the lobsters there are.

Q. Some people have suggested that if only those men were allowed to fish that were licensed they would be more careful. Do you think it would make any difference in your case whether you had a license in your pocket or whether you fished without one?—A. It is pretty hard for me to answer that in one way, because I know my mind, but I don't know another man's mind. If I had a license I might work all right and the other might work wrong.

Q. Would it lead you to inform on the other man if you found he was violating the law?—A. Yes, it would. If I saw him doing wrong I might tell him to do right, but it would be pretty hard for one man to lead the whole lot.

Q. What are the fishermen doing with the berried lobsters?—A. Some of them bring them to the hatchery and the others are boiling them in the boilers. I don't

SESSIONAL PAPER No. 22a

know myself whether it is right or wrong. If it was me I would leave them outside where they belong; they should not be brought ashore at all.

Q. What is the general practice?—A. The practice around the factory where I take is that they bring the spawn lobsters to the hatchery. The others boil them.

Q. Are not all the factories in the neighbourhood supplying the hatchery?—A. As far as our factory is concerned, they bring the berried lobsters to the hatchery. The rest I don't know what they do.

Q. As to the small lobsters, what is the practice?—A. They bring everything ashore.

Q. Does the canner make any objection to receiving small lobsters?—A. No, not where I am.

Q. If the canner did object, what would happen?—A. We would have to throw them overboard, I suppose.

Q. You would not bring them ashore?—A. I would not bring them ashore; you can't go against the orders.

Q. Then you take ashore to the factory everything you catch in your traps?—A. Yes.

Q. Has the canner in your neighbourhood ever objected to receiving anything you brought him?—A. No.

Q. Have you any idea as to the spawning habits of the lobster, do you find spawn lobsters during all the season?—A. Yes, sir, from the first to the last.

Q. Is there any time when spawn lobsters are more numerous than at another?—A. No. About three weeks before quitting the fishing they are just about spawning.

Q. You can tell by the eggs whether they are ripe or not, they get loose?—A. They are loose on the lobster and if shaken a little they fall off.

Q. Then what do you say is the spawning time of the lobster?—A. From the 15th July to the month of August is about the time they spawn, in my judgment.

By Mr. Turgeon, M.P.:

Q. Do you not think they spawn about the first part of July?—A. We never found any that were out of spawn before we quit fishing, they always had spawn on them. Last year I found eight of them and they had spawn on them and I shook it off. That was on the 10th of the month.

By the Commissioner:

Q. Is it the practice here to shake the eggs off?—A. No, only when a man wants them, that is all. I do shake them off when I take the eggs.

Q. It is not a hard matter to shake the spawn off?—A. No, not when they are ripe.

Q. Is it hard at any other time?—A. You will spoil them because they are just coming on.

Q. Do you think there is any time when the lobsters are not fit for food?—A. Well, you have got me there. I think they are good eating every time to my taste.

Q. From the opening to the close of the season what would be the average size of the lobsters you catch?—A. I should give my average from the smallest to the biggest as about 7 inches.

Q. That is the average size of the lobsters you catch?—A. That I caught this summer. But it is not so with every boat. My run of lobsters was big and others still smaller.

Q. What is the smallest sized lobster you ever saw with eggs on it?—A. It is generally the way that the big female lobsters have spawn and the small lobsters have none. I have never seen a small one with spawn on. I should say the smallest I have seen with spawn on would be an average of about 9 inches.

Q. Do you find more spawn lobsters at the close than at the beginning of the season?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. What would you say would be the average number of lobsters bearing spawn out of a hundred?—A. Some days we have none and others two or three during the summer. At the last you will get five or six and as many as eight. At the beginning you will find none. You can judge the average from that.

Q. Do you think the canners make any examination of the lobsters when brought to them to ascertain whether any are berried or not?—A. They did at our factory because the packer was supplying the spawn to the hatchery. I don't know about the other factories.

Q. Do you think that spawn lobsters after being taken out of a trap and held in the boat for some hours with other lobsters piled on them and then carried to the cannery are likely to survive if picked out and returned to the water?—A. Some would survive and others would not. A man with any judgment cannot say they are all good because some of them are smashed. However, there are some that are good because they have spawn on them.

Q. If the berried lobster is to be returned to the water, should she be returned to the water when caught?—A. Yes, then she would be all right and spawn all right.

Q. There is a chance that the spawn would be lost if the spawn lobsters remain a few hours in the boat and are then piled in a barrow and dumped out at the factory? In most cases these lobsters are canned?—A. The most of them anyway.

Q. Do you think it would be possible to make a thorough examination of the catch brought in at the cannery in order to pick out the berried lobsters; would it be an easy matter to cull the catch so as to save the berried or small lobsters?—A. It would not.

Q. You do not think it could be easily done?—A. I suppose if the law made them they could do it.

Q. Do you think it would be possible to induce the fishermen to return all the berried lobsters they take in their traps to the water at once?—A. I think it would be easy to get them to return the berried lobsters to the water if there was a fine heavy enough so that they would keep them there.

Q. You would have to fine the fishermen and not the canner?—A. Yes, I would say that if the fine was on the fishermen it would be better.

Q. But it is on the fishermen at present?—A. Well, it is all right if it is on the fisherman, because he brings everything ashore and everything goes to the boiler. Sometimes the canner looks and sometimes he does not. If the fine was on the fisherman when he caught spawn lobsters he would put them overboard.

Q. Why do they not do it now? Do not the fishermen understand that the future condition of the fishery depends upon the preservation of the spawn lobsters?—A. I don't know what they do in other places; we bring them ashore.

Q. Before you had the hatchery what did you do?—A. Thirteen or fourteen years ago when I did fishing I had orders to bring everything ashore.

Q. From whom?—A. From the boss, the packer.

Q. So you brought the small ones and the berried lobsters also then?—A. We brought everything ashore. Lately we have brought spawn lobsters ashore because they are saving the spawn for the hatchery.

Q. What would be your idea about buying the berried lobsters from the fishermen and retaining them in pounds?—A. I don't know whether we have any pounds here that contain feed for them.

Q. There should be from the way you are situated with inlets and indentations in the coast. You do not think pounds would be of any use?—A. Not the way we are fixed.

Q. What is your idea about the present license system, do you think the number of licenses to pack should be restricted?—A. I should think not, I should think that the licenses are all right.

Q. The number is supposed to be restricted now; under the regulations there are

SESSIONAL PAPER No. 22a

no new licenses issued.—A. Do you mean to say to stop fishing? I don't understand you.

Q. Do you think there is any reason why any man that wanted it should not get a license?—A. I don't know about that.

Q. Some people claim there is no good reason why the number of licenses should be restricted, that one man has as much right to get a license as another; what is your opinion?—A. My opinion upon that is that if every man had a license the lobsters would be slacker in a few years than they are now because there would be too many fishermen around the shore.

Q. Do you think the number of traps is too great?—A. No.

Q. Do you not think there are too many traps fished?—A. I don't think it, I don't think there are too many traps fished.

Q. It is possible for the lobsters to get past the barrier of traps set around the coast?—A. There is lots of space for the lobsters to go between the lines of traps yet.

Q. Do you think it would be wise to confine the licenses to certain districts and give every man his water limit?—A. Yes, that ought to be done. Every man ought to have his part of the shore to fish and no other man encroach upon him.

Q. Would you not limit the number of traps in that particular district? What would be the good of any restriction if the fishermen were allowed to fill the place up with traps as some men doubtless would?—A. It is pretty hard for me to answer that.

Q. You have an opinion to offer surely upon that point, you are a fisherman of more than ordinary intelligence?—A. I should say that if a man had so many miles to fish under his license he ought to put as many traps as he wanted in that ground.

By Mr. Turgeon, M.P.:

Q. Use his ground?—A. Use his ground.

By the Commissioner:

Q. Do you not think he would use it up?—A. I mean that he should fish as much as he wanted to up to the close season.

Q. Do you not think that if a man had a certain area allotted to him, it would be to his interest to protect that area and not overfish it?—A. It would not be overfishing if he fished until the close season and then stopped. Next season the lobsters would come on his ground as much as on the others.

Q. You think then the lobsters wander all over?—A. I think so. If a man is allowed to fish so many miles of ground he ought to be allowed to fish as many traps as he wanted.

Q. When you go out first to fish do you think the lobsters are coming in from deeper water beyond where your traps are set?—A. Yes, by the way our traps are fishing. Our traps are set off from the shore. Where we first begin to fish is outside. Then we feel the lobsters coming in.

Q. When do you think the lobsters leave the shore?—A. I don't know anything about that. I never followed them out, I never walked on the water.

Q. Supposing the canneries here were to be closed, would there be any other market for the lobsters?—A. I don't know that. I know it would be a darn poor time if the factories were closed.

Q. Do you think that an increase in the number of canneries would result in an increased catch of small lobsters?—A. I don't know at all.

Q. I suppose an increase in the number of canneries would mean an increase in the number of traps?—A. Yes.

Q. And if the number of traps were increased would you not be catching still smaller lobsters than you are at present?—A. Yes, there would be more small lobsters caught.

9-10 EDWARD VII., A. 1910

Q. Do you think that if the law with regard to the 8-inch limit were strictly enforced it would put the canner out of business?—A. I should say so. I am pretty sure it would, because they would not can if they were restricted to 8 inches.

Q. Do you think if the size limit were abolished it would make much difference in the size of the lobsters you bring ashore?—A. It would not make much difference because we don't get any smaller than 5 or 6 inches. The smallest lobster gets through. If we were to take any smaller than that we don't bring them ashore. They are no good where there is nothing in them.

Q. Then you do not bring in everything you catch?—A. We bring in all except what are no good. When we get these very small lobsters we don't take them.

Q. How would it affect the fishery if we were to do away with the size limit altogether?—A. I don't think it would affect it much. If you keep an 8-inch limit it will put them out of business.

Q. But you do not keep that size limit; that is not observed at all?—A. If you take off the size limit altogether they are not going to take the smaller lobsters because they are no good. It would be just the same as it is now.

Q. What would be the effect of a regulation doing away with the size limit and limiting the open season for fishing to the 1st July?—A. It would be a small business, because it would be only 8 or 9 days and the run of the lobsters then is about 6 or 7 inches.

Q. During those 8 or 9 days the bulk of the fishing is really over?—A. This summer there are none at all; when we quit there was nothing.

Q. How is it in most seasons when you quit?—A. In most seasons it is a little better when we take up the traps, but not much better. The best fishing is in the spring, the month of May. After that it is slack, but coming on towards the last it is sometimes a little better. This summer it was still worse. If you give only 8 or 9 days more it would not make much difference with the small lobsters caught then. There is no good fishing then, and the fishermen will simply run into debt.

Q. How many fishing days do you have as a rule; do you begin to fish about the 10th May?—A. About 10th May and fish till 10th July.

Q. During that time how many days do you lose owing to storms and other causes; what is your average number of fishing days?—A. We lost about 10 or 12 days this summer.

Q. Did you suffer much loss from broken traps this season?—A. One of our boats lost over 100 traps. I lost 50.

Q. Is it to your knowledge that there is any combination among the canners here to keep down the price paid to fishermen; can fishermen go from one canner to the other?—A. I don't know anything about that. We are hired by wages and don't go around asking about other men's business.

Q. You are satisfied with what you get?—A. Yes.

Q. Do you think the fishermen, one with the other, would make more money if every man was allowed to can on his own hook?—A. Some of them would make money and some of them would not, because every man isn't a solderer. He has got to be a solderer to can lobsters. Some of them cannot do it and some of them can. In that way every man cannot have a license because he has got to have a solderer to solder his goods.

Q. Do you think that the hatchery here is useful? How long has it been in operation?—A. I don't know about that because I was not here when it first started. From what I heard the hatchery is doing good work. At the first part of the season the spawn is no good; I suppose because it is too new. When the lobsters are ready to spawn they bring them there and they are hatched out. For about three weeks at the last of it the hatchery is doing good work.

Q. You do not know whether the fishermen have already noticed that there are more lobsters in the neighbourhood of the hatchery or whether the young fish are more numerous than they used to be?—A. I have not noticed.

SESSIONAL PAPER No. 22a

Q. Would you recommend an increase in the number of hatcheries?—A. My opinion is that if they do keep on hatcheries they ought to have more or none at all. We have only one here, and there is a limit to the distance they can collect the spawn. As for the factories outside of that area, the spawn lobsters must go into the boilers because it is too far to bring the spawn. So in order to hatch out the spawn they ought to have more or none at all. The number that do hatch out their spawn does not correspond with what they boil in the boilers.

Q. Do you think it is right to take undersized lobsters?—A. I think it is this way: They cannot do business if they do not.

Q. Do you think it would be of any advantage to widen the space in the bottom of the trap, to put a greater distance between the slats?—A. In my judgment I think they are far enough apart now. If I had my way I would put them closer.

Q. Would you confine lobster fishing to a certain distance off shore?—A. Traps do you mean?

Q. Yes?—A. No, I guess they are just about right now where they are fishing.

Q. Would you say that we should fix a depth of water inside of which you should not fish traps after you have followed the lobsters right into shore from deeper water?—

A. I don't think it would be right to have a limit of water because some summers the lobsters act differently; they don't go inshore. Other summers they are near shore in two or three fathoms of water. If you confine it to four fathoms sometimes they will get few lobsters; half a mile farther there are lots of them.

Q. In what depth of water are the hoop nets fished?—A. They are generally fished from three to three and a half fathoms. They are very seldom closer than that, except when there is a big northwest wind and they are afraid of going adrift. Then they are fished sometimes in two fathoms of water.

Q. How many hoops will a man fish? You call them 'curlies,' do you not?—A. They fish from 15 to 20, I suppose.

Q. You do not fish them?—A. No, I do not fish them.

Q. Are they fished extensively all along the shore?—A. Yes, they are.

Q. What class of lobsters do they catch?—A. This summer it was about the same as the traps.

Q. You would not say they catch more berried lobsters, or smaller lobsters, than the traps?—A. They do some summers; last summer they did.

Q. Do you think it is only natural that the berried lobster should go into the warmer water to spawn?—A. Yes, I should judge that they do go close to the shore to spawn because when we have the traps close to the shore at the last of the season we do find more spawn on them.

Q. Then, what is your opinion about the hoop net fishing, do you think it hurts the fishery?—A. There ought to be a law to keep them from taking lobsters that are too small.

Q. Would the simplest way not be to abolish hoop net fishing?—A. I don't think it.

Q. You would allow it to continue?—A. I think it ought to be allowed to continue hoop net fishing.

Q. You do not think that the hoop nets hurt the lobster fishery more than the traps?—A. No, they do not, they ought to be allowed to fish.

Q. What is the best month for lobster fishing?—A. Generally in the spring. This spring it was the month of May. Last spring also I think it was in the month of May.

Q. What do you think about fall fishing?—A. I think it ought to be all right, there ought to be good fishing then. That is generally the way since I can remember. On the sea shore there was always good fishing late in the season, in August and September.

Q. Would you not say that if you have fall fishing, in addition to spring fish-

9-10 EDWARD VII., A. 1910

ing, you are going to exhaust the supply of lobsters more rapidly; is not that burning the candle at both ends?—A. Not in one way. If the fishery was closed for a month at the time of spawning, then the rest of the fishery would be all right.

Q. At what part of the season would you take that month off?—A. From the 15th July to the 15th August.

Q. You would not allow any fishing during that time?—A. That is my opinion.

By Mr. Turgeon, M.P.:

Q. Do you not think it would be better to stop on the 1st July?—A. Maybe, it would be better, but from the 15th July to the 15th August would be my opinion of it.

By the Commissioner:

Q. Are live lobsters shipped from here at all?—A. Not that I know of.

Q. Are there any facilities for shipping live lobsters?—A. I don't know that.

Q. Is there anything else you would like to state for our information?—A. No, only about the spawn lobsters. I think if they were not allowed at all to bring them ashore, but bring them to the hatchery, it would be a good idea, because all that are brought to the shore are boiled. That is destructive to the fishery, I think.

By Mr. Turgeon, M.P.:

Q. You think that is the chief effort we should make, to save the berried lobsters altogether?—A. Yes. As far as bringing them to the hatchery, I think it is all right, but there ought to be a law, where there is no hatchery, not to bring them to the shore, but to keep them outside.

By the Commissioner:

Q. Of course, there is a law in existence?—A. Yes, but it is not followed.

By Dr. Sormany, M.P.P.:

Q. In your opinion, the hoop nets do not hurt lobster fishing more than the traps?—A. If the same conditions existed for hoop nets as for trap fishing they would not hurt any more.

Q. There are a good many hoop nets being fished?—A. A good many.

Q. Can you make a comparison between the number of lobsters caught in the hoop nets and the number caught in the traps?—A. Comparatively speaking, the number of lobsters caught in hoop nets is very small. I mean to say that fishing with traps, one boat destroys as many lobsters as one boat hoop fishing. A boat with 25 or 20 hoops would not destroy as many lobsters as one boat with 250 traps, in my judgment.

By the Commissioner:

Q. Are the fishermen engaged in hoop net fishing monthly wages men?—A. They buy their own hoops.

Q. And sell the lobsters by the hundred?—A. Yes.

Mr. J. W. WINDSOR.—Are not the hoops fished in a fathom of water?

The WITNESS.—I said from three to three and a half and sometimes two.

By the Commissioner:

Q. Are the hoop nets not fished inside that, in shoaler water still?—A. I was not there every night to find out. That is during the day time; I don't know what they do at night.

By Dr. Sormany, M.P.P.:

Q. Will one boat fishing with traps destroy less or more lobsters than a dory fishing with hoop nets?—A. The boat with traps will destroy a little more.

SESSIONAL PAPER No. 22a

Q. If the number of traps to each license was limited, would it not be better?—

A. Yes that ought to be limited. A license should not have 25 boats, for example. It should be limited that there should be so many boats to each license.

Q. And so many traps to each boat?—A. And so many traps to each boat.

By Mr. Turgeon, M.P.:

Q. What would you think of limiting the ground, say to two or two and a half miles, and others have similar privileges?—A. I cannot answer all that because if you did give it to some of these factories, an area of three miles, the others would have nothing.

By the Commissioner:

Q. If you limit the number of traps to a factory how would you decide the point, because some factories have much greater capacity than others?—A. I would like 250 to each boat.

By Mr. Turgeon, M.P.:

Q. How many boats?—A. To a license? I would say 5 boats ought to be enough to a license.

By Dr. Sormany, M.P.P.:

Q. What about a big factory employing 12 boats?—A. They would have to reduce their number to 5.

Mr. GEORGE WINDSOR.—The witness has suggested that there should be a limit of 5 boats and 250 traps to each factory. What is another factory going to do that employs 12 boats?

The WITNESS.—Reduce them to 5.

Mr. GEORGE WINDSOR.—But what is the canner going to do with all his traps?

The WITNESS.—They would not be lost; there would be room for them after the first two or three storms. When I lost some I could replace them by others from the store.

Witness discharged.

DOCITHE CHAISSON, canner, called and sworn:—

By the Commissioner:

Q. How many years have you been fishing?—I have been in the business for 20 years fishing and packing. I have fished at times and packed at times.

Q. Where is your cannery situated?—A. Abraham's village, on the coast.

Q. How many boats do you employ?—A. Three boats with two boats under contract.

Q. How many canneries are there in your district?—A. Only one.

Q. How many cases do you pack generally?—A. Between 250 and 300; 250 this season.

Q. What is the biggest pack you have made?—A. Three hundred cases last year.

Q. How do you find the fishing at present compared with past years?—A. My experience is that since I started in the business I have found an increase in the number of lobsters. There are more lobsters now than there used to be. For one cannery twenty years ago there are ten now.

Q. Then there are a good many more traps fished?—A. Yes.

Q. And a good many more lobsters caught?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Is there any difference in the present size of lobsters as compared with former years?—A. They are about the same.

Q. What is your practice in regard to small and berried lobsters; do you take all the fishermen bring you?—A. Yes, I have always done that.

Q. Do you know the regulations?—A. Yes.

Q. You give your spawn to the hatchery?—A. Yes.

Q. Before the hatchery was built what did you do with the spawn?—A. I boiled the berried lobsters.

Q. What is the average size of the lobsters now?—A. From 7 inches up. Since 20 years it has taken six lobsters to make a pound. That is the average for 20 years.

Q. Do you know of anybody ever having been fined for not observing the regulations?—A. Yes, I was fined myself.

Q. For what reason?—A. For taking berried lobsters.

Q. Did that result in bringing about a change in your practice?—A. It did not make any change because the hatchery was built immediately after that. All the factories did the same thing; they all boiled their berried lobsters before the hatchery was established.

Q. What proportion of lobsters carry eggs?—A. A small proportion, four or five per cent.

Q. Is there any time in the season when you find the proportion big?—A. Yes, there is a time in the season after the 20th June when they are found in greater number. More are taken by the 'curlies' than by anything else. There are some places where they fish with hoop nets in a fathom and a half of water, and in those places they do a great deal of destruction by catching small lobsters and berried lobsters.

Q. Do you think the fishermen have adopted the practice here of washing or brushing off the eggs from the berried lobsters?—A. No, they give the spawn to the hatchery. I am pretty sure they would do so if they did not have to give them to the hatchery.

Q. Do you think there is any way of getting the fishermen to understand they should return the berried lobsters to the water?—A. If the law could be universally enforced, if all canners would agree not to take them, the fishermen would not bring them in. But for one that would follow the regulation ten would not do so. It is a simple matter to remove the eggs at any time in the season by striking the tail of the lobster on the water.

Q. Then you think the hatchery is a good institution?—A. Yes, it is a great benefit. It is doing very much good and but for it the spawn would be destroyed by the boiling of the berried lobsters.

Q. Is there any place in this neighbourhood where pounds could be established?—A. Yes, in Shippigan Gully.

Q. Do you think if the law was strictly enforced you could continue to pack?—A. I don't believe any factory could stand it, it would not pay.

Q. Do you think there are enough canneries in operation now?—A. Yes.

Q. Would you have any objection if a license was given to everybody who applied for it?—A. No.

Q. Then should we have some inspection to make sure that applicants for licenses could pack lobsters properly?—A. Yes. There would be more trash than well packed lobsters.

Q. How many years is it since canning was first introduced in this district?—A. I cannot give the exact date. It was begun before I have any recollection of the business, it may have been 40 years ago.

Q. Does it take six 8-inch lobsters to make a pound?—A. That is the average. Out of the lobsters I get my average runs six to the pound.

Q. What do you think of the idea to do away with the size limit altogether and shorten the open season to the 1st July?—A. The season is already too short. As it is we do not take many under seven inches.

SESSIONAL PAPER No. 22a

Q. In that case there is not much reason to have a size limit?—A. No, if the limit was 7 inches instead of 8.

Q. In that case would it not be just the same?—A. No, because the smaller lobsters are caught with hoops.

Q. What do you think of the idea of forbidding fishing inside certain limits?—A. I would approve that idea.

Q. What is the best month for fishing lobsters?—A. It is not the same every year. This year it was in the month of May and last year it was in June.

Q. What do you say to the month of July?—A. July is a good month because the lobster is very much bigger than in the spring.

Q. Are you in favour of a fall season for fishing?—A. It would suit some districts. In August lobsters could be fished by everybody.

Q. Do you think there should be an inspection in order to maintain the quality of the lobster packed at the cannery?—A. It would be a good thing.

Q. If no canneries were operated here what market would the fishermen have for their lobsters?—A. The fishermen would die of starvation.

Q. You are in favour of hatcheries?—A. Yes.

Q. Has the hatchery here been long enough in operation to demonstrate its benefits?—A. Yes, it has put a lot of lobsters into the sea.

Q. Have you any other opinion to offer?—A. I am against hoop net fishing. If that had been abolished since the hatchery was in operation there would be lots more lobsters to-day.

Q. How long have the hoop nets been fished?—A. A long time, but they are taking much smaller lobsters now than they used to. The lobsters they are taking are very small and it takes 14 or 15 to fill a pound can.

By Dr. Sormany, M.P.P.:

Q. If the regulations as to size and the taking of berried lobsters were strictly observed in the case of hoop nets, would fishing with them destroy the lobsters?—A. No.

Q. Do they take any lobsters in four fathoms of water?—A. Yes, they do and the lobsters are of the same size as in the traps.

Q. What do you think of the idea of limiting the number of traps to each license?—A. Yes, there should be a limit of so many traps to each license.

Q. In your opinion is the great number of traps now fished one of the great causes of destruction?—A. I think it is.

Q. If the regulation concerning berried lobsters were enforced and a limit placed upon the number of traps fished, would the lobsters increase in number?—A. Undoubtedly they would.

Q. Could you suggest a maximum number for the bigger factories?—A. For the bigger factories I would say 1,500 traps instead of 3,000 as they have now.

Witness discharged.

ALBERT ROBICHAUD, fisherman, called and sworn:—

By the Commissioner:

Q. The question has arisen as to the evil effects of what is called here 'curley' fishing, termed elsewhere hoop net fishing. You have fished 'curlies,' have you?—A. Yes.

Q. Do you fish them regularly every year?—A. Not regularly. I fished two summers.

Q. When did you begin to fish 'curlies'?—A. The last of May, I guess. We began about the 25th of May.

9-10 EDWARD VII., A. 1910

Q. What depth of water do you fish in?—A. In the spring they fish in about 3 fathoms, then in 2 fathoms and then in 1 fathom.

Q. Do you notice any difference in the kind of lobsters you are catching when you fish for them in the spring; in 3 or 4 fathoms of water what do you find?—A. I find the lobster bigger when we fish far away in deeper water.

Q. And what do you find as you come inshore?—A. The lobster is smaller.

Q. And when you are fishing in one fathom what sort of lobsters do you get?—A. Five or six inches and some very scarce, some big ones.

Q. But the majority of them are of what size?—A. Five or six inches.

Q. Do you get many female lobsters with berries?—A. Not very many.

Q. Do the canners take these five or six-inch lobsters from you?—A. Yes.

Q. They do not raise any objection?—A. No, sometimes they kick about it, but they take them all the same.

Q. How many of these five or six-inch lobsters does it take to make a pound can?—A. It would take 20 of them for sure.

Q. And there are a great many of these 'curlies' fished?—A. Oh, yes, all along the shore.

Q. Do the same men who fish the traps fish the 'curlies'?—A. Some fish with both.

By Dr. Sormany, M.P.P.:

Q. Could there be any way of enforcing the regulations so far as 'curley' fishing is concerned, could they take 7 or 8-inch lobsters?—A. In the spring they could, but not later on. If they fish in three fathoms of water they take good-sized lobsters.

Q. Could they take them all the season through?—A. Yes.

Q. They could fish all the season from beginning to end in three fathoms?—A. Yes.

Q. Would they take as many?—A. They could not take so many.

By the Commissioner:

Q. Would it pay them if they were confined to three fathoms and not allowed to fish inside of that depth?—A. It would not pay them much.

By Dr. Sormany, M.P.P.:

Q. But if the fishermen take lobsters 5 inches long they are not worth much, they do not sell those?—A. If they pay \$1 a hundred for lobsters they take the small ones in size also. Along the shore they take more small lobsters.

Q. Do you not think that the canners should not be forced to buy these small lobsters? If you forbid 'curly' fishing that industry would be at an end whereas if you prohibit the canners from taking the small lobsters then the 'curley' fishing could continue but only take the good-sized fish?—A. Yes.

Q. If it does not pay them then they can give it up. The question is: If the packers were forbidden to buy these small fish would that not be a good protection against the destruction of lobsters by the 'curly'?—A. That is what I think.

Q. Would it be as good a protection as to forbid 'curly' fishing altogether?—A. Yes.

By the Commissioner:

Q. Did you not know yourself that it was against the law to take these small lobsters?—A. No, I heard it but did not know it personally.

Q. Do you think it is right to take these very small lobsters, do you not think it is ruining the fishery?—A. I don't think it is right.

Q. Then the fact is you would admit the regulations are not observed at all?—A. No.

SESSIONAL PAPER No. 22a

By Dr. Sormany, M.P.P.:

Q. At the factories?—A. At the factories.

By the Commissioner:

Q. Anywhere? There is no attempt made to enforce the regulations, the factory will take anything you bring them?—A. Yes.

Q. Has it always been that way?—A. Always, sir.

Witness discharged.

PIERRE X. PAULIN, fisherman, called and sworn:—

By Dr. Sormany, M.P.P.:

Q. How many years have you been fishing with hoop nets?—A. Since 8 years ago.

Q. Did you take lobsters as small as the preceding witness said?—A. No, In those days I took much bigger lobsters.

Q. Were there as many small lobsters then as there are now according to the previous witness?—A. No.

Q. But you fish as close to the shore?—A. Yes.

By the Commissioner:

Q. What depth of water did you fish in?—A. Sometimes three fathoms, sometimes two.

By Dr. Sormany, M.P.P.:

Q. Was the lobster that was caught then much smaller than the trap lobster?—A. There was not much difference. When they were broken, 100 lobsters gave 10 or 11 pounds of meat.

Q. You are a canner now?—A. Yes.

Q. What is the average weight per hundred?—A. 14 or 15 pounds of meat from 100 lobsters is the average in my factory now.

Q. In those days by following the regulations as to size and berried lobsters, do you think the fishermen could have made a living?—A. Hardly.

Q. Would the 'curley' fishermen have done as well as the trap fishermen observing the regulations?—A. Yes, and perhaps better.

By the Commissioner:

Q. Would it seriously interfere with the fishing if the use of 'curlies' were prohibited inside a certain depth of water?—A. It would prevent a good many men from earning a living. Some men could fish 'curlies' that could not fish traps.

Q. Would the prohibition of 'curly' fishing be an unfair restriction?—A. It would be unfair to some.

By Dr. Sormany, M.P.P.:

Q. Would it not be better to forbid the canners from buying small lobsters rather than prohibit 'curly' fishing altogether?—A. If the small lobster was brought ashore it would not make any difference whether it was bought or not, it would be destroyed just the same.

Q. Would the fishermen not throw the small lobster into the water if they could not sell it?—A. They might throw it in the water but not until it had been refused by the buyer and then it would be too late, the lobster would be dead.

Q. What do you think is the best way to help the lobster industry?—A. Just to leave the berried lobsters in the water.

Witness discharged.

Commission adjourned.

9-10 EDWARD VII., A. 1910

TABUSINTAC, July 23, 1909.

WILLIAM WISHART, manager, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. About 30 years.

Q. To whom does this cannery belong?—A. W. S. Loggie & Co.

Q. Are there many other canneries in this neighbourhood?—A. There are none right around here except those of W. S. Loggie & Co.

Q. They are all the canneries of W. S. Loggie & Co.?—A. Yes, but inside the bay there are Savoy & Sewell.

Q. How many canneries would you say belonged to Mr. Loggie in this neighbourhood?—A. There are five from here to Lower Tracadie Gully.

Q. How many boats do you employ at this cannery?—A. Six.

Q. Manned by two men?—A. Manned by two men.

Q. And fishing how many traps each?—A. About 250, sometimes more, sometimes less.

Q. What number of hands are employed in the canneries?—A. That is on the shore, besides the fishermen?

Q. No, in this particular cannery?—A. We employ about 15 girls on an average and 3 men, 18 hands.

Q. What is the capacity of this cannery, what is it calculated to pack?—A. About 300 to 350 cases.

Q. How many did you pick this year?—A. 400.

Q. And last year?—A. Something about the same; 300 the year before that.

Q. Can you say whether the annual pack here is decreasing compared with the early days of the fishery?—A. Well, if anything, this factory cans more.

Q. Would you venture to speak for the other canneries?—A. This next factory, except this year, has canned more and more every year.

Q. Is that due to the fact that you are fishing an extra amount of gear?—A. No, it seems the lobsters come here better these late years. We do not fish quite as much gear.

Q. What sort of a trap do you fish with?—A. The ordinary trap.

Q. You do not fish the new trap, the parlour trap?—A. No, the ordinary trap is the one we use.

Q. It is not your opinion then that the supply of lobsters has been kept up by taking lobsters that formerly were rejected and using an increased amount of gear?—A. No.

Q. Is there more gear in the water now in this neighbourhood than when you began to be interested in the fishery?—A. There may be. I will tell you all the difference. There were two boats taken off and put down at the other factory. That makes the same amount of competition at the other factories.

Q. Are you fishing about the same number of traps?—A. Just about the same.

Q. Do the fishermen own the boats and gear or are they owned by the factory?—A. The factory owns it all.

Q. How are your fishermen engaged?—A. By the month.

Q. And what is the average monthly wage?—A. About \$24, \$48 for each boat.

Q. That includes what?—A. Just their pay. We have to board them.

Q. In addition to that?—A. Yes.

SESSIONAL PAPER No. 22a

Q. When does your fishing begin here?—A. About the 5th of May we canned this year, sometimes the 9th.

Q. What is your season in this part of the country?—A. We begin 20th April and knock off 10th July.

Q. You do not usually begin on the 20th April?—A. No, on the average about the 5th May.

Q. And when do you knock off?—A. We always fish up to the 10th July.

Q. What is your best month for fishing?—A. May.

Q. In what depth of water do you first fish?—A. Eight or nine fathoms.

Q. How far off shore?—A. About $3\frac{1}{2}$ miles.

Q. Then you move your traps in during the season?—A. Some seasons we do and some we do not. Sometimes we find they hang out there.

Q. What is the nature of the bottom here?—A. Rocky bottom.

Q. Do you think lobsters approach the shore for the purpose of spawning?—A. I think so.

Q. What would you say is the principal spawning month of the lobster?—A. July.

Q. Can you say whether the lobster spawns every year, or every second year or twice a year?—A. I think she spawns every year.

Q. Do you find lobsters bearing berries at all times of the season?—A. Yes, but not so many as at the last of the fishing. There are few at any time up here, that is in the season.

Q. When do you get the most berried lobsters?—A. The last of June and the 1st July.

Q. Can you tell what is the smallest sized lobster you have ever known to bear eggs?—A. Something like 8 or 9 inches.

Q. Is there any part of the season when you consider lobsters unfit for food, for instance when they are casting their shell?—A. I don't think then they are fit to eat at all. Sometimes I think in July they cast their shell.

Q. Could you give me any idea of the average size of the lobsters you find bearing berries?—A. About 9 inches.

Q. What percentage of the lobsters that are brought to your factory would you say bear eggs?—A. We tried it two or three times and about two lobsters out of 100 this year we chucked over. Now there is a certain time too after a storm one fisherman said he took 40 out of 400 lobsters.

Q. Do you know whether the practice of stripping or washing off the eggs from the female lobsters is followed by the fishermen in this neighbourhood?—A. These lobsters are all thrown overboard. We never handle berried lobsters, we take them right out of the trap.

Q. Is that a general practice along the shore?—A. Here it is.

Q. I suppose from the fact that the canners refuse to accept the berried lobsters the fishermen have learned to throw them overboard outside?—A. They do not get any count for them when they bring them ashore.

Q. Is there any hatchery in this neighbourhood?—A. No.

Q. Do you make a regular examination for the purpose of determining whether there are any berried lobsters delivered to the factory?—A. The orders are from the inspector and Mr. Loggie to take no berried lobsters. We follow out the orders as best we can. We throw them overboard but sometimes one make escape.

Q. It has been suggested that a good way of protecting the berried lobsters would be to save them and get them in pounds where they would be held until the close of the season; have you any idea whether that can be done here?—A. Yes, I think it could be done.

Q. Are there places along this shore where tidal pounds could be established?—A. Yes.

Q. What is the size limit in this division?—A. 8 inches.

9-10 EDWARD VII., A. 1910

Q. The lobsters were measured this year, were they not?—A. They were measured twice, I think.

Q. By whom were they measured?—A. The fishing overseer, Mr. Simpson.

Q. What proportion of the lobsters taken here would be below the legal size limit?—A. Over half, as near as I can remember.

Q. What is the average size of the lobsters taken here?—A. I think it would be $7\frac{1}{2}$ inches.

Q. Do you get many large lobsters?—A. We get quite a few.

Q. Do you see any of the old time large lobsters that you used to see when you first began operations here?—A. Yes.

Q. You do occasionally get them?—A. Yes.

Q. If the present size of 8 inches were strictly enforced what effect would it have upon the canneries in this neighbourhood?—A. They would have to shut down.

Q. Do you think an increase in the number of canneries would result in an increased catch of undersized lobsters?—A. Yes.

Q. Would you favour any increase or decrease in the present size limit, having regard to the future of the industry?—A. No, I don't see how you could fish lobsters and make much change in the size.

Q. Has there been any noticeable decline in the average size of the lobsters caught in this district within the last ten years?—A. No.

Q. Would you say there has been any decrease since you first began packing?—A. It is likely they are smaller.

Q. Have you any idea as to the condition further back than that?—A. No.

Q. When did canning first begin here?—A. I think about 28 or 30 years ago, in fact they canned 35 years ago below here. That is before I knew much about it.

Q. Would you venture to say there has been a decrease in the average size of the lobsters within your recollection?—A. It would be more than I would like to say. As far back as I can remember it used to take 145 lobsters to 100 pounds, and it will take the same to-day. There cannot be much difference.

Q. What regulations were in force when you began?—A. Just about the same as there are to-day. At the very first there were no regulations, I think, as to the size at all.

Q. Do you think there is any particular reason why there should be different size limits on sections of the coast not very far apart?—A. I don't know of any particular reason.

Q. Is there any particular reason for having a smaller size limit in your district than in any other district?—A. No.

Q. Do you think it is in the interest of the continuation of the lobster industry that lobsters should be taken before they reach the age of reproduction?—A. No, I don't think they should be caught.

Q. Is it invariably a fact that the larger the lobster, the smaller number it takes to fill a one pound can?—A. Yes.

Q. What disposition is made of the lobsters taken here below the size limit?—A. They are canned.

Q. From what size do you can them?—A. Almost down to as small as you get them. We get some that are no good.

Q. What would you call no good?—A. Perhaps 4 or 5 inches. I never measured any of them. When they are that size they are only second class and usually we don't like to save them.

Q. It has been estimated that it takes nine 7-inch lobsters, which lobsters have never been afforded an opportunity of reproduction, to fill a one pound can. What is your experience with regard to the size of lobsters required?—A. About $7\frac{1}{2}$ to 8 inches. We have tried them here.

Q. That is what the size runs to here?—A. That is what it runs. Of course it is two years since I have tried them.

SESSIONAL PAPER No. 22a

Q. Would you favour reducing the size limit?—A. To get a smaller lobster?

Q. Would you make it legal to take a still smaller lobster?—A. Yes.

Q. Do you think if we reduced the size limit to 7 inches there would be any greater hope of the fishermen and the canners living up to the law than there is at present?—

A. I think they would. The run of lobsters is about 7½ inches.

Q. What would you say to abolishing the size limit altogether?—A. Having no limit at all?

Q. Having no size limit and then in lieu of that perhaps shortening the season?—A. I don't know which would be the best for here. I think the limit of size would be the best because when we get the rigging out we have such a short time to fish and it is so rough. Then there is such an expense that by the time you get to shore with your lobsters you have nothing. I think that along here to reduce the size limit and let the time run on would be best. It would stop the fishing altogether in these bays if you reduced the size and enforced it.

Q. Do you think it is possible to enforce the size limit regulation?—A. Oh, yes, it is possible.

Q. It would require an immense staff, would it?—A. Yes.

Q. You would need to have a man in every boat?—A. Pretty nearly a man in every boat.

Q. And a man in every factory?—A. Yes. It would be difficult to know what would be the best thing to do, to shorten the season or what.

Q. When is your best fishing month?—A. Mostly in May.

Q. Is it not the case generally that the fishing begins to slacken off before the end of the season, taking one season with another?—A. Yes. Some seasons it holds out and some seasons it does not.

Q. But generally it slackens towards the end?—A. Generally it slackens.

Q. Could a size limit of 10½ inches be maintained here?—A. Oh, no.

Q. Did you ever see any lobsters 10½ inches in size?—A. Three or four or five a day.

Q. Is it the case that canners are compelled to accept undersized or berried lobsters for fear of losing their fishermen who would, in the case of refusal to take illegal lobsters, sell them to canners less scrupulous?—A. It is likely that is the way of it.

Q. It does not occur here where your fishermen are all wages men?—A. No.

Q. How many pounds weight of green lobsters of each size would it take to fill a pound can?—A. It takes 425, say about 450 pounds, on an average of green lobsters for 100 pounds of meat. That is a lobster and a half in count to the pound weight in green lobsters.

Q. Have the regulations for the protection of the lobster, that is with particular reference to the size limit, ever been observed in this district?—A. Well it was watched pretty close.

Q. At one time, more so than now?—A. Yes.

Q. Now there is no attempt to enforce the size limit?—A. No attempt at all.

Q. At one time there was?—A. Yes, you had to be careful.

Q. You are of the opinion that a strict enforcement of the present regulations would mean the closing down of the canneries?—A. Yes.

Q. Do you think that the existing penalties, if strictly enforced, are sufficient to deter packers from violating the regulations?—A. Yes, I think they are pretty nearly enough. If a man was caught once or twice he would never attempt it again.

Q. Do you think the number of canneries has reached a maximum compatible with the preservation of the lobster industry, and should the issuance of further licenses be discouraged?—A. I think there are enough canneries licensed.

Q. Do you think that in the interest of the lobster industry it would be right to close down the canneries for some years, to shut off lobster canning altogether for a term of years, until the lobsters had time to recuperate?—A. I don't think it would do

9-10 EDWARD VII., A. 1910

very well to shut it all down. A great many people have so much rigging on hand it would not be advisable.

Q. The Lobster Commission of 1898 recommended that temporary reserves should be established in various sections along the coast where fishing should not be allowed for a year or two, the location of such reserves to be changed from time to time?—A. That might be all right.

Q. Would it be possible to do that?—A. Yes.

Q. Do you think the present close season is satisfactory?—A. Yes.

Q. Would you suggest any change in the existing regulations?—A. No, I don't think I would.

Q. In your opinion would a reduction in the length of the open season be of advantage and have the effect of eventually increasing the supply of lobsters and perpetuating the fishery?—A. Yes, I think it would.

Q. It has been asked that fall fishing be allowed in some districts where, owing to the ice remaining on the coast, there is delay in commencing the fishing in the spring, what would you think about that?—A. I believe it would be all right to have a short season in the fall. There are places where they do not get out early in the spring.

Q. Is the present regulation restricting the number of canning licenses satisfactory?—A. Yes.

Q. A great many people think there should be no limit to the number of licenses, that there is no reason why one man should get a license and another should not?—A. Well, I don't think it. Supposing you build a factory right here and it costs \$2,000 or \$3,000 and I come and build another little one alongside of it and destroy your business? You have gone to great expense and another man comes and takes your business right from you. Of course that is the cry here, everybody is saying now that every man should get a license.

Q. What would be the result of giving a license to every man who applied for it?—A. The factories would be so thick they would have to do something to shorten the time and cut them out.

Q. Do you think that if a license were given to every man who applied for it he should be compelled to pack lobsters up to a certain standard of quality?—A. Oh, yes, you would have to do that.

Q. So the thing would about equalize itself in the end?—A. Yes.

Q. Do you think there is much inferior lobster meat packed at present owing to poor equipment?—A. Yes, a great deal.

Q. Lobster packing is the only thing that is not subject to inspection and the tendency of the day is to be more scrupulous in regard to food products and how they are put up?—A. I think the canneries should be inspected.

Q. Would the present staff of fishery officers in your opinion be competent to look after that inspection?—A. Yes, I think they would do.

Q. Would you refuse a canning license to an alien?—A. Yes, I would.

Q. Do you think the fishermen, one with the other, would make more money if allowed to can than they do by fishing?—A. I don't think they would, that is taking them on the average.

Q. Are there any co-operative canneries around here? There are some places where a number of fishermen have grouped themselves together and carry on canning, what we call co-operative canneries. There is a law providing for the incorporation of such unions of fishermen in Nova Scotia?—A. Well there are not enough up here in the bay. There are two fellows who can on that principle but they have a man hired to fish and one man to can the lobsters.

Q. Under one license?—A. One license and one factory.

Q. What is the price paid for lobsters here where they are fishing by the hundred?—A. It was about \$3 a hundred pounds for green lobsters this year.

Q. Are you aware of any complaints made by the fishermen that the price paid for lobsters by the canners is not satisfactory?—A. No, sir.

SESSIONAL PAPER No. 22a

Q. Is it to your knowledge that any fishermen have ever lost their catch of lobsters by the canners refusing to accept them?—A. No, sir.

Q. It has been alleged that in some instances the fishermen have suffered injury from the failure of the canners to operate their factories although a sufficient supply of lobsters was available. Do you know of any instance of that here?—A. No, I do not.

Q. Would the fishermen in this district find any market for their lobsters if the canneries were closed?—A. No, not in any quantity.

Q. There are no facilities here for the carrying on of the live lobster trade?—A. No.

Q. Are there any live lobsters shipped from this locality?—A. No, none.

Q. Do you think that the shipment of live lobsters should be favoured in preference to the canning industry?—A. It does not affect us here.

Q. How does the present price of lobsters compare with that paid years ago?—A. Well, last year was the highest price that ever was paid and this year it is a little less.

Q. Is that due to market conditions?—A. Yes.

Q. And when you first began fishing yourself what did you get for lobsters?—A. About \$9 to \$9.50 and \$10 a case.

Q. But as a fisherman what did you get?—A. Now they get \$3. The first lobsters I sold were for \$2.25, that was seven or eight years ago. Before that they were away down. I think the price was \$1.75.

Q. Have you anything to say about hatcheries?—A. No, I don't know anything about them, there are none in this neighbourhood.

Q. You think the plan of impounding the berried lobsters could be carried out here?—A. Yes, it could be carried out.

Q. Do you think that the traps now in use are the best ones that could be employed?—A. Yes, we find them so, we can't get anything better.

Q. What space is there between the slats in your trap?—A. About an inch.

Q. Is it the width of a lath?—A. No, less than that.

Q. I notice your hoops in the end are smaller than ours in the Baie des Chaleurs, ours run from 4½ to 5 inches in diameter?—A. Ours are less than that.

Q. What is the diameter of your hoop here?—A. About 3 inches.

Q. Do you think the number of traps fished by a cannery should be limited?—A. I think they should be.

Q. There is not much use limiting the number of canneries unless the number of traps is also limited?—A. No.

Q. What would you consider to be about a fair number of traps to be licensed?—A. To a license do you mean?

Q. Yes.—A. That would be to 100 cases? About 500 traps.

Q. Are 'curlies' used here?—A. No.

Q. Is trawling carried on here at all?—A. No.

Q. There are many places where the lobsters towards the close of the season go into bays, harbours and lagoons. Do you think that fishing in these places should be stopped?—A. Yes, I think that is the worst hurt that could be done.

Q. Is inside fishing done here?—A. Not right here but a few miles off.

Q. In the Magdalen islands there are lagoons, supposed to be the natural breeding grounds of the lobster, where no fishing is allowed.—A. They are allowed to fish here at the same time as we are.

Q. Is the close season strictly observed here?—A. Yes.

Q. At Shippigan and Caraquet fishing out of season and canning in the woods in private houses is said to be going on.—A. They may be canned one day after the season but not more. There may be a time come when the season would close on Saturday and you may have Sunday and Monday to finish up.

9-10 EDWARD VII., A. 1910

Q. But I mean the practice of persistently fishing throughout the close season and canning in secret?—A. No, they don't do that at all, they have never done it here.

Witness discharged.

WILLIAM MCWILLIAMS, fisherman, Brantville, called and sworn:—

By the Commissioner:

Q. How long have you been fishing?—A. About nineteen years.

Q. What do you do when you are not engaged in lobster fishing?—A. Farm and fish smelts.

Q. Have you always carried on your fishing off this neighbourhood?—A. Yes, sir.

Q. Are there a large number of fishermen engaged in the lobster fishing in this district?—A. Quite a lot.

Q. What number of boats would you say are employed along this front?—A. About twenty-four.

Q. How far off shore do you begin to fish?—A. About $3\frac{1}{2}$ miles.

Q. In what depth of water?—A. About 8 or 9 fathoms.

Q. When do you generally begin to fish?—A. About May 5.

Q. Do you fish throughout the season in the same depth of water?—A. At times and there are times when we do not.

Q. You follow the lobsters?—A. Yes, follow them.

Q. Have you some seasons remained fishing at that distance?—A. Some seasons we have not moved any at all.

Q. Other seasons you find the lobsters come in and you have to follow them?—A. Yes.

Q. One season with the other I suppose it is the general rule that they do move in?—A. Generally.

Q. In your experience is the annual catch decreasing or otherwise, are you getting as many lobsters as you did when you began?—A. Yes.

Q. Of the same size?—A. Yes, of the same size.

Q. You think that the average run of lobsters has not diminished since you began fishing?—A. No.

Q. Are you fishing an increased amount of gear now to get the same weight of lobsters?—A. I may be fishing more gear, but I am getting more lobsters than I did.

Q. Has the number of traps fished increased considerably in this neighbourhood?—A. I don't think they have much.

Q. Is there any difference between the trap you now fish with and the one you used when you first began?—A. It is the same trap.

Q. Having the same sized hoop and the same sized opening?—A. Yes.

Q. Parlour traps are not used here at all; how does that happen?—A. No one ever tried them here I think.

Q. You fish by the month?—A. By the month.

Q. And the boats and gear all belong to the canners?—A. Yes, sir.

Q. It has been suggested that it would be a good thing to require the fishermen to take out a license at a nominal fee in the belief that they would be more apt to observe the regulations; do you think that you would do any better in that regard if you had a license in your pocket?—A. No, no better.

Q. What is your practice with regard to undersized and berried lobsters?—A. Heave them over; that is, the berried lobsters.

Q. Why do you do that?—A. To save them and not destroy them.

Q. Is that done voluntarily on your account?—A. That is our orders from headquarters, to heave them over

SESSIONAL PAPER No. 22a

Q. Is that order general in Mr. Loggie's canneries?—A. I think it is all around here that I know of.

Q. Then as to the undersized lobsters, what is done with them?—A. Any that is too small for use don't generally stay in a trap; they go out.

Q. What would you consider too small for use?—A. Between 5 and 6 inches.

Q. Lobsters under 5 inches you would not pretend to bring ashore?—A. No.

Q. How do the wages paid now compare with those paid when you first began to fish?—A. The wages are higher now.

Q. When you first began were you paid by the month?—A. Always paid by the month.

Q. You take these wages because you are satisfied?—A. I take them because I am satisfied.

Q. Are you aware of what the law is governing the fishery in this neighbourhood? When does the season open and close?—A. It is supposed to open 20th April and close 10th July.

Q. And then as to berried lobsters, the law is what?—A. To put them overboard.

Q. And as to the size limit, what is the law?—A. Take what you can get I suppose.

Q. That is the practice not the law?—A. I cannot tell you any more than that we are not to take more than 5 or 6 inches.

Q. Were you ever warned by the canner or fishery overseer?—A. We have been.

Q. Not to take anything under 8 inches?—A. Nothing under 9 inches I have been told.

Q. You take to the factory all you get in the trap, leaving out berried lobsters?—A. Yes.

Q. Do you expect the canner to take all these undersized lobsters?—A. Yes.

Q. What do you think is the spawning time of the lobster?—A. About July.

Q. What do you know about the berried lobster?—A. We find more berried lobsters in July than at any time.

Q. Do you think the eggs on the berried lobster are riper at that time?—A. I cannot tell very much difference. There are times when the eggs are not the same colour as at other times.

Q. Do you find lobsters that spawn all through the season?—A. A few, an odd one.

Q. You find more spawn lobsters at the end of the season?—A. More towards the end of the season.

Q. Do you think you find more spawn lobsters close inshore than you do when you fish in deep water?—A. There doesn't seem to be much difference.

Q. Do you think there is any part of the season when the lobsters are not fit for food?—A. I don't think there is during the season we are fishing.

Q. What is the smallest size at which you have ever noticed a female lobster bearing eggs?—A. I have seen them much smaller, I think, than 9 inches with eggs.

Q. What would be the average size of the egg-bearing lobsters here?—A. About 10 inches, I suppose. There are times when we get them a good deal bigger with eggs.

Q. One with the other, do you think they will run as large as 10 inches?—A. Between 9 and 10 inches.

Q. What would you think of the idea of saving all the berried lobsters, not throwing them overboard, and taking them to pounds where they could be held?—A. I believe it would be a good idea.

Q. Do you know anything about lobster hatcheries?—A. No, sir, I do not.

Q. Are there places in this neighbourhood where tidal pounds could be easily constructed?—A. Yes, sir.

Q. According to you the regulation affecting the berried lobsters is fairly well observed?—A. Yes, sir.

9-10 EDWARD VII., A. 1910

Q. Is the practice of stripping or washing off the eggs from the female lobsters followed by the fishermen in this neighbourhood at all?—No, sir, not that I know of.

Q. The canner that you work for does object to your bringing in berried lobsters?—A. Yes, sir.

Q. But not undersized lobsters?—A. No.

Q. Is it an easy matter to cull out the lobsters when they are brought to the cannery as to their size and so forth; would it be an easy thing to enforce the regulations do you think?—A. I don't think you could do anything with it. I don't think it would pay to run factories here if you did enforce it.

Q. Would it be an easy matter to cull lobsters when they are brought to the factories as to the matter of size?—A. It would take a terrible time to cull them.

Q. If the canners refused to accept undersized lobsters would the fishermen throw them back into the water?—A. Yes.

Q. Do you know if it is the practice to avoid working for the canner who is strict in the matter of the size limit and the culling of lobsters?—A. I don't know.

Q. Are you aware of any fishermen having lost his catch of lobsters owing to the refusal of the canner to accept them?—A. No.

Q. What do you think about the regulation restricting the number of canning licenses?—A. I think there are enough at present.

Q. And what is your opinion in regard to the proposition to limit the number of traps that should be fished by a cannery?—A. I think what Mr. Wishart told you was all right.

Q. Would a great increase in the number of canneries result in an increased catch of small lobsters?—A. Sure.

Q. Do you know anything at all about the live lobster trade?—A. No.

Q. If the size limit were strictly enforced here would it put the canners out of business?—A. I believe that.

Q. What would you think of a regulation doing away with the size limit and in return shortening the season somewhat, would you bring in any smaller lobsters than you do at present?—A. I don't suppose a man would bring them in much smaller.

Q. Do you think that in exchange for doing away with the size limit it would be wise to shorten the season?—A. If the season was shortened it would hardly be worth while for a man getting out rigging, the spring is so rough.

Q. It seems that the greatest damage is done towards the close of the season by catching more small lobsters and berried lobsters, that is in places where they do not observe the law?—A. Here the fishermen are pretty careful as to that.

Q. You are not aware of any combination among the packers to keep down the price paid for lobsters?—A. No.

Q. Do you think the fishermen could make more money if they were allowed indiscriminately to can lobsters?—A. I could not tell you, I never studied up that.

Q. Would you favour any change in the size limit?—A. No, I don't know of any better regulation that there is now.

Q. And you have not noticed any great decrease in the average size of the lobsters during the last ten years?—A. No, sir, I have not.

Q. Do you think it is right, in the interest of the lobster fishery and its continuance, that immature lobsters should be taken before they are old enough to reproduce themselves? What would happen in farming if we were to kill off all the lambs and all the calves?—A. It takes a man some time to study what age they are when they are killed off.

Q. It is the exception to find berried lobsters under 8 inches?—A. They are very few.

Q. Do you think that a larger percentage of lobsters is required in the fall to fill a pound can than in the months of May or June?—A. I don't think it.

Q. Do you think that the fishing for lobsters should be kept farther out from the shore, that insisting upon not fishing inside a certain depth of water would be a good

SESSIONAL PAPER No. 22a

thing and protect the breeding lobsters?—A. We very seldom fish inside three fathoms here. There is not much difference in the fishing there as compared with the fishing outside, so far as the size of lobsters is concerned.

Q. The practice of fishing in shoal water has not been carried on here?—A. No, sir.

Q. Do you think that the practice of fishing in bays and lagoons and places where the lobsters evidently go in to spawn should be prohibited?—A. I think it should be if the lobsters go into those places to spawn.

Q. When is the best fishing time?—A. May.

Q. And I suppose up to the middle of June?—A. Yes.

Q. What would you think of the idea of shortening the season and removing the restriction as to the size limit?—A. I would not like to offer an opinion.

Q. It has been asked that fall fishing be allowed, what do you think of that?—A. I believe it will be all right in some places.

Q. All right for the canner or fisherman, but do you not think it will exhaust the supply pretty thoroughly if fishing in spring and fall is allowed?—A. It will help to kill them off quicker, sure.

Q. Is there any other statement you would like to make or any other opinion you would like to volunteer?—A. There is nothing that I can think of.

Witness discharged.

The commission adjourned.

ESCUMINAC, July 24, 1909.

II. E. FLILGER, packer, called and sworn:—

By the Commissioner:

Q. How far back does your experience of lobster canning go?—A. I had full control of a factory from 1898 till 1902, but before that I had supervised the packing for the last 22 or 23 years.

Q. What other canneries are licensed in your neighbourhood?—A. There are no others nearer than Escuminac Point.

Q. Do you can near the lighthouse?—A. Near the beacon.

Q. How many boats do you employ?—A. Generally two.

Q. Are the boats and gear your own?—A. Yes.

Q. How are the fishermen paid?—A. By the month. This year I have not any boats of my own. I bought the lobsters this year by weight from outside parties.

Q. You got the lobsters from anybody that would deliver them?—A. Yes.

Q. What is the capacity of your cannery?—A. The largest pack was 100 cases.

Q. What did you pack this year?—A. 52 cases.

Q. What number of people do you employ in your cannery?—A. This year there were 5.

Q. How does the fishing compare with what it was when you first went into the business?—A. There are not nearly as many lobsters.

Q. What difference is there to-day compared with olden times?—A. There are not nearly as many lobsters for one thing, and they are not nearly as large.

Q. To what do you attribute the diminution in size and the falling off in quantity?—A. Well, there were heavy storms some years ago. They claimed that was the reason; the first heavy storm came on in August and piled the lobsters on the shore right around the coast four or five feet high.

9-10 EDWARD VII., A. 1910

Q. You think that was the cause of the diminution and not overfishing?—A. I do not think they were overfished along this coast.

Q. Originally were the lobsters very much larger in size than they are now?—A. Yes, considerably larger.

Q. Up to the time of that storm had there been any appreciable diminution in the supply?—A. No.

Q. Did you notice the year after that there was a great falling off?—A. Yes.

Q. And the decline has kept up ever since?—A. Up to within this last few years. They have been better this last five years than for the two years previous to that.

Q. That is at Miramichi bay you mean?—A. Speaking of the shore along here.

Q. From within what radius do you draw your supply?—A. I suppose within a few miles.

Q. Have you any idea of the depth of water in which the fishermen fish?—A. Five to seven fathoms.

Q. From your observation as a canner, what do you consider the spawning season for lobsters to be?—A. The middle of July to the middle of August.

Q. Do you believe that the lobsters come close inshore for the purpose of spawning?—A. In some cases.

Q. Have you had any experience with regard to egg-bearing lobsters; what is the smallest sized lobster you have seen carrying eggs?—A. Seven inches I would say.

Q. Have you seen many that size do you think?—A. No.

Q. What would be the average size of those lobsters that carry their eggs outside?—A. I would say between 8 and 9 inches.

Q. Do you consider there is any part of the season when lobsters are not fit for food purposes?—A. I guess part of July they are not.

Q. That is when they are soft shelled?—A. Soft shelled, that is my opinion.

Q. Could you give me any idea of the percentage of lobsters bearing eggs that are taken in traps?—A. I could not.

Q. Do you know if the practice of stripping or washing off the eggs from the female lobsters is practiced by the fishermen in the neighbourhood?—A. Not to my knowledge.

Q. What is the practice with regard to berried lobsters; are they brought to the factory?—A. The fishermen throw them overboard as far as I know.

Q. Do you accept them at the factory?—A. I do not.

Q. Have you warned the fishermen not to bring berried lobsters to you?—A. I have.

Q. Have the local fishery officers visited you occasionally?—A. Yes, quite frequently.

Q. Has it been your practice to make any examination for the purpose of determining whether berried lobsters are delivered at the factory or not?—A. I always overhaul them.

Q. What is the size limit in this division and when does the fishing season open and close?—A. The size limit is 8 inches. The season opens on the 20th April and closes the 10th July.

Q. When do you really begin to fish, as soon as the season opens?—A. As soon as the season opens?

Q. Do you fish in April?—A. There have been lobsters taken on the 23rd or 24th April, but that is unusual.

Q. One season with another, when does the season usually begin?—A. The 1st May.

Q. And do you can right up to the close of the season?—A. Yes.

Q. What proportion of the lobsters taken in the traps or brought to the factory are below the legal size limit?—A. I could not say.

SESSIONAL PAPER No. 22a

Q. Would you say a considerable portion?—A. I would not say there was a large proportion to my knowledge from the limited number that we pack.

Q. There are some lobsters taken that are below the size limit?—A. Yes.

Q. Do you as a rule take all that are brought?—A. No, I do not.

Q. You do refuse to take the lobsters under a certain size?—A. I refuse to take the small ones, yes.

Q. Do the fishermen not grumble about that where they are being paid by weight?—A. Yes, they do.

Q. If the size limit were strictly enforced what effect would it have upon you as a canner?—A. Not very much I think. Perhaps where they handle large quantities the packers might have to go out of business, but where the pack is only 50 cases, I don't think so.

Q. Would you favour any increase or decrease in the size limit?—A. I would favour a decrease to 7 inches.

Q. Do you think the fisherman or canner would be more likely to observe the law if the size limit were placed at 7 inches than they are at present with an 8-inch size limit?—A. I think that lobsters at 7 inches could be taken for canning purposes.

Q. Do you think that lobsters are fully developed at 7 inches?—A. Not fully developed.

Q. What must be the effect if lobsters continue to be taken before they have reached the age at which they can reproduce themselves?—A. What I am speaking of now are the non-berried lobsters.

Q. Even so, whether berried or not, do you not think the practice of taking immature lobsters, one-half of which I suppose would be females, will be destructive?—A. I think the main part is to protect the berried lobsters.

Q. You do not think it makes any difference about taking the small lobsters?—A. Not very much, not as much as the others.

Q. When was lobster canning first introduced in this neighbourhood?—A. I think about the year 1856.

Q. And has the business gradually increased from that time down?—A. Now there is just the same number of canneries along the shore with the addition of two more at Escuminac Point.

Q. There has been no increase in this neighbourhood?—A. Not this last 25 or 26 years.

Q. Within what distance of here would that be?—A. Four or five miles.

Q. Can you remember what regulations were in force when the canning first began?—A. I don't think there were any regulations.

Q. Do you think that the average size of the lobster is as great to-day as when canning first commenced?—A. No, I think not.

Q. You said a while ago that you thought the decrease in size was the result of a big storm which destroyed the lobsters; is that the only cause which has operated?—A. No, it may have been overfishing. Still there never were any more than 500 traps fished along this shore, that is from here to Escuminac Point.

Q. The bulk of the fishery has always been outside of that?—A. Outside of that.

Q. Do they get lobsters off Escuminac Point before you do here?—A. Yes.

Q. How many 7-inch lobsters will it take to fill a pound can?—A. I could not say anything about that.

Q. Do you know how many 8 or 9-inch lobsters it will take, have you ever kept any record of that?—A. No, they were all of one size that we put in the can. I don't suppose we ever kept a record. Of course they were not all 9-inch lobsters that were broken and put in the can.

Q. You say you would favour reducing the size limit to 7 inches?—A. I think I would.

Q. Do you think it would be better to abolish the size limit altogether?—A. No.

9-10 EDWARD VII., A. 1910

Q. Do you think it would be possible to abolish the size limit and shorten the season somewhat to compensate for that?—A. It might, the lobsters seem to be improving around here since the season was shortened four or five years ago. My own opinion would be to do away with the size limit if the season were shortened.

Q. Would it materially affect the fishery here if the season were closed on July 1 instead of the 10th; is it not the case that the fishery begins to slacken off towards the end of the season?—A. It used to in former years, but last summer, a year ago, the best fishing was right at the time of closing.

Q. There may have been some cause at work that kept the lobsters back so that they did not come in at the early part of the season, but one season with another they generally come in pretty regularly?—A. This year on account of storms they slackened off about a week or ten days before the season closed.

Q. Have you any idea how many pounds weight of green lobsters it takes to fill a pound can?—A. Four and a-half to four and three-quarters with us, that is shell and all.

Q. Is there any improvement in the practice with regard to taking berried lobsters, are the fishermen becoming aware of the fact that it is most important to preserve these lobsters?—A. Some of them are.

Q. Do you think the existing penalties, if they were enforced, are sufficient to deter the packer from violating the regulations?—A. Yes.

Q. Do you believe that any one who applies for a license to can should be granted the privilege?—A. Yes, I think they should. I think that if any man wants to go into lobster canning and lose or make money he should have the privilege of doing so.

Q. What do you think would be the result of the indiscriminate packing of lobsters? Do you think there would be a good deal of bad product put up?—A. Not now; I do not think it. People seem to understand the business a great deal better than they did in former years.

Q. Then you would favour issuing a license to any one that asked for it without discrimination?—A. Yes.

Q. It has been suggested that the best way to protect the fishery would be to close down for a number of years; what would you think of that?—A. I would not advise it at all.

Q. During what period of the open season is lobster fishing most actively prosecuted here?—A. Generally in the first part of the season, in the month of May. Sometimes in June there is a good run of lobsters, about the best.

Q. Are berried lobsters more abundant, or do you see more of them, at certain times of the season than at other times?—A. I have seen very few of them this year.

Q. Do you think there is any one part of the season when more berried lobsters are taken than at another?—A. I would say about the latter part of May there seem to be a few more.

Q. Should the product of the canneries be subject to inspection?—A. I don't think it is necessary in the canning business, because the lobsters are generally put up fresh and clean.

Q. Do you think that if the meat is prepared on tables that are not kept scrupulously clean it will deteriorate and decay?—A. I suppose if they don't look after that.

Q. Are the tables kept as clean as they should be in all instances?—A. I think so, as far as my experience goes.

Q. What would you think of issuing a license to an alien?—A. I would not approve of that at all.

Q. Do you think the fishermen would make more money if allowed to can indiscriminately?—A. I would not express an opinion upon that either.

Q. What do you pay for lobsters?—A. The price started at \$1.75 a hundred pounds and went to \$2.50.

Q. The rise began this season?—A. Yes.

SESSIONAL PAPER No. 22a

Q. What was the cause of the rise?—A. Competition I suppose.

Q. Have you any idea of the wages paid to those who fish by the month?—A. I have no men engaged by the month.

Q. Are the fishermen complaining at all that the price paid by the canners is not satisfactory?—A. Not to me.

Q. Are you aware of any fishermen ever having lost their catch of lobsters by the canners refusing to accept them?—A. No.

Q. Would the fishermen in this district have any other market for their lobsters if the canneries were closed?—A. Not for their whole catch delivered to the market at Loggieville and Chatham for fresh lobsters.

Q. Are there any facilities here for the exportation of fresh lobsters?—A. There are no facilities here for doing that.

Q. Have you any idea which is the most remunerative branch of the industry to the fishermen—the fishing of live lobsters or the canning?—A. No, I have had no experience of that.

Q. What are live lobsters worth in this neighbourhood?—A. They are not sold alive.

Q. Are the lobsters boiled and shipped?—A. Boiled and shipped.

Q. What are they worth when they reach the market?—A. I have not shipped any that way.

Q. Have you any experience of hatcheries in this neighbourhood?—A. No.

Q. Are you in favour of establishing them?—A. Yes, if it will increase the number of lobsters.

Q. Do you know anything about the practice of placing berried lobsters in pounds and holding them there until the close of the season?—A. No.

Q. What do you think of that idea?—A. It would be a good idea.

Q. Are there any places on this coast suitable for pounds?—A. There would have to be some sheltered place clear from storms.

Q. What kind of trap is used in this locality?—A. It is an ordinary trap.

Q. The old-fashioned trap with an opening at both ends?—A. An opening at both ends.

Q. You don't see what is called the parlour trap with one end closed and an opening in the side?—A. There might be a few; not many.

Q. Is there anything else you would like to add to your testimony?—A. As to the number of lobsters that used to be on this coast in former days I remember hearing my father speak of coming down here some years ago. He had been canning salmon up the river and there were three of them—he, his brother and another man. With the aid of gaffs, poles with a gaff at the end of them, they caught and put up 600 boxes of lobsters in September. Now you could not get 100 boxes with all the traps on the shore. The first year that we fished traps along the shore we got over 3,800 lobsters in one day out of 250 traps. Now I cannot get that number in a fortnight. In 1901 I had two boats with 500 traps and all I got was 42 boxes. The next year I had one boat and got 50 boxes. Instead of keeping on canning then I let it go and the lobsters have gradually been getting better since, but this year they were not quite so good.

Q. Do you desire to say anything further?—A. No, I think you have covered the ground pretty well.

Witness discharged.

9-10 EDWARD VII., A. 1910

GREGORY MCGRAW, fisherman, Escuminac, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. Thirty years.

Q. What do you do when not engaged in fishing lobsters?—A. A little of everything.

Q. Do you do any other fishing?—A. Sometimes a few to eat.

Q. On what part of the coast have you fished?—A. On this part of the coast, from Escuminac Point up to this.

Q. Is there such a thing as a Fisherman's Union here?—A. Not yet.

Q. Who have you been fishing for lately?—A. Fishing for myself.

Q. And selling your catch?—A. Yes, sir.

Q. Where did you sell your catch?—A. To all the packers.

Q. In what depth of water do you usually go into to fish in the spring?—A. Six fathoms.

Q. How far off shore is that?—A. I suppose about two miles.

Q. Do you continue to fish in that depth of water all through the season?—A. No, we move into four after the——

Q. About when do you generally move in?—A. About the 15th of June.

Q. What guides you in the matter of moving in, the state of the fishing?—A. Yes, I follow the fish.

Q. As soon as you find the fish slacking off in deep water you follow them in?—A. Yes.

Q. Do you make more than one move?—A. No.

Q. What is the shoalest water in which you fish?—A. Four fathoms.

Q. Is there any fishing down here with hoop nets in shoal water?—A. Not that I know of.

Q. Around Shippigan and Miscou there is a great deal of that done with 'curlies'?—A. There is none of that here.

Q. And there is no trawling?—A. No trawling along the shore at all.

Q. When do you usually begin to fish?—A. The 1st of May.

Q. And how long do you continue to fish?—A. Until the 10th July.

Q. What is your experience as to the annual catch, is it as good now as when you first began to fish?—A. I think the last summer it was as good as ever I saw it.

Q. That was with regard to quantity or quality?—A. Quantity, the number of fish.

Q. Was it as good a run as you ever had?—A. I would not say it was quite as large.

Q. Do you think a stage in the fishery has been reached when the decrease has been stopped, have you noticed in the last few years that your run of fish is improving or keeping about steady?—A. I think the last five years they have increased a good deal.

Q. Have you ever thought of that or attributed it to anything?—A. I got all I could and got clear of them as quick as I could. That is all I thought of.

Q. What number of traps do you fish?—A. When I fished on wages I fished sometimes 300. Since I have been fishing for myself I don't fish over 100.

Q. Do you think that the number of traps fished in this district has increased in recent years?—A. No, not many to speak of.

Q. I do not mean the traps for this cannery here, but around this part of the coast generally?—A. I think not. It is just about the same as it always was.

Q. Has there been any increase in the number of canneries in recent years?—A. No.

Q. Is there any difference in the trap you fish now and the style of trap you used when you began?—A. I fish the same trap.

SESSIONAL PAPER No. 22a

Q. What is the space between the slats?—A. An inch.

Q. Was it always that?—A. Always that.

Q. What is the size of the hoop in the end?—A. Six inches.

Q. That is a pretty large hoop?—A. Yes, but we want to get the big lobsters.

Q. Most of those we saw on the north shore were not more than three inches.—A. Some may make them small, but I always like a big hoop.

Q. You own your own boat and gear?—A. Yes, sir.

Q. It has been suggested that for the better control of the lobster fishery, the fishermen should be required to register and take out a license, so that only licensed fishermen should be allowed to fish for lobsters. Those advocating that plan think it would tend to make the fishermen more careful in their observance of the law and more likely to inform on others who are not so careful. Do you think the fact of the fishermen being registered would make any difference?—A. I would not say anything about that at all.

Q. How does the price paid for lobsters now compare with that paid when you first began to fish?—A. Well the price this year, we did not get any price at all; we gave them away.

Q. How was that?—A. In other years we used to get \$2.50 a hundred and they would collect them. This year we got \$2.50 a hundred weight and delivered them.

Q. What was the reason of that change?—A. The price of lobsters was down, I suppose.

Q. When you first began to fish lobsters what did you get?—A. \$2.50 since I began to fish them myself.

Q. When you first went into the lobster fishery what was the price per hundred?—A. I could not tell you, it was all wages by the month.

Q. In the early days also?—A. Yes. Some men fished by the hundred, but they were found in rigging and boats. My first start out was 40 cents a hundred and I was found in everything.

Q. Is there any competition, or are you forced to accept a certain price?—A. We have got to take it or leave it.

Q. Is there any combination on the part of the canners to keep the price down?—A. I think they all followed the same tale pretty well this spring.

Q. I suppose that when prices are up there is more competition than there was this year?—A. Yes.

Q. What are the regulations governing the lobster fishery?—A. We open on the 1st of May and close on the 10th July.

Q. What is the law with regard to berried lobsters?—A. Chuck them overboard.

Q. What is your practice?—A. Shove one in if you can when you go into the shore with your boat. If the canner sees it chuck it over.

Q. Do you think that the regulation for the preservation of the berried lobster is observed among the fishermen?—A. I don't think it is a bit of good. If I chuck it over out of my boat, the next day another fellow will have it in his boat.

Q. What is the size limit supposed to be here?—A. 8 inches on this coast.

Q. Is that regulation observed at all; do the canners and fishermen confine themselves to 8-inch lobsters?—A. Not exactly; there are a good many smaller ones.

Q. Then, practically, you take to the factory everything you catch?—A. No, I have often chucked small ones away.

Q. Would you expect a canner to take all the lobsters you bring to him regardless of whether they were undersized or not?—A. I think so. If he would take them I would have the right to give them.

Q. You have had a good many years experience in handling lobsters, what do you think of the spawning season?—A. That is a kind of a puzzle. I think the whole season through.

9-10 EDWARD VII., A. 1910

Q. You find lobsters with berries attached the whole season through?—A. Yes, sir, from spring to——

Q. Do you notice a difference in the appearance of the eggs as the warm weather approaches?—A. I think July would be the ripest time I have ever known.

Q. You find berried lobsters all through the season?—A. All through the season.

Q. Do you find any more during any particular season?—A. I have never noticed.

Q. How many lobsters out of a hundred bear berries?—A. I could not say.

Q. Is the percentage of berried lobsters large or small?—A. Very small.

Q. Most of those who have cared to make a statement have put the quantity at not more than three per cent. Do you get more when you shift in than in the early spring when you are out in deeper water?—A. Not many I think.

Q. You have not noticed any difference?—A. No.

Q. You do not find any more spawn lobsters close into shore than you do in deep water?—A. No.

Q. Do you think there is any time of the season when the lobsters are not fit for food, when they should not be used?—A. I never thought of that.

Q. During the time when the lobster is casting his shell for instance?—A. They are so seldom caught around this coast that they are not worth noticing.

Q. Have you ever remarked what is the smallest sized lobster you have ever noticed bearing eggs?—A. I would not like to say; I have never noticed.

Q. Could you give me any idea of the average size of the lobster that bears eggs?—A. You will mostly see them a good sized lobster.

Q. Do you think you ever seen them less than 8 inches in size with eggs on them?—A. I would not like to say I did.

Q. I suppose you will admit that the seed lobsters should be saved and not destroyed or wasted?—A. Yes.

Q. What would you think of asking the canner to pay a larger fee than he does at present and in that way establishing a fund so that the seed lobsters should be bought from the fishermen and taken to a hatchery or placed in pounds?—A. I would say that would be all right.

Q. Do you think it is possible to persuade or educate the fishermen to throw the seed lobsters overboard and not to destroy them?—A. I think so, yes.

Q. Do you think the fishermen are more careful to-day in regard to saving and protecting the berried lobster than they used to be?—A. I think they are more careful.

Q. What would you think of reducing the size limit to 7 inches?—A. It would suit me fine.

Q. Do you think the fishermen would be more likely to observe the law if the size limit were put at 7 inches than if it were left at 8?—I think so. I think our smallest catch is about 7 inches.

Q. You do not see any smaller than that?—A. Not much below that.

Q. Would a 7-inch lobster get out of your trap?—A. A 6-inch one will go every time.

Q. Do you think the small lobsters do escape from the traps very much?—A. Lots of them.

Q. What change would you suggest in the present regulations?—A. I don't know that I would make any.

Q. Is the practice of stripping or washing off the female eggs followed in this neighbourhood?—A. I never did it and I never saw it done.

Q. Have the cannerymen in this neighbourhood ever objected to accepting berried or undersized lobsters?—A. Yes, they have.

Q. Do you think they make any examination for the purpose of detecting small and berried lobsters?—A. I could not say what their practice is.

SESSIONAL PAPER No. 22a

Q. Do you think that when a large number of lobsters have been brought to the cannery it is easy to make an examination so as to detect those that are undersized or berried?—A. I would not like to say much about it.

Q. Where 5,000 or 6,000 lobsters are brought in and thrown in a heap would it be an easy matter to cull them out?—A. Not very easy.

Q. If the canners refused to accept undersized and berried lobsters, would it have the effect of inducing the fishermen to return them to the water?—A. Yes.

Q. Do you think it is the practice to avoid dealing with a canner who is known to be careful on this point; do you know anything as to that?—A. No.

Q. Have you ever known one canner to be more scrupulous than another?—A. They have all got about the same song on this coast.

Q. Do you think it would be possible to buy the berried lobsters from the fishermen and place them in pounds?—A. I think so. There is no trouble in bringing them ashore all right.

Q. Are there places anywhere along this coast, within a reasonable distance, where the berried lobsters could be saved and held in pounds?—A. This bay is the only place I know of.

Q. Are the lobsters living there now?—A. Yes.

Q. Are you aware of any fisherman having lost his catch of lobsters through the canner refusing to accept them?—A. No, sir.

Q. What do you think about the present regulation which restricts the number of canning licenses, is it satisfactory?—A. No, I do not think so.

Q. What regulation would you favour?—A. I would like to have a license myself.

Q. A license to can? Have you ever tried to get one?—A. No, I have not.

Q. Would you favour issuing a license to every man that applied for one?—A. I would.

Q. Would that not necessitate some inspection with regard to the quality of the product packed and the manner in which the meat is put up?—A. I could have as good a packer as any other factory.

Q. Would there be any market here for lobsters if the factories were closed?—A. No market except the local market.

Q. Do you think that an increase in the number of canneries would result in an increased pack of undersized lobsters?—A. Well, I would not think so.

Q. Do you think we ought to limit the number of traps fished by any canner?—A. I think they are pretty well limited when a man fishes 250 traps.

Q. Do you think it would be right when issuing a license to a canner to limit him to a certain number of traps?—A. I would say it would.

Q. How many traps do you think we ought to limit a canner to?—A. It would be the number of boats you would have to limit.

Q. Then we would have to limit the canner to a certain number of boats and a certain number of traps?—A. That might result in a saving of lobsters.

Q. What do you think of the suggestion to close down for a number of years?—A. We would starve.

Q. It is said in some districts that the canners could not continue in business and observe the law regarding size limit, what do you think of that? Do you think that if the 8-inch size limit were strictly enforced it would put the canners out of business?—A. I think they would have to capture a few small ones.

Q. You think they would not be able to continue packing even with the 8-inch limit if it were strictly enforced?—A. No.

Q. What percentage of lobsters are taken here below the 8-inch limit? In some places they say as much as 50 per cent?—A. There is nothing like that here.

Q. Do you think there is any understanding on the part of the canners to keep down the price paid to the fishermen or is there competition among them?—A. They just pay what they like.

9-10 EDWARD VII., A. 1910

Q. And the fisherman is obliged to accept it?—A. Yes, the fisherman has got to take it. All the canners will put their heads together and make a price.

Q. Do you think they live strictly up to a bargain of that kind?—A. Pretty well, it is pretty well fixed.

Q. When you first commenced fishing was the average size of the lobsters greater than it is to-day?—A. Yes, there were some larger.

Q. To what cause do you attribute that decline in size?—A. Well maybe the big ones kept the little ones away from the traps and the big ones were caught more.

Q. Is there any reason why the size limit should be smaller in one district than in another; were the lobsters not originally pretty much the same run?—A. I would say so.

Q. Do you think that in certain localities there was a smaller species of lobsters than in some others?—A. I could not say. I have never been fishing except on our own coast.

Q. Do you think it is in the interest of the fishery generally that lobsters should be taken before they have reached maturity? If you kill off the lambs where are you going to get your sheep?—A. We let the lambs go.

Q. Should you not let the small lobsters go also?—A. We do let the small lobsters go.

Q. In regard to the traps, has the opening between the slats been made any narrower since you first began to fish?—A. No, sir.

Q. It has remained as it always was, about an inch?—A. About an inch—some a little more and some a little less. Some fellows are not particular in nailing on the laths; it may be a little closer or a little wider.

Q. When do you get most of the lobsters?—A. From the 10th May to the 15th June, that is commonly the best lobster season.

Q. What would you think of doing away with the size limit altogether and to compensate for that shortening the season somewhat?—A. The season is pretty short as it is.

Q. What would you think of doing away with the size limit and cutting the season off at the 1st July?—A. As far as I am concerned that would suit me all right.

Q. The general feeling is that it is towards the close of the season the greatest harm is done?—A. Well, I could not say. There are no more berried lobsters in July than there are in May, or no more small ones.

Q. What would you think of allowing fall fishing?—A. I think it would be pretty cold on the hands to have it any later and there would be rough weather.

Q. Are there any live lobsters shipped from this district?—A. I have shipped some cooked ones.

Q. Shipped them to Chatham and Newcastle?—A. Yes.

Q. What was the average price received for them?—A. As high as 10 cents apiece.

Q. What class of lobsters do you generally send there, not very small ones?—A. From 9 inches up.

Q. You would not send any below 9 inches?—A. No.

Q. There are no facilities here for shipping lobsters to the large markets?—A. No, sir.

Q. You think that in the matter of getting a license one man ought to be as good as another?—A. Yes, sir. If he cannot make a living that way let him quit.

Witness discharged.

HOWARD ALLAN, fisherman, Escuminac, called and sworn:—

By the Commissioner:

Q. You heard the evidence of the previous witness and noted what he said?—A. Yes; I approve of what he said.

SESSIONAL PAPER No. 22a

Q. Do you wish to add anything?—A. I think if the fishermen here would put their traps out the last of July and fish the balance of the season it would be better for the lobsters

Q. How about the spring fishing?—A. I would say not to fish in the fore part of the season, but to begin now. Let them put their traps out now and fish in the fall; I think it would be better for the lobsters.

Q. What is your reason for making that suggestion?—A. I think the lobsters make for the coast to lay their eggs.

Q. And they are laid by what date?—A. I think the lobsters are pretty well through spawning now. That is my opinion.

Q. What you suggest might do in a good many places where there is suitable shelter, but over the greater part of the coast it might be impossible to fish in the fall? —A. It is rougher here, too, but I certainly think it is better for the fish.

Q. There would not be as many spawn lobsters destroyed?—A. I do not think so.

Q. In the event of fishing in the fall you would not fish in the spring?—A. Would not fish in the spring. Then I think we ought to have a license.

Q. You think that anybody that applies for a license ought to be allowed to have one?—A. I think so.

Q. Would you be in favour of limiting the number of traps fished by a cannery? —A. No, I would not be in favour of that. I think they have a right to fish what they want.

Q. Is there anything further you would like to say?—A. No.

Witness discharged.

JOHN STEWART, factory employee, Escuminac, called and sworn:—

The WITNESS.—I have been canning at Escuminac Point and at Pictou, Nova Scotia.

By the Commissioner:

Q. For how long?—A. I was six summers at Pictou Island?

Q. For Burnham and Morrill?—A. No, sir, for McClure. They used to take the spawn off the female lobsters and convey it in a little boat to the hatchery. That is the way they preserve the spawn down there.

Q. Is it your opinion that the hatchery has done good in that neighbourhood?—A. They claim that it does good. The fishermen always were in favour of it.

Q. Is it the custom there to observe the legal size limit?—A. They do not make any difference. I was there six years and only saw the officer come once. The owners of the factory were there themselves and they looked after the spawn. It was removed from the lobsters and taken to the hatchery.

Q. The spawn was saved there?—A. Yes. There it is not so hard to do.

Q. And your opinion is that here the spawn is destroyed and lost?—A. Certainly it is.

Q. Do you think there is any attempt made here to protect or preserve the spawn lobsters?—A. There was this year. I know the head man at the shop I worked at gave the fishermen orders to throw the spawn lobsters overboard.

Q. In whose cannery was that?—A. W. S. Loggie's.

Q. What is the practice here with regard to small lobsters?—A. They took all they could get in the factory I worked for.

Q. What would you say as to the proposition that the size limit should be withdrawn altogether and in return for that slightly shorten the season?—A. I don't know about that.

9-10 EDWARD VII., A. 1910

Q. Have you any idea as to when most of the berried lobsters are taken?—A. Coming on the last of the season.

Q. Do you not think it is pretty safe to say that towards the end of the season you also get a larger percentage of small lobsters?—A. You do.

Q. So that if you cut off any time at the end of the season you do more to protect the fishery?—A. There are more spawn lobsters then. In the spring, the early part of the season, there is a very odd one.

Q. You find berried lobsters during all parts of the season?—A. Yes, but not so many as at the latter part.

Q. Do you think it would be a wise thing to do away with the size limit?—A. Anything under seven inches I think is hardly worth canning. It takes more time and it takes such a quantity of them; there is no meat in the very small lobsters.

Q. You would be in favour of establishing a hatchery in this neighbourhood, would you?—A. They seem to be in favour of it down south and I think it would preserve the lobsters here. If we don't save the eggs the industry will soon be fished out.

Q. What would you think about pounds?—A. The lobsters would have to be put into some place.

Q. Are there any suitable places for pounds here?—A. Not unless they are put inside the island. I think in our bay there would be too much fresh water although I have seen lobsters here.

Q. Have you any suggestions to make for the improvement of present conditions?—A. About a license, I think any man that can put lobsters up ought to have a license as well as the big fellows.

Q. You would need to have some guarantee of efficiency or some inspection?—A. Yes, I should think so.

Q. Do you think there would be any advantage in restricting fishermen to a certain depth of water and not allowing them to fish too close to the shore?—A. I believe that would be all right because the female lobsters come into the shallow water to spawn. I don't know whether they all do. I think fishing in two fathoms ought to be stopped.

Q. Do you think the lobsters have decreased in size?—A. They have.

Q. Do you think there is a greater average of small lobsters than there used to be?—A. Yes, since I commenced thirty years ago. But the lobsters down south are of a larger size than we get here.

Q. That is the lobsters in the neighbourhood of Pictou Island?—A. Yes.

Q. There is a great deal of fishing done there?—A. Yes.

Q. Do you think there is any combination on the part of the canners to keep the price down?—A. I don't know. They seemed to butt against one another this year.

Q. You think the fishermen take to the factory pretty nearly all they catch?—A. I think so. Of course I was never out with them to see whether they throw any overboard or not.

Q. What was the smallest sized lobster you ever saw carrying eggs?—A. I don't think I ever saw anything under 8 inches carrying eggs.

Q. Have you any idea what proportion the berried lobsters bear to the total catch?—A. I could not tell you.

Q. You think the canners are packing a smaller run of lobsters than when you were first connected with the industry?—A. Yes.

Q. They are using smaller lobsters to keep up the pack?—A. Yes, sir.

Q. Do you think there is any time during the season when lobsters are not fit for food?—A. First in the spring the meat is not so solid as it is afterwards. It is softer and not so firm.

Q. When the lobsters are casting their shell how are they in quality?—A. Going on about the 1st July there is a lot of soft shell lobsters. I think when the lobster is casting its shell the meat is not fit to be canned.

SESSIONAL PAPER No. 22a

Q. Do you think that if the canners refused to accept berried lobsters from the fishermen they would return those lobsters to the water?—A. If the canners refused to take them they would have to.

Q. Can you tell us the proportion of lobsters that are below the size limit; that is, how many out of every hundred?—A. I could not say, because I never saw them measured.

Q. Have you any idea how many lobsters it ordinarily takes to fill a pound can?—A. It would take between 8 and 9; that is at the last of the season. Those are the small ones. The average I think would be 6 and 7.

Q. Do you think that if the size limit were strictly enforced the canners would have to close up?—A. I dare say, because there is a lot of small sized lobsters canned. The canners might say that in order to hold on to the small ones.

Q. Would you favour any change in the law as regards the size limit from your experience?—A. I don't think anything under 6 inches is any good to can.

Q. Have you any idea what regulations were in force when you first became identified with the industry?—A. Not any that I remember.

Q. If the size of the lobsters is not as great as it was 30 years ago, what is the reason for the diminution?—A. Too many small ones caught. They are not allowed to grow. If we catch all the small ones we cannot get big ones because they have no time to grow.

Q. Do you think there is any reason why there should be a different size limit in one place from what there is in another?—A. I don't know about that.

Q. Do you think the lobsters originally were pretty much the same size all over, or do you suppose there is a smaller race in some places than there is in others?—A. Off Cape Bald there is a smaller race of lobsters and they are a month later in canning. So I am told by practical men engaged in the industry.

Q. What do you think of the proposition to do away with the size limit and to compensate for that reduce the season somewhat?—A. I think the season is short enough. They should not be allowed to take any undersized or spawn lobsters. That is one thing that should be stopped altogether, taking the spawn lobsters.

Q. What do you think of requiring the fishermen to register and take out a license; would that have any difference in the fishermen observing the law?—A. It might with some, but not with all.

Q. Do you think the existing penalties, if they were enforced, are sufficient to deter the packers from violating the regulations?—A. I think so if they were enforced.

Q. What would you think of a general closing down for some years?—A. I don't think that would do at all. There are so many fishermen who are dependent upon lobster fishing for the biggest part of their living who would be out of employment altogether.

Q. What is the best fishing month?—A. Coming on the last of May and 1st of June. About the middle of May anyway.

Q. Do you think it would be possible to establish a standard of fitness for a license to can; to insist that the packing tables should be of glass, marble or enamelled ware?—A. Ours are all zinc, and are washed thoroughly and made as clean as water could make them.

Q. Do you think that the product of the canneries should be inspected?—A. There is no doubt but that it ought to be.

Q. What do you think about issuing canning licenses to aliens?—A. It should be stopped altogether; I don't approve of that.

Q. Do you think the average fisherman would make more money if allowed to can?—A. I think so. I think he would make a little better living.

Q. You would encourage the policy of having fishermen co-operate in canning?—A. And put up their own fish.

9-10 EDWARD VII., A. 1910

Q. Are there any co-operative canneries in this district?—A. No, sir.

Q. Do you know how the price is established?—A. There is a price for the monthly men.

Q. Their wages vary I suppose, one man may be worth more than another?—A. That is the way it is always.

Q. And for those who sell their lobsters by weight?—A. I cannot say anything about that.

Q. Are you aware of complaints by fishermen that they could not get a fair price from the canners?—A. Yes, I think they all try to get as much as they can. If they don't get what they want some grumble.

Q. Are you aware of any fishermen having lost their catch of lobsters by the canners refusing to take them?—A. No, I am not.

Q. If the canneries were closed here could the fishermen find another market for their lobsters?—A. No, sir, because it takes very few to fill up the local market here.

Q. Have you any idea which branch of the lobster fishery is the most remunerative to the fishermen, the live lobster trade or the canning?—A. I believe the canning is the best.

Q. What do you think about the trap in use?—Is it the best suited for the purpose?—A. Yes, sir.

Q. Have you anything else to say?—A. I think that any man who wants to put up lobsters should have a license.

Q. Do you think there should be a limit to the number of licenses granted to one individual?—A. The man I work for took out two licenses one season.

Q. For one cannery?—A. He overran his first license.

Q. What I mean is do you approve of issuing more than one license to one man—that one man should run different canneries?—A. No, I would not favour that at all.

The COMMISSIONER.—If there is any other person connected with the lobster fishery that wants to give evidence we shall be very glad to hear him. We want to make the inquiry as thorough as possible.

OSBORN WILLISON, fisherman, called and sworn.

By the Commissioner:

Q. You are a fisherman and you fish off Escuminac Point?—A. Yes, sir.

Q. For one of the factories down there?—A. Yes, sir.

Q. How long have you been fishing lobsters?—A. About six summers.

Q. Always in the same locality?—A. Yes.

Q. When you are not fishing lobsters how do you employ your time?—A. In the summer season I work about the farm.

Q. When do you first begin to fish?—A. About the 20th April. We commence to run our lines as soon as we get a chance.

Q. The ice is gone from here then has it?—A. As soon as the ice leaves we start to run our lines.

Q. In what depth of water do you begin to fish?—A. Ten and eleven fathoms first.

Q. How far off shore would that be?—A. I would not have much idea. It would be a good piece; it must be four or five miles I think.

Q. How long do you fish in that depth of water?—A. About a month I would say.

Q. Then what happens?—A. We move our traps into seven fathoms and then into about four and then into two fathoms.

Q. You go right into two fathoms eventually. When do you get in there?—A. We commence to move in about June, the last of June.

Q. You move in because you follow the lobsters?—A. We follow the lobsters.

SESSIONAL PAPER No. 22a

Q. What number of traps do you fish?—A. I have about 250.

Q. Are you working by the month or by the week?—A. By the month.

Q. Do you find a smaller run of lobsters in two fathoms of water than you do in ten?—A. I find the lobsters smaller in size.

Q. Would you venture to say that as you go in to shore the run of lobsters gradually decreases in size? Do you get the best lobsters in the beginning of your season?—A. Yes, sir, always the best.

Q. Do you find berried lobsters when you first begin to fish?—A. Some. They seem more plentiful in June.

Q. And there are more of them in the shoal water than in the deeper water?—I don't know that there is much difference.

Q. Are the lobsters as large now as they were when you first began to fish; would the average run as large?—A. I think they are just about near the same.

Q. Do you get about the same number and proportion of lobsters as when you began to fish?—A. Unless it was this summer. They are scarcer this summer.

Q. What would you attribute that to?—A. It is not due to the weather. I think it was a fine summer.

Q. Have you always fished the same amount of gear and the same number of traps?—A. Just about the same.

Q. That is about as much as a man can fish?—A. That is about what he is supposed to fish. Some fish more.

Q. Are there more traps and boats fished in your neighbourhood since you first started fishing?—A. I think there are about the same number of boats. They may fish a few more traps than in the first summer I fished.

Q. The boats and gear are owned by the canner I suppose?—A. Yes.

Q. What would be your idea about requiring the fishermen to register and take out a license?—A. It might make a difference.

Q. Have you any idea of the price paid for lobsters now compared with what it was when you first began to fish?—A. No.

Q. Is the monthly wage about the same?—A. This year they were lower than I have ever seen them. Wages were about \$28 this year and last year about \$35.

Q. What was the decrease owing to?—A. I could not say.

Q. Was it the same all over?—A. All down that shore.

Q. In the matter of the sale of lobsters and so forth, do you think there is any competition or are the fishermen obliged to accept what is offered them?—A. I think they have to. They have to take what they get or quit the business.

Q. What is the regulation regarding the opening of the season?—A. The fishermen run their traps about as soon as the ice goes away. I never was told to throw away berried lobsters until this summer.

Q. And this summer you were told to throw the berried lobsters away? By whom?—A. By the foreman.

Q. Who owns the cannery?—A. W. S. Loggie.

Q. Did the fishery officer ever tell you that?—A. He never told me.

Q. But you think the fishermen generally know that?—A. I don't think they were ever told until this summer.

Q. Then as to the size limit, what is the regulation?—A. We catch them pretty nearly all sizes; we catch them down to about 5 inches.

Q. Down to what size are the lobsters generally caught?—A. That is the average run. Do you mean how small a lobster I have seen caught? I have taken them down to as low as five inches.

Q. And they were all accepted?—A. Yes, sir, everything that was taken in my traps.

Q. What has been the practice with regard to berried lobsters?—A. I used to fetch them ashore. This year I fetched some ashore.

9-10 EDWARD VII., A. 1910

Q. Although the instructions this year were not to bring them ashore?—A. Yes, but he did not enforce it very much. They all fetched them and I fetched them along with the others.

Q. Do you expect a canner to take all the lobsters you bring to the factory, berried and undersized lobsters, and everything?—A. He always did.

Q. Do you think he ever made, or attempted to make, a cull of the lobsters?—A. I never seen them, not where I fished.

Q. Have you always fished at the same place?—A. I always fish around the Point.

Q. At what time of the season do you take most of the berried lobsters?—A. I could not say. I have seen them plentiful I think about the last of the season.

Q. How many lobsters out of every hundred do you take in your traps that bear berries?—A. I could not say.

Q. Would there be a good many or very few?—A. Some years there is more than others. In the spring you don't see many. Some years I have seen a lot more than others, but there is not a great many.

Q. What is the best fishing month in the season?—A. From the middle of May to the middle of June I believe is the best.

Q. Do the fish slacken off towards the end of the season?—A. Yes, always.

Q. What would you say in your experience is the spawning period of the lobster?—A. I think the last of the season. I have found them with the spawn partly off at that season.

Q. Do you notice the eggs getting ripe when you handle the spawn lobsters?—A. I have seen lobsters with the eggs nearly off at the last of the season. The spawn looks different, too.

Q. Do you think the lobsters come inshore to spawn?—A. No, sir, I have caught them the last of the season outside. I don't know if they do.

Q. Do you think there is any time when lobsters are not fit for food?—A. I do not think they are good when they are shedding their shell.

Q. What is the smallest sized lobsters you have ever seen carrying eggs?—A. Oh, about 9 inches; 8 or 9 inches.

Q. What would be the average size of those you have seen bearing eggs?—A. Mostly good sized lobsters.

Q. What would you say is the average size of the lobsters you take one with the other?—A. I would not have much idea.

Q. Do you ever see any very large lobsters now?—A. Very few.

Q. Can you give me any idea of the size or weight of the largest lobsters you have ever caught?—A. I have seen one at the factory I worked at that weighed 5 pounds. That was the largest one I ever saw.

Q. Is the regulation for the protection of the berried lobster observed here?—A. Not in my experience.

Q. Would you suggest any change in the regulations that would give better protection to the lobsters?—A. I think to stop shoal water fishing would be a protection.

Q. Why do you think that?—A. Because they seem to claim that is the time you get the most, in shoal water, and they are easier caught. You can fish more with traps and destroy more lobsters.

Q. Are hoop nets or 'curlies' used here at all?—A. I have seen very few these last few years.

Q. Is there any illegal fishing or packing going on here after the close of the season?—A. I have never seen any.

Q. Is the practice of stripping or washing off the eggs from the female lobsters followed here?—A. I have seen an odd fellow do it for fun; I have knocked them off myself.

Q. Is it easily done?—A. It is not very hard to knock them off, but still when you are fishing you could not do it very well unless you went ashore.

SESSIONAL PAPER No. 22a

Q. There is no necessity for doing it if the canners take the berried lobsters with their eggs on?—A. No.

Q. Has the canner in your neighbourhood ever objected to accepting berried or undersized lobsters?—A. No.

Q. Is it to your knowledge that the canners have ever made any examination for the purpose of seeing that the lobsters that they receive are not contrary to law?—A. I have never seen them.

Q. Do you think if the canners refused to accept the berried and undersized lobsters the fishermen would be obliged to put them back in the water?—A. I think they would.

Q. The monthly wages fishermen would not likely object?—A. No, they would not.

Q. But the men selling by weight might?—A. Yes, they might.

Q. Do you think it is the practice on the part of the fishermen to avoid dealing with a canner who is careful in the observance of the law? Some canners complain that if they live up to the law strictly they would lose their fishermen who would go to other canners not so careful?—A. I don't know as to that.

Q. Do you think it would be possible to get the fishermen to return all the berried lobsters to the water?—A. Yes, I think it would. I think if we were told to throw them overboard. It would not be any use for one to do it when others fetch them ashore.

Q. Would it be possible to get the fishermen together and explain the matter to them?—A. It would be necessary for the fishermen on wages to throw them overboard.

Q. Are the fishermen getting more careful and understand better the necessity for preserving the berried lobsters?—A. I think they are.

Q. Do you think it would be a simple matter to have the berried lobsters collected and carried to pounds?—A. I don't think it would.

Q. How long will the lobster live out of the water?—A. He will live 24 hours if kept out of the sun, that is in the spring. Nothing will kill him as quick as the sun. He will not live very long if left in the boat where the hot sun can beat on him; he will die in three hours.

Q. What would be the best means of saving the eggs in your opinion?—A. Throw the lobsters back into the water.

Q. What do you think about the present regulations restricting the number of canning licenses?—A. I don't know that it would be a benefit to all hands to be canners. All hands could not be canners; there would be no fishermen. I daresay it would be all right for the man who could put up lobsters to get one. Another man might not be able to put them up.

Q. Would the fishermen have any market for their lobsters if the canneries were closed?—A. No, I don't think it.

Q. Do you think if the present size limit were strictly enforced here the canneries would have to shut up?—A. That is if confined to 8-inch lobsters?

Q. Yes?—A. I think they would.

Q. Do you think an increase in the number of canneries would result in an increased catch of undersized lobsters as things are at present?—A. It might.

Q. What would you think of a proposition to do away with the size limit altogether and take off a few days at the close of the season?—A. It is according to how much you would take.

Q. How much would you allow us to take if the matter rested with you?—A. Any time I ever fished from the 1st of July to the last of the season there were very few lobsters caught of any account.

Q. But still there are some caught?—A. About the poorest there is. That time of the year there seems to be no lobsters much anyway. At about that time you will

9-10 EDWARD VII., A. 1910

get them with their shells coming off at about the very last of the season. It might help the industry.

Q. You say the size limit is practically not observed at the present time?—A. No, sir.

Q. It would be very difficult to enforce it, would it not?—A. It would be pretty hard.

Q. So that the law would be always liable to violation?—A. I don't know how you could do it very well.

Q. But the regulation taking some time off the season could be enforced?—A. Yes.

Q. Do you think it would cripple the industry or treat the fishermen unfairly if we stopped fishing on the 1st July?—A. I don't know as it would hurt the fishermen an awful lot.

Q. Do you not think that in three years the fishermen fishing by weight would catch more fish and that it would effect an improvement in the fishery?—A. I think it would be the best and easiest done for sure.

Q. What would you think of the proposition to close down canning for a number of years?—A. I don't think that it would be very good. That would be hard on the poor fisherman.

Q. Would you favour closing down in certain sections for a time?—A. I don't think it would be advisable.

Q. Which do you think, of all the propositions advanced, would be the most reasonable and best in order to save the lobsters and improve the fishery in the future?—A. I suppose to protect the small lobsters and the spawn ones.

Q. How would you go to work to do that?—A. Well, the majority of small lobsters I ever caught were caught in shoal water at the last of the season. That is about two fathoms; outside you get very small lobsters. They move in and it is there you get the small lobsters.

Q. Do you think the lobsters go far off shore in winter?—A. I think they do. It is in about 11 fathoms we get the best fishing. They appear to be in closer this year.

Q. Has any one caught lobsters here in winter?—A. Not around here.

Q. Are you aware of any combination on the part of packers to keep down the price paid to the fishermen?—A. I don't know what they would do it for.

Q. Do you think there is any reason why the size limit should be different on one section of the coast from what it is on another?—A. I don't see any reason at all.

Q. Are there smaller runs of lobsters on some sections of the coast than on others?—A. I have only fished along this coast and, therefore, don't know about that.

Q. You are of the opinion that lobster fishing should be kept to a certain depth of water, that shoal water fishing should not be allowed?—A. Not too shoal.

Q. What should you put the limit at?—A. About three or four fathoms.

Q. When is your best fishing month?—A. There are more lobsters caught in June I think.

Q. Are the lobsters in better condition in June than in May when you begin to fish?—A. The earlier you fish generally the better the lobsters. The earlier you fish you get the bigger lobsters.

Q. Do you think the lobsters are as well filled as when you first catch them?—A. I think they are better in June.

Q. Are there any places where lobsters come in at the close of the season that it would be well to close and prevent fishing in? At the Magdalen islands fishing in lagoons where the lobsters go to spawn is prohibited. Is there anything of that kind here?—A. Inside of reefs they fish at the last part of the season.

Q. But the prohibition of shoal water fishing would prevent that?—A. It would prevent that, they could not fish there.

SESSIONAL PAPER No. 22a

Q. And it is only at the very close of the season that fishing goes on at these places?
—A. The last of the season.

Q. Would you limit the number of traps fished by a canner?—A. Yes, I would limit the number of traps.

Q. There does not seem to be any object in reducing the number of licenses without a reduction in the number of traps?—A. I have known them to fish as high as 300 traps in shoal water. When a man is hired he is supposed to take 250 traps. That is where I think a great deal of the mischief is done.

Q. Is there very much loss of traps in the spring where you fish?—A. There are a good many traps lost.

Witness discharged.

The commission adjourned.

RICHIBUCTO, July 26, 1909

EDWARD MCINERNEY, manager, Richibucto, called and sworn:—

By the Commissioner:

Q. How long have you been connected with the canning business?—A. About 18 years.

Q. You had at one time I think a cannery of your own?—A. Yes.

Q. You own it still?—A. I should own it, yes.

Q. At present you are connected with the firm of R. O'Leary?—A. Yes.

Q. Have you the management of the canneries?—A. I have the overseeing of the canneries.

Q. How many does that represent?—A. I suppose about 18 canneries large and small.

Q. Where are they situated?—A. From Point Sapin to Cocagne.

Q. How many boats do you employ altogether, how many to a cannery?—A. Some of our canneries are small and some large. I suppose there would be in all 100 boats.

Q. Fished by two men generally?—A. Yes.

Q. What number of hands would that represent in the canneries, men, women and boys?—A. About 200 girls, 200 fishermen and about 150 men and boys in addition to that.

Q. Are there many other canneries licensed between Sapin and here?—A. W. S. Loggie has got one at Sapin, one at Kouchibouquae gully and one at Buctouche bay. A. and R. Loggie have a factory here and one at Shockfish. Mr. O'Leary operates the rest of the canneries along the coast with the exception of those I have mentioned.

Q. What is the total capacity of your canneries one year with the other?—A. From 3,000 to 4,000 cases.

Q. What have you packed this year?—A. I would say about 3,000 cases.

Q. What is the largest pack you ever made at any time?—A. I could not exactly tell you. The very largest pack would be probably when I was not in the firm.

Q. During your connection with it what was the largest pack you ever made?
—A. About 6,000 cases.

Q. Have they packed more than that?—A. They have before my time.

Q. Do you think the pack is kept up by the aid of increased gear and closer fishing; did you at the beginning fish as much gear as you are fishing now?—A. No, sir.

9-10 EDWARD VII., A. 1910

Q. Are you fishing a larger number of traps than you used to fish formerly?—

A. Yes. I can remember that we commenced to fish with 150; now it is 250 traps to a boat.

Q. In some places they fish even more than that?—A. Yes.

Q. Do the fishermen own their own boats and gear or do you supply the outfit?

—A. There is a few of them own their own gear. I suppose you could take it about half and half.

Q. What is the average wage paid to those who are paid by the month, you supplying the gear?—A. We hire them different ways. Our fishermen this year got about \$100 for the season. That would be about the average.

Q. You supplying the gear?—A. Supplying the gear and boats and everything.

Q. And boarding the men?—A. They board themselves.

Q. How are these men paid, by weight?—A. We do not have very many of them paid by weight this year only up north. Down here they are all paid by the box. I would not like to give you the price either by weight or box.

Q. Do you think they are paid more to-day than they were twenty years ago?—A. Yes.

Q. Have you any employed by the month?—A. No, sir, the most of our fishermen fish on halves. We find the gear and the boat and we give them half the fish. A great many of them fish that way.

Q. How is that fish turned into you?—A. By the box.

Q. What do you call a box?—A. 48 pounds.

Q. It is by the case then?—A. Yes, by the case.

Q. From your observation as a canner can you give me any idea what is the principal spawning month of the lobster?—A. Well, I suppose it is July here, about the 1st of July or the last week in June.

Q. And the spawning period will continue how long?—A. Their spawn is generally off by the middle of that month.

Q. Do you believe the lobsters approach the shore for the purpose of spawning? Do you think they go into warm, shoal water for the purpose of spawning?—A. That is something I would not be able to give you any idea of myself. They come into shore about that time of the year and you naturally would suppose it would be for that purpose. That is the only reason. They will always come inshore at that time of the year.

Q. Have you any idea of the smallest size at which the female lobsters carries eggs?—A. We have seen them pretty small.

Q. How small would you say you have seen the lobster with her eggs extruded?

—A. I cannot say I have seen them any smaller than 8 or 9 inches.

Q. Have you any idea as to how often the lobster spawns; some people claim twice a year, others once a year?—A. I could not tell you. I could not form any idea.

Q. Is there any part of the season when lobsters are not fit for food purposes?—A. I believe there is, just about the time the shells are soft. I do not believe they should be allowed to be canned at that time.

Q. Can you give me any idea of the average size of the berried lobsters?—A. The average size, I suppose, about the present time would be about 9 inches.

Q. At what size would you consider the lobster to be fully matured?—A. We have some of them here very large. You take a lobster that weighs a pound it would be a fair run of fish.

Q. It would be a fully matured lobster?—A. It would be a fully matured lobster. Some of them grow very large.

Q. Can you give me any idea of the percentage of lobsters taken in the traps that bear eggs? How many per hundred would be egg-bearing lobsters?—A. I would say, from general observation, about one-third.

SESSIONAL PAPER No. 22a

Q. You think one-third would be berried lobsters?—A. I believe so. You take some runs. There is a time in the year, say from about the 10th to the 20th June, or round there, there is a run of female lobsters. Every year we have a kind of a run of them.

Q. You expect that run to come and you notice it does come?—A. It does come every year. You will notice in the catch that there are more females.

Q. Then you would say that at that period of the year, in June, they are most numerous?—A. They are most numerous.

Q. Do you know whether the practice of stripping or washing off the eggs is followed by the fishermen here?—A. No, they do not do it.

Q. Do you think it would be possible to get the fishermen to return to the water all berried lobsters taken in their traps?—A. I think they should be made to do so; there should be some mode of carrying that out.

Q. Do you not think if the canners refused positively to accept the berried lobsters it would have that effect?—A. It would certainly have that effect. They would either have to strip the eggs off or return the lobsters to the water.

Q. Do the canners make any scruple about accepting the berried lobsters?—A. No, none at the present time.

Q. And if they absolutely refuse to accept them from the fishermen what do you think would happen?—A. I think the fishermen would strip the berried lobsters.

Q. And bring them in that way?—A. Yes, sir.

Q. Is it the practice to make any examination for the purpose of detecting berried lobsters when the catch is delivered at the factory?—A. No, sir, not in this part of the country.

Q. It has been suggested that one method of protecting the berried lobsters would be for the government to buy them from the fishermen at a slight advance on the price paid by the canners, these lobsters to be liberated at once or placed in pounds until the close of the season. What is your opinion of these suggestions and which do you think the most effective?—A. I suppose we would have a good place in the harbour here.

Q. How far up do you catch lobsters?—A. At the mouth of the harbour. There might be an odd one in the harbour, but we never fish for them here.

Q. What would you think of the proposition requiring the canners to pay an increased fee, instead of the 2 cents a case as at present, and in that way realizing a fund for the purchase of the seed lobsters from the fishermen?—A. The industry to pay for its own protection? Well, of course, the canners should pay a license and the boat should pay a license. The only way you are going to get at any protection of the lobster industry is that way. You have got to get right at the fishermen first, the same as in the smelt business. Those fishermen have got to take out a license and then your revenue is going to be increased.

Q. It would be charged to the boats eventually?—A. And that would raise your revenue. In that way you have a correct estimate of the number of boats that are fishing on any ground every year. You can get at your business better, and then if you are going in for protection that is where you have got to start right, outside among the fishermen, not among the canneries. I believe in starting out first and making the boats pay a license. Every canner can can for 15, 20, 30 or 35 boats, and this license fee as a protection for the lobster industry is no good at present.

Q. Would you limit the number of boats?—A. Limit the number of boats and pay a license. Supposing there is a certain area of ground and one man has 10 boats, another one 2, and so on. The fellow that has 10 boats cut him down. If he has more dollars and cents than I have do not allow him the only gear on the ground, but freeze him out and give every man a chance; limit him to a couple or three boats or so. Limit the number of men in the business and license the boats. Of course when

9-10 EDWARD VII., A. 1910

a fisherman has a license you have more control over him. If you are an officer you can stop him and say: 'You cannot bring in any more female lobsters.' It is the same as to a man who sells liquor under license. If he sells liquor without a license you cannot get at him, but if he is brought under license he has got to live up to the law. You have some power over him.

Q. For an infringement of the law would you cancel his license?—A. I would cancel his license. Where a man has a license he has got to look after it.

Q. What is the size limit in this division?—A. I think it is 8 inches.

Q. And the season here is what?—A. 26th April to 10th July.

Q. Could you give me an idea of the proportion of the lobsters taken in the traps that are below the legal size limit?—A. On this ground here there is not very many.

Q. Do you know if the lobsters were measured this year at your canneries?—A. They are never measured.

Q. This year there were special instructions sent around to the officers to go and measure them?—A. I could not tell you about this year. I was not as much on the shore as in other years. For years I was among the factories all the time. This year I only rode down once.

Q. You mean to say the law is never enforced?—A. Never enforced.

Q. Then you cannot give us any idea of the proportion of lobsters taken that would be below the legal size limit?—A. The percentage on this coast is very small. We have a better run of lobsters here off Richibucto Cape than we have off Sapin. I have fished in both places and it will take a lobster less here off Richibucto Cape than off Sapin to the pound.

Q. Has that always been the case?—A. In old times they were large everywhere, but recently that is the case. After you get into the south you ought to go among the factories yourself; it is something terrible altogether. I have seen it take as high as 13 lobsters to a pound at some places.

Q. That is beyond the limit here, in the southern district?—A. Beyond this limit?

Q. That is the other side of Shockfish river across to West Point?—A. Yes.

Q. If the present size limit were strictly enforced what effect would it have upon the canners?—A. It would curtail their pack.

Q. Would it put them out of business here? In some places they have told us that if the size limit were lived up to it would put them out of business?—A. In this district I would say it would not.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. It would have that tendency.

Q. Would you favour an increase or decrease in the present size limit?—A. I would not favour any decrease.

Q. Within your recollection has there been any noticeable decline in the average size of the lobsters taken?—A. Not in this district. We had as good an average this year as we have had for ten years.

Q. And about 30 years ago how was it; then the lobsters were undoubtedly larger?—A. Yes.

Q. Do I understand you to say there has not been much decrease in the last ten years?—A. Not in the average size.

Q. Has there been any decrease in quantity?—A. Well, yes, there is a decrease in quantity no doubt. Not so much in the pack, for we have about ten times as much gear fishing as we used to have at one time.

Q. Do you think that in the olden times, when lobster packing first commenced, the lobsters were about of the same run everywhere?—A. I think they were the same.

Q. Have you any idea as to the cause of the decrease in size and the fact that there are such small lobsters down in the southern district?—A. I attribute it to the hatcheries.

SESSIONAL PAPER No. 22a

Q. But the lobsters were small even before the hatcheries were established?—A. No, it is only this last three or four years that I have noticed these small lobsters south in Cocagne, as far as I go down.

Q. What are the nearest hatcheries to you?—A. One at Shemogue, one on Pictou island and one on Shippigan. They had an enormous run of lobsters; they never had the like of it before.

Q. Of small lobsters?—A. Of about the one size, and it has led them to believe they come from these hatcheries. We never get that run of lobsters here at all in this north season. The strange thing is that you have only got to go down three miles and they appear to come along at that time. I do not know whether we would get them or not if we were fishing them, but they get this small run of lobsters from the latter end of July along.

Q. When was lobster canning first introduced in this neighbourhood?—A. About 40 years ago I suppose. I cannot exactly say.

Q. Did they can salmon before they canned lobsters?—A. Yes, they canned salmon first.

Q. Do you know what regulations were in force then?—A. I don't think there were any regulations at all.

Q. I think the first regulation introduced was stopping the canning in the month of August?—A. Yes, what they call the close season, which was a very good idea.

Q. When lobster canning was first introduced were not lobsters everywhere along the coast about the same run?—A. About the same run.

Q. Then to what cause do you attribute the decline in the size?—A. They must be getting fished out.

Q. Everywhere?—A. Everywhere.

Q. In your opinion the decline is a natural result of overfishing?—A. Yes, sir, and I would add the lack of protection. For there is no doubt the fishery needs more protection.

Q. It has been suggested that a minimum size of 9 inches should be established for all the waters north of Cape Canso, and of 10 or 10½ inches for all the waters south and west of that point. What would you think of that suggestion, or even if the limit were put at 8 inches instead of 9?—A. 8 inches is a pretty good sized lobster.

Q. What would you think of having simply two grand divisions?—A. I think that would be all right.

Q. Do you think that different size limits and different seasons in adjoining sections of the coast are unsatisfactory and tend to violations of the law?—A. Yes, sir.

Q. We are coming to the region now where there is a change?—A. Yes.

Q. Do you think there is any reason for that separate division here?—A. Yes.

Q. Do you think it is in the interest of the fishery that lobsters should be taken before they can reproduce, say at 8 inches?—A. No, sir, I would not think so.

Q. Is it invariably a fact that the larger the lobster the smaller number it takes to fill a pound can?—A. Yes, although sometimes you get large lobsters and there won't be much meat in them.

Q. It has been estimated that it takes nine 7-inch lobsters, which lobsters have never been afforded the opportunity of reproduction, to fill a one pound can. If that is the case what effect must the continued fishing of these immature lobsters have upon the industry?—A. There is only one result, it must exhaust the fishery.

Q. Is it your opinion that it will take nine 7-inch lobsters to fill a pound can?—A. I think it will.

Q. You have seen lobsters taken at a size that will need 13 to the can?—A. I have seen them.

9-10 EDWARD VII., A. 1910

Q. The statement has been made authoritatively that a strict enforcement of an 8-inch size limit, together with the protection of berried lobsters by means of hatcheries and pounds, would perpetuate the lobster industry?—A. It would; yes.

Q. Would you favour reducing the size limit to 7 inches as has been suggested?—A. No, sir.

Q. Would you favour abolishing the size limit and proportionately shortening the season to make up for that?—A. No, sir, that is no protection to the business.

Q. Could a size limit of 10½ inches be maintained here without detriment to the lobster industry?—A. No, sir.

Q. Have you an idea as to the effects of fall fishing? It has been suggested by some person that thirty per cent more lobsters in number are required in the fall than in the month of May and June to fill a pound can?—A. I have never fished in the fall.

Q. Is it the case that canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen who would, in case of refusal to take illegal lobsters, go to other canners less scrupulous?—A. I suppose they would; yes.

Q. How many pounds weight of green lobsters of each size would it take to fill a pound can?—A. Well, we have never figured that way. A ton of lobsters will pack about 9 boxes.

Q. That is a ton of green lobsters?—A. That is what we figure on; about 4½ boxes to 1,000 pounds of green lobsters.

Q. What will it run to the hundred? —A. I am going to give you an idea. Speaking about the size of lobsters on this coast, last spring we had fish here that averaged a pound of lobster. There were about three factories down here and the lobsters averaged about a pound of lobster. That is a big average. Up north it will take about two to the pound, I feel satisfied, and down south, God knows how many. I have never weighed them down there, but I know by the count. When we used to weigh them they would weigh that.

Q. It has been suggested that for the better control of the lobster fishery the fishermen should be required to register and take out a license at a nominal fee. What do you say as to that?—A. I say it is all right; it is a good idea, because it brings them under your control.

Q. Do you think that will have the effect of causing the fishermen to observe the law?—A. It would have more effect certainly.

Q. And do you think licensed fishermen would be more likely to report violations of the law by each other?—A. Exactly, it is a good idea.

Q. What is the practice here in regard to taking berried and undersized lobsters?—A. They take everything right through; they can everything that comes ashore.

Q. Even where the fishermen are monthly wages men?—A. They can everything.

Q. Have the regulations for the protection of the lobster ever been observed in this district?—A. I cannot say that they ever have to any great extent.

Q. Are the existing penalties sufficient to deter packers from violating the regulations if they were strictly enforced?—A. Yes.

Q. In the event of persistent violation of the regulations would the preservation of the lobster industry demand the cancellation of the offender's license to can?—A. Yes, certainly. I should think so.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further licenses be discouraged?—A. I cannot say that the issuance of cannery licenses should be discouraged, because it would be a pretty hard thing to do, but what I would say, as I have already told you, is license the gear. Of course, I am only speaking from my own point of view. I have not got a license to-day, but I understand the lobster business thoroughly, and I have the means to go into it. I have got my boys, and it is pretty hard for Mr. So and So to come to me and say: 'You have to sell your fish to me.' Where I have got the experience, the capital and the outfit to can my lob-

SESSIONAL PAPER No. 22a

sters I should, as a citizen of this country, be able to have all that is in it. I should not be obliged to give my lobsters to you or somebody else because you have a license. It is a law that is not going to hold in this country, because the people are not going to stand it. If I have a grown-up family or want my boys to remain here, I wish them to have equal rights and be able to go into my business as long as they can carry it on ably. Therefore, I claim that by curtailing the number of licensed factories you are only throwing the business into the hands of monopolists. There are a few men that own all this coast now. That is something that the government should not ignore; they should look after that a little more closely and deal fairly with the people. It affects me personally, but I don't want you to accept any suggestion I make on that ground. Then there is another thing. The government grants a license to seven or eight fishermen. Anyway it just amounts to this: There are six or seven fishermen, and, of course, they had a right to get a license and it is alongside a shop of mine. I represented that to the department. I drew a coast line and everything and went to a lot of work over it. However, I got very little satisfaction. I do not know whether it is because I am on the wrong side of politics, but that should not make any difference on a coast of this kind. These men had to take their fish two miles to be canned. They were farmers and fishermen, and it was a great inconvenience to them.

Q. And led to a lot of extra cost?—A. Certainly. They had a license this year to can their fish.

Q. They clubbed together and got a license?—A. I do not know what is the number. However, seven or eight or nine clubbed together and got a license. I was glad to see the men get a license, because they were entitled to it.

Q. That is what they call a co-operative license?—A. A co-operative license and I think it is a very good idea.

Q. In the interest of the lobster industry would you favour a general closing down for some years?—A. I don't see how you could stop.

Q. It would dislocate things too much you think?—A. I think it would.

Q. The Lobster Commission of 1898 recommended that temporary reserves should be established in various sections along the coast where fishing should not be allowed for a term of years, the location of these reserves to be changed from time to time. Do you think the lobster industry has reached a point where it is necessary to take such heroic measures?—A. Not at the present time on this coast.

Q. Do you think it would be better if suitable regulations could be enforced?—A. Yes, if they could be enforced. There is one thing they have got to do now and that is to look after the berried lobsters. Any laws they pass in regard to the fishery business must be enforced. They have not been doing that; everybody knows it. It is a business that should be protected and without protection it is going to go down.

Q. Do you think a reduction in the length of the open season would be of advantage and eventually tend to perpetuate the fishery?—A. The season is almost short enough now, I think.

Q. Do you do much here from the 1st to the 10th July?—A. No, we do not, I will admit that.

Q. In connection with a former question: Would you favour a universal close season for the whole Atlantic coast, that is from July 15th to January 1st following, or have such a season from July 15th to January 1st north of Cape Canso, and from July 1st to January 1st west and south of Cape Canso with a larger limit in the latter division?—A. No, sir.

Q. Would you favour fishing in the fall?—A. I don't know that, I think that one season is enough.

Q. It would be burning the candle at both ends in your opinion?—A. Yes. I claim that the lobsters now being packed from the 1st July on this coast should not be packed.

9-10 EDWARD VII., A. 1910

Q. You would not allow any packing after the 1st July on this coast?—A. After that date lobsters should not be packed. If these southern people cannot see any way to get the fish in the spring they ought not to fish in July at all, but give them fall fishing.

Q. That is in the southern district?—A. Yes, in the southern district. The lobsters caught there during the month of July should not be canned.

Q. You do not regard the present regulations restricting the number of canning licenses as satisfactory?—A. I don't think it is.

Q. Would you favour issuing a license to every one competent to pack?—A. Yes, I would favour issuing a license to every man competent to pack. One man's money is as good as another's, one man has just as much right to pack as another.

Q. Would it be possible to establish a standard of fitness for canning; in granting licenses you would need to have some restriction?—A. Some restriction, certainly. I think a man should have experience and should have capital. Above all he should be an experienced man.

Q. How would you establish a man's fitness to can?—A. He would have to have some experience in the business.

Q. Of course he could employ experienced people to do the work for him?—A. That is right.

Q. Then the applicant for a canning license must have capital?—A. That is right he must have capital. At the same time I don't believe in men with capital handling all the lobsters on this coast. I believe more in having the men that are running the business the sole owners and not having one man controlling the whole coast. I believe in having restrictions in that way.

Q. But you think there ought to be some standard of fitness for a cannery?—A. There certainly should be, but it is pretty hard to define it.

Q. Do you think the cracking table should be of material that could be kept scrupulously clean?—A. Yes.

Q. Would it be possible to have the cracking table of glass, marble, enamelled-ware or something of that kind?—A. Yes.

Q. Because where the cracking table is of soft wood, and is not kept clean and thoroughly scoured it is apt to get very foul?—A. We cover our tables with zinc. We built a new shop here and put in hardwood flooring. It is jointed and comes together as close as we could possibly get it.

Q. On the table?—A. On the table. I might say it has given us good satisfaction. I prefer it to zinc. It is the first one we put in and I prefer it because there is nothing can adhere to it.

Q. Should not the product of the canneries be subject to inspection?—A. Yes.

Q. Could this inspection be made by the existing staff?—A. No.

Q. Would you refuse a canning license where aliens only are interested or mainly interested?—A. I would not make any distinction.

Q. It is only their capital invested here, they employ Canadian labour?—A. Yes.

Q. Do you think the fishermen generally would make more money if they were allowed to can?—A. I do not know that they would.

Q. You would approve of the policy of co-operative canning?—A. That is all right.

Q. Are there any of these co-operative canneries in your district?—A. There is only one, which was licensed this year for the first time.

Q. What is the price paid for lobsters in your district and how is that price established?—A. It varies.

Q. Where the fishermen are paid by weight what is the price?—A. About \$3 a hundred pounds. In the case of some it was less than that this year. The lobsters are bought in different ways in each place.

Q. How is that price established; is it a matter of arrangement with the fishermen?—A. Yes, a matter of arrangement between the canner and the fishermen.

SESSIONAL PAPER No. 22a

Q. Is there competition?—A. Yes.

Q. Are you aware of any complaints made by fishermen that the price paid them is not satisfactory?—A. The fishermen can look out for themselves. The class we have here can.

Q. Is it the case that fishermen have lost their catch of lobsters by canners refusing to accept them?—A. Not to my knowledge.

Q. Have the canners, from abnormal market conditions or other reasons, reduced the price paid to the fishermen?—A. Green lobsters are a little lower this year on account of the price of canned lobsters.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of the canners to operate their factories although a sufficient supply of lobsters was available.—A. That has never been the case here.

Q. It has been asserted that if the catch of lobsters was further lessened or curtailed, the canners would have to shut down. What is your opinion on that subject?—A. I don't know. If it protects the lobster industry it should not make any difference.

Q. What market would the fishermen have for their lobsters if the canneries were closed?—A. If the canneries were closed they would have to seek a live lobster market in the United States and the shipping facilities would not guarantee shipment.

Q. Which branch of the industry do you think is the most remunerative to the fishermen, and the least likely to deplete the industry, the canning or the live lobster trade?—A. The live lobster trade is out of the question on this coast.

Q. Are there any live lobsters shipped from here?—A. None.

Q. Should the shipment of live lobsters be favoured in preference to canning?—A. I am not in a position to give you an opinion upon that.

Q. Are the present facilities adequate to the profitable handling of the live lobster trade?—A. No, sir.

Q. Have you any idea of the price of live lobsters in this district?—A. No, sir, they have not been handled here.

Q. From your experience can you say whether the hatcheries have helped to maintain the supply of lobsters or not?—A. I think they have.

Q. Saving the eggs ought to do that in any case?—A. Yes, sir.

Q. Can you give me any instance showing the good effects in that direction?—A. In the south the increase in the lobsters is due to the hatcheries in the opinion of the fishermen.

Q. Would you recommend an increase in the number of hatcheries?—A. I would.

Q. Have you any observation to make with regard to tidal pounds for the breeding of lobsters?—A. No, I have not.

Q. Do you think that the trap at present in use is the most suitable?—It appears to be the only one.

Q. The one in use here is the old fashioned trap?—A. Yes.

Q. Have you the parlour trap here?—A. The three end trap?

Q. Yes.—A. Yes, we have that too.

Q. Was that not introduced for the purpose of saving everything that came into the trap?—A. Yes.

Q. The creation of a board to advise the department with respect to the administration of the lobster and other fisheries in the maritime provinces has been suggested, would you approve of that idea?—A. Yes, certainly I would.

Q. Is there any other matter connected with this inquiry upon which you would like to express an opinion?—A. No, sir, only what I told you about the licenses. I think the license should be on the boat instead of on the pack. It is all right for the canners to pay a license, but I believe in making every boat pay a license. That is the only suggestion I would make in regard to that and I think it would be a good idea because it would bring these men under the control of the officers.

9-10 EDWARD VII., A. 1910

Q. It seems rather absurd to limit the number of canneries and not limit the number of traps?—A. I always advocated that. When Mr. Chapman was here the last time I did so. I have spent a lot of money over this thing. Not that it is any benefit to me because I am getting my fish canned. The only thing is, I was deprived of a license and the time the government passed the law dealing with licenses there was not a fisherman about this coast knew anything about it or a man that runs a cannery. If they had given a year's notice I would have taken out my license; they caught us unawares. They should not deprive any man of his rights. Furthermore, the industry is one that needs protection if it takes more officers to do it. You take a fishery officer for the whole of this coast and what does it amount to? You want a man among the factories all the time to look after the female lobsters and make the canners live up to the law. It is going to benefit them in the end. It may come hard at first but in the end they will benefit by it. It will be just the same as any other law. They may regard it as intended to drive them out of business but it is not that.

Q. When the fishermen first put out their traps in the spring in what depth of water do they set them?—A. Our spring fishing is the outside fishing in about 10 to 12 and 13 fathoms of water. We go I suppose about six miles off on this coast. At Cocagne you may go ten miles off to get that same depth of water.

Q. About what time does the fishing begin?—A. From the 5th to the 10th May, that is the packing.

Q. The traps are out before that?—A. Sometimes. The lines are out very seldom before the 25th April. It is generally about the last of April and 1st May.

Q. Then as the season advances what is the practice with regard to the traps?—A. It depends a great deal upon the ground that you have traps on. If you are on good bottom the fish will hold out long. In the spring of the year you may have four or five weeks good fishing. When the fish move in you gradually move in your gear. The fishermen generally move their gear into about four or five fathoms of water.

Q. Do they fish inside of that at all?—A. Very little. Of course sometimes they do. I have known them to fish in three fathoms of water but not to any extent.

Q. Are hoop nets used here?—A. Not at all.

Q. Is there any illegal fishing or illegal packing done here after the season is over?—A. There has been a little I think. It is worth looking after. There has been a little more here than there should have been.

Q. Do you think that towards the close of the season, when the traps are fished in shoal water, the proportion of undersized and berried lobsters is greater than when fishing begins?—A. They are principally undersized.

Q. Do you think it would be wise to limit the fishing to a certain depth of water and not allow the fishermen to come too close in?—A. I don't think that would have much effect; it depends a great deal upon the bottom. I have seen lobsters caught outside that were the smallest fish we got in the shop. That was on sandy bottom, whereas there would be some lines in shore, quite handy, on the rocky bottom that would have good sized fish.

The lobsters undoubtedly come in from deeper water in the spring?—A. They do.

Q. Up to what time of the year do you think they keep coming in?—A. I would say about the middle of May here. You can tell by the outside lines. When we set out lines in the spring of the year we have sometimes no fish at all and sometimes we get seven and eight hundred and nine and ten hundred. That body of fish will keep up about two weeks. Then there is not much more fish come because we have had lines out on sandy bottom and they never got any more fishing after that, the lobsters move in towards the shore.

Q. What time will they reach the shore?—A. Say by the middle of June.

Q. How long do they remain off the shore?—A. I think in the fall of the year the fish are off shore.

Q. They are still inshore in the fall of the year?—A. Yes, in fact I know they are. I know they get fish very late in the fall. I have known them to fish in October.

SESSIONAL PAPER No. 22a

These fellows fished on the quiet and did not go far away from the shore and their traps were getting good fish. That would lead you to believe the fish stayed on until quite late and then moved out; they must of course move out.

Q. Who is the manager for Mr. Loggie here?—A. Mr. Baird. Let me repeat that I think the lobster regulations should be enforced and the officers should not make fish of one and flesh of another. Then it would be of benefit to the country.

Q. Do you think that when the regulations were first applied there was more attempt made to enforce them than there is now?—A. I think so. I think they have gradually got into the habit of letting the thing lapse. Make the fishermen pay a license; make him see that he has something to lose, that you have got some hold on him. If he violates the law then let him forfeit his license.

Witness discharged.

Mr. McINERNEY recalled:—

THE WITNESS.—You asked me if I thought it was advisable to issue a license to fishermen to can. I don't think so, and I will tell you why. I think there should be a standard shop. Where those fishermen can their own lobsters they will bring them ashore and they have not got the proper facilities to can those fish right. They will pack them in the house, in the woods and every place. I think there should be a standard shop, that it would be up to the mark, and a man should not get a license to pack until his shop is up to the mark and fishing not less than 5 boats.

Q. What would five boats represent in the way of cases?—A. Say about 200 cases. I think that would be a good thing. It affects your stock if you get any poorly packed lobsters; it is dangerous.

Witness discharged.

LAZARE GUIMOND, packer, St. Louis, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the packing business?—A. Twenty-nine years this summer.

Q. How many canneries do you control?—A. I control one.

Q. Situated at St. Louis?—A. Right on the beach about two miles from the mouth of the river.

Q. Are there any other canneries in that neighbourhood?—A. Three miles from me there is a cannery belonging to Mr. W. S. Loggie, and on the south side of me, three miles away again, there is a cannery owned by Mr. Selim Robichaud.

Q. How many boats do you employ?—A. I had seven of my own there at the factory. I think there were 12 or 13, but some of them were small craft, at Principaux, 12 miles from us.

Q. What number of hands do you employ afloat and ashore?—A. I generally have 14 men afloat and sometimes 7 or 8, sometimes 9, men ashore. Of girls I had at times 60 and 40. This last summer I only had 19 and after a fortnight's fishing I had to let some of them go.

Q. What would your cannery be able to turn out when running full blast?—A. If there was a run of lobsters the same as I have seen them I could turn out 35 to 40 boxes a day. I have done more than that but that would be what I call good work.

Q. What did you pack this year?—A. I cannot tell you exactly, I think over 300.

Q. What is the largest number you ever did pack?—A. 2,300 boxes.

Q. In the same cannery?—A. It was when the lobsters were plentiful.

9-10 EDWARD VII., A. 1910

Q. They did not keep plentiful?—A. No, they began to decline after I came here.

Q. Are you fishing a larger number of traps than you did formerly?—A. Yes.

Q. Is it your opinion that the supply of lobsters is being kept up by taking small ones that were formerly rejected?—A. We are taking about the same. I mean to say we are taking smaller lobsters now because the run is not so much. When there was plenty of lobsters they were of large size and the smallest ones would go through the traps.

Q. What was the space between the slats of the trap formerly?—A. One and a half inches. Now it is an inch and a quarter and some closer.

Q. Do the fishermen own their own boats and gear?—A. No, we supply them.

Q. From your observation as a canner and fisherman what do you think are the spawning months of the lobster?—A. Years ago when we had the long season to the fall it would be from the 10th July to about the 10th or 15th August. I remarked this year when the 10th July came we used to get females just after spawning. I said it was a good job the season was not extended because the fishermen would find in their traps five or six sometimes that had no shell and they were just like a piece of rubber after losing their shell, the new shell had not got hard.

Q. What do you think yourself about the spawning habits of the lobster, do you think she spawns every year?—A. Yes, once a year. Some years in the first part of the spring you get the female lobster with eggs attached. They drop off then and you hardly see any of them after the 10th July.

Q. What is the smallest size at which you have seen a female lobster bearing eggs?—A. I have seen them as small as six and seven inches. They were not very thick, but there were some. I have seen them this small too (illustrating by a gesture).

Q. What would you say is the average size at which they have eggs?—A. I cannot tell you the average exactly, but I have seen as small as six and seven inches. Very few six, but seven quite a number and from that up to the larger size.

Q. What percentage of the lobsters taken in the traps bear eggs? How many out of every hundred?—A. It just depends. Some times you find none; other times a dozen and some times more. The average would be one-quarter at the regular spawning period in the spring.

Q. Is the practice of stripping or washing off the eggs from the berried lobsters carried on by the fishermen?—A. No.

Q. Do you think it would be possible to get the fishermen to return the berried lobsters to the water?—A. It is impossible. The moment that point arises every factory would close; they cannot do it. The reason why is that the canners would not get the fishermen to do it. Supposing you dropped them overboard to-day, when you went back the next morning they would be all in the trap again. I have seen that. We tried that some years ago when I was fishery officer. The fishermen used to get a lot and smash them on the bow of the boat so that they would not come back.

Q. Do you think if the canners refused absolutely to receive berried lobsters, the fishermen would throw them back into the water?—A. Yes.

Q. But now the canners have to take them?—A. Yes, that is my opinion; in fact it is the only good sized lobster in which there is a profit. Generally when the female lobsters come ashore to spawn they are large lobsters. Except this year, we have not seen any of that kind at all.

Q. There is a smaller run this year?—A. Yes, a smaller run in general.

Q. What do you think would be the best way to protect the female lobsters? There cannot be any doubt that it is wrong to destroy them?—A. My opinion is this: We commence in the spring and quit on the 10th July. The lobsters spawn all through the season. Of course there is a spell, as I have told you before, from the 10th July until the 15th and 20th August when they all come ashore.

Q. That is the heaviest spawning period?—A. That is the heaviest. We used to drop them out some years ago. About 15 years ago we used to stop fishing in the

SESSIONAL PAPER No. 22a

month of August, and then after that we continued in the fall until we quit packing, until it was too cold to continue.

Q. How do you think we can save these female lobsters, that is the main thing?—A. That is the main thing, but it is more than I am able to tell you. The difficulty is that you may throw them over and another man violate the law. I tried one year an experiment with these large female lobsters with eggs attached. We used to strip the spawn into buckets. Then I got little boxes from the government in which I put the spawn with seaweed, and you would have in four or five days the spawn all stuck around it. The remainder of the summer there was any amount of spawn lobsters. We used to strip the spawn and drop it on the seaweed. In the fall the young lobsters would be swimming around as lively as possible, and we would say: 'Those are the lobsters we dropped on the flats among the seaweed.'

Q. It has been suggested that one method of protecting the berried lobsters would be for the government to buy them from the fishermen at a slight advance over the canners' price, these lobsters to be liberated at once. You say you would get them again the next day?—A. Yes, the next day.

Q. Suppose that instead of liberating them you held them and placed them in pounds?—A. That would be the only way.

Q. Of course it is not everywhere you can find places to establish pounds. There must be an enclosure where the tide flows in and out and there is not much fresh water?—A. On our shore there are harbours, there is no fresh water at all.

Q. You think there would be an opportunity of establishing pounds here?—A. I think so.

Q. Another method of protection is to obtain the eggs from the cannery and hatch them out in hatcheries. What would you think of increasing the number of hatcheries?—A. I cannot say anything about that myself; you understand that better. Last summer towards the last we had storms very frequently which rolled the kelp into the traps, and the fishermen told me that when they pulled up the traps they found quite a number of small lobsters.

Q. What is the size limit in this division?—A. Some of the lobsters caught are 7 inches in size and in other places they are below that. They are allowed to go because it is pretty hard to quarrel with the fishermen. I would not take them at all myself, but other packers do it.

Q. What proportion of the lobsters taken in the traps are below the legal size limit of 8 inches?—A. Some days there are none at all, and other days there are about 2 or 3 to the 100. When the lobsters come ashore in shoal water about one-third would be below the legal limit.

Q. If the present size limit were strictly enforced what effect would it have upon the canner?—A. I don't think it would have any effect at all; I think it would be a benefit. In different localities there would be different opinions. I am pretty strict and I cannot get as many fishermen to fish for me as the others. As I have often told them they must not think only of to-day; there are our children to provide for.

Q. Do you think an increase in the number of canneries would result in an increased pack of small lobsters?—A. I think so.

Q. Would you favour any change in the present size limit?—A. If the present size limit were strictly enforced it would be a great benefit. Then the fishermen ought not to be allowed to fish so handy to the shore; that is what causes all the trouble. Outside they do not do much harm, but it is different inshore. They come right inshore from two or three fathoms to one fathom of water, and the first storm that comes smashes all the traps. We are at the loss of it and not the fishermen.

Q. When did lobster canning first begin here?—A. The first canner was Mr. Henry O'Leary, at St. Louis, about 44 or 45 years ago. There was no factory along the shore, except for salmon, and Mr. O'Leary bought three small houses about a mile from the shore.

9-10 EDWARD VII., A. 1910

Q. What regulations were in force then?—A. There were no regulations, they were allowed to fish all summer.

Q. What was the first regulation?—A. There were two seasons, leaving out the month of August.

Q. Is it your opinion that the decrease in the quantity and size of lobsters that is taking place is due to over fishing?—A. Certainly, there is no question about it. When I came into the business 29 years ago I put up, with not half the rig I have now, 2,300 boxes and this year I went a little over 300. That is a big difference. Two seasons are all right enough but for a month the lobsters won't be fit to can and once you bring them in you cannot put them back again.

Q. Do you not think that two seasons would more quickly exhaust the fishery?—A. Certainly.

Q. Do the factories take whatever lobsters are brought to them, big and little?—A. Yes, I cannot put up as many lobsters as I would like because I cannot get the fishermen. Last year and this year I used to get lobsters from the next factory but when they found I did not want to take them too small they quit and do not want to bring me any more at all. So I think a long season encourages violations of the law. Under the present regulation we can commence fishing on the 20th April. I think that is too early. It should be the 25th before any lines are set out. Every factory should fish its own front. We have 7 boats and I am sure there were about 21 or 22 boats on the same ground. They come and run their lines crossways and some of our fishermen were a week before they could overhaul their traps.

Q. How many pounds weight of green lobsters of each size does it take to fill a pound can?—A. I cannot tell you. I never could pack out of a ton more than 8 boxes. Sometimes you can a few pounds over, but there would be 8 boxes of 48 pounds each to a ton.

Q. You say that a ton of lobsters should fill 8 boxes?—A. A ton of lobsters to 8 boxes. Sometimes they can over and sometimes less.

Q. Do you really think it takes a ton of lobsters to fill 8 boxes of 48 pounds?—A. Yes. One thousand lobsters used to pack three and three-quarter boxes. Last summer I know for a fact 1,000 lobsters went a little over two boxes, 48 pounds to the box. The late lobsters at my factory used to run more than that; they would come all summer. We fished away out in deep water. I mean when the female lobsters came ashore.

Q. It has been suggested that for the better control of the fishery the fishermen should be obliged to take out a license as well as the canner?—A. It would be just as well in my opinion. If that is done there will be less fishermen and it will be better protection. I do not think it is fair for us to pay a license to fish when all others come and occupy the ground and pay nothing at all and leave us all the expense.

Q. Do you think every cannery should be licensed to fish a fixed number of boats?—A. Yes, sir.

Q. Speaking generally are the regulations for the protection of the lobster observed in this district?—A. No, take it all through.

Q. What would be the effect of enforcing the regulations strictly?—A. The effect would be that the fishermen would quit and we would have to close up.

Q. Do you think the existing penalties are sufficient if they were strictly enforced?—A. Yes, I think so.

Q. Do you think there are canneries enough, having in view the preservation of the fishery?—A. Yes, there is too many already.

Q. How would you favour a general closing down for a number of years?—A. I have nothing to say to that.

Q. The Lobster Commission of 1898 recommended that certain sections along the coast should be closed and that those sections should be changed every few years. What would you think of that plan?—A. That would be good enough I think.

SESSIONAL PAPER No. 22a

Q. Do you think it will be possible to carry out that idea?—A. We have regulations now under which we commence to fish 20th April and close 10th July. That is sufficient and all that is necessary is to put the law in force and not catch so many small lobsters.

Q. What do you say about closing on the 1st July?—A. I would say that and I think my boys would agree too, because from the 1st July to the 10th is the time the most harm is done.

Q. Would you favour limiting the depth of water in which fishing should be allowed?—A. I think if it was general all through, a limit to the depth of water, everybody would get more benefit.

Q. What depth of water would you fix as a limit?—A. I would say not inside three fathoms and that is shoal enough.

Q. What would you think about allowing fall fishing?—A. It would not agree with us because when we had the whole year, in September it got too cold. Nobody would fish then and storms came and that was a time everybody wanted to be at their crops.

Q. I suppose a great many of the lobster fishermen are farmers?—A. You may say all.

Q. Would you be in favour of limiting the issue of licenses to pack?—A. Yes.

Q. Would you favour giving a license to every one who is competent to pack? What reason is there why you should say this man may pack and not that man?—A. You are right there. I think myself there have been too many packers allowed. Formerly everybody was better off. Then more men came into the business and they have lost their farms and their fish and are poor now.

Q. Where the applicants are competent men is there any reason why we should grant a license to one and refuse it to another?—A. Not in that case.

Q. Do you think that the canning should be subject to inspection?—A. That has been done with me. I would not object to that at all.

Q. What do you think of the policy of encouraging fishermen to co-operate in getting a license and running a cannery?—A. If young men were encouraged to start factories the old canners would not be able to get fishermen.

Witness discharged.

PETER F. RICHARD, canner, Richibucto Cape, called and sworn:—

By the Commissioner:

Q. Have you ever fished yourself?—A. Not myself.

Q. You are familiar though with the practice of the fishermen?—A. Yes. In my family we are three brothers and everything goes in my name.

Q. You run the cannery?—A. Yes.

Q. Do your brothers can or fish?—A. One of my brothers is a sailor and the other a farmer. He has a rig and he hires himself to fish.

Q. How many boats have you?—A. We have three boats and there are three other boats that we pack the fish for.

Q. Under what arrangement do you buy your fish?—A. We charge them so much a box for canning it.

Q. Is the pack decreasing or otherwise in your neighbourhood?—A. This has been a poor year.

Q. What do you attribute it to?—A. It is hard for us to say what was the cause.

Q. Had you good weather?—A. The weather was not very good all through. It was windy and the fish were closer than they used to be.

Q. How long back does your experience of canning go?—A. I cannot tell exactly; perhaps eight or nine years.

9-10 EDWARD VII., A. 1910

Q. Are you fishing a larger number of traps than you did when you began?—A. Yes.

Q. Does it take more traps than it formerly did to keep up the supply?—A. Yes.

Q. What is the average number of traps fished by the fishermen in your district?—A. 240 and 250.

Q. What time do they put out their traps?—A. The season opens on the 20th April, but some times we cannot begin on time on account of the ice.

Q. In what depth of water do you put out your traps?—A. I cannot tell that. Some fishermen go very far out and others do not go out so far. They fish at 7, 7½, 8, 9 and 10 fathoms of water.

Q. Would that be a good way off shore?—A. A good way, yes.

Q. Then as the season advances do they bring their traps inshore?—A. Sometimes they do and sometimes the lines remain outside all the time. Sometimes the fishing is better inside and they bring their traps in.

Q. How close in do they come?—A. The distance was never measured.

Q. Into what depth of water?—A. I never inquired.

Q. Do they come into less than three fathoms of water?—A. No, I don't think it. There are a few lines, about 30 or 40 lines, they set in shoal water here and there.

Q. Is it late in the season when they do that?—A. During the fishing season.

Q. During the whole fishing season?—A. Some times and some times they do not set them. When the fish come inside they set them.

Q. When you set your traps in deep water do you get a larger run of fish?—A. We used to get a larger run of fish at the beginning of the season on the outside.

Q. Is it not your experience that late in the season and in shoal water you will get smaller fish and a greater number with eggs attached?—A. They will get them closer in to the shore.

Q. Do you think the small traps that are fishing in a fathom and a fathom and a half of water get a larger percentage of small lobsters and lobsters with ripe berries?—A. Yes, sir, I think so.

Q. Do the fishermen own their own boats and gear?—A. Some do and some do not.

Q. Do you think the lobsters come in shore for the purpose of spawning?—A. That is what we have always believed.

Q. During what months do you think most of the lobsters spawn?—A. We always thought that they spawned towards the last of July up to the last of August, because if you get a lobster then it is changing its shell and is soft.

Q. Do you think it would be wise to keep the lobster fishing farther off shore and thus protect the small and berried lobsters that come into the shoal water?—A. I think that would be better.

Q. Is there any part of the season when you think lobsters are not fit for food?—A. They say that now is the worst time of the season when the lobster is changing its shell, and that the fish put up now are no good.

Q. What is the smallest lobster you ever saw with eggs on her?—A. I have seen some of all sizes. We sometimes get small lobsters just inside the bar, twenty yards from the shore, they are small and they have eggs on them. They are 4 or 5 inches in size.

Q. You think you have seen lobsters as small as 4 or 5 inches with eggs on them?—A. I do not remember if I have seen them with eggs, but I have seen them that size inside the bar.

Q. You do not know then the size of the smallest lobster you have ever seen with eggs?—A. No.

Q. Have you any idea of the general run of the lobsters that have eggs? Some of them must be good lobsters. How many lobsters out of a hundred would you say bear eggs?—A. Sometimes in a boat you will find one or two, sometimes there are half of them.

SESSIONAL PAPER No. 22a

Q. When would you expect to find the half of them egg-bearing?—A. At the last of the season.

Q. What is the practice here, do the fishermen bring everything they catch to the factory?—A. Some do and some do not. Some throw all the small ones out and some bring them all ashore.

Q. Does the canner make any objection to receiving any lobsters the fishermen bring him?—A. I suppose the canner takes everything that comes.

Q. Do you think it would be possible to get the fishermen to return the berried lobsters to the water and thus save them?—A. I don't think it would be a good plan because when there are half of them with eggs the fishermen will kick.

Q. You understand that we must do all we can to save the berried lobsters. It is the destruction of the eggs that is injuring the lobster fishery?—A. I suppose so.

Q. What would happen if the canners refused to take the small and berried lobsters? Suppose they said: 'We will not take any lobsters under 8 inches nor any berried lobsters.' What would happen if they all did that?—A. The fishermen would have to throw them back.

Q. How do you think we could best save the berried lobsters, do you think we could buy them from the fishermen and hold them in pounds until the close of the season?—A. That would be the right plan.

Q. Could you tell me what percentage of the lobsters are below the 8-inch limit all through the season?—A. Only Mr. Girouard who measured the lobsters can give you that information.

Q. Yes, but I want your opinion. Give me your idea of what percentage of the lobsters you take are below the 8-inch limit?—A. Not many are below 8 inches.

Q. What do you think would be the effect if the law were strictly enforced, if canners were compelled not to accept berried lobsters and lobsters under 8 inches?—A. I don't think the canners could go on; they could not work I suppose.

Q. What do you think about the practice of restricting the number of licenses to canners, do you think we should issue any more?—A. No, I think there are plenty out now, too many.

Q. Do you think we should encourage the fishermen to club together and get a cannery license for themselves?—A. No, I don't think it. I think it would be a bad thing. If too many clubbed together and did that we wouldn't be able to get fishermen for the old stands.

Q. Is there any reason for having a smaller size limit or a different season in one district than in another; do you think it is a wise thing to do, or are you of opinion the season should be the same everywhere inside the gulf?—A. I think so in my opinion.

Q. Do you think it is a wise thing to allow small lobsters to be taken, must it not have the effect of spoiling the fishery for the future?—A. Yes, if they are taken too small, under 6 inches anyway.

Q. Do you know if it is the case that canners are compelled to accept small and berried lobsters for fear of losing their fishermen who would in case of refusal to take illegal lobsters go to less scrupulous canners?—A. I think those that have their own rig would do that. Where a man is hired by the month or the season it makes no difference to him.

Q. How many pounds weight of green lobsters does it take to fill a pound can?—A. At our place it generally takes $4\frac{1}{2}$ and $4\frac{3}{4}$ green lobsters to fill a pound can. That is two half pounds, we generally put the fish in half pounds.

Q. Does your can contain a pound of meat or do you make some allowance for the fluid?—A. I think they make some allowance for the fluid. They only, I think, take $7\frac{1}{2}$ ounces for half pounds.

Q. What is the best month for fishing in this neighbourhood?—A. It used to be the early spring. Spring fishing used to be the best here, but this year it has not been.

9-10 EDWARD VII., A. 1910

Q. When was the best fishing this year?—A. It was the same all through the summer.

Q. One season with the other, what is the best time for fishing?—A. The month of May.

Q. It has been asked that fall fishing be allowed in some districts, what would you say to that?—A. We would like to have a spell in the fall.

Q. Do you think it would be profitable to bring the gear ashore and then start again in the fall?—A. They could fish with smaller gear.

Q. They could fish with less gear in the fall?—A. Yes.

Q. Would you favour issuing a canning license to every one competent to pack?—A. No, sir, because there are too many now.

Q. What would you think about inspecting the pack?—A. That would be a good thing, for there would be lots of bad fish going on the market.

Q. Is there bad fish going on the market at present?—A. There was some this year.

Q. There is a certain proportion of bad fish marketed every year and it must affect the price?—A. Yes, I think so.

Q. Are you aware of any complaints made by the fishermen that the price paid by the canner is not satisfactory; are the fishermen generally satisfied with the price they get?—A. Not generally; they want a little more.

Q. Is it the case that any fishermen have lost their lobsters owing to the canners refusing to accept them?—A. Not that I know of.

Q. Is the price paid for lobsters this year the same as last?—A. No, sir, it is under. It was $11\frac{1}{2}$ last year and 9 this year. That is what we get ourselves.

Q. What do you pay the fisherman when he is selling by weight?—A. \$1.10 to \$1.15 is what we generally pay. We hire them by the hundred or by the season.

Q. What did you pay this year?—A. We hired nearly all by the season this year.

Q. Would there be any market for live lobsters in this district if the canneries were shut down?—A. I suppose the fishermen would not fish.

Q. There is no way of shipping live lobsters to market?—A. No, there is no chance here to send them.

Q. Are there any live lobsters shipped from here?—A. Not that I know of down here.

Q. The opportunity to do it is not available and there is no price then for live lobsters here?—A. No.

Q. Can you say whether the hatcheries help to keep up the supply of lobsters or not?—A. Yes, sir.

Q. Would you approve of having more hatcheries?—A. We could have one in this county, either in Buctouche or Richibucto.

Q. What do you think of the system of placing lobsters in pounds?—A. I would be in favour of that.

Q. Is there anything else you would care to say?—A. I would like to have two seasons for fishing lobsters. I would like to fish the lobsters in the fall. I would like to have from April, practically from the beginning of the season, to the last of June, and then another season from the beginning of August for six or seven weeks.

Q. Do you think fishing should be limited to a certain depth of water?—A. It should not be allowed inside of two fathoms. It should be kept out because we have flat rocks and reefs. For six fathoms of water the fishermen have to go a long distance off.

Q. Do they fish 'curlies' here now?—A. They used to, but not now.

Q. They used to fish in shoal water?—A. Yes.

Q. What made them stop?—A. When they fished those traps they could get fish inside at the very end of the season, but at the beginning they could get none. Then they stopped altogether fishing 'curlies.' Another thing would be, supposing a line

SESSIONAL PAPER No. 22a

was set here and another fisherman comes inside and runs over that man's line. There is difficulty in getting the last man to take his line away. Some times you have to cut him and some times he will cut you and make a row. There should be a certain distance allowed between the two lines and the fishermen ought not to go inside that distance.

Q. There should be some regulation then to prevent confusion and to prevent one fisherman's lines running over those of another?—A. Yes, sir.

Q. Do you think that as well as limiting the number of canning licenses the number of traps fished by a cannery should be limited?—A. I think so. Mr. O'Leary gets on our stand. He has about 20 or 25 boats taking up our fishing ground and we cannot stand against him. The same with Mr. Loggie.

Q. Then you would limit the number of traps fished by a canner and the number of traps fished by a boat?—A. Say to 250 to a boat; not one more. You could put 200 if you liked, but none above that. I would just say that a man like Mr. O'Leary ought not to be able to put out more boats than anybody else.

Q. Should not the number of licenses issued to one man be limited?—A. Yes.

Q. I suppose there have been cases where a firm has advanced money to a cannery and it has made default and been taken over?—A. The large cannerys have gradually swallowed up the smaller ones and have got the licenses issued in their own name.

Witness discharged.

ANGUS DURANT, fisherman, Richibucto, called and sworn:—

By the Commissioner:

Q. Where do you fish?—A. I belong to the town and fish off the mouth of the river.

Q. For whom have you been fishing this year?—A. For Mr. O'Leary.

Q. What do you do when you are not fishing lobsters?—A. I am a carpenter.

Q. How long have you been fishing?—A. Since I was able to go in a boat.

Q. How old are you now?—A. Fifty-one.

Q. Have you always fished off this place?—A. I have been fishing from Escuminac to here.

Q. Are there many other fishermen fishing in the same locality?—A. Quite a lot of them.

Q. On what lay are you fishing this year?—A. I am fishing a rig of my own.

Q. And you sell your lobsters?—A. Yes.

Q. And you have been selling them to Mr. O'Leary?—A. Yes.

Q. How far off shore do you begin to fish?—A. We begin to fish about four miles off the shore.

Q. In what depth of water?—A. There would be 10 to 11 fathoms.

Q. When do you go out there?—A. We go out there as soon as we are able to put a boat in the river, as soon as the ice is gone.

Q. The season begins on the 20th April, is the ice always gone then?—A. Yes, the ice is always gone then.

Q. Do you think there is any reason why there should be any date fixed for commencing to fish in the spring?—A. I think so.

Q. And when do you stop fishing here?—A. We stop fishing the 10th of July.

Q. The law says you are not to take any berried lobsters or any lobsters under 8 inches?—A. Yes, sir.

Q. Do you begin to fish out in 10 or 11 fathoms of water and then gradually come in shore?—A. Yes.

Q. How long do you fish in deep water generally?—A. About three weeks. Then remove the traps inshore.

9-10 EDWARD VII., A. 1910

Q. How far?—A. We move them into as much as about six or seven feet of water.

Q. Do you do that all at once?—A. All in one move.

Q. And you come into six or seven feet of water?—A. There would be two or three fathoms on the outside of the line. On the inside six or seven feet of water.

Q. Are the lobsters decreasing since within your recollection?—A. Yes, sir, they are.

Q. When you first began to fish did you get a very much larger run of lobsters than you do now?—A. Yes, sir, quite a lot larger.

Q. Are you fishing more gear now than when you began?—A. Not much more, very little more.

Q. But there are a great many more boats fishing?—A. A great many more in it than there was at that time.

Q. What number of traps does a man generally fish?—A. Generally from 200 to 250 traps in a boat to two men.

Q. Do you use the same trap now that you used to fish with?—A. Yes, the same trap.

Q. Is it the old fashioned trap?—A. Yes, sir.

Q. With a hole in each end?—A. Yes, sir.

Q. You don't fish the parlour trap?—A. A few have a small quantity once in a while.

Q. Are you taking much smaller lobsters than you used to take formerly?—A. When we began we used to take a little one like we do now. Of lobsters six or seven inches in size we get more than when I commenced to fish.

Q. Was it always the practice to take the small lobsters as well as the big ones?—A. The practice was to chuck them overboard at first. You chuck them overboard to-day and to-morrow they are back again.

Q. And then you decided to do what?—A. Take them all and bring them to the cannery.

Q. Do most of the fishermen own their own gear?—A. No, the most of them fish for the cannery.

Q. And they use the gear and boats belonging to the cannery?—A. Yes.

Q. Are there many fishermen fishing by weight here?—A. They were all fishing by weight this year for the first year.

Q. What led to the change?—A. The canners claimed last year they had to pay too much by the hundred, too much money per hundred. So they claimed if they took them by weight they would get them cheaper and would not have to pay so much money.

Q. What do the canners pay by the hundred?—A. The man who is fishing his own gear is getting \$2.50 per hundred.

Q. And the men fishing canners' gear?—A. They are getting \$1.50.

Q. Do you think it would be wise to license the lobster fishermen?—A. No, because we are not making the money. The fisherman has a hard time to keep everything together. He is not the man that is making the money.

Q. How does the price paid for lobsters now compare with what they used to get?—A. Last year we used to get \$11 a box.

Q. I mean what is the fisherman paid per hundred?—A. Last year he was getting \$3 a hundred.

Q. This year the price was cut down?—A. This year it was cut down.

Q. What was the best price you ever got?—A. The best price I ever got was \$3 a hundred.

Q. And when you first began to fish?—A. I was getting \$1.50 a hundred.

Q. Is there any competition as to price or are you forced to accept what the canners offer?—A. No, sir, we are not forced to accept the price they offer.

SESSIONAL PAPER No. 22a

Q. You either take it or leave it?—A. Either take it or leave it.

Q. Does one canner pay more than another?—A. No, sir.

Q. Do you think all agree to pay the same amount?—A. As far as I know they do.

Q. What is your practice with regard to small and berried lobsters; do you take them all to the factory?—A. Yes, sir.

Q. Does the factory object to receiving them?—A. No, sir.

Q. Then you take to the factory everything you catch?—A. Yes, sir, but anything under 6 inches we don't take at all.

Q. Do you expect the canner to take anything you bring to him?—A. Yes, sir.

Q. What do you think is the spawning time for lobsters?—A. July.

Q. Do you think the lobsters come inshore to spawn in shoal and warm water?—A. Yes, sir.

Q. Do you find more spawn lobsters inshore than you do outside?—A. Yes, sir.

Q. Do you think there is any time when the lobster is not fit for food?—A. Yes, sir, from the 15th to the last of July.

Q. What is the best month for fishing?—A. May.

Q. Out of every hundred lobsters you catch how many are females with eggs?—

A. Generally in May we don't get much; we get them in July.

Q. More female lobsters?—A. Yes, sir.

Q. And more small lobsters?—A. Yes, sir.

Q. What would you say was the smallest lobster you ever saw carrying eggs?—A. About 7 inches.

Q. Not very many I suppose?—A. Very few from 7 to 8 inches.

Q. What do you think is the average run of the female lobsters with eggs?—A. You will get them from 8 to 13 inches.

Q. What is the average run in lobsters here?—A. About 8 inches I would say.

Q. What would you say as to the best plan for us to adopt to save the female lobster with eggs?—A. The best plan is to have a hatchery and put the eggs in it.

Q. What would you say to buying the female lobsters with berries from the fishermen and placing them in pounds to hatch out themselves?—A. I don't know much about that because that is a thing I never saw.

Q. How do you think we could best influence the fishermen so as to save these berried lobsters and not bring them to the cannery?—A. The only way it could be done I suppose is to make a bargain with the man who runs the factory and the man who has his own traps to buy the female lobsters from them.

Q. You do not think the fishermen could be induced to put the berried lobsters carefully in the water?—A. The fishermen with another man's rig; they have got to do what the boss tells them to do.

Q. If the boss told them to put the berried lobsters back into the water would they do it?—A. No. They would say: 'We will stop fishing because we cannot make a living.'

Q. How would it be in the case of men paid by the month?—A. It would be the same thing to them.

Q. Are the regulations observed at all?—A. No, sir, they are not observed, and I am going to tell you the reason why. To keep the regulations they would say: 'We will not go at it at all; we will close up everything. We cannot pay the expense.'

Q. Is the practice of stripping the eggs off followed here at all?—A. It was never done to my knowledge.

Q. Because you always brought the berried lobsters to shore?—A. Yes.

Q. Have the cannery ever objected, to your knowledge, to taking berried lobsters?—A. They did once for a year or two.

Q. How long ago was that?—A. That is a good spell ago; it must be 16 or 17 years ago.

9-10 EDWARD VII., A. 1910

Q. Why did they object then?—A. The lobsters were pretty plentiful and they had enough besides the berried lobsters to do their business. But now they cannot afford to do it because their business without them would not pay.

Q. Would it be a very easy thing when a large quantity of lobsters is brought to the cannery to cull them and pick out those with berries?—A. It would be an easy thing to do.

Q. Do you think that a female lobster that has been in the boat all day covered up with other lobsters would live after being brought to the cannery?—A. Yes, sir.

Q. Do you think she would still have enough life in her then?—A. Yes, if looked after. You see the fisherman has got to look after every lobster because when they are dead they are no good. He has got to look after every one so that they may be alive when he comes ashore.

Q. Do the canners refuse dead lobsters?—A. Yes, sir, all the canners.

Q. Do they cull them over at the cannery to see that there are no dead lobsters?—A. When they go over them to see whether there are any dead ones they do not count those at all.

Q. Do you think the fishermen would refuse to deal with a canner who insisted upon the law being carried out?—A. Everybody does the same or the fisherman would not be able to make a living.

Q. Then the canners are all alike in accepting the lobsters that are brought?—A. Yes, as a rule. What one does the others do.

Q. Then you see no way of getting the fishermen to save the berried lobster unless he brings it ashore and sells it?—A. No, sir.

Q. Are you aware of any fishermen having lost his catch of lobsters by the canner refusing to buy them?—A. No, sir.

Q. Would you favour giving a license to every man who applied for it?—A. Yes, sir.

Q. How would you fix the standard of qualification? A man would have to show that he was able to can lobsters; how would you regulate that? You know there are lots of men that could not can properly.—A. Along this shore the fishermen are all able to can lobsters, every one of them. It might be different with a new man, a young fellow that goes into business, but the average man around here is able to can.

Q. It is proposed to issue licenses to clubs of fishermen, to a number of fishermen who join together and can lobsters on the co-operative plan. You have had one license issued here this spring on that plan. Would you favour doing that sort of thing?—A. I think so.

Q. Do you think there are enough canneries in existence at present?—A. There are enough canneries in one way to can all the lobsters that are put up but there is another thing to look at besides that. Take the case of a man that is fishing his own rig. They say to you 'We will give you \$2 a hundred for lobsters,' and we see a way to make \$4 a hundred. Why can't we have the privilege of making \$4 the same as the other man? We ought to have the same privilege that the other man has.

Q. Would you restrict the number of boats fished by each canner?—A. No, sir.

Q. You would allow the canner to fish as many boats as he likes?—A. Yes, because it would be an unfair thing otherwise. There are so many men trying to make a living and if you restrict the number of boats you may throw half of these people out of jobs. They would not know what to do. They would be unable to make their living on account of that. If you give them a chance to do the same as the rest they will not make much money, but will make a living anyway.

Q. If the present regulations preventing the taking of berried and undersized lobsters were strictly enforced how would it affect the canner?—A. He would have to shut down.

Q. Do you know anything about the shipping of live lobsters to the market?—A. I do.

SESSIONAL PAPER No. 22a

Q. Did you ever try it?—A. I never tried it here, but I have seen them shipped.

Q. Do you think it is the more profitable way for the fisherman to dispose of his lobsters?—A. Yes, sir.

Q. Is there any chance to do it here?—A. I suppose there will be a chance, what there is in other places.

Q. In other places they have got fast trains and the distance is shorter to the market?—A. There may be something in that.

Q. If the canneries were all closed down what would happen?—A. I would have to leave the lobster fishing alone.

Q. There would be no chance for all hands to carry on the live lobster trade?—A. No.

Q. Do you think the fishermen are getting a fair price for their lobsters from the canner?—A. Not this year.

Q. They say the market has fallen?—A. They claim the market is bad. We have got to allow something for that.

Q. Do you think there is any combination on the part of the canners to keep the price down?—A. I don't think so.

Q. Do you think that the fishermen would make more money if allowed to can for themselves?—A. In some places they would.

Q. Would you advocate establishing a hatchery the same as they have at Shemogue; do you think that has done good?—A. Yes.

Q. Have you ever heard that more lobsters are seen owing to the operation of that hatchery?—A. Yes.

Q. Would you be in favour of having more hatcheries?—A. Yes. I think the hatchery is very good, I think there ought to be one here.

Q. You told me that there has been a decrease in the size of the lobsters. Do you think that decrease is going on yet or has it stopped?—A. No, for a few years back it has kept just about the same.

Q. The decrease took place years ago not recently?—A. Yes, about 10 or 15 years ago.

Q. Of recent years there is not much of a decrease?—A. No, it keeps just about the same.

Q. What do you think was the cause of the decrease in size of the lobsters?—A. I think the reason was the season was too long.

Q. And they fished the lobsters out in the beginning?—A. Yes. A few years ago they used to fish in August. I think that was the time they did the harm.

Q. What is the best period of the fishing season with you?—A. The month of May.

Q. What is your opinion about fishing in the fall?—A. I think it would be a very good idea. I would fish a shorter time in the spring of the year, commence about the 10th of May till the last of June and have a month or a month and a half in the fall, beginning in September.

Q. Have you had any experience as to the character of the lobsters in the fall; are they as good as they are in the spring?—A. Yes.

Q. Just as full?—A. Yes, sir, some years better.

Q. Do you see many berried lobsters in the fall?—A. No, sir.

Q. Supposing there was no fall fishing, what would you suggest as the best regulation to keep the supply of lobsters up?—A. We cannot make it much better than it is now. I think there should be a time to commence in the spring.

Q. You have the 20th April?—A. It is too soon.

Q. Why is it too soon?—A. Because in some places outside where there is no harbour they can commence that time and fish, and when there is a river or some such place the fisherman cannot get out. So the other fellow has the advantage.

Q. Do you think it would seriously cripple the fisherman and the canner if fish-

9-10 EDWARD VII., A. 1910

ing were stopped on the 1st July instead of the 10th?—A. I think it would be a very good idea to stop on the 1st July.

Q. It is your opinion that during the last few days of the fishery the most harm is done?—A. Yes, sir, that is my opinion. I think from the 1st July there ought to be no fishing at all.

Q. Would you limit the depth of water; would you keep the fishermen outside in a certain depth of water?—A. No, sir; it is not very easy to do that; it will be quite a bother to do it. The way it is one fellow might go pretty well out and have very shoal water. Another fellow not so far out might have deeper water. It just depends what coast he is on.

Q. There are places where there are lagoons and bars inside which the lobsters try to get. Would you protect the lobsters where they are in such places?—A. Yes, sir.

Q. You would keep the fishing in the open off shore?—A. Yes, sir, off shore.

Witness discharged.

Mr. GUIMOND recalled:—

By the Commissioner:

Q. Do you wish to add anything to your former testimony?—A. In regard to the female lobsters with berries you should try and fix it some way so that the fishermen could get clear of them. If you are going to punish them every time they bring us such lobsters they will do what they have done in old times—they will have a scraper and scrape all the berries off. To have a pound and turn the berried lobsters in there and let them spawn for themselves is the surest.

Witness discharged.

J. H. BAIRD, manager, Richibucto, called and sworn:—

By the Commissioner:

Q. You are the manager here for what firm?—A. A. & R. Loggie.

Q. How long have you been connected with lobster packing?—A. About two years.

Q. Then your experience is quite recent?—A. Yes.

Q. How many boats do you employ at this cannery?—A. About 18 boats, two hands to each boat.

Q. What number of hands do you employ in the cannery, men, girls and lads?—A. About 25 I suppose altogether.

Q. What is the capacity of the cannery, what do you pack here?—A. That varies.

Q. What did you pack this year?—A. About 500 cases.

Q. And last year?—A. Last year it was between 700 and 800, I think.

Q. What is the total capacity of the cannery?—A. I can hardly say as to that. It depends on the number of girls you have.

Q. What is the best pack that has ever been made in the cannery to your knowledge?—A. I could not tell you what was packed at this factory before my time.

Q. Are you fishing a larger number of traps than you used to fish formerly?—A. A few more, yes.

Q. Can you speak of your own personal knowledge as to the condition of the fishery?—A. It is not as good this year as it has been the last two years.

Q. But in a general way is the fishery decreasing?—A. Last year it seemed to be better and this year it is poorer.

SESSIONAL PAPER No. 22a

Q. Is it your opinion that the supply of lobsters has been kept up by packing lobsters that were formerly rejected?—A. I could not say.

Q. Do you think they packed these small lobsters in the early years?—A. They probably did not run as small, I could not say as to that.

Q. Do the fishermen own their boats and gear or do you supply them?—A. Both.

Q. What percentage of the fishermen fish their own gear?—A. I suppose there is with us here very nearly one-half.

Q. Are you paying the fishermen who own their own gear by weight?—A. Yes, by weight.

Q. What is the price paid by weight?—A. The price paid by weight this year is \$50 a ton.

Q. How was it last year?—A. Last year it was higher.

Q. What is the reason for paying less this year?—A. On account of the price of lobsters going down.

Q. How are the other men engaged, by the run, by the season or how?—A. We have most of them engaged by the season.

Q. Are there many on shares?—A. Not many on shares.

Q. Do the fishermen begin to fish farther off shore early in the season?—A. Yes.

Q. In what depth of water?—A. It depends on the place they fish. If it is rocky bottom they go out in deep water.

Q. And do they move their traps inshore as the season advances?—A. Yes.

Q. Have you noticed that the early run of lobsters caught in deep water is a better one than those caught later in the season?—A. Yes.

Q. Do they get more berried lobsters later in the season than they do at the beginning?—A. I should imagine they would.

Q. Out of every 100 lobsters brought to the factory how many are berried?—A. I could not tell you. There are some berried lobsters.

Q. Are the regulations observed?—A. Yes, they are observed.

Q. In what way?—A. As far as can be. I suppose there are times when lobsters that run a little smaller than the regulations allow are canned.

Q. Is it the practice of the canner to refuse anything that is offered?—A. Yes, it is. It has been this year particularly. Other years it would not be so much. I know last year it was pretty hard, the fishermen made such a kick over our refusing any lobsters that were brought in.

Q. And what about this year?—A. There have not been so many lobsters taken probably. The run is no bigger for sure.

Q. Have you refused to take undersized or berried lobsters?—A. Yes, in the factories we have.

Q. Have you always refused?—A. As much as possible we have refused.

Q. Because the general trend of the evidence is that the regulations are not observed?—A. The fishermen have a lot to do with that. They kick so much about it.

Q. Then will you say that you are obliged to accept what the fishermen bring?—A. Well, I suppose so; we cannot say exactly that. We avoid trouble with them sometimes.

Q. Have you taken illegal lobsters because if you refused to do so they would take them to other canners who would not decline?—A. Yes, there is something in that too.

Q. Do you think there is any part of the season when lobsters are not fit for food?—A. No, no time during the season.

Q. At any time during the year?—A. Not to my knowledge.

Q. Could you give me any idea of the average size of the lobsters you took this year?—A. It is pretty hard to say.

Q. How many lobsters does it take here to fill a pound can?—A. I could not tell you that.

9-10 EDWARD VII., A. 1910

Q. Have you any statistics or data on the subject?—A. The only way to get at that would be if we had the man in charge of the factory.

Q. Do you think it would be possible to get the fishermen to undertake to return to the water all berried lobsters?—A. Yes, I think it could be done if all the packers stood out.

Q. How about undersized lobsters?—A. The same thing would apply to those. Still it would be harder with the undersized lobsters.

Q. If the law were rigidly enforced as to undersized lobsters would you still be able to continue packing?—A. No, I don't believe we would.

Q. What would be the best method of protecting the berried lobsters?—A. I should think the best way would be to have a hatchery.

Q. Could you give me any idea of the proportion of lobsters taken in the traps that are below the legal size?—A. No, I could not.

Q. Do you think the number of canneries is sufficient at present?—A. Yes, I should say so.

Q. In your opinion would an increase in the number of canneries result in an increased violation of the law?—A. I don't know about that. I daresay that might be the case.

Q. Would you favour an increase or decrease in the present size limit?—A. I am not prepared to say.

Q. Do you think there has been any noticeable decline in the average size of the lobsters in your district within the last ten years?—A. I could not say.

Q. What do you think has caused the decrease in the size of the lobster?—A. I don't know at all.

Q. What would you attribute it to; there must be a reason for this falling off from the originally good condition of the lobster fishery?—A. I am not prepared to say.

Q. You do not think it is the result of overfishing?—A. Well, it was thought that at one time. Still last year the lobsters were better than they had been these last few years.

Q. Do you think that different size limits and different seasons in adjoining sections of the coast are unsatisfactory and encourage violations of the law? What do you say to having a different season within three miles of you from what you have here?—A. I think it is necessary.

Q. Do you think there is as much reason for having a long season here as there is down there?—A. No, you take around Buctouche bay they are catching lobsters here when they don't catch them there. At the end of our season they are catching lobsters when it is not worth while catching them here.

Q. Could they not begin the same time as you do?—A. I am not prepared to say on that point.

Q. Do you think it is wise to kill off the young lobsters before they have reached the age at which they can reproduce themselves?—A. No.

Q. What would you think of a regulation doing away with the size limit altogether, but materially shortening the season?—A. I would not favour shortening the season.

Q. Would you favour doing away with the size limit?—A. No.

Q. Is it the case that cannerymen are compelled to accept undersized and berried lobsters for fear of losing their fishermen who would, in case of refusal, go to other cannerymen who are less scrupulous?—A. Yes.

Q. What would you think of licensing the fishermen, do you think it would have the effect of making them more careful to observe the law?—A. I don't know that it would.

Q. In the event of persistent violation of the regulations by a canneryman would you advise cancelling his license?—A. That would be the only way to do.

SESSIONAL PAPER No. 22a

Q. What would you think of a general closing down of the canneries for some years with the object of renewing the fishery?—A. I am not prepared to offer an opinion on that.

Q. During what period of the open season is the lobster fishery most actively prosecuted?—A. Along in June seems to be the best season here and the latter part of May. June is always good up to the 15th or 20th.

Q. What would you think about allowing fishing in the fall?—A. I should think not.

Q. Is the present regulation restricting the number of canning licenses satisfactory?—A. Yes, I should think so.

Q. Do you think it would be possible to establish a standard of fitness for lobster canneries?—A. I should think it would be possible and it should be done.

Q. And do you think that some system of inspection should be adopted?—A. Yes.

Q. Would you refuse a canning license to an alien?—A. I would say so.

Q. Do you think the fishermen would make more money if allowed to can?—A. No, I do not.

Q. What do you think of the policy of encouraging fishermen to co-operate in canning?—A. I cannot see that it would be of any benefit to them.

Q. How is the price paid to the fishermen for lobsters established; does every canner pay what he pleases, or is there any arrangement as to what he shall pay?—A. Every canner pays what he pleases.

Q. And the fishermen can either take it or leave it?—A. Yes.

Q. Are you aware of any complaints made by the fishermen that the price paid by the canners is not satisfactory?—A. No, not in a general way.

Q. There are always individual cases of grumbling?—A. There are always kickers.

Q. Are you aware of any fisherman having lost his catch of lobsters by the canner refusing to accept them?—A. No.

Q. Have the canners on account of the abnormal market conditions, or for any reason whatever, reduced the price paid to the fishermen for lobsters?—A. They have reduced the price this last year owing to the state of the market.

Q. What market would the fishermen in this district have for their lobsters if canning were stopped?—A. They would not have very much of a market.

Q. There is no opportunity for shipping the live lobsters? There are no facilities here in the way of cold storage, refrigerator cars, &c., for handling live lobsters?—A. No.

Q. Do you think that the number of boats fished by each cannery should be limited?—A. No, I don't think so.

Q. Do you think that the absence of any such restriction permits the large canner to crowd out the small fellow?—A. No, I cannot see how it does.

Q. If one man with more capital is allowed to fish any number of boats and traps, must it not have the effect of crowding out the others?—A. Well he may be in a position to crowd them out probably by having more capital.

Q. Do you think any of the smaller canneries have been crowded out?—A. I could not say in the two years' experience that I have had.

Q. Do you think a limit should be put upon the number of canneries that any one man should be licensed for?—A. I am not prepared to say.

Witness discharged.

Commission adjourned.

9-10 EDWARD VII., A. 1910

BUCTOUCHE, July 27, 1909.

WILLIAM JAMES CAMERON, manager, St. Thomas, called and sworn:—

By the Commissioner:

Q. For whom do you run the cannery?—A. For Mr. W. S. Loggie.

Q. How long have you been engaged in the lobster industry?—A. This is my fourth season as manager.

Q. How long have you been connected with the fishery?—A. Seventeen years.

Q. Did you use to fish before occupying your present position?—A. Yes, sir.

Q. How many boats do you employ?—A. There are two factories, 8 boats to each, fished by 2 men to a boat.

Q. How many hands do you employ in the cannery itself, men and girls?—A. There are always 3 men and 14 to 15 girls in each factory.

Q. Is the capacity of each cannery about the same?—A. Just about the same. Some years we used to put up over 500 cases.

Q. You are still at work and do not know what the pack will be this year?—A. No.

Q. What was your pack last year?—A. Over 330 cases at each cannery.

Q. Have you any idea what was the best pack these canneries have ever made?—A. The best pack? With 7 boats they put up 560 cases.

Q. How long ago?—A. About 8 years ago.

Q. What number of traps do your boats fish?—A. Two hundred and fifty.

Q. On what lay are the men?—A. All on wages by the month.

Q. What is the average wage paid?—A. This year it is a little different. It always used to be \$25 to \$30. This year it is a little less, \$27.

Q. That is due to the poor market, is it?—A. Yes.

Q. Do the fishermen own the boats and gear?—A. No, they belong to the factory.

Q. What is the best period of your fishing here?—A. It has always been at the last of the season.

Q. What is your season?—A. We begin on the 25th of May and close on the 10th August.

Q. How long has this season obtained?—A. About ten years.

Q. Before that what season did you fish?—A. The same as up north, knocked off on the 10th July.

Q. Is it taking more gear now to catch the same amount of lobsters than it did when you began to fish?—A. I think it does.

Q. Are the lobsters as large as when you first began?—A. I don't see any difference, they are just about the same size.

Q. What is the size limit here?—A. Seven inches.

Q. Not 7 inches but 8 inches. What is the average size of the lobsters that are brought to the factory, about what will they run?—A. That is pretty hard to say, I never measured any of them.

Q. Still you have a general idea?—A. There are very few lobsters under 7 inches.

Q. Were the lobsters that were brought to the factory measured this year?—A. Yes, there was a man went round for that purpose.

Q. Are the regulations requiring no berried and no undersized lobsters to be taken closely observed here?—A. Yes, since I have been manager there have not been any brought ashore with berries on them. As to small sized lobsters we are not so particular.

SESSIONAL PAPER No. 22a

Q. But in the case of berried lobsters you have observed the regulation?—A. Yes, sir, very strictly.

Q. Have you notified the fishermen that they must not bring them in?—A. Yes, notified them when I took charge not to bring in any berried lobsters.

Q. But as to the small ones what do you do?—A. The small ones we can them as we catch them.

Q. You take anything in the shape of small lobsters?—A. Unless it is something awful small. Anything too small it would not be any use to bring them in. There is nothing in it for canners.

Q. What is the best time of fishing?—A. Coming on the last of July.

Q. When do you begin to notice that the run of lobsters is coming in?—A. Commencing about the 10th July. Outside now it begins to rise. With the inshore lines it slackens off.

Q. Are the shoal lines not doing so well now?—A. Not so well.

Q. Is that the case every year?—A. Every year.

Q. Late in the season will the shoal lines do better?—A. They say in September they do better again.

Q. Do you know if the practice of stripping or washing off the eggs from the berried lobster is practised by the fishermen in this neighbourhood?—A. I don't know at all.

Q. You say it is the practice of the fishermen here to return to the water all berried lobsters they take in the traps?—A. Yes, sir, that is the orders. We don't can any but give strict orders not to bring them in. I don't say there are not lobsters put in by mistake but that is the strict orders and I think it is so all along the shore.

Q. If the regulation were strictly enforced here as to the size limit would the canners be able to continue packing?—A. I think it would pretty hard. You say it was 8 inches. That would be pretty hard.

Q. A great many witnesses say that if the size limit were enforced, many canneries would have to close down?—A. I think they would too.

Q. Is it your practice to make any examination of the lobsters as they come in to see that there are none with berries?—A. Yes, sir, it is. We give them strict orders not to bring them in.

Q. And they are not brought in?—A. They are not brought in.

Q. Could you tell me what proportion of the lobsters you receive are below the size limit?—A. It would not be much I tell you.

Q. Can you see what the percentage is?—A. There would not be many. It would be hard for me to give you an exact idea.

Q. And you think if the size limit were strictly enforced it would cause the closing down of the canneries?—A. There is a misunderstanding between you and I. I take down to 7 inches and you say 8 inches. Between 7 and 8 inches there is a big difference. If it came to 8 inches it would make a big difference. At 7 it would not make so much.

Q. Has there been any noticeable decline in the average size of the lobsters brought to your cannery during your recollection?—A. No.

Q. Are the lobsters running as large now as they used to?—A. I cannot see any difference. It was about the same ever since I have been fishing. They may be a little smaller, but we used to get small lobsters then. The first catch in the spring you will get lobsters larger than you will catch afterwards.

Q. When they are coming in?—A. At the first catch.

Q. Are they a larger run than those you get later in the season?—A. Yes, than later in the season.

Q. What were the regulations in force when you first began fishing, what was the law then?—A. We used to begin as early as we could fish and stop on 15th July.

Q. To what do you attribute the decrease in the size of the lobsters?—A. It is very little.

9-10 EDWARD VII., A. 1910

Q. Well, even the little there is what has brought it about? The lobsters are undoubtedly smaller?—A. There is very little difference. You take out in the deep water, and the lobsters are just as large now as ever they were.

Q. That is speaking for this section of the coast?—A. Yes. But the lobsters handier the shore seem to be of a smaller size.

Q. What is the reason for having a different regulation as to the season in this district than in the other districts? What led to it?—A. I don't know. They used to set out their traps earlier in the spring and their gear was carried out by the ice.

Q. Does the ice remain later here than at either end of the Strait or the north side of Prince Edward Island?—A. I suppose it was an idea of the people that it would be better to have a change.

Q. How many lobsters do you reckon it takes to fill a pound can?—A. On an average do you mean? It would take about eight lobsters.

Q. Now, it is estimated from actual measurement and count that it takes nine 7-inch lobsters to fill a pound can?—A. Of course we don't count our lobsters, they are all weighed.

Q. What is your idea about the practice of taking undersized lobsters; do you think it is destructive to the fishery to take lobsters that have not reached the age at which they reproduce themselves?—A. Well, I don't know about that part of it.

Q. What is the smallest female lobster you have ever seen with berries attached?—A. About 8 inches down to 7.

Q. Do you think you see many 7-inch lobsters with berries?—A. It is the same as with people, there are some pretty small and some pretty large. The lobsters are about the same.

Q. Could you give me an idea of the general run of the egg-bearing lobsters?—A. It would be from 8 up to 10 inches.

Q. It is pretty clear that the regulation as concerns the size limit is not observed at all by the fishermen or by the canner. What would you think of a regulation doing away entirely with the size limit but shortening the season so as to make up for that?—A. Well, my idea would not be that way. I think the season is short enough.

Q. Do you think you can go on much longer taking undersized lobsters and have the industry continue profitable; do you not think you are reaching the time now when you are catching smaller lobsters?—A. We have been getting them right along in another place; last year along the north shore they had big catches of lobsters. Some seasons are a failure. I do not think it is due to scarcity; I think it is like in the case of any other fish. Some years we get lots of fish, other years they will be in another place. Last year along the north shore they had big catches of lobsters; when they were a lot scarcer in other places they had big fishing. Take a little bit south of us now they are getting big catches and here we have not got any.

Q. Could you give me any idea how many pounds weight of green lobsters it takes to fill a case with you?—A. There is a difference. In the first of the spring you can do it under 200; about 190 or 195 pounds of green lobsters will fill a case. Now it will take about 235.

Q. And later in the season?—A. Later in the season 200 will fill a case. Later on in the season they get good again and will take from 195 to 200 pounds.

Q. Have the regulations for the protection of the lobster ever been observed in this district?—A. Well, I don't know whether they have been or not.

Q. Were they ever enforced at any time?—A. I don't know whether they were enforced. They have been stricter since I have been in the business. About the size of the lobsters we never make any difference. When they are very small I have told the fishermen it is no use to bring them in.

Q. Do you think the existing penalties are sufficiently heavy, if they were strictly enforced, to deter packers from violating the law? You do not know of anybody having been fined for breaking the law?—A. It would be just hard enough to keep on.

SESSIONAL PAPER No. 22a

Q. Do you think it would close the canneries up if you enforced the law?—A. I think it would.

Q. Has the number of canneries increased here within the last ten years?—A. There are a few more since within a few years and a greater quantity of traps.

Q. It has been suggested that the fishermen should be licensed, and that only those holding licenses should be allowed to fish lobsters, what do you think of that?—A. I don't know much about that.

Q. Do you think that the number of boats a cannery is allowed to fish should be limited or regulated? At present a canner may have as many boats as he can afford to put out do you think that should continue to be the regulation?—A. I don't know. I don't think they should run too many boats.

Q. Then you would limit the number of boats attached to a cannery?—A. Certainly.

Q. In your opinion is the practice of limiting licenses to certain individuals a good one?—A. I don't know about that. If everybody gets into the business nobody will do anything.

Q. Is there any reason why some people should be given a license and others refused?—A. It would not be any use to give everybody a license. There would be still more gear and more lobsters fished.

Q. Do you think that it is reasonable to limit the number of canneries and not limit the amount of gear they fish? Do you think that any man who asks for a license and says he is able to can should be given one?—A. I don't think it. Lots of people would ask for a license to can who did not understand the business and would not put up good fish.

Q. They would have to show that they were able to carry on the industry successfully?—A. The price of lobsters is a lot better than it used to be when they were only half put up and people did not understand packing.

Q. Do you buy lobsters by weight?—A. Yes, sir.

Q. What do you pay for them?—A. From \$55 to \$65 a ton.

Q. How many cases do you consider a ton of lobsters represents?—A. The run of the season it will average about 9 cases to a ton.

Q. It has been asked that fall fishing be allowed in some districts, would you approve of that?—A. I would not approve of it.

Q. In some districts a number of fishermen club together and are granted a license to can on the co-operative plan. Has any of that been done here?—A. It has been done this year down below.

Q. There is a co-operative association?—A. That is what has been understood.

Q. That is a new license has been issued to a company of fishermen; do you think that practice should be made general?—A. No, I do not think it should.

Q. Do you think the pack of lobsters should be subject to inspection as a general thing?—A. I should think it would be the right thing.

Q. Is there a bad product turned out in some canneries?—A. Yes, there is so.

Q. Would you grant a canning license to an alien?—A. It is according to how long he has been here. Everybody has got to live.

Q. There are a number of licenses issued to large firms composed of men not Canadian citizens?—A. I think the people in the place ought to have the right to can as well as the outsider coming in.

Q. Is it to your knowledge that the fishermen have ever complained of the price of lobsters as not satisfactory, as not being fair?—A. It is different with us. We have been buying from one boat but we don't buy many. We mostly pay by the month, our men are mostly all wages men.

Q. Are you aware of fishermen having lost their catch of lobsters by the canners refusing to accept them?—A. No.

Q. What would the fishermen do here with their lobsters if the canneries were

9-10 EDWARD VII., A. 1910

closed?—A. They would have to stop I suppose, stay home and farm. I don't see anything else they could do.

Q. Is there any chance of exporting live lobsters to the market here?—A. Yes, a fellow at Shediac handles a few.

Q. Have you any idea which branch of the industry is the most profitable to the fishermen, selling lobsters to the canner or shipping them alive?—A. I think it would be selling them to the canner.

Q. You think the fishermen get more in that way?—A. That is for the whole season, because they would not be able to handle live lobsters.

Q. There are no facilities for handling them?—A. No.

Q. Have you any idea of the price paid for live lobsters?—A. No, I have not.

Q. Where the fishermen are paid by the hundred how does the price compare with that paid in years past?—A. Well, prices are good enough, they have been paid better I think.

Q. Is the price as good this year as it was last?—A. No. That is on account of the price of canned lobsters going up.

Q. Do you know anything about lobster hatcheries?—A. I do not. I have heard talk of them, they say they are a good thing.

Q. In this neighbourhood there is no hatchery nearer than Shemogue?—A. No, that is the nearest. They are counted a good thing.

Q. Would you recommend an increase in the number of hatcheries?—A. I think they are necessary.

Q. You think there are any facilities here for making pounds?—A. That is something I do not understand. There are nice bays here.

Q. A sheltered place would be needed with the tide rising and falling?—A. I think there are good places here with nice beaches.

Q. Do you think there are good places here inside the sand bars and harbours?—A. Yes.

Q. But lobsters have never been impounded here?—A. No.

Q. Is there any other matter connected with the industry that you would like to explain or say anything about?—A. No. All I would like to mention is that we ought to have a longer season.

Q. Do you not think a longer fishing season under present circumstances would mean a greater destruction of lobsters?—A. Perhaps it would not be a benefit in the long run.

Q. The object of the government in making regulations is to protect the fishery and continue it in a good condition?—A. If there is no longer season I don't think they could place it any better to answer the people than it is now.

Q. How about protecting the lobster, that is the main question?—A. I don't think they can fish them out. I think they are the same as any other fish. You cannot fish herring out.

Q. Herring are another matter. You seem to have fished mackerel out. In what depth of water do you begin fishing here?—A. About 4 fathoms which would be about 2 to 2½ miles off the shore.

Q. Then when you move in what depth of water do you have?—A. They have tried them in closer than that and there seems to be lobsters. I would say they would be in about 3 fathoms of water.

Q. Is that the shoalest water the fishermen fish in, do you think?—A. Yes, I don't know that there are many in water as shoal as that.

Q. Are you fishing the same style of trap as when you first began to fish?—A. No.

Q. What trap are you using in your district?—A. The three headed trap.

Q. That is what we call the parlour trap. Why was the change made?—A. They say it is better for the second day. Supposing you leave the traps for two days, like over Sunday, the lobsters will stay in them better than in the two headed traps.

Q. The lobsters do not go out of that trap, the object is to hold all they catch?—A. Yes.

SESSIONAL PAPER No. 22a

Q. Are the slats in the traps as far apart as they used to be?—A. There are some closer than they used to be. We don't have them as close as some people, I don't think it is any use.

Q. What distance is there between the slats of your trap?—A. One inch.

Q. And in some traps the slats are closer than that?—A. Some closer but we get just as many lobsters with an inch space as when the slats are closer. It is just a fashion they have of lathing them, of having them closer together.

Q. The idea is to keep all the lobsters that enter the trap and not let them out again?—A. I suppose so.

Q. That is hold the smaller lobsters?—A. I don't think they will hold them any better.

Q. Don't you think it would be more difficult for a lobster to get out where the space is only an inch than where it is an inch and a half?—A. It would have to be a pretty small lobster to get out through an inch.

Q. So you think that fishing in very shoal water should be permitted, for example, in a fathom or a fathom and a half?—A. I don't think so. You get small lobsters then.

Q. The shoaler the water the smaller the lobster?—A. Yes, sir.

Q. You think there are more berried lobsters in the shoal water?—A. I don't think there are.

Q. What do the lobsters come into the shoal water for, do you think?—A. I could not tell you.

Q. Do you think they come in to spawn; what brings the lobsters to shore?—A. I could not tell you, I do not think they come to breed. In deep water there is just as many berried lobsters as there is in shallow.

Q. Do you notice the berries on the female lobster getting ripe as the season advances?—A. Yes, they get larger.

Q. The eggs get larger and do you not notice as the season advances that they get riper?—A. Yes.

By Mr. Leblanc, M. P.:

Q. Where are you fishing?—A. At the bar, six miles below here.

Witness discharged.

JOHN MOONEY, fisherman, St. Thomas, called and sworn:—

By the Commissioner:

Q. What is your age?—A. 24.

Q. How long have you been engaged in lobster fishing?—A. About 16 years off and on.

Q. Have you always fished in the same neighbourhood here?—A. Yes, sir.

Q. For whom are you fishing now?—A. W. S. Loggie.

Q. Are you fishing by the month or by weight?—A. By the month.

Q. How long have you been fishing by the month?—A. Since I first began to fish.

Q. The canner supplies all the gear, boats and traps?—A. Yes.

Q. Are you boarded by him or do you board yourself?—A. He boards me.

Q. How are the monthly wages now as compared with what they were when you first began to fish?—A. They are a little lower this year than they were last. Last year was about an average with what it was when I first began to fish.

Q. What does the wage amount to?—A. It runs from \$25 to \$28 and \$30.

Q. Did you get the same wage 17 years ago when you first began to fish?—A. About the same.

Q. What number of traps do you fish?—A. 250.

9-10 EDWARD VII., A. 1910

Q. Have you always fished that quantity?—A. No, sir, I have fished 200.

Q. Then you have increased the number of traps?—A. Yes, sir.

Q. Are there more fishermen fishing lobsters in your neighbourhood than when you first began to fish?—A. Yes.

Q. Do you think the canners have increased the number of their fishermen?—A. Yes.

Q. Does that mean that it takes more fishermen and a larger number of traps to keep up the supply?—A. They are using bigger gear to get more lobsters.

Q. What is the run of lobsters to-day as compared with the run when you began fishing?—A. They are nearly the same.

Q. Are the lobsters any smaller?—A. Inshore they are smaller but outside in deep water they are about the same average.

Q. When do you begin fishing?—A. We set our lines on the 25th May.

Q. Do you always begin at the opening of the season?—A. We have got to put our traps out and that takes us a week, sometimes longer.

Q. Do you always find lobsters there when you put out your traps?—A. Yes.

Q. In what depth of water do you put them out?—A. Some years I fish in four fathoms of water, other years I fish in nine.

Q. How far off shore would that be?—A. That will be 7 or 8 miles off.

Q. You come in contact with boats from the other shore at that depth? What is the deepest water outside?—A. Ten fathoms is the deepest water across from here to Cape Egmont.

Q. Then as the season advances what do you do, how long do you fish in that deep water?—A. The whole season.

Q. You do not move in then?—A. No, sir.

Q. Is not the practice then to move in?—A. There is no room inside, there are too many others. Somebody has got to fish outside, they cannot all fish in shoal water.

Q. Is it more profitable to fish inside than outside?—A. I think inshore you get more fish.

Q. Is there any difference in the average size of the lobsters caught inshore as compared with those caught off shore?—A. Yes, they are a good deal smaller in size.

Q. In how shoal water do some of the fishermen fish?—A. Two fathoms.

Q. Not less than that?—A. No, I don't think it, about two and a half to three fathoms. As they go out it gets deeper.

Q. Do you think, taking the whole season through, the average lobsters caught in shoal water are smaller than those caught in deep water?—A. Yes.

Q. Do you fish up to the close of the season always?—A. Yes, sir.

Q. How do you find the run of lobsters outside?—A. They are getting better all the time unless the last ten days of our fishing.

Q. Do the lobsters come from the east or from the west?—A. Well, some years we find them come from the northward, some years more from the southward. These late years they have been coming more from the southward. They say it is on account of the hatchery down at Shemogue.

Q. What is your experience with regard to berried lobsters, do you find them in the spring when you first put out your traps?—A. Yes, sir.

Q. Do you find them any more numerous as the season advances?—A. No, there are more in the spring. They shed their spawn, some time during June, I think, and now we are commencing to catch them again.

Q. Can you tell when they have shed their spawn?—A. Yes.

Q. You find the empty eggs on them?—A. Yes, there is slime on the tail. We often find them with a few eggs on the tail.

Q. Showing they have dropped their eggs?—A. Yes.

Q. What time do you think they do spawn?—A. I think they spawn in June as near as I can tell.

SESSIONAL PAPER No. 22a

Q. Has there been any increase in the number of licensed canneries in your time?
—A. I think there is about the same number.

Q. Are you aware of any number of fishermen having united together and obtained a license to can?—A. Yes, sir, one company did that this spring.

Q. Are you in favour of fishermen being allowed to club together and can on their own account?—A. Yes, sir.

Q. Do you think that everybody applying for a license should be allowed to can?—A. I think so, that is everybody that is capable.

Q. Would it not be necessary for the applicant for a license to offer some proof that he was able to carry on the industry properly?—A. Yes, sir.

Q. It would not be proper for everybody, regardless of qualification, to can and put up all sorts of goods?—A. No, sir.

Q. What requirements do you think should be insisted upon; should the man be able to show that he could pack a certain number of cases, say not less than 100?—A. I would not say the number of cases. A man that is able to put up lobsters and has had experience in fishing, a man brought up in the business all his lifetime, I think it is right he should get a license as well as another, but not every bushman to go and start a factory who knew nothing about it.

Q. Supposing we were to license the boats and allow only those fishermen to fish who registered and took out a license at a nominal fee, how do you think it would work?—A. It might work all right.

Q. Do you think that the number of boats a cannery is allowed to fish should be limited?—A. I think so.

Q. It seems of no use to limit the number of licenses when you do not limit the number of traps?—A. No, sir.

Q. What is your opinion about that?—A. My opinion would be no new licenses. Where fishermen cannot get a license to can, their boats should be licensed.

Q. Do you fish the same style of trap as when you began?—A. No, sir.

Q. You are using the parlour trap?—A. Yes, sir.

Q. What is the distance between the slats?—A. An inch.

Q. Why was the space between the slats made narrower, was it with the idea of holding everything that goes into the trap?—A. I don't know. I think so.

Q. What has been your practice with regard to female lobsters?—A. To throw them in the water.

Q. You do not rub the eggs off?—A. No, that would be of no benefit to me.

Q. But they would take them at the cannery?—A. They would take them there but they don't allow them ashore.

Q. Is it to your knowledge that the canners have refused to accept berried lobsters?—A. Yes, sir.

Q. How long has that been the case?—A. Ever since I have been fishing.

Q. Do they make any scruple about packing undersized lobsters?—A. I never heard them say.

Q. Then they take everything you bring?—A. Yes.

Q. Has the law ever been enforced here?—A. For small lobsters? I think it has been some 15 years ago.

Q. But gradually the enforcement has become lax?—A. Yes.

Q. What is the size limit?—A. 8 inches.

Q. What percentage of the lobsters under 8 inches do you take to the factory?—A. Not very much. They are very small and do not weigh much, we chuck them back.

Q. How small do you take them?—A. Not much under 7 inches, very few.

Q. What is the average size of the lobsters you do catch?—A. They will run from 7 to 10 inches.

Q. When do you see the most berried lobsters?—A. In the spring.

Q. And about what size are they?—A. Outside in deep water we get mostly big ones, 10 and 12 inches.

9-10 EDWARD VII., A. 1910

Q. With berries attached?—A. With berries attached.

Q. What is the smallest sized lobster you ever saw with berries attached?—A. One 5 inches long, this morning. I said: 'That is the smallest female lobster I ever saw with berries on.'

Q. The opinion of scientists is that there are very few under 8 inches that bear eggs?—A. I got a dozen 5-inch lobsters with berries on this week, and more. I threw about five hundred weight of berried lobsters over yesterday morning. To-day I did not catch as many. We are getting more berried lobsters now with new berries than we are lobsters without berries.

Q. All with new berries?—A. Yes, black. I have got a few since last week

Q. How does the price paid for lobsters to those who sell by weight, to-day, compare with what it used to be; do you not know what they are paying by weight to-day?—A. About \$55 a ton.

Q. How does that compare with the price paid 17 years ago?—A. They never used to buy them that way 17 years ago.

Q. They always fished by wages?—A. Yes, sir. Some by the hundred in this other district to the north.

Q. Have you ever known the canner to refuse to accept small lobsters?—A. If they were too small they would refuse them.

Q. Where do you think the canner would draw the line?—A. He would say it would only be losing time to pack these small lobsters, to pick the meat out of them.

Q. You say you think the spawning season is in June?—A. I think so.

Q. Do you think the lobsters go close in shore to spawn?—A. Well, I don't know how you can get them outside in ten fathoms of water and get them inshore all through the season.

Q. Do you not think that the lobsters outside, if not caught, come inshore to spawn?—A. They might, I cannot say.

Q. Is there any time when the lobster is not fit for food?—A. Yes, sir, when it is losing its shell, when it is too soft.

Q. When is that?—A. In July.

Q. Do you get many lobsters now that are losing their shells?—A. Yes, quite a few.

Q. What proportion would you say?—A. They have all got new shells now and are hardening up.

Q. It is easy to tell those lobsters?—A. If they are too soft sometimes, just like mush, we have to throw them back into the water again.

Q. If the age and size limit were strictly enforced would the cannery be able to continue?—A. No, sir.

Q. Is the practice of stripping the eggs off, or knocking them off by striking the lobster on the water, followed here at all?—A. Not to my knowledge.

Q. Do you think the fishermen are learning the necessity of protecting the berried lobsters, that it is in their own interest to do so?—A. Yes.

Q. If the cannery refuse to accept small lobsters would the fishermen throw them into the water and not bring them ashore?—A. I think so.

Q. The men that are fishing by the month are not interested in forcing small lobsters on the canner, if the canner would not receive them the fishermen would not bring them?—A. It would make no difference to them they would throw them back.

Q. Do you know if any fishermen here avoid engaging themselves to a canner who is known to be strict in the observance of the law, or are all the cannery alike?—A. They are all alike, I guess.

Q. Do you think it would be possible for the government to buy the berried lobsters from the fishermen and to hold them in pounds?—A. I think so.

Q. Would it be an advantage to have a hatchery here?—A. I think so because we get a good deal more lobsters with berries on than we do without berries. I threw from four hundred to five hundred weight with berries overboard.

SESSIONAL PAPER No. 22a

Q. When did you notice they were beginning to come?—A. Since the last week with the new berries. Of course I have not fished all this summer but only a part.

Q. Will you find them with berries on up to the 10th August?—A. I think so.

Q. If the canneries were closed here is there any chance to carry on the live lobster industry?—A. I think so. The fishermen would get gear out and sell them themselves.

Q. You would need fast trains, refrigerator cars and several other things?—A. I am afraid the market is too far away.

Q. If the facilities existed for the shipment of live lobsters which would you say would be the most profitable here, selling the live lobsters to the canner or shipping them to the market?—A. I could not say, I have had no experience.

Q. Do you think an increase in the number of canneries would result in an increased catch of small lobsters?—A. It might.

Q. Some people have proposed, as the best way of remedying the present condition of things, to shut down for a few years and allow the lobsters to recuperate, what would you think of that?—A. I would not care about it.

Q. It would throw a great many people out of employment you think?—A. Yes, sir.

Q. Would they not be able to find some other means of employment?—A. They would have to leave the country.

Q. What do you do when you knock off lobster fishing?—A. I am the pilot here.

Q. Are you aware of any combination on the part of packers to keep down the price, do you think the packers combine at all to keep down the wages paid to the fishermen?—A. I am not aware of it.

Q. You have no complaint to make on that score?—A. No, sir.

Q. Do you think the fishermen would make more money if allowed to can on their own account?—A. Some would, I suppose, and some would not.

Q. Would you favour any change in the size limit?—A. I don't think it.

Q. What would you think of a regulation doing away with the size limit and shortening the season?—A. I don't know what to say about that.

Q. The theory is that by taking some days off the end of the season we would save a great many berried and small lobsters, that the bulk of the lobsters that come late in the season are breeding lobsters, that by allowing you to take any size but shortening the season we would gain more than we would lose. What do you think of that?—A. I cannot say.

Q. To what cause do you attribute the decrease in the size of the lobsters?—A. They did not give them time to live.

Q. That is they have caught too many young lobsters?—A. Yes, sir.

Q. Do you think the lobsters really run, and always did run, smaller in some districts than in others, or were they originally, before they were fished out, pretty much the same size everywhere?—A. I think they are pretty much of the same size here.

Q. Do you think it would take more lobsters to fill a pound can in the fall than in the spring?—A. No, sir, about the same.

Q. When do you make your best fishing here?—A. Well, inshore here about the 15th July, coming on the 20th July, we get the best fishing.

Q. And where you are offshore?—A. The last of July to the 10th of August we get a big fishing.

Q. Is there any fishing or packing done here after the close of the season?—A. No, sir.

Q. There is no illegal fishing in that respect?—A. No, sir.

Q. Are hoop nets, what they call 'curlies,' fished here?—A. No, sir.

Q. Fishing in very shoal water, sometimes less than a fathom, that is not done here?—A. That is not done here.

Q. What is your idea of allowing fishing in the bays and harbours; do you think

9-10 EDWARD VII., A. 1910

the fishermen should be allowed to fish in the lagoons and in the harbours?—A. Yes, let them fish wherever they can get lobsters.

Q. You know the Magdalen Islands and the lagoons there?—A. Yes.

Q. Undoubtedly the lobsters enter those lagoons to spawn and the lagoons therefore are protected?—A. Of course the general rule is that you never see small lobsters with berries. The lobsters are small inshore but all of them cannot come in to spawn.

Q. Do you not think that fishing in very shoal water, in sheltered places of that kind, where the water is warm, you catch an unfair proportion of small lobsters, more so than you do outside?—A. Oh, yes, a good deal smaller.

Q. Do you not think it is the duty of the department to protect the small lobsters; if you do not do so how are you going to have big lobsters?—A. That is so.

Witness discharged.

JOHN BAPTISTE MAILLET, Fisherman, St. Thomas, called and sworn:—

By the Commissioner:

Q. What is your age?—A. 41.

Q. How long have you been fishing?—A. 18 years fishing and soldering.

Q. What are you fishing to-day?—A. I run a cannery and fish a boat.

Q. Whose cannery?—A. My own with my brother. It goes in my name.

Q. How many boats do you fish?—A. We own three boats and we buy the fish from two other boats.

Q. The three boats of your own are fished by wages men, are they?—A. We hire the men.

Q. And the other two boats sell you their lobsters?—A. Yes, sir, by the 100 pounds.

Q. What is the price per 100 pounds?—A. There is no real price exacted. There is \$58 a ton promised.

Q. If the market rises, the fishermen are paid a little more, if it goes down they get less?—A. Not any less.

Q. In what depth of water do you fish?—A. We fish in different depths. We have a line off shore, that is we fish in about 2 to 2½ fathoms. We have some outside that one, half is line in four fathoms and half in two and a half fathoms.

Q. You fish inside and outside the bank?—A. We follow the bank.

Q. What time do you begin to fish?—A. In the spring we begin, the last of May.

Q. And you are fishing still?—A. Yes.

Q. What is your experience with regard to fishing, in deep water will you get a larger run of lobsters than in shoal water?—A. Sometimes, it depends on the run.

Q. Would you say on the average you get better lobsters in deep water than in shoal?—A. This last year we did not fish outside. We fished in shoal water.

Q. What is the average size of the lobsters taken by you?—A. The average size is about 8 inches and I would tell you there is quite a lot of 7.

Q. And some a little under?—A. Yes, a little under.

Q. It has always been a practice here, has it not, to take pretty much all you catch unless the lobsters are very small?—A. Yes, certainly, but we have a certain measurement; a lobster that is under 66 inches we don't take it.

Q. And what do you do about the berried lobsters?—A. We throw them in the water.

Q. Have you always done that?—A. Sometimes at first I did slash them. Of late years I don't do it.

Q. You put the berried lobsters back in the water?—A. Since this law has been in force.

Q. Do you think the fishermen generally are observing the berried lobster regulation better than they used to?—A. Yes, I think so on our shore.

SESSIONAL PAPER No. 22a

Q. You have heard the fishermen say that?—A. Yes, I heard the fishermen say that they watch one another to see that they don't take berried lobsters.

Q. What is the best time of your fishing?—A. The best time for fishing is all the month of July.

Q. Do you see more lobsters with eggs at one time than you do another?—A. Yes, in the spring of the year there is more berried lobsters.

Q. What time do you think they spawn here?—A. They spawn in June. It appears about the end of June we don't see much, sometimes a few. In the fall of the year I used to see more when the lobsters shed their shell. We did not use to see them inshore.

Q. Do you get more lobsters with berries inshore than you do in deep water?—A. No, sir, I think there is more outside.

Q. Out of every 100 lobsters how many do you think bear berries?—A. In the spring about one-third; sometimes, not always. It is not always the same, they seem to come in schools or runs.

Q. How many lobsters does it take in your cannery to fill a pound can?—A. It is a thing I never counted.

Q. Do you know how many lobsters go to the ton or the hundred pounds?—A. It depends upon the run. Sometimes it will go 100 lobsters to 200 pounds. Other times it will go more. It will take two or three to the pound some runs in the summer.

Q. How many lobsters of your run will it take to fill a pound can?—A. I think it will come to just about four to five to the pound can.

Q. How many cases do you pack from a ton of lobsters?—A. I averaged this summer about 230 pounds of lobsters to the case of 48 pounds. Some years ago less and some years more, it varies.

Q. In your experience has there been much change during the last ten years in the size of the lobster?—A. I think there has not been much change.

Q. How has it been, taking the last 20 years?—A. Well, I have been fishing for about 18 years and of course early in the spring the lobsters were always big because they came from the northward. Now we get the lobsters from the south. I remember when we began to fish we never waited for the south run of lobsters, we always waited for the north. Since then a hatchery has been established at Shemogue and we are beginning to see a small run of lobsters coming from the south. Now we get the most of our lobsters on that run and not from the north.

Q. Do you fish the same kind of trap as when you first began?—A. No, we used to fish a trap with two ends. Now we fish a trap with only one. Of course there are two rooms in the trap, before there was only one.

Q. Those are what we call parlour traps?—A. Yes, sir.

Q. Do you think they get more lobsters?—A. They do. Like on Monday they have two days to fish and the present traps will hold the fish better than the others. On a middling run of fish the other trap was just as good perhaps, but if we have a heavier run of fish the present trap will hold better. I have counted as much as 33 in a trap. I never saw that with the other trap.

Q. Are there many fishermen here that own their boats and gear?—A. There are about six I know on this shore.

Q. Most of the fishermen are paid monthly wages and fish with factory gear?—A. Yes. Of course the men that have the license, you don't mean those?

Q. Are there many fishermen fishing their own gear who sell their lobsters where they please?—A. Well, there are about six boats on this shore, on the south side.

Q. But most of the fishermen are fishing by the month and with the gear belonging to the factory?—A. Certainly.

Q. How many boats would you allow a factory per hundred cases?—A. We used to count about 50 cases to a boat.

Q. If you pack 300 cases you would be allowed to fish six boats?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Do you think there is any use in limiting the number of traps to a boat?—

A. I think the number ought to be limited because we have trouble otherwise. Some fellows put a pile of gear out.

Q. Would you fix the number at 250 to a boat?—A. That would be right. We fish about 300 to a boat. Four hundred can be fished but it is only a bother; they cannot do it properly.

Q. What is your opinion in regard to the matter of canning licenses, do you think we ought to issue a license to can to every man that applies for it, or limit the number?—A. It is hard to do that. If we look at it in the right way it ought to be open to all hands, it is a free country. It ought to be arranged so that there would not be so much failure as in the olden times. I remember in the olden times there were a great many failures.

Q. That is the reason so many canneries are licensed to large firms, I suppose due to the failures?—A. Not on our shore. The company that bought this factory down here thought they could make a big pull and paid as much as it was worth. They thought when they saw all the licenses were stopped they would grab all the shore and let the poor man fish for nothing. That is my opinion.

Q. You think the law regarding the size limit is generally ignored, it is the practice to bring everything into the factory?—A. It is the practice to bring everything in all right. We always have a certain size. Anything that is no good we don't bring ashore. Sometimes I threw out of the trap as much as four, five or six this year. That is down on the bar, that is where the small lobsters keep.

Q. And some places you get more small lobsters than in others?—A. Certainly.

Q. Do you think you get more spawn lobsters in shoal water than you do in deep water?—A. No, sir, you get more in deep water than in shoal.

Q. Do you think there is any time when the lobster is not fit for food?—A. There is a time when there are some, just a wee few. We don't bring them ashore, we throw them out.

Q. That is when you find soft shelled lobsters?—A. It is forbidden by the officer to take them and forbidden by the boss of every factory. I am boss of our factory and I don't stand them at all.

Q. The last witness has stated that he has seen female lobsters only 5 inches in size with eggs on them?—A. It is a thing that is hard to tell, but I have seen some very small lobsters with eggs on them. Of course I never measured them.

Q. Were they less than 8 inches in size?—A. Quite a lot less, under 7 inches I think. But most of the spawn lobsters are bigger, about 8 to 10 inches in size.

Q. Are these spawn lobsters full of meat; are they generally good?—A. Yes, they are.

Q. A great many people say they are the best, they are fuller of meat?—A. They are, because they do not shed their shell until they have spawned.

Q. You know what the regulations are as to size limit, berried lobsters, and the length of the season, what change would you suggest; if you suggested anything, with a view to preserving the fishery?—A. The rule ought to be, if you do not want us to shut down, that the size limit should be no higher than 7 inches. Otherwise we cannot live.

Q. You think if the size limit were made higher than 7 inches you would have to shut down?—A. I know what I say, we would have to shut down.

Q. How would it work to do away altogether with the size limit and in return have a shorter season?—A. A shorter season would not do us here, because, you see, the run is not always on the same day; that is the trouble. Sometimes we have to apply for an extension. At times we would get it, but at other times we did not. When we see the run is later on we apply for an extension.

Q. You applied this year for an extension did you not?—A. Not this year. One year when an extension was granted it put us right up. Sometimes the best run is at the close of the season.

SESSIONAL PAPER No. 22a

Q. Would you be in favour of establishing a hatchery?—A. Yes, certainly, I think a hatchery should be established here because there are so many crabs that are enemies of the spawn. We got over 300 barrels of crabs in three boats. They eat the spawn and young fry; so do the perch and codfish.

Q. What did you do with all those crabs?—A. I put them on the land as manure.

Q. Do you think it would be possible to establish pounds where the spawn lobsters could hatch out?—A. I think it would be less expensive to take the eggs to a hatchery and it would be just as good.

Q. Are you aware that any fisherman in this neighbourhood has ever lost his catch of lobsters through the canner refusing to take them?—A. No.

Q. What would you think of the idea of closing down the canneries for some years?—A. That is no way to do. You might as well try and do away with the food a man has to eat. There is room to establish hatcheries to give all hands enough to eat. My idea is to keep on.

Q. Do you see much failure in the conditions during the last ten years or are things about the same?—A. I think they are better now than ten years ago, it may be owing to the price of the fish. I have been canning lobsters now for 15 years and the first year I fished I could only contract for—I think it was about \$5.50 a case. Now I can get double that, nearly treble.

Q. That was not exactly my idea. A great many people say the fishery is at a standstill. Is it not getting any worse the last few years? Do you think it is still going down during the last ten years or is it just about the same?—A. I think here it will be about the same because two years ago we had as big a run of fish as ever I saw myself. Last year we had not a big run, but a fair run; this year it is poor. I don't believe it is scarcity of the fish, but God's will.

Q. It is an off year for lobsters?—A. Yes, you see that with codfish and mackerel.

Q. When you began to fish first you used to have bad years?—A. The first year we began we fished 400 traps and we could only get 47 cases. That was the run. We could not have any extension that year, and we thought the run really was after the season closed.

Q. Is there any chance to ship live lobsters from here to the market?—A. No, unless we had some cold storage or vessels.

Q. There is no opportunity for doing that trade?—A. No, and it costs money to do it.

Q. Do you think the packers have combined at all to keep down the price, has there been any combination?—A. Only this year that the buyers combined. It is only my own opinion.

Q. This year the price was down everywhere and they say it is due to the bad market last year?—A. So they say. They must have something to say, but my opinion is they combined themselves. I might be wrong in that.

Q. To whom do you generally sell your lobsters?—A. To R. O'Leary, Richibucto. I began with Mr. O'Leary.

Q. What was your pack last year?—A. 244 cases.

Q. And the year before?—A. We only ran one boat, about 60 cases.

Q. And since you have started in this year?—A. We have 120 cases packed so far.

Q. Speaking about fishing in the fall, how are the lobsters then?—A. It is a thing I don't know anything about.

Q. Some people have told us it takes more lobsters to fill a can in the fall than in the spring?—A. Early in the spring it is just about the same as in the fall because the first lobsters you bring ashore are quite poor and not so good as just before they begin to shed their shell when they are at their best.

Q. Then they begin to get poor and then reach their best again?—A. And just at the fall they are the same as early in the spring.

Q. Have you any idea about fishing in very shoal water, what would you put the limit at of the depth of water to be fished in?—A. I would not put any limit because

9-10 EDWARD VII., A. 1910

we used to fish on a bank in about two fathoms of water away out. You will find these about three miles from the shore. We used to fish there and you will get most of the small lobsters there.

Q. Supposing you were to fish late in the season in one fathom of water?—A. You can get big lobsters in one fathom of water if it is mud bottom. After the lobster has shed his shell he goes to the mud bottom where there is seaweed and that is a place where you will get the big lobsters. That is sometimes in some places.

Q. One year with another what is the best time to fish?—A. The best time of fishing is in July.

Q. Have you any recommendation to make?—A. If the season could be lengthened for ten or fifteen days, five days in May and ten days in August, it would be better for the fishermen.

Witness discharged.

PETER LEBLANC, manager, called and sworn:—

By the Commissioner:

Q. Are you packing on your own account?—A. I am manager for Mr. Belideau.

Q. How many canneries do you manage?—A. One.

Q. How many canneries does that gentleman control?—A. Two, one situated at Cocagne Bar and other at Casey Cape.

Q. What is the capacity of those two canneries?—A. Four boats to each cannery.

Q. Are the men hired by the month?—A. Yes, by the month.

Q. The factory own the boats and gear?—A. Yes.

Q. And the men are paid monthly wages?—A. Yes.

Q. You do not buy the lobsters?—A. We did some years but not now.

Q. Are there many other canneries in your neighbourhood?—A. Yes, there are a number.

Q. What is your average pack?—A. Some years we have packed fifty cases per boat and we have packed as high as seventy-five cases per boat. Some years we have only packed thirty-eight, that was a few years ago.

Q. Can you tell us in what depth of water your boats fish?—A. I could not say exactly as I don't fish myself.

Q. Still the fishermen fish a good way out?—A. A good way out. We have some that fish inside and the others fish outside.

Q. Is it the practice to move the outside traps in as the season advances, or do those fishing outside stay there all the season?—A. They fish outside all the season. We did it for some years, but of late years we have not done it.

Q. Are there more traps in your neighbourhood than when you began?—A. Yes.

Q. How many years have you been in the business?—A. Eleven years. There are more traps now than there ever was.

Q. What is your average number of traps?—A. They fish 250 traps per boat.

Q. Do you think that is a fair number of trap?—A. I think it is. As many as the fishermen can handle.

Q. Especially if the water is deep, it is harder work fishing in deep water?—A. It is.

Q. Have you always fished the same number of traps?—A. No, we have less traps some years. We used to have 250 traps to a boat inshore and 200 outside. This year our outside boats do not go as far as we have 250 to a boat all round.

Q. What is the nature of the lobsters you are getting now compared with those you used to get when you first began?—A. I don't think there is much difference. They may be a little smaller from the 15th June to the end of July. I think they are a little smaller. When we first begin they are of good size until the last of June.

SESSIONAL PAPER No. 22a

Q. From the last of June until the end of the season how are they?—A. From the last of June for a while, that is inshore, the shore lines, they are smaller—that is after the lobster changes his shell—for two or three weeks.

Q. And then how are they?—A. Then they grow bigger, but we get them bigger still——

Q. Towards the end of the season?—A. Towards the end of the season.

Q. Do you find them in better order and fuller of meat in one part of the season than another?—A. Yes, sir.

Q. What is the best time?—A. The best time is when we set from the 15th to the 20th June and then from about now until the end of August.

Q. Do you think, speaking generally, it is safe to say that the pack is kept up by taking a smaller run of lobsters now than was taken years ago?—A. I could not say about that.

Q. On the whole, do you not think that the run of lobsters is smaller now than when you began fishing?—A. It is hardly smaller.

Q. You think it is about the same, as far as your experience goes?—A. It is about the same as far as I can tell.

Q. Do you think the lobsters are as large as they ever were?—A. I think so. Outside to-day you get a good catch, as large lobsters as ever were caught.

Q. What is the practice with respect to berried lobsters in connection with your canneries?—A. The fishermen throw them back in the water.

Q. You do not accept them?—A. No.

Q. Is that the practice pretty generally with the fishermen?—A. I think it is in our district; I don't know of any shop that cans any.

Q. Do you think the fishermen are learning to understand that the berried lobster law is a good one?—A. Yes, sir, they are learning. Of course, they may bring in one or two that way, but you have only got to tell them to be very careful and the next morning you don't find any in their traps.

Q. So you think the law with regard to berried lobsters is pretty well observed in your neighbourhood?—A. Oh, yes.

Q. How is it in regard to the size limit?—A. I suppose there is some undersized.

Q. Would you venture to say what percentage?—A. It is pretty hard for me to say.

Q. Is there half of them undersized?—No, not half of them.

Q. Is there one-third?—A. No, I do not think there is more than one-quarter in the cases of the inshore lines. For the outside lines I don't think there are hardly any.

Q. Have you ever remarked the smallest sized lobsters you have ever seen carrying eggs?—A. I could not tell you because I am not a fisherman.

Q. Do you think there is any part of the season when the lobsters are not fit for food?—A. I don't think so.

Q. You think they are always fit for food?—A. I think so.

Q. Can you tell me how many lobsters it takes in your factory to fill a pound can?—A. I suppose it would take on an average of from 5 to 8.

Q. Will that average vary comparing one part of the season with another?—A. Yes, I think it would.

Q. You take less at the beginning of the season than you do at the end?—A. Yes.

Q. What would be the effect on you as a canner if you were strictly limited to 8-inch lobsters and nothing else?—A. We would simply close the doors.

Q. If you closed down what would the fishermen do?—A. I don't know what they would do for a living.

Q. Is there any market for live lobsters, any chance to export them?—A. There is the American market, but it is not known very much around here, although there are a few shipping live lobsters.

Q. Are they beginning to ship them?—A. Yes, but not in large quantities.

9-10 EDWARD VII., A. 1910

Q. The facilities do not exist; you are too far from the Intercolonial?—A. We have not got the facilities here.

Q. If the facilities for the live lobster trade existed, would the fishermen do better exporting these lobsters than selling them to the canner?—A. They would this year when the price of canned lobsters was down. I think they would do better.

Q. Have you any idea of the price paid for live lobsters?—A. At Point du Chene the price paid, I think, is from \$100 to \$125 a ton. That is what I was told. I could not credit the fact.

Q. And the price paid per ton by the canner is how much?—A. This year it is about \$55.

Q. What do you think about licensing the fishermen; it has been proposed by some people that the boats should be licensed?—A. I don't see why they would be.

Q. Do you think that every canner should be allowed to fish as many boats as he pleases? What is the use of keeping down the number of licenses if you do not limit the number of traps?—A. That is right. I don't think so. I don't think a man should be allowed to run more than 8 boats anyway, and I don't think he should be allowed to put out more than 250 traps per boat.

Q. What is your idea of the present method of restricting the licenses and only giving them to those that have been fishing?—A. I think in our district it is a good idea because there are too many already.

Q. Then you would not favour issuing a license to can even to any man who could show that he was able to do so?—A. No.

Q. You would prefer restricting the number of licenses?—A. Yes, sir.

Q. What regulations were in force when you began to can?—A. We used to begin as early as possible in the spring and stop the 15th July.

Q. Was there any size limit then?—A. The same size limit.

Q. You do not remember the time when there were no regulations?—A. No.

Q. Do you think that the lobster has been overfished?—A. I don't think so, because I remember for a few years, that is in 1901 and 1902, we only caught about 38 cases per boat, and in 1903, with the same gear out and the same traps running, I think we caught 70 cases per boat.

Q. What was the reason for making a different season north and south of here?—A. The reason? Some springs here are very rough weather and people could not haul out their gear in time. Sometimes the lobsters do not take a new shell; that is, at the same date. Sometimes the lobsters would take a new shell and strike in heavy afterwards. After they have renewed their shell they feel hungry and go into the traps. For years it would happen as late as the 23rd and 25th July, and then when we would have to close on the 15th July we would be out of that run of lobsters altogether. We would have to shut down without getting that run, and that is the reason why the fishermen asked to have that changed.

Q. Would you favour reducing the size limit?—A. No, I would not.

Q. You prefer the 8-inch limit?—A. Yes.

Q. You say it is not enforced?—A. No, I know it ain't.

Q. What would you think of a regulation allowing you to catch any size lobster but protecting the berried lobsters and shortening the season?—A. I don't think it would be advisable. I don't think the season should be shortened, I think it is short enough now.

Q. Do you know if the cannery have been compelled to accept undersized or berried lobsters for fear of losing their fishermen?—A. I don't know anything about that.

Q. Do you think that registering the fishermen and getting them to take out a license would cause them to observe the law better?—A. No, I don't think so, because they will just do what the manager tells them.

Q. Do you think if the fishery has to be regulated it is best done through the cannery and not through the fishermen?—A. I think so.

SESSIONAL PAPER No. 22a

Q. Are the existing penalties sufficient to prevent packers from violating the law if they were enforced.

Q. What would you think of the proposition to close down all lobster fishing for a number of years?—A. I don't think it would do, there are a lot of men earning their living by it and it would throw them out of employment.

Q. Those engaged in the fishery are not regular fishermen?—A. They are small farmers. Those men have only a small piece of land and cannot live on it alone.

Q. Do many of them go in for cod and mackerel fishing?—A. Not many.

Q. Most of them confine themselves to lobster fishing?—A. Yes.

Q. The Lobster Commission of 1898 recommended that fishing should be stopped in certain sections of the coast alternately?—A. I do not think that is good.

Q. Do you think it would be possible to fish a shorter season in the spring and then stop and begin in the fall?—A. We could not do that very well here under the existing circumstances. We could not get the men back considering there is lots of other work outside. We have got to keep it up while we are at it.

Q. Do you think there should be an inspection of the canned product at the factory?—A. The way it is we run under contract and we have a man who does that. He is around the factory two or three days a week and he inspects the fish as it goes into the can and after it is canned. Therefore, I have nothing to say about that.

Q. Who does that inspector represent?—A. He is representing the Robert Simpson Company of Halifax. They keep their own inspectors.

Q. Have you ever known him to find fault with the pack?—A. Yes, in some cases they do.

Q. What would happen to that man whose pack was criticised, would he have any difficulty in selling his lobsters?—A. Yes, the lobsters have got to be 'O.K.' or not at all.

Q. Where do you sell your lobsters?—A. We send them to Halifax under this man's inspection. They are inspected at the factory.

Q. Does he give you any certificate?—A. Yes, he gives us a certificate at the factory. He opens so many cans while they are coming in, and all that kind of thing, to ascertain whether they are number 1.

Q. What do you think about giving a license to people who are not Canadian subjects?—A. I don't think it would be fair.

Q. Of course there are some aliens among our largest packers and they were the first to begin packing?—A. Yes, I know.

Q. Do you know if the individual fisherman would make more money if allowed to can for himself?—A. I don't think so.

Q. Do you think every man is competent to can?—A. Well it is pretty hard proposition.

Q. Do you not think he would need some experience?—A. I think he would need some experience. A man who does not know anything about the business is apt to can bad goods.

Q. Do you think that where a number of enterprising young fishermen are willing to co-operate for the purpose of canning lobsters they should be given a license?—A. No, I don't think so.

Q. Do you know whether any fishermen have complained that the price paid for lobsters by the canners was not satisfactory?—A. They were not complaining before this year, but this year they are complaining.

Q. What is the cause of their complaint?—A. A drop in the price of lobsters. The wages are lower this year and if a man has been getting a certain price he does not want to come down you know.

Q. Is it the case that fishermen have lost their catch of lobsters by the canners refusing to accept them?—A. I know of no case.

Q. Is there any other matter connected with this inquiry that you would like to make a statement upon?—A. No, I have no other statement to make except that I

9-10 EDWARD VII., A. 1910

would not like the season to be shortened whatever. If it could be lengthened it would be better.

Q. Better for the fishermen or for the lobsters?—A. Better for all hands, I think, I don't know about the lobsters.

Witness discharged.

The commission adjourned.

CAPE BALD, July 28, 1909

PACIFIC P. LEGER, canner, Cape Bald, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. I have been in the lobster business since the second year after they began to pack in this province.

Q. That is 37 years ago?—A. Thereabouts.

Q. What other canneries are licensed in this neighbourhood?—A. I am alone here. The nearest one is 300 or 400 yards. The others are strung along clean to Cape Tormentine and into Baie Verte. Farther on towards Shediac there are some.

Q. Is this the only cannery you are running?—A. This is the only one I am running.

Q. Have you always run this factory from the beginning?—A. I used to run down on the shore.

Q. How many boats do you employ?—A. The highest I have is nine.

Q. With two men in a boat?—A. Two men in a boat.

Q. What number of hands do you employ in the cannery, men and girls?—A. It is according to the strike of lobsters; some years quite a number, other years less. Up to now they have not come in any heavier and I have not had more than six girls and men. Last year I had more.

Q. What was your pack last year?—A. Last year I packed about 300 cases.

Q. What is the largest pack you ever made?—A. I have went up to 500.

Q. Are you fishing more gear now than when you commenced?—A. Just about the same.

Q. How many traps do you fish to a boat?—A. Some have got 300, others 325 and 350. With my boats I guess the highest is 300. Some are under that.

Q. Did you always from the beginning fish the same number?—A. The first years they were better. I have seen some years, since first beginning, that the lobsters were just as good as they were at first, when we packed about 500 cases. That is only about five years ago.

Q. You must have had a good run that season?—A. It was a good run.

Q. Do your men own the boats and gear or do you own them?—A. I only own one boat. The rest I pack at so much a case. Some of the boats I have, have no license.

Q. The boats are not licensed?—A. I have some boats that the men used to run factories but they did not pay and they came in with me. Of course they are holding their license this year just the same.

Q. They do not operate but can with you?—A. They can with me.

Q. How do you find the size of the lobsters now as compared with the size when you first commenced canning?—A. This year the size was a good deal better than last year, it is a good deal larger.

Q. But how does that size compare with the size when you first began operations?—A. There is a difference. When I commenced they were full-sized lobsters. I have weighed lobsters that weighed 16 pounds.

SESSIONAL PAPER No. 22a

Q. That was only now and again?—A. Of course they are getting scarcer, but 5 and 6 and 7 pound lobsters were common at the start.

Q. And how is it now?—A. Of course I have weighed some that weighed 7 pounds this year.

Q. That is a big lobster?—A. There were some small lobsters but they were a good deal larger than last year. The inside trawls here brought larger lobsters than the outside. Of course I figured out that the spring was cold and the lobsters came in-shore.

Q. To get in warm water?—A. To get in warm water. That is what I figured on.

Q. What is the average size of the lobsters you are canning now?—A. There was a fellow measured them here this spring. He came twice but did not give me a statement of the measurements so I could not tell you exactly.

Q. Tell me from your own idea?—A. I figured it that there are about three classes of lobsters from ten down to six inches.

Q. Of course the legal size limit is eight inches everywhere?—A. Yes, everywhere.

Q. Do you think you could continue canning if you were tied down to eight inches?—A. Of course I could can but I don't know how the fishermen could hold out.

Q. Do you feel yourself obliged to take whatever lobsters the fishermen bring you?—A. No, I do not feel that I am. Of course I know myself that the lobsters are taken down to about six inches. There may be a few smaller than that.

Q. What is the smallest lobster you can?—A. About six inches.

Q. How is the regulation observed here, do you take lobsters with berries?—A. Not with berries. I notified the fishermen not to bring any ashore after the hatchery was closed. They take them from the spring until they shell. After they shell there is no more spawn.

Q. And is the hatchery shut down then?—A. Yes, the spawning season is over. After the season is over, after they shell, the small lobsters don't come in. I don't know if the female shells or what they do, but they don't come in.

Q. But you find lobsters after this with the berries on?—A. A few.

Q. Not as many as in the spring?—A. No.

Q. Out of every 100 lobsters how many do you consider have berries?—A. Some days I would get a tub about that high, (illustrating by a gesture) a little more than half a barrel. With some outside boats it would amount to pretty nearly that full and from that down to 13, 14, 15 and 16 and so on. The most I get would be about half a barrel.

Q. Does the man from the hatchery come with a cart to collect the spawn?—A. No, with a gasoline launch every day and he takes the spawn to the hatchery.

Q. How are you paid for that?—A. I am paid \$6 for the season.

Q. For saving the eggs?—A. Yes.

Q. You scrape the eggs off and save them?—A. Yes.

Q. Is that the general arrangement to allow \$6 for it?—A. That is all I get. I don't know if they pay any more or pay less.

Q. It seems a small sum?—A. A small sum for the trouble. It takes quite a time. It has to be done carefully if you want to save them.

Q. When do you commence to get berry lobsters?—A. As soon as the fishermen commence to fish.

Q. And you begin to fish when?—A. The 25th May. The first fish I get here is about the 28th May. It takes a couple of days to set the traps and then about the 28th or 29th they begin to move off shore and I begin to pack.

Q. Do you find many berried lobsters at that time?—A. Just as many. They will hang on until they shell.

Q. How long has the hatchery been closed?—A. Only a fortnight. Whenever the lobster spawn gets that scarce it does not pay, they have to stop.

Q. What is the smallest lobster you ever saw bearing eggs?—A. You cannot get them any smaller with eggs than between 8 and 9 inches. Sometimes you will get one 7 inches but very seldom.

9-10 EDWARD VII., A. 1910

Q. Yesterday a man told us he was sure he got lobsters 5 inches in size bearing eggs?—A. Any man with common sense would not say that because the lobsters have got to get their size.

Q. And the size is 8 inches?—A. Yes. You very seldom find them at 7 inches.

Q. What would you say is the average size of the berried lobsters?—A. From 7 and 8 up to 10 inches. Some you get are 11 and 12 inches.

Q. Then they are generally a good run of lobsters?—A. Yes, and every one of them is well filled.

Q. How many lobsters out of every 100 would you say bear eggs, taking the season generally?—A. On the average I don't suppose there would be more than 15 to 100.

Q. Do you think there would be that many?—A. I would not say just exactly because I never counted them.

Q. That is a little higher than most of the people tell us?—A. It might be less. I could not say. I would not want to be sure. If I had a gear of 300 traps and would have them on the outside on the Straits here I would catch more than those fishing inside.

Q. More berried lobsters?—A. Yes, more berried lobsters. They never spawn inside like outside with the bottom that is there.

Q. What sort of a bottom do they prefer to spawn on?—A. A rocky bottom.

Q. Will they not spawn on mud?—A. No, they prefer a clean rocky bottom where there is seaweed and kelp and they can hide their eggs.

Q. Is there any time in the season when you consider lobsters are not fit for food?—A. When they shell. That depends on the fishermen. Of course I do not like to have them but I sometimes do. I keep them back as much as I can, but the man that is fishing by the hundred weight wants all the weight there is. The men that are fishing like I have boats here, all fishing for themselves, it is different. They leave them in the traps until the shell is hard enough to bring them ashore.

Q. How long does it take them to harden up their shells?—A. Three or four days. Sometimes they fetch some that are just like a skin, they are not worth anything. The man that brings them ashore has no sense because they are worth nothing. When broken up in the cannery they all go away, it is all loss. You take and wash the claws and the tail and they all go away in the water, it is a waste.

Q. In what depth of water do they set their traps here?—A. In some places you would find 7 fathoms. Some of the ends of their trawls would be in 12 and 13 fathoms.

Q. Those are the outer trawls?—A. The outer trawls. Inside here it is an average of about 8 fathoms.

Q. How far off would be the outer trawl?—A. The first one in you could throw a stone to in shoal water, and from that to about half-way across the Straits. Some of the Island folks have crossed and some of the fellows here have crossed to the other side.

Q. I suppose the hatchery begins taking the spawn as soon as you commence to fish?—A. Yes.

Q. After they stop taking the spawn are the fishermen careful to put the berried lobster back into the water?—A. They have to. Sometimes we will find one in the lot but that cannot be helped. When the men are handling a big heavy run they cannot stop and watch every one. Sometimes there is one will come once in a while. I am very particular about that. Sometimes they will bring one in, they probably do, and I would not see it.

Q. You think the berried lobster regulation is pretty well observed?—A. As far as I can see into it is pretty well observed.

Q. If the 8-inch size limit were strictly enforced a great many people say they would have to shut down because they could not continue canning profitably?—A. The man that is fishing by the hundred weight I don't suppose he could continue to fish because they do not pay him enough by the hundred weight to live on.

Q. What do they pay by the hundred weight?—A. Some pay \$1.25, others pay \$2.50 and so on. The canners get them as cheap as they can.

SESSIONAL PAPER No. 22a

Q. How many lobsters will there be in a hundred weight?—A. Early in the spring it takes a little under two hundred weight for a box of 48 pounds. When they shell it takes just about 250 pounds.

Q. How many lobsters will that mean?—A. That information I could not give you.

Q. You don't know how many lobsters it takes here to fill a pound can?—A. I could not tell you because that is a thing I never tried.

Q. What is the arrangement made where they pack by the case ; do you charge them so much a case for packing their lobsters?—A. They pay me \$2 a case for packing the goods.

Q. Do you supply the cases and the tins?—A. They contract their goods wherever they sell and then their cases are furnished.

Q. The supplier furnishes the case?—A. Yes.

Q. Could you give me any idea of the proportion of lobsters below the 8-inch size that is taken?—A. No, I could not tell you that. As I said awhile ago, if the man that kept the measurements had left them with me I could have given you the information. However, you will get that later on.

Q. Are you in favour of the present system of licensing canneries?—A. Well, my opinion is this : The man that is fishing and getting his goods packed by a man that has got a license, I don't see that he needs one. I mean to say a man that is fishing and getting his goods packed and labelled the same as if he had a license. I don't see what need there is for it.

Q. Some people say that every man who applies for a license should get it, that one man has as much right to get a license as another?—A. Of course, all there is in it, I suppose, is the trouble of keeping account of his license because he has got to pay his \$2 just the same. All there is in it is just to draw the license, but that man has got to pay me \$2. I can't go to work and buy a license and ship his goods for nothing.

Q. The intention of the law at present is that if you do not pack in your own cannery you should not get a license?—A. That is right.

Q. But that is not the rule?—A. That is right.

Q. To what do you attribute the change in the condition of the lobster fishery from what it was when you began packing?—A. There is quite a difference.

Q. What is the cause of it?—A. Some claim that where the hatchery is they catch more lobsters than we do on this ground here.

Q. How far from the hatchery at Shemogue?—A. Five or six miles. I remember once when I used to run a factory down there the eggs were taken there and the people commenced to dispute and say that they had not fair play. The eggs were taken here and hatched there and they were catching more lobsters than we were. Whether that is the reason or not I don't know, but here we never had any strikes of lobsters like they had down there. Of course, I would not say that it was the lobsters that were hatched there that did it.

Q. You think if they take the eggs from here the young lobsters should be distributed here?—A. My idea was that if the young lobsters were placed right along the coast everybody would get a share and it would do good to everybody. This year the people complained that there was not fair play, so the hatchery man spread them out.

Q. That is not what I mean. Why is the fishing not as good as when you began to can first?—A. There is more gear now than at that time.

Q. Do you not think the lobsters have been fished out?—A. It must be that. There are a great deal more boats than when canning commenced, quite a few more.

Q. Do you think the number of boats fished by a cannery should be limited or should a canner be allowed to have as many boats as he pleased?—A. Too many boats to a factory are no good ; a certain amount of boats would be enough. Some factories have got 27 or 28 boats. When that number of boats comes in you want to

9-10 EDWARD VII., A. 1910

have quite a crate to save all the lobsters. If you only have half that many boats you would handle the catch better.

Q. Do you think the cannery that can afford to run 27 boats is covering an unfair amount of ground outside?—A. Of course, the man that has got 27 boats has got to take more ground than the man that has only got seven or eight.

Q. Is that fair to the others?—A. I would not think it fair, but at the same time——

Q. It means that the man who has means enough to engage all these boats is monopolizing an unfair amount of fishing ground?—A. I think a man ought to have just so many boats.

Q. How many cases do you reckon on packing to a boat?—A. Some years I have packed here 101 cases to a boat. Last year I had boats here only packed—of course, they had small gear—14 cases to 36. Some 24—some 25, some 30, some 34. The highest I had last year was about 64 cases to a boat. I took down to as low as 14 cases. That was only about 125 traps, two men to a boat. They were just attending to that with their farming.

Q. Who are the men fishing lobsters, are they regular fishermen?—A. No, sir, they are all farmers.

Q. They do not fish cod or mackerel?—A. No. Of course, there are mackerel but they are so scarce they do not take any trouble to fish them.

Q. They do not fish cod?—A. No, sir.

Q. What do most of these men do when the lobster fishing is over?—A. Go to their farming, they don't make farming pay.

Q. Why?—A. Because the produce has to be hauled too far. You have got to haul 16 miles. Well, a load a day is pretty slow work.

Q. When the lobster canning first began do you think the lobsters all along the coast were about the same run and the same size?—A. They were pretty near, they were of good size.

Q. Were they all the same everywhere?—A. Yes, along this coast.

Q. What were the regulations in force when you began to pack, having reference to size limit, season and one thing and the other?—A. You commenced to fish in the spring and fished until the fall.

Q. There was no regulation then?—A. No regulation.

Q. What were the first regulations introduced?—A. We used to commence as soon as the ice was gone and then we would stop on the 15th July.

Q. And begin again in the fall?—A. No, sir, stop then, that was the regulation we had. Then the season was changed from the 20th May up to the 10th August.

Q. What do you think of the change in the law?—A. The change in the law is all right.

Q. Do you think fishing should be allowed inside three fathoms?—A. Here at three fathoms we would get right close to the shore. Some places it would not be that.

Q. Are 'curlies' fished here at all?—A. No, sir, not here.

Q. You are fishing the parlour trap now?—A. Yes.

Q. Why do they use the wheeler trap in preference to the other?—A. They say they are better. In the other trap the lobsters used to travel in and out. They would go in and eat all the bait and after that come out. But they crawl into the wheeler trap and cannot get out. Some get out when there is no bait; they are bound to get out.

Q. What distance apart are the slats?—A. Some of them are pretty close, about an inch apart I should say.

Q. In former times the slats were made farther apart?—A. Yes.

Q. For what reason do they make them narrower now, to hold the smaller lobsters?—A. Yes.

SESSIONAL PAPER No. 22a

Q. Has there been much change in the fishery in the last ten years?—A. In ten years there has not been much difference. Some summers it will be a little slacker and other summers a little better.

Q. There has been a failure compared with forty years ago, but during the last ten years there has not been much change?—A. Not much change.

Q. Do you think the lobsters are getting smaller all the time or has the decrease in size stopped?—A. I guess that has stopped. It is about the same all the way through.

Q. You are of opinion the hatchery here has done good work?—A. I should think so. Whatever spawn they have preserved and hatched they have done it all right. My opinion is this : If the fishermen had the value of the expense of the hatchery paid to them to leave the lobsters there or bring them ashore, be paid what they are worth and then return them to the water, that would be the best hatchery.

Q. You would rather see the berried lobsters put back in the water to hatch themselves?—A. To hatch themselves, I think that is the best way. I will tell you why. Sometimes the boats will be here at 7, 8, 9 o'clock until noon. The first lobsters that come in I have got to scrape the spawn off them. The fellow that comes to get the eggs arrives, and before he gets through with these factories and back to the hatchery it will be 3, 4, or 5 o'clock. Some of the spawn must be no good by that time. You take the green spawn, and it will hang on longer. The eggs almost ready to spawn, just as soon as you put them in the water, you can see it yourself, they will spawn right off. But if the water is not circulating in the dish they will die. The green eggs can stand it until they get to the hatchery. Of course if there was a hatchery here and a hatchery there it would be better. But of course that you could not do.

Q. What would you think of placing the berried lobsters in pounds and letting them hatch out?—A. That would be all right with this breakwater here.

Q. You think that could be done here?—A. Yes, inside the breakwater.

Q. Are there any harbours in this neighbourhood that would be suitable?—A. The harbour at Shemogue is the nearest we have. Right straight off here, close to the rocks, we have 9 or 10 feet of water. That is the deepest water we have here.

Q. You could not make a pound unless the place was well sheltered?—A. There are no other places where it could be done.

Q. What do you think of saving the seed lobsters by means of pounds where they can be established?—A. That would be all right. I am against this hatchery because any common man that has got any sense knows himself by the distance they have to take the spawn, all the eggs cannot remain good. But if you take the lobsters from the outside to the shore and then put them in the water and let them spawn themselves every one of the eggs is sure to be good.

Q. Would you bring the berried lobsters in shore and then release them close to the shore?—A. Put them in here in the deep water and let them go wherever they liked afterwards. There is plenty of water for them to crawl out.

Q. You would catch a great many of them over again would you not?—A. You would not catch them inside. If you took them 7 or 8 miles away it will not be a long while before they will get back again as there is a lot of feed here and a lot of rocks they could get under.

Q. If that were done would you not let anybody fish traps among them?—A. No.

Q. You do not think a strict enforcement of the 8-inch size limit would close you down?—A. I don't think it would close me down. I could handle my factory with less help but it would make a great difference to the fishermen all right.

Q. What would happen supposing all the canneries were to close down?—A. The way that people are fixed now the government would have to build another house in Dorchester to put them in. Because you see the people do not get the worth of their goods. They only got it last year and now they do not get it. It makes a difference where the buyer is. He wants to get a profit from the goods he sells out of his store

9-10 EDWARD VII., A. 1910

and he wants to get a profit out of the goods he buys from the poor people, so the poor people cannot make enough to clear themselves. He always holds them and every year they have got to go to him because they do not get enough lobsters to pay.

Q. Some people have the idea that if the fishery were to close down for three or four years the lobsters would increase again and operations could begin afresh?—A. If they were to close down and the people could stand it, it would be all right. But how many could stand it?

Q. Is there any chance here of shipping live lobsters to the market?—A. They are doing that now. This year there was a man here from Shediac who is shipping live lobsters to the States.

Q. What does he pay for them?—A. \$127 a ton.

Q. What sized lobsters does he take?—A. He won't take them under 10 inches.

Q. Were there many people selling lobsters to him?—A. Quiet a few. He has got quite a few this year.

Q. What would you think of the idea of asking the fishermen to take out a license? The idea is that if a fisherman were licensed he would be more careful to observe the law?—A. Certainly they would have to if they had to take out a license.

Q. Were the regulations as to the preservation of lobsters ever observed here that you remember?—A. They were.

Q. Were they ever enforced?—A. I don't know if they were enforced, but they were talked about. When the laws were first made you could not bring in any under 9 inches. But the fishermen could not stand that, so they bring them according as they get them.

Q. Now it is asked that the size limit be reduced to 7 inches, and it is said with that reduction they would be more careful to observe the law. Do you think there are canneries enough?—A. I think for the lobsters there are.

Q. When is the best time of the fishing with you?—A. The best time is now when they strike in. They are not the best in weight, but the best in quantity.

Q. When is the best time for weight?—A. In the spring, until they commence to shell. All the lobsters have to fill up their shells, the best time for a number is now.

Q. What would you think of allowing fishing in the fall, in other words, to have two seasons?—A. Two seasons would be quite a bother for the fishermen to take up their traps and set them out again.

Q. What would you think of doing away with the size limit altogether, but protecting the berried lobsters and shortening the season?—A. The fishermen say the season is short enough now.

Q. What change would you suggest yourself?—A. Of course it does not depend so much upon me as on the fishermen.

Q. You know what the fishermen think and feel?—A. Some fishermen say if they were starting in about the 12th July, and from that running right out.

Q. And have no spring fishing?—A. And have no spring fishing. Then all the females would have a chance to spawn because you know when they shell there are no more of these berries, all the berries would be gone.

Q. Supposing you were given from the 15th July to the 15th September?—A. From the 15th July? I guess they would want all the rest because here in the fall there are lots of storms.

Q. When should they knock off?—A. They would have to knock off when they would be cold enough.

Q. You would say the end of September?—A. It would be a good deal better for the fishermen on this account because all the berries would be saved and that would be that much more difference. I think that law would be all right to save the lobster. If it continues as it is the fishermen will have to drop it.

Q. Are the fishermen going behind?—A. They are pretty nearly all going behind. For one that goes ahead there are five or ten going behind.

SESSIONAL PAPER No. 22a

You do not think every fisherman should be allowed to can on his own hook?—
A. He would have to pay the same money supposing he had a license. I am not against each one fisherman having a license because they have to pay all the same.

Q. If we did that we would have to have some guarantee that the man getting the license could pack properly, otherwise he might be putting up a bad product, and that would injure the market?—A. That would be the danger.

Q. And we would have to have a guarantee that every fisherman would pack a certain quantity.

Q. Are you aware that the fishermen complain that the price paid for lobsters is not enough?—A. Not enough this year. Last year the fishermen could live on it.

Q. What is the price?—A. The fishermen are getting \$4 less a case this year from the buyer.

Q. What is the reason for that?—A. That they can't afford to pay more, I suppose.

Q. What was the best price the fishermen got?—A. \$14 a case last year.

Q. Is there anything else you would like to tell me?—A. It depends on the fishermen. If they want to have a change in the law, it is on their own account. The change suggested would be better for the fishermen because the spawn would be saved; otherwise it would not. If there was an increase in the lobsters it would suit them. Now there is the hatchery at Shemogue. You will find there is a difference in the number of lobsters in that locality because they always strewed the spawn there with the exception of once when they spread it on this shore.

Q. Are they getting more lobsters there?—A. Yes, the man who went round measuring the lobsters said they were getting a smaller sized lobster.

Q. But a great many of them?—A. A great many of them. It shows the lobsters must be there.

Witness discharged.

Commission adjourned.

LEGER'S BROOK, July 28, 1909.

THEOPHILUS LEGER, manager, Leger's Brook, called and sworn :—

By the Commissioner :

Q. How long have you been engaged in the lobster packing?—A. Ten years.

Q. In charge of the cannery?—A. Yes.

Q. Have you ever fished yourself?—A. No, sir.

Q. Who is the proprietor of this factory?—A. O. M. Melancon, of Shediac.

Q. How many boats do you employ?—A. Eight.

Q. What number of traps do they fish on the average?—A. An average of 325 to the boat.

Q. Are the boats and gear the property of the canner or do they belong to the fishermen?—A. They belong to Mr. Melancon.

Q. Are your fishermen all engaged by the month?—A. By the hundred. The fishermen that run the boats they hire their hamper themselves.

Q. The man fishing by the boat is fishing by the hundred pounds?—A. The hundred pounds.

Q. What is the average price paid by the hundred pounds?—A. \$1.25 per hundred pounds.

Q. You furnish him all the material?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. How does that price compare with the price paid last year?—A. It was a little more last year.

Q. What have you been paying since you have been in the industry?—A. \$1.35 per hundred weight.

Q. Do you buy the lobsters by the hundred weight or by the ton?—A. The hundred weight.

Q. What was your pack in this factory last year?—A. Some 432 cases.

Q. Have you any idea what the pack was the year before?—A. I was not working here then, I started here this summer.

Q. What was the best pack they ever made here?—A. Last summer was the best summer for a long time.

Q. How have you found the lobsters that you have been packing, are they increasing or decreasing?—A. I think it is hard to tell, we don't find much difference.

Q. What is your opinion as to the fishery since you have been engaged in it, do you think the lobsters are as plentiful as they formerly were??—A. Not quite.

Q. Are they as large now as when you began?—A. About the same, I think.

Q. What is the average size of the lobsters you take here, how many will they run to the hundred weight?—A. I could not tell you exactly.

Q. How many lobsters do you count to fill a pound can?—A. Three or four, I think. The average would be about four.

Q. What has been the practice here with regard to spawn lobsters, do you take them at the factory?—A. Yes. During the time of the hatchery we have got to be careful.

Q. You give the eggs to the hatchery?—A. Yes.

Q. After the hatchery stops running what do you do?—A. We don't take them. We are careful to give the fishermen orders not to bring them.

Q. Do the fishermen put them back into the water?—A. They ought to, they don't bring them in here.

Q. Do the fishermen brush the eggs off?—A. Not here, I believe.

Q. What depth of water do your fishermen fish in?—A. Between 7 and 8 fathoms, sometimes they strike 11.

Q. How far off shore would that be?—A. Six or seven and sometimes eight miles.

Q. What was the smallest sized female lobster with eggs you ever saw?—A. Just about 7 inches, 7 or 8.

Q. What would be the average size of those with eggs?—A. Just about 8, the average.

Q. How long has the hatchery been running at Shemogue?—A. Six or seven years, I think.

Q. Have you noticed any improvement in the run of lobsters since it has been in operation?—A. We did for the first year, but now I do not know. We thought so because the lobsters are smaller.

Q. You are not sure?—A. No.

Q. Why do you have any doubt?—A. Perhaps the hatchery is not run right.

Q. They come here for the eggs?—A. Yes.

Q. Do they bring the young lobsters back here and plant them in the waters?—A. They take the eggs every day.

Q. Yes, but where do they put the young lobsters?—A. About a mile and a half to two miles.

Q. Do they plant them all along the shore?—A. Yes, all along the Strait.

Q. Do you think all the eggs you strip off and send to the hatchery live?—A. No, sir, they don't live because they are not handled quick enough. They ought to be taken up to the hatchery right away.

Q. As soon as you take them off?—A. Certainly.

Q. How long do you keep them sometimes?—A. The boats come here about this time and they go to the hatcheries about 4 or 5 o'clock, that is quite a long while.

SESSIONAL PAPER No. 22a

Q. Have you noticed, yourself, quite a loss in eggs?—A. I have seen some that are no good.

Q. I suppose the green eggs early in the season stand the longest?—A. Yes.

Q. How is it with the very ripe eggs?—A. They won't stand very long.

Q. Is there any other way of saving the eggs that you can think of besides taking them to the hatchery?—A. Yes, there may be.

Q. Supposing the fishermen brought all the berried lobsters in and they were planted along the shore to hatch their spawn?—A. That would be all right. Every factory should have a man or somebody.

Q. To be here and take those lobsters?—A. Pay the fishermen so much.

Q. And put them back in the water?—A. Right away.

Q. Supposing we bought the female lobsters and put them back in the water near the shore, would they go out and be caught again or would they stand on the shore?—A. They would stay, but not very long.

Q. Another proposition is to buy the lobsters and hold them in pounds. Are there any harbours here where pounds could be established?—A. The harbour where the hatchery is is a great harbour.

Q. You begin fishing here on the 25th May, do you not?—A. Yes, and fish until the 10th August.

Q. You are not allowed to fish any berried lobsters unless you sell the spawn to the hatchery, and the size limit is 8 inches is it not?—A. Yes, eight inches.

Q. Has the size limit ever been observed?—A. No.

Q. What would be the effect on the cannery if the law were enforced, and no lobsters under 8 inches were allowed to be taken, a great many canners say it would close their factories up?—A. I think it would, too. The enforcement of 8 inches would shut up many a cannery.

Q. Out of the lobsters you take what quantity would be below 8 inches?—A. Six and seven are quite a lot.

Q. Out of every 100 how many would you take below that size?—A. We will take one-third any way.

Q. Have many new canneries been established here for the last ten years?—A. No.

Q. Do you think that every man who applies for a license to can should be given one?—A. I think so. One man has as much right to live as another.

Q. We would be obliged to have some guarantee that such a man was in a position to put up the goods properly and to can a certain quantity?—A. Yes, I think that is all right.

Q. Would you allow a canner to fish as many boats as he pleased, or would you regulate the number?—A. Too many boats would not do.

Q. There would be no use in restricting the number of canneries, and yet allowing the existing canneries to fish as many boats as they pleased?—A. No.

Q. Is the number of traps fished now much greater than it used to be?—A. No, just about the same.

Q. Would you keep the size limit of eight inches or what would you do?—A. Eight inches will not be much I tell you.

Q. It has been proposed to do away with the size limit altogether, and in return for that have the season shorter?—A. I think the season is short enough now.

Q. Do you think the present season from the 25th May to the 10th August is the best?—A. I think so.

Q. Does not that cover the time when the lobsters spawn?—A. Yes.

Q. How would it do if the season were changed altogether, and you began on the 15th July and fished till the end of September?—A. It would not do. I do not think it would. The month of September is not fit to fish because of the rough weather.

Q. You do not believe in fall fishing then?—A. No, I think the season is all right as it is.

9-10 EDWARD VII., A. 1910

Q. Do you think it takes more lobsters to fill a pound can in the fall than it does in the spring?—A. No, it does not.

Q. When is the best time of the fishing here, when do you get most of your lobsters?—A. Now, is the time.

Q. This is the best time?—A. From the 10th to 20th July.

Q. Have the lobsters all done spawning now?—A. The hatchery is stopped over a week ago.

Q. How are the lobsters that are coming in now, you still see some with eggs, do you not?—A. No, there is none; we don't bring them in. If the fishermen do bring them in they have to take the eggs off. Sometimes we get one by mistake. When a man is fishing 800 pounds with about 300 traps he might easily mix them.

Q. Do you think it would be any advantage to have the fishermen take out a license?—A. I have not thought of that.

Q. What would you think of closing down the canneries for three, or four, or five years in the hope of allowing the lobsters to return to their original condition?—A. I may just as well tell you I would be against that because there are lots of people dependent upon the lobster industry, and such a thing would result in hard times.

Q. Do you think the present hatchery is run as it should be?—A. No, sir.

Q. Is it run carelessly?—A. Yes, run carelessly.

Q. Do you think there ought to be an inspection of the pack of the cannery?—At present there is no inspection, and you put up your lobsters as you please?—A. Oh, yes.

Q. There is inspection by a gentleman from Halifax in the interest of the buyer, but none beyond that?—A. No.

Q. What would you think of inspection of the product of lobster canneries by the government?—A. That would be all right.

Q. Do you think the present fishery officers could carry on that inspection?—A. Some of them would be all right.

Q. How often do you see fishery officers here?—A. Quite often.

Q. They come here of course to stamp the cases?—A. To stamp the cases.

Q. Do they not come to see whether you are getting small lobsters?—A. Yes, they look into the cooler to see whether there are any female lobsters.

Q. Supposing the canning of lobsters were stopped here, is there any opportunity for the fishermen to send their lobsters to market alive?—A. No.

Q. Is the shipping of live lobsters done here?—A. A few by Mr. Paturel of Shediac.

Q. Where does he buy his lobsters?—A. Along the shore.

Q. Who sells the lobsters to him, the fishermen or the canner?—A. There are some fishermen that own their own gear that do so. Some of the factories sell him a large lot.

Q. Do you know what he pays for live lobsters?—A. Something like \$125 a ton.

Q. Do you think where a group of fishermen unite in order to carry on canning, any reasons exist why they should not be given a license?—A. Certainly not, if they want to live.

Q. Are you aware of any complaints made by fishermen as to the price they are getting now from the canners for the lobsters?—A. There are lots of complaints, they want more. Some won't fish for the price.

Q. Are you aware of any fishermen having lost their catch of lobsters, because the canners would not take them?—A. We can generally take all they bring.

Q. Do you think if the canneries were closed the fishermen could not find a market for their lobsters?—A. No.

Q. Have you any idea which branch of the lobster industry is the most profitable to the fisherman, the live lobster trade or the canning?—A. It is the canning.

Q. What is the size of the lobsters that are fished alive?—A. Ten inches.

Q. They will not take anything under that size?—A. No, sir.

SESSIONAL PAPER No. 22a

Q. Are the fishermen making as much money out of the lobsters as they used to?—A. Not quite.

Q. That is only this year?—A. Last year was pretty poor, too, although some factories did well.

Q. Are the traps you fish now the same as you used formerly?—A. No.

Q. Formerly the fishermen used to fish a trap with a hoop on each end?—A. There are three nets now.

Q. You call them wheeler traps?—A. Yes, the wheeler trap, that is the kind now.

Q. Are the slats put closer together than they used to be?—A. Not since I remember.

Q. What is the distance allowed between the slats?—A. Just about three-quarters of an inch.

Q. Would you change the regulations in any way?—A. The season is all right, I think, and as for the 8-inch lobsters we do not take much. There would not be many brought ashore that are eight inches. That is my idea, and I handle them every day.

Q. Do you think the lobsters are getting smaller all the time?—A. I suppose they are about the same.

Q. Do you think the size limit should be changed from eight inches?—A. I would make it seven inches.

Q. Do you think it is right to continue catching off all the smaller lobsters?—A. No, it is not right.

Q. Can we hope to continue the fishery if we persist in catching the small ones?—A. No.

Q. Most of the men fishing lobsters are not regular fishermen, are they, they do not fish cod or mackerel?—A. No, just——

Q. What do they do when the lobster fishing is over?—A. Farm a little and go to the woods.

Q. They do not fish for cod or haddock?—A. No, there is nothing at all until the herring in the spring.

Q. Where do you get your bait, do you obtain it all here?—A. Yes, we catch the herring by setting gill-nets.

Witness discharged.

ABEL BURKE, fisherman, Leger's Brook, called and sworn:—

By the Commissioner :

Q. You are not fishing this year?—A. No.

Q. For how long did you fish lobsters?—A. Fifteen years.

Q. Why did you give it up?—A. Because I thought the lobsters were slackening up.

Q. What other occupation have you taken to?—A. I am a butcher now.

Q. When you used to fish lobsters what did you do besides?—A. Farm a little in the spring, fish in the summer and in the fall go to the woods.

Q. Did you only fish lobsters?—A. I fished herring in the spring with my boat.

Q. On what part of the coast did you do your fishing?—A. Off this shore.

Q. Can you give me any idea of the total number of men that are engaged in the lobster fishing from this parish?—A. I should judge there are a couple of hundred men around this neighbourhood.

Q. Do most of them fish their own gear and boats?—A. There is about one-third fish their own gear.

Q. When you were fishing did you handle your own gear?—A. I handled my own gear for seven years unless I fished for others.

9-10 EDWARD VII., A. 1910

Q. What number of traps did you usually fish from a boat?—A. The average run that I fished was 300 as a rule.

Q. How is it that you fish more traps here than in other places?—A. I used to fish less than others. Some years I used to run 335, 345 and 350 traps ; other years 275. The average I fished was 300 traps. . .

Q. Do you think a man can fish more than that number?—A. If he attends to it right that is as many as he can attend to. There are some able fishermen that can attend to 350, but as a rule 300 is enough for a boat if attended right.

Q. In what depth of water used you to fish?—A. I used, as a rule, to set a trawl inside. That would be in five fathoms of water. Some would have 10 and 11 fathoms. As a rule the average outside is about 9 fathoms.

Q. How far off shore would be the limit?—A. About $5\frac{1}{2}$ miles, between 5 and 6. It won't go half way across but there are a few do go.

Q. What is the bottom like?—A. When you get out here 2 miles off there is a little reef about a quarter of a mile wide. Then you strike a mud bottom, just mud, gravel and sand that is no good. About $3\frac{1}{2}$ miles farther off you strike a little reef which is good fishing ground. Then you strike a bar of sand a mile and a quarter wide. Then you strike another good fishing ground.

Q. The reefs are the best fishing ground?—A. Yes, because of the rocky bottom.

Q. Is that bottom covered with seaweed?—A. With kelp and mussels.

Q. Do you think the lobsters spawn among that kelp?—A. No, sir.

Q. Did you fish throughout the season always in the same depth of water or did you move in?—A. I always fished in the same depth of water.

Q. You had one end of your trawl in shoal water and the other end in deep water?—A. We don't set out that way here ; they do in Nova Scotia. What I meant was, sometimes you strike a deep hole where you set in, but as a rule 9 fathoms. Very few fishermen shift unless they strike a poor bottom, then they might change their trawl.

Q. Nobody fishes here in from one to two fathoms of water?—A. No, sir, four to five fathoms is the shoalest water we fish in.

Q. Would you find some lobsters inside of that?—A. We might find a few, but very few.

Q. Are 'curlies' or hoop nets fished here at all?—A. No, sir.

Q. When you knocked off fishing were the lobsters failing in your opinion?—A. Well, they were failing in this way : Every year this last four years they were decreasing.

Q. In quantity or in size?—A. In quantity and in size both.

Q. And previous to four years ago?—A. Well, I used to generally catch from 8 to 9 and 10 and 11 tons of good sized fish. Four years ago I used to catch a good quantity of small fish, that is when this hatchery at Shemogue first started. The hatchery was handled pretty good then.

Q. You think the hatchery is not as well handled now as when it first started?—A. There is not enough attention paid to it. I think there are better ways of handling spawn lobsters.

Q. Do the same people attend to it as in the beginning?—A. Yes.

Q. Was there any difference between the trap you fished last year and the one you fished when you first began?—A. The first few years, 15 years ago, I fished with a ring in each end. Now we have the parlour traps.

Q. Why did they change to the parlour traps, what was the reason?—A. They call this a patent, this Wheeler trap, this trap with the double net. On account of the storms the lobsters used to come into a place where they could not eat and the bait would last longer.

Q. And the lobsters could not escape so easily out of the parlour trap?—A. No.

Q. Are the slats nearer together?—A. A little mite.

Q. What are they now?—A. There is no use to lath a trap any closer than three

SESSIONAL PAPER No. 22a

quarters of an inch. They did lath them closer, but there is no need of it. Three quarters of an inch is the right width.

Q. What was the best season for lobsters when you were fishing?—A. The fishermen used to set out their lines as quick as they could in the spring, when the ice went out and quit on the 20th July, I think it was. In my opinion the first fishing is the best because the shell of the lobster is hard then, and we used to get good fish. We used not to spoil any, and the men used to get more because they did not catch many spawn lobsters. In this hot weather they shed their shells.

Q. Are there many more traps fished now than when you began?—A. Yes, a great many more.

Q. Do you think it is by fishing an increased number of traps that the canneries are keeping up their pack?—A. Sure, that is the way it is. The men want to make wages, and they will work hard and put out a lot more gear.

Q. And bring in everything they catch?—A. Everything they catch.

Q. How is the regulation in regard to berried lobsters observed here; I suppose while the hatchery is running the fishermen bring in the eggs?—A. They are scraped off, and kept until the man goes by who takes them to the hatchery. But the most of them are dead when he gets them to the hatchery. He goes off at night on some other business. The man does not attend to it at all. He should be there at the hatchery every day as he has charge of it, and he is there about four or five hours altogether.

Q. If the hatchery were properly run, as it was in the beginning, what would you think of its work; did it do good work formerly?—A. I think it did. The first few years it ran I have found from 8 to 10 and 12 little fellows the length of that (illustrating by a gesture). They would be two years old then. One year there would be a lot that long, and you would find just the same in other years. There is no other place they could come from except from the hatchery.

Q. You do not find that condition existing to-day to the same extent?—A. Those little fellows are not so thick.

Q. What would be your idea as to getting the fishermen to register and take out a license?—A. My idea is that a fisherman should have a license this way: That a man would sign a paper to run a gear of 300 traps, if he wants to, to make his living. I would not want a man to have a license that would just fish 50, 60, or 100 traps, but a man that would want to go at it and do business should have a license.

Q. You mean a license to can?—A. No, a license to fish.

Q. Do you think that a fisherman who is under license would be more careful about observing the law?—A. I think he would if he was licensed, and if he had to take care of the female lobsters. If that were done, in three or four years the fishery would need no benefit.

Q. What is paid here for collecting the eggs?—A. Nothing. They get the lobster factory to take the eggs and deliver them free. There is nothing paid for that. There was a big kick made. They did so much work they said they could not attend to it, and the man who attends the hatchery said he would see to it. I guess he did pay his friends a little for it, but the others he did not.

Q. I hear that some men are paid \$6 for the season?—A. There you are, you see, and others get nothing.

Q. As between the fisherman and the canner is there any competition at all in the matter of price or is the fisherman bound to accept what the canner offers?—A. I will tell you this: Mr. Magee and Mr. Melancon are big business men, and the more of the little fellows they drive out they think the better. They telephone each other, and have their price set in the spring, and when one goes to see them they say: 'You cannot have any more, that is all we are paying.' If the fishermen do not want to sell to them, but to take care of their fish, they should have the right to do it.

Q. We find there are cases where a number of fisherman club together, and get a license, and can their own lobsters, do you think that should be encouraged?—A. Yes, I should think that is all right.

9-10 EDWARD VII., A. 1910

Q. Do you think one man or one firm should be allowed to have a great number of licenses, or would you restrict the number?—A. I don't think it is right for a man to have as many factories as he wants because the rich man will run the poor man down if he has the opportunity.

Q. How is it that certain firms have got so many factories?—A. They ran the other men out.

Q. The original factories were built by small men?—A. Along this shore especially, and I understand up north it is the same way. Mr. O'Leary and Mr. Loggie up there have the whole run. I have not tried for a license because I could not get it. I could make a little more by packing, but I could not get a license.

Q. Would you limit the number of boats any cannery should be allowed to fish?—A. I would.

Q. What would you limit them to?—A. Each factory? I think it should never go above 10 boats to a factory.

Q. What is the average number of cases to a boat, have you any idea?—A. This last ten years back a boat that made 60 cases was a good average. I do not suppose the average boat did go that.

Q. We were told about 50?—A. That is what I was going to say. If the average boat does that it is about as much as it does.

Q. Do the canners take all the small and berried lobsters that are brought to them?—A. They take all they can get.

Q. If the size limit were kept at eight inches what would happen?—A. That would be a good law if strictly enforced. The way it is along the shore it would knock them out because they pack lobsters from five inches and upwards. They are the fellows that are full. The inside lobsters, when you get them small, are the ones that will pack good.

Q. Because they are always full?—A. Yes.

Q. Do you think it is fair to say you get a smaller run of lobsters inshore than offshore?—A. I think it is.

Q. You think you get more small female lobsters inshore than you do offshore?—A. No, sir.

Q. Where do you find most of the female lobsters?—A. Right on the rocky bottom where there is a little seaweed.

Q. Do you think the law in regard to berried lobsters is well observed after the hatchery closes?—A. They look pretty sharp after it. The officers around here are very careful but the lobsters are scarce and the fishermen will scrape the eggs off with their fingers, or beat them off, and take the lobsters to the factory.

Q. And you think that if the fishermen were to be licensed they would be more careful about the law?—A. I think so.

Q. Is there any time in the year when the lobster is not fit for food?—A. Yes, from about the 15th July on to now there are some that are not fit to eat.

Q. That is soft shelled lobsters?—A. Yes.

Q. Does it take long for the shell to harden up again?—A. Five or six days. I have found them soft in the trap and in five or six days the shell will spring back so that it will hurt your fingers.

Q. What is the smallest berried lobster you ever saw?—A. I have seen them down to about seven inches long.

Q. What is the average size of the berried lobsters?—A. About ten inches.

Q. That would be from 8 to 12 inches?—A. Yes.

Q. They are generally good full lobsters?—A. They are good full lobsters as a rule. The big lobster that has spawn is 10 and 11 inches long.

Q. What do you think is the time most of them spawn?—A. They spawn from the 15th June up to about the 15th July. You will find some right along but that is the time you see the eggs falling off. When they are ripe it will only take five

SESSIONAL PAPER No. 22a

or six days for the eggs to drop off. They won't drop all at once. I have kept them in my traps feeding them and in five or six days they would be all clean but there would be a kind of slime where the eggs were.

Q. The eggs break open and the little lobsters come out?—A. Yes.

Q. The male lobster and the female lobster come together like a ram and a sheep?—A. They do and I have found them too.

Q. Found them together?—A. Yes, I would swear to that. They would come together as a man and woman standing up, but I would not swear that is what they were at.

Q. But you have seen them joined together?—A. Yes, sir.

Q. In the trap?—A. Right in the trap.

Q. The eggs are fructified by the male and are hatched out on the little swimmerets under the tail of the female?—A. Yes, under the tail of the female lobster.

Q. Have you ever noticed the eye of the lobster in the egg?—A. Yes.

Q. You can see it shine out quite plain when the egg is pretty ripe?—A. That is when they are brought ashore. The trouble is they are scraped off roughly in a hurry. Nobody attends to the eggs at the factory and most of them are left in a pan and not taken away until next morning. Some of the eggs are already hatched out and dead. I was told by a person this year that he lost half a bushel of the spawn a couple of times when the boat did not come.

Q. About what time does the boat come round?—A. It comes about four o'clock every evening.

Q. How far north does that boat go?—A. A. No farther north than Barachois, but he goes farther this year. He is supposed to go to the Barachois factories but I believe he goes farther on other business.

Q. Does the boat belong to the government?—A. It is a boat they hire and give so much a day for, the man and the boat.

Q. Do you think the fishermen on the whole are getting more careful about the eggs of the berried lobster?—A. More careful because they see that berried lobsters are getting scarce. They will gather together and talk about it and that they ought not to be taken. They are talking this summer about the way the eggs have been spoiled; you will find them half rotten. There was a time when they figured they had millions of young fish but the keeper was away and the boiler burned out. For a time something went wrong and they pumped a whole lot of mud among the young fish. That has been the case for years.

Q. There should be a careful man in charge?—A. And right there on the spot, but he is not there.

Q. What percentage of the lobsters taken are females with eggs?—A. I think between five and six per cent are females with eggs. On some bottoms you will find ten per cent. They might number more, but that is what I judge.

Q. Out of every hundred lobsters what number is less than eight inches?—A. 65 or 70 as a rule. I have seen some lobsters that the fishermen bring in would number 90 with us when this hatchery was running good, and there would be 50 I should judge between five and six inches.

Q. Do you think there is any chance here of establishing pounds where the berried lobsters could be kept?—A. Yes, there is a very fine place at Shemogue harbour.

Q. You want a place with a certain depth of water where the tide flows in and out and there is not too much fresh water?—A. There the tide runs in and out so that a boat can sail right up.

Q. Do the lobsters go in there?—A. There may be some. And then in Shediac harbour, to the west of it, there could be pounds.

Q. Do you think the cannery would be obliged to close down if the 8-inch size limit were strictly enforced?—A. There might be one or two that would stand it, but not many. I think if they were forced to take no larger than eight inches they would have

9-10 EDWARD VII., A. 1910

to shut down because they would go so far in debt in a few years they would not come up again; they would not pack enough to pay wages.

Q. Some would stand it while others would go to the wall, you think?—A. Yes, they would not get the fishermen. That would be the real trouble, they could not get the fishermen to go at it.

Q. What do you think would be the best way to induce the fishermen to put the berried lobsters back in the water?—A. It would be for the government to pay the fishermen the money they are now paying to those lazy fellows in the hatchery. It would not amount to much for each fisherman. The man that runs the boat ought to have so much to leave his lobsters there, or have a tub or box of fresh water. He could have fresh water every half hour in his boat and put the lobsters into it, and then let somebody take them or place them into these pounds if they are established. Or the fishermen could leave the lobsters in their traps until they are hatched. To throw the lobsters back would be too much work; they would be back in the traps the next morning.

Q. What would happen if the berried lobsters were brought in shore and liberated in shoal water?—A. I think it would be all right, they would hatch out; but the great trouble would be there are so many trawls inshore the fishermen would get them back again. That would be the great trouble, and the most of them are caught outside.

Q. If the canners refused to accept berried or undersized lobsters, what would the fishermen do?—A. They would not fish around here, it would not pay them.

Q. Are berried lobsters more numerous at one time than at another?—A. They are about the last of June.

Q. Are you aware of any fisherman having lost his catch of lobsters owing to the refusal of the canner to accept them?—A. I have.

Q. How did it happen?—A. Because the canner had too many boats and could not handle the lobsters. In fact he got full up with lobsters. He bought them and put them in stacks, but they died there, and at last the canner refused to take them. He had thirty-two boats more than the capacity of the cannery could handle. At last the fishery officer came there about it, and he stopped the fishermen from bringing them ashore. The fisherman could not fight the canner, because he had not enough money. You know what it is when it is a case of fighting a moneyed man. Mr. Melancon has made money. He came in a poor man. He has a nice factory with eight boats. He always has a crowd to handle his fish, the factory is always clean, and the lobsters are packed in good shape.

Q. How many boats does he fish at the other factory?—A. I think he runs eight boats the same as here. That year there was a great scene when all the lobsters died.

Q. The Lobster Commission of 1898 suggested the temporary cessation of lobster fishing in certain areas, what would you think of that?—A. I would not think anything of that. There are a lot of men behind time. Lobsters have been slack. Those men work at the lobster fishing, and they depend upon it for a living. If lobster fishing were stopped for two or three years, there is nothing they could fish to meet the bills they have incurred from one year to another. That is the reason why I would not like to see it stopped.

Q. Do you think the present restriction of canning licenses is satisfactory?—A. Would you like to see men like Mr. Loggie and Mr. O'Leary get all the business they want to get? They get all the licenses they can. If there is a little firm dealing with them they try and run him under to get his license. I think that is unfair.

Q. Do you think that a fisherman should be granted a license if he can establish the fact that he can pack properly?—A. Yes, that is what I think. That is, to a certain extent. I would not grant too many licenses; I don't believe in that. I would like Mr. Loggie, or Mr. Melancon, or Mr. Magee, the big business men, to run to a certain extent five or six factories, but not swamp all the rest because they are big men. I have talked that over with Mr. Chapman, the fishery inspector in Moncton, and he says it is unfair. You do not think it is right yourself, do you?

SESSIONAL PAPER No. 22a

Q. I would not allow it?—A. That is right. Still that prevails down here, and it is unfair, I think. I have been fishing for fifteen years, and I had to pay \$2.25 to get my lobsters packed. It was too much. I had to give up. Where lobsters can be packed in the spring of the year they can be packed for 75 cents to \$1.10 a case. It has been done and money made out of it. A canner told me he packed for \$1.10 and made money, but because I was stuck and had not a license and had to go to these fellows they charged me \$2.25. That is not right, that is not fair.

Q. Do you think that the live lobster trade pays the fishermen better than selling their lobsters to the cannery?—A. I think it would if they had a chance to do that.

Q. Only the big lobsters are shipped, it is not so hard on the lobster fishery?—A. But after a while they would see the way they would have, getting a lot of nice butter on their bread. It cannot be done here because we have no chance to do it. But where they have a chance and do it, they make more money because they can get more big lobsters after a while.

Q. Do you think there is any combination on the part of the packers to keep down the price paid to the fishermen?—A. I think there is. I know that for a fact.

Q. If a number of fishermen join together and are able to put up the necessary capital and provide the necessary equipment for a cannery, would you favour granting a license to them?—A. I would be in favour of that if there were two or three, or four or five men, who had any means. I would not want any man who had not a cent to go into it. Men with \$400 or \$500 apiece that want to go into it ought to have the right to do so.

Q. The fishery inspector ought to be able to know who are the men competent to go into the industry?—A. A man like Mr. Chapman ought to be able to say about these men : 'Well, they are all right.'

Q. Would you favour any change in the size limit from 8 inches?—A. I would not want to see them taken under 8 inches, I think it would close the factories up. but I would not allow them to take as small lobsters as they do take, down to 5 inches, I think it is no use.

Q. What would you think of changing the season in this particular section, say begin to fish July 15 and fish to the end of September?—A. It would be no good to us here. After the 20th August we have frequent storms and heavy weather and could not get out. For one fellow who could fish, two or three could not do any fishing at all.

Q. When fishing first commenced were the lobsters of a fairly good size all over the coast?—A. Along this coast when I first commenced about 15 or 16 years ago they were full-sized lobsters.

Q. Have you any recollection of the largest lobster you have ever seen?—A. I remember when I was not fishing of seeing one that weighed 14 pounds.

Q. Do they still occasionally catch big lobsters?—A. It is very seldom.

Q. When they got very large lobsters in the old days they used to fish with the hoop?—A. Yes, I guess there is none now. One caught two or three years ago was 21 inches from the end of the nose to the end of the tail. The fisherman thought there was a lot of lobsters and that his trap was too small. He put on big rings to his traps and occasionally an extra trap to his line. He did not do very much that year, it just happened that way.

Q. Do you think there is any reason why the size limit should be smaller on one part of the coast than on another?—A. I don't see any reason for that.

Q. Do you think a larger percentage of lobsters is required in the fall to fill a pound can than in the spring?—A. It takes about the same in the fall after they have shelled, but the spring is the best time.

Q. As the meat is firmer then?—A. The meat is firmer and it is easier to make good canned lobsters.

Q. Do you think it would make any difference to keep the lobster fishing farther off shore and not allow any to be done in shoal water?—A. I don't know whether that would be any different or not

9-10 EDWARD VII., A. 1910

Q. On some parts of the coast you will find them fishing in a fathom or a fathom and a half and they seem to catch a very small run of lobsters in that water?—A. You can catch just as many lobsters outside if you strike the right bottom. I know two fishermen fishing in this very spot used to bring in here 500 or 600 pounds weight a piece on a strike, and I am sure they must have had thousands and thousands of them, but 100 would hardly cover the bottom of a tub. These little fellows stay on certain bottoms.

Q. When is the best time of the fishing here for the quantity of fish?—A. From the 20th July to the 1st August. There are about 10 to 12 and 15 good fishing days about that time.

Q. Are there many days in the fishing season when you cannot get to your traps?—A. There are some seasons quite a few, others not so much. I have known a season when we would lose our fishing for a week owing to the very high wind.

Q. What would you think of doing away with the size limit altogether and shortening the season?—A. It would be pretty hard to do that, the season is short enough here now. I suppose, as you said, we want to have some protection, but, as I told you, if they take lobsters too small it won't do. If the fishermen are not to take them under 8 inches, not to take them any smaller for two or three years, it would crush them to the wall. The fishermen could not stand it, they would not fish. If you had a strict rule not to take one under 8 inches the men would not fish here at all.

Q. Is there anything more you would like to tell us?—A. The whole thing to increase the lobsters here—I am under oath to tell you what I think whether it is right or wrong—is this: For the protection of the berried lobsters the fishermen should be paid for taking care of them. Give them an interest in it. With the bottom we have got right off this very coast, if the female lobsters were taken care of and the number of boats for each factory limited, the fishery would never run out, we would always get from 8 to 9 and 10 tons of fish each boat and make a good living out of it. But it is no use to bring the female lobsters ashore unless they are taken proper care of. I should say give the fishermen a certain amount of money to keep these berried lobsters or have a regular hatchery to place them in there. Or else make it a rule in the case of a man that runs a hotel and runs a hatchery also, that if he does not do his work right you would discharge him and put another man on it. If those female lobsters were protected we would never run out of 8 or 9 and 10 tons of fish. We have caught as high as 15 tons of fish to a boat. One female lobster will give you millions of fish if the spawn is taken care of, and if the fishermen were paid well for these lobsters by the government they would take an interest in it. But the way it stands here, where the spawn is taken to a hatchery the fisherman has no interest in it because he sees the little fellows are destroyed. I knew one factory where the boat collecting the spawn never called all the summer, and a fisherman told me he never brought the female lobsters ashore. The small black spawn lobsters I think it is useless to take to the hatchery; they do not ripen that season. My opinion is that if that spawn is scraped off it will only spoil. The spawn that is pretty nearly ripe would hatch if taken care of. There are lots of occasions when the boats come along at half past ten and the eggs are scraped off and remain until some times after five. In some factories the spawn will remain there until the next morning and then they will throw it out.

Witness discharged.

Commission adjourned.

SHEMOGUE, July 28, 1909.

TEDDY S. LEBLANC, factory employee, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. Thirteen years.

Q. Always in this part of the country?—A. In various places.

Q. How long have you been working here?—A. About five summers.

Q. How many boats is this cannery fishing this year?—A. About 25 boats.

Q. Fishing on an average how many traps?—A. About 250.

Q. What number of cases is this cannery prepared to pack?—A. About 1,000, and we packed about that number last year.

Q. And the year before?—A. Pretty nearly the same.

Q. And what is the largest pack you ever made?—A. Up to 1,000.

Q. Have you always fished the same number of boats, or are you fishing more than usual?—A. Less than usual.

Q. What is the largest number you ever did fish?—A. 27.

Q. Has the supply been kept up by taking smaller lobsters than you used to use?—A. It is pretty nearly the same size every year I guess.

Q. Do the fishermen own their own boats and gear?—A. Some are owned by the factory and some by the fishermen.

Q. On what lay do the fishermen who use their own gear sell their lobsters?—A. By the ton.

Q. At what rate?—A. \$60 this year.

Q. What was paid last year?—A. \$75.

Q. What was the decrease in price the result of?—A. It was owing to the depression in the market.

Q. How are the men who are hired by the month paid?—A. They were paid less this year.

Q. There is a hatchery here to which you give the spawn from the berried lobsters?—A. Yes.

Q. Do they come here for the spawn?—A. Yes. We take the spawn off here.

Q. What arrangement is made about doing it?—A. Mr. Magee is paid \$25 a year, and agrees to save the eggs for the hatchery.

Q. Are the eggs usually delivered in good order?—A. Yes.

Q. When the hatchery is closed what becomes of the berried lobsters?—A. After the season they stop spawning, and you don't see many berried lobsters.

Q. Is the practice of brushing off the eggs followed by the fishermen here?—A. They used to slap the tails of the lobsters on the water and bring them ashore. Everybody knows that.

Q. How many pounds of green lobsters does it take to make a case here?—A. Over 200 pounds to make a case.

Q. Of green lobsters?—A. Yes. Sometimes it takes less in the spring when they are hard shelled.

Q. Could you tell me what proportion of the lobsters that come to the factory are under 8 inches?—A. There are lots under 8 inches.

Q. What is the smallest sized lobster you can?—A. 6 inches.

Q. If the canner refuse to accept the small lobster under 8 inches, would the fishermen give up fishing do you think?—A. That is what they say. They say if they don't take the small lobsters they can't run the factory.

9-10 EDWARD VII., A. 1910

Q. What would you say was the average size of the lobsters you pack here?—
A. Fifty per cent is above 8 inches, and 50 per cent under.

Q. What is the best time of your fishing here, when do you get the most lobsters?
—A. Now.

Q. You are in the height of fishing?—A. Yes.

Q. Is that the case every year?—A. Yes, from about the 15th of July to the first part of August.

Q. Does it slacken off a little towards the end?—A. After next week it will begin to slacken off.

Q. Is there any illegal packing done in this neighbourhood after the 10th of August?—A. Yes, I have heard of some boats fishing.

Q. Where do they pack those illegal lobsters, in canneries or in their own homes or in the woods?—A. In their own homes, I suppose.

Q. Is there much of this illegal fishing and packing done?—A. Oh, no, but there is some.

Q. How many hundred cases would you say?—A. It is pretty hard to tell.

Q. Do they get labels put on them?—A. They sell them all right.

Q. Somebody must buy them?—A. Yes.

Q. Have any new licenses been granted in this neighbourhood for canning?—
A. I don't think so.

Q. In your opinion, should a license to pack be given to every man that applies for it?—A. I think every man has the same right to pack.

Q. Do you think there are canneries enough on this part of the coast?—A. Yes, sir, for the quantity of lobsters there are enough.

Q. Has the decrease in the supply of lobsters continued?—A. For the last two or three years the diminution has not continued.

Q. Do you think that if licenses are granted more freely a guarantee should be required that the lobsters will be properly packed?—A. Yes, I think some guarantee should be required.

Q. Are you aware of any complaints by the fishermen that the price paid by the canners for lobsters is not enough?—A. Of course the fishermen think they don't get enough.

Q. Do you know of any case where the packers have refused to accept lobsters from the fishermen?—A. A case occurred here three or four years ago because the run was too heavy, they got more than they could handle.

Q. What happened then?—A. I did not work here that year, but I heard it said they had to throw the meat away.

Q. If the canners were closed here what would happen to the fishermen?—A. It would make pretty hard times for the fishermen.

Q. What do the fishermen do when the lobster fishing is over?—A. They go to the woods in winter, they don't do any other fishing.

Q. What do you think is paid for live lobsters?—A. I have heard that they pay \$140 a ton.

Q. What size do they require the lobsters to be?—A. I understand they require them to be 9 or 10 inches long.

Witness discharged.

Commission adjourned.

CAPE TORMENTINE, July 28, 1909.

THOMAS W. ATTWOOD, Superintendent, Portland Packing Company, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing business?—A. 22 years.

Q. Are you a Canadian?—A. I am a Canadian, I was born in Nova Scotia but reside in Portland, Maine.

Q. How many canneries are there under your control?—A. There are four around here, and then we have four under contract this year, making eight in all.

Q. Are there many other canneries licensed in your neighbourhood?—A. Quite a number.

Q. How many boats do you employ?—A. We have 49 at our own four canneries, and I could not give you the exact number of boats at the other factories.

Q. What number of hands fish the boats?—A. That varies at different times during the season.

Q. As a rule I suppose there are two men to a boat?—A. Fishing the boats you mean and not in the factories? Well in these 49 boats there will be about 90 men.

Q. I see you are employing gasoline boats now?—A. Quite a number of them.

Q. And in the factories what is the average number of hands you employ for the season?—A. I should say it would average about 80 for the season in our own canneries.

Q. What will be the average capacity of these four canneries?—A. About 750 cases for the four canneries.

Q. What would be the total average?—A. We pack at the four canneries ordinarily about 3,000 cases. That will be about 750 cases on an average.

Q. And what do the packs of the other canneries represent?—A. They would represent about 350 cases.

Q. Is your annual pack decreasing or otherwise?—A. Well that depends on how far back you go.

Q. That is one of the points we want to establish; during the last ten years how has it been?—A. During the last five years I should say that our pack has increased. Of course we have yet to know what our pack this year will be. Last year and the year before, our pack here was practically the same. We got just about the same pack in 1908 as in 1907, and the year previous to that our pack was very small.

Q. Would you venture to say that during the last ten years the pack has been about an average?—A. Well, I think so, Commander. There has to be some consideration taken in that of the fact that we employ more boats now than we did ten years ago. We are getting as many lobsters but we have more gear in the water.

Q. What would be the average number of traps fished per boat?—A. About 350.

Q. How will the pack to-day compare with that of 20 years ago?—A. It is not very much less than it was years ago. Of course 20 years ago the industry was practically new. I think it is about 30 years ago since the industry was first started here. At that time the lobsters were very plentiful and the men then used to go out a short distance from the shore and come back with a boatload. The lobsters of course are not as plentiful as they were at that time because then it was a virgin industry.

Q. The Portland Packing Co. was about the first to engage in lobster packing in this neighbourhood?—A. Almost. I think the business had been carried on only three or four years when we started.

9-10 EDWARD VII., A. 1910

Q. The Americans were the pioneers in the lobster packing industry were they not?—A. I think so.

Q. Do the fishermen own their own boats and gear, or do you supply the outfit?—A. About two-thirds of the fishermen own their own gear.

Q. Are the balance of the fishermen employed by the month, by the run, or how?—A. By the hundred weight.

Q. And those that fish their own gear sell the lobsters to you by the hundred weight?—A. By the hundred weight.

Q. How does the price per hundred weight compare with that paid, say, twenty years ago?—A. Twenty years ago, I think, we paid 40 cents.

Q. And this year?—A. This year we are paying \$1.15.

Q. I understand the price paid this year is slightly below that of last year?—A. Last year we paid \$1.50. That was where we furnished the gear. When we first located here we owned all the gear so that we cannot make a comparison. To-day we are paying \$3 per hundred weight where the fishermen furnish the gear as against \$3.75 last year.

Q. How would the amount of gear you put out now compare with the amount of gear you fished twenty years ago?—A. I should say that twenty years ago there was not more than one-third the amount of gear we are using now. Of course, these are only approximate figures.

Q. It shows evidently that you require a much greater amount of gear now?—A. It doesn't show that entirely. If there was a smaller amount of gear in the water to-day there would be as many lobsters landed, but it would not be cut up quite as much among the fishermen.

Q. Has the number of canneries increased during the twenty years?—A. It has decreased very largely.

Q. There are not as many as there were twenty years ago? The number has decreased in the last ten years, I have no doubt?—A. Not on this coast. The decrease is a constant decrease.

Q. Then it is going on still?—A. Not, perhaps, within the last three or four years, but I should say that five years ago—ten years ago anyway—there were at least one-third more factories.

Q. What was that decrease in the number of factories due to?—A. Simply to the fact that they could not run profitably and went out of the business. Quite a number of the small factories were operated by fishermen who have abandoned those factories and to-day are selling their lobsters to some larger factories instead of operating their own.

...

Q. Did you fish as far off shore in the early days as you do now?—A. Now they go very much farther out. I should say that twenty years ago there was not a boat went over three miles.

Q. In what depth of water do they fish?—A. Three to five fathoms.

Q. Do the trawl lines here run parallel with the shore?—A. They have to run with the tide. They cannot run across the tide.

Q. What is the greatest distance now they fish off shore, I suppose they meet right across here?—A. Some of our boats are fishing nearer the Island shore, that is they overlap each other.

Q. How does the average size of the lobsters caught to-day compare with the average size when you first had to do with the industry?—A. When I first came down here I had been in the lobster business two or three years before that. We were operating a factory at Shemogue and at that time we were packing quarter-pound cans then because the lobsters ran so small. I think to-day we are getting a larger run at that factory than we did twenty years ago. At this factory we have always had a good run of lobsters as to size. I mean the factory right at the point about a mile above here. The same would apply to the factory at Cape Jourmain. I should say that in twenty years the lobsters have decreased in size quite a little. Take

SESSIONAL PAPER No. 22a

the average run and I should say at those factories they have decreased. At the factory just about 15 miles from here they have really increased if anything.

Q. Are you taking a class of lobsters to-day that you did not pack twenty years ago?—A. We have been packing about everything that came to us.

Q. Touching on that question, how has the regulation been observed here?—A. In regard to the size limit, do you mean?

Q. Yes.—A. I should say it has never been closely observed, but a few years ago there was an attempt to enforce the law. Some years ago—in fact, quite a number of years ago—there was really quite a slight attempt made to enforce the law. The officers would come around, perhaps, and I know during the Conservative regime a number of years ago—

Q. In Sir Hibbert Tupper's time, was it?—A. In Sir Hibbert Tupper's time, the inspector at that time made a practice of imposing a fine, a nominal fine, once during the season.

Q. It was the practice then to impose a fine?—A. But it really made no difference in the packing of the lobsters. We paid the fine and looked happy.

Q. Since then have fines been imposed?—A. I do not know of any fines being imposed on account of the size limit for a number of years.

Q. Have any fines been imposed for taking berried lobsters?—A. No, I should say the only fine that I know of has been imposed for fishing in the close season.

Q. Is there much fishing going on now during the close season?—A. I think not.

Q. There seems to be some along the shore?—A. There is more or less, but I think very little within the last few years. I know that the officers have done their best to enforce the close season along this shore for a number of years.

Q. Could you give me any idea where the lobsters taken in the close season are packed?—A. They are usually packed by some fisherman. Some fisherman who owns gear, for instance, when we close our factory at the end of the season will within two or three weeks put out a small gear of 100 traps, or something like that, close inshore and pack the lobsters so taken in his house or wherever there is opportunity to pack.

Q. How are these lobsters usually disposed of?—A. The late pack? Usually among the local merchants, I suppose.

Q. They are sold without any label or anything of that kind?—A. I presume so.

Q. Your season extends here from the 25th May to the 10th August?—A. Our season extends from the 25th May to the 10th of August. We are not allowed to run our lines or to put out any gear until the 25th May, consequently it is the 1st of June usually before we land any lobsters, and we fish until the 10th of August.

Q. Within that time what is the best period of the fishery?—A. It may surprise you when I tell you that our factories only extend along about fifteen miles of the coast here, and that at our factory at Little Shemogue the best part of the season when the lobsters are most plentiful is usually the last two weeks in July. That applies also to our Botsford factory, two miles from the coast, and to our factory at Jourmain; but we get our best fishing off here, where our fishermen set down pretty well to the line that runs across, in the month of August. The ten days in August we usually put up half our pack.

Q. Do you think there is any part of the season when the lobster is not fit for human food?—A. No, I do not think there is any part of the season when the lobster is not fit for food. That is, it is not poisonous, and there is no time during the season when we can put up such nice looking goods as after the lobsters have shed their shell. They are brighter and nicer looking goods than the spring lobsters. They are not as good lobsters if you want lobsters to eat, but as far as their appearance goes in the can they will be better looking, and they are perfectly wholesome. There is no time when lobsters are unfit for food.

Q. When the hatchery is running are the eggs from the berried lobsters preserved for it?—A. They are as far down as our Jourmain factory, but the boat which collects the spawn does not go below that.

9-10 EDWARD VII., A. 1910

Q. Then what is the practice here with regard to berried lobsters?—A. I am under oath, I suppose? We take the berried lobsters here, and there is no way we could prevent the taking of them. That is, if we told our fishermen we would accept no berried lobsters we would get none; I mean no lobsters with eggs on them. But it is a very easy matter for the fishermen to remove the eggs outside, and there is no possible way to prevent that except by establishing a hatchery right here at Cape Tormentine, where there should be one. There is no place on the coast where the hatchery could be better supplied than right here, and we could get the eggs for them in better condition.

Q. What is the average size of the berried lobsters?—A. I should judge they might average about $9\frac{1}{2}$ inches.

Q. What is the smallest sized berried lobster you have any recollection of seeing?—A. The smallest berried lobster I ever saw was a 7-inch lobster.

Q. Are there many of that size?—A. I should say very few, a very small proportion of them. I have seen 7-inch lobsters with berries on, I don't think I ever saw any smaller than that. You will find lots of 8-inch berried lobsters.

Q. What percentage of the lobsters taken in this neighbourhood in the traps would bear eggs?—A. Well, if that question applies to the present time——

Q. I mean in various times of the season?—A. We are getting no berried lobsters now, you might say practically none.

Q. I suppose that any lobster found to-day with berries is not going to hatch them out this season?—A. I do not imagine so. You find practically no berried lobsters now. We do not know if one comes into our factories to-day, but in the spring it is different. You know about 50 per cent of the lobsters are males anyway——

Q. All the female lobsters do not have extruded eggs?—A. And that cuts out 50 per cent of the lobsters right here. I should say that perhaps during the month of June 20 per cent of our lobsters are berried lobsters. I may be putting that pretty high, but I should think that would be about right. We have no specific data on that point.

Q. And what would you say as to the proportion of berried lobsters during the month of July?—A. From the 1st July until the 15th we get very few lobsters here anyway. It is about their shedding time. It is about two weeks before the lobster sheds and two weeks after that they are not looking for food. Anyway, we get very few at that time of the year. There would be a very small percentage at that period.

Q. What would you consider the principal spawning month of the lobster in this neighbourhood?—A. The month of June.

Q. Is the practice of stripping or washing off the eggs from the berried lobsters followed by the fishermen?—A. Not here, because it has not been necessary.

Q. Do you think it would be possible to get the fishermen to return to the water all the berried lobsters they catch?—A. No, I don't think so.

Q. What would happen if the canner absolutely refused to take them?—A. They would simply remove the eggs from the lobster before they brought them to the factory.

Q. It would be difficult to detect the lobsters that had carried berries when they were brought to the factory?—A. Almost impossible, it would take an expert to do that.

Q. Do the canners make any scruple about accepting berried lobsters?—A. Not on this coast. You understand that from our Jourmain factory all along the coast here the eggs are removed from the lobsters at the factory and carried to the hatchery.

Q. Wherever the hatchery boat calls?—A. Yes, I think possibly the canners would object to taking delivery of the berried lobsters except for the fact they know it would be no use to do so, they would get them just the same.

Q. It has been suggested that one method of protecting the berried lobsters would be for the government to buy them from the fishermen at a slight advance on the price paid by the canners and liberate them at once?—A. That would be a very nice thing for the fishermen. They would get those lobsters day after day.

SESSIONAL PAPER No. 22a

Q. And they would be paid for over and over again? What do you say as to placing the berried lobsters in pounds?—A. If they were placed in pounds that would be a different proposition.

Q. And retained in pounds until the close of the season when they would be set at liberty. Which of these suggestions would you consider the most effective?—A. the only practicable one would be to place the berried lobsters in pounds.

Q. Do the facilities for establishing pounds exist here? What we require for a pound is a sheltered place with a certain depth of salt water and a free inflow of the tide involving only a reasonable outlay?—A. I do not know of any place on this coast where it would be practicable. This coast is very exposed and there are practically no harbours..

Q. What would you think of the proposition requiring the canners to pay an increased fee, instead of 2 cents a case as at present, and in that way realizing a fund for the purchase of the seed lobsters from the fishermen?—A. Well, so far as our people are concerned there would be no objection to that.

Q. That was Mr. Tidmarsh's suggestion before the Marine and Fisheries Committee?—A. There would be no objection to that for the reason that it would go towards creating a monopoly of the business; it would cut out the smaller packers. Of course none of the larger packers would object to it, but the smaller ones would. I do not see that it would be a fair proposition, but our people would have no objection to it.

Q. You have told me I think the proportion of lobsters packed below the legal size limit?—A. Well, that varies so at our factories that it is a pretty hard question to answer. We have one factory—the factory I spoke of at Shemogue—where I should say that 80 per cent of the lobsters—at least 60 per cent—will run below that limit. At our other factories I should say that possibly not over 30 or 40 per cent would run below the limit of 8 inches. In other words it would not be over 30 per cent at all our factories with the exception of the one at Shemogue.

Q. If the present size limit were strictly enforced what effect would it have on the canner?—A. I should think it would close the factories. Even if we could operate our factories profitably on the lobsters that would run 8 inches and upwards, the fishermen could not afford to throw away the lobsters below the legal size limit. We would be unable to secure fishermen to operate our factories.

Q. It has been said that in certain districts no lobster canner could continue packing and observe the legal size limit?—A. That is true.

Q. Would you favour any increase or decrease in the present size limit?—A. Well if the size limit is to be enforced as it should be—that is, if you have one—I should favour a decrease in the size.

Q. A decrease to what?—A. I should be in favour of removing the size limit entirely. It has practically been the way the law has been in operation for a number of years.

Q. Would you favour a shortening of the season to make up for that?—A. I do not see how you could shorten the season very well here and operate the factories successfully.

Q. Would it be possible to operate here at any other season? Of course the great object is, if possible, to save the berried lobsters?—A. Of course you are looking at the protection of the lobster.

Q. Yes, we are looking at the matter from that point of view. It has been suggested that it might be possible in this district to begin fishing say on the 15th July and go to the end of September. In that way you would avoid taking the berried lobsters, would you not?—A. We would have no berried lobsters whatever. But I will tell you how that would result, in my opinion: We get the bulk of our lobsters after they have shed. There is a worm that frequents the water out here, that is the borer,

9-10 EDWARD VII., A. 1910

which begins to operate on the traps in August, and such a season would mean that the gear fished from July 15 until the last of September would be practically ruined.

Q. Ruined in one season?—A. Ruined in one season. The fishermen would need to be furnished with new gear after the season.

Q. What is the average life of a trap?—A. Three years. I repeat, the fishermen would have to put out new gear every season. Furthermore, the rope during that season of the year rots very much more rapidly than it does during the colder part of the season. The season proposed would mean that it would cost the fishermen every year somewhere about \$350 to fit out the gear, whereas now it costs them \$100 to \$150 to keep their gear in working order. That would be one objection to a late season. Then again the lobsters would be taken in such quantities during that season that in my opinion inside of three or four years you would not catch any berried lobsters; you would take the female lobsters just the same and in three or four years there would be no lobsters left to spawn the next year. I think such a season would be more destructive to the fishery than the present one. Of course I am simply giving you my personal opinion.

Q. What were the regulations in force when you first began canning here?—A. The first season that I spent on this shore I could not say when the season opened whether it was the 1st of January or not. Anyway we were allowed to put out our gear as soon as the weather conditions allowed. I think the season began on the 1st of January, but it does not make any difference in this district anyway. We were allowed to put out our traps as soon as the ice went and the first year I fished on this coast we fished on till the 20th September.

Q. Then did you stop fishing on your own account?—A. No, the season ended the 20th September.

Q. I think in the early days of the fishery the fishing season omitted the month of August?—A. That was not so here. We fished from the time the ice left until the 20th September that year. Then shortly afterwards the season was changed, and ended on 15th July, and it was almost an invariable practice to grant an extension of from fifteen to twenty days which made our season practically until the 1st of August.

Q. When lobster canning first commenced were not the lobsters on this coast everywhere about the same size?—A. Do you mean along the entire coast?

Q. Along the entire coast, everywhere?—A. As I was telling you a few minutes ago, when I came here something over twenty years ago the lobsters ran smaller at our factory fifteen miles from here than they do to-day. There is a gentleman present who had charge of that factory for fourteen or fifteen years and he will corroborate my statement.

Q. That was at the very beginning when lobster canning was first established?—A. Yes. We were getting at that time a very large run of lobsters here. They ran really smaller than they do to-day. We were buying at that time two for one.

Q. Do I understand you to claim that there are smaller runs of lobsters in some districts than in others?—A. I know that to be so. We have a number of factories on Prince Edward Island. There is one at Watford where the lobsters run very small, averaging about eleven to the can. We buy by count there and they run about eleven lobsters to the pound can.

Q. And was that always the case?—A. Ever since we operated the factory.

Q. Is the fishing done there in a sheltered place or in a place where the small lobsters have a habit of running into?—A. I do not know much about the conditions there because I have not had very much to do with the factory. I see the reports when I go home in the fall.

Q. To what cause do you attribute the decline in the lobsters where there has been a falling off?—A. One reason is that they fish a smaller trap with a smaller hoop and the large lobsters are not able to get into that trap. We took a lobster here last summer that was caught on the outside of the hoop. It weighed about eight pounds. The top of the trap happened to be open and the lobster went in that way but the large lobsters cannot get into our traps.

SESSIONAL PAPER No. 22a

Q. Has the hoop been made smaller within your recollection?—A. Yes, it is not much more than half the size it used to be.

Q. Are you fishing the same trap now that you fished at the beginning?—A. No, we are fishing the Wheeler trap or parlour trap with three heads.

Q. What was the object in changing the style of trap?—A. To prevent the lobsters from escaping from the trap. When a lobster is the full length of the trap it will get away down to the far end and it will take a shoot right out through the funnel. With the trap in the middle they do not have the same opportunity to take that shoot.

Q. Are the slats put closer together now than they were originally?—A. I think they are but I would not be positive.

Q. Do you think there would be anything gained by insisting upon having the slats, at all events those in the bottom, put farther apart?—A. It would liberate some of the smaller lobsters.

Q. Do you think that different size limits and different seasons in adjoining sections of the coast are unsatisfactory and tend to encourage violations of the law?—A. I think it may to a certain extent where the line is drawn. For instance there is a division line right here.

Q. Across to Cape Traverse?—A. Yes. It just runs down to Crapaud or there somewhere.

Q. Where does it begin on this shore?—A. It begins at Indian Point just a short distance above our factory. I never could see any reason why that dividing line should have been made there. If they had drawn a line down to the middle of Baie Verte across to the Island shore, it would have given the New Brunswick shore one district and the Nova Scotia shore the earlier season that they want over there. But here there are factories within half a mile of each other having different seasons. There is no reason that I could ever see for that and the tendency is—you take this district above us here and it is a pretty difficult matter to close those factories down and leave the others running for practically a month longer.

Q. Do you think it is in the interest of the future of the lobster industry that lobsters should be taken before reaching the age of reproduction?—A. Of course you can only answer that question honestly and in one way: It certainly is not.

Q. The statement has been made authoritatively that a strict enforcement of the 8-inch size limit, together with the assistance of hatcheries and pounds, would perpetuate the lobster industry; would you concur in that?—A. I should say that a strict enforcement of the 8-inch size limit was not calculated to protect the industry. I have more faith in hatcheries. I know that the Pictou hatchery has done great work down there for the propagation of the lobster, but the hatchery at Shemogue is really too far removed from its base of supply. I think that wherever you find a spawning district a lobster hatchery should be established there. I believe that a strict enforcement of the close season and the establishment of hatcheries at points where the spawn is available are all that is necessary to perpetuate the lobster industry.

Q. Then you are in favour of hatcheries?—A. I certainly am.

Q. Would you recommend an increase in their number?—A. I certainly should.

Q. What do you think about the present method of gathering the eggs, do you think that the majority of those eggs reach the hatchery in a viable condition?—A. I do not.

Q. Would it be possible to bring the lobsters alive to the hatchery?—A. I should think that would be a rather difficult thing to do.

Q. What is the trouble here with the delivery of the eggs at present?—A. Well, it is due partly to the method by which they are collected, and partly to the character of the man you have engaged in collecting them. Men who are not interested in the business, who are simply working for their day's pay, are not particularly concerned as to whether they get the eggs to the hatchery alive or dead as long as they get them there.

9-10 EDWARD VII., A. 1910

Q. Is not the hatchery run as well now as when it was first started?—A. I am not really able to say. There is a hatchery some distance from us and I have never visited it but twice.

Q. What have you to say with regard to shipping live lobsters to market, is it possible to do it from here?—A. I do not believe it would be.

Q. The facilities for successful shipment do not exist?—A. And on account of the character of the lobster.

Q. There is not a sufficient number of large lobsters?—A. Not so much that as that the lobsters we get in this Strait are not as hardy as the Atlantic lobsters. You take the weather as it has been to-day. It has been a very hot day and even when these lobsters reach the cannery from the boats, having been only out of the traps from three to four hours perhaps, we get quite a large percentage of dead lobsters; they have not the vitality of the Atlantic coast lobster and for that reason I do not think——

Q. Is the temperature of water here higher than on the Atlantic coast?—A. Yes, I should imagine so.

Q. A live lobster industry has been started at Shediac and a man connected with it has been buying lobsters above here.—A. I heard something about that this summer. He is shipping by express every day and getting the live lobsters into the market very quickly, but the charges are very high upon these shipments and it would be only certain times during the season when it would be profitable.

Q. Do you think that where the necessary facilities for shipment exist, the live lobster trade is a more profitable one for the fishermen?—A. I presume that in Western Nova Scotia the fishermen derive the larger part of their receipts from the live lobster trade.

Q. There is no lobster canning in the State of Maine now?—A. None at all.

Q. The trade there is entirely one in live lobsters?—A. Entirely.

Q. Have you any idea of the regulations in force in Maine; there is no size limit is there?—A. There is a size limit.

Q. But no close season?—A. I think there is no close season. We are not engaged in the lobster business in Maine in any way, but I know there is a size limit and I think they are allowed to fish the year round.

Q. Is it the case that canners are compelled to accept undersized and berried lobsters from the fishermen for fear they would, in case of refusal to take such lobsters, sell them to other canners less scrupulous?—A. Yes, that is true. For instance we come down here in January to engage our fishermen. If we were to tell those men that we would accept no berried lobsters or no lobsters under 8 inches we could not hire a man among them.

Q. How many pounds weight of green lobsters of each size does it take to fill a pound can?—A. As to the size that makes very little difference. There is a slight difference. Do you want our average here for the season for the can or the case?

Q. Either way.—A. We average, take it the season through, about $4\frac{1}{2}$ pounds to the can and there is very little difference between the small lobsters and the large lobsters. The small lobsters are more profitable to the canner than the large ones.

Q. Down to what size?—A. Down to any size that we take. For instance, at our Shemogue factory where we are getting small lobsters it takes fewer lobsters to the can, than it does down here where we get a larger run. There is a difference of about half a pound to the can.

Q. But how about number?—A. In number, as I say, on the Island it takes practically 11 lobsters. We buy by weight entirely here and it takes about $4\frac{1}{2}$ pounds to the can on the average.

Q. It has been suggested that for the better protection of the lobster the fishermen should be required to register and take out a license at a nominal fee. What effect would that have upon the fishermen, would it make them more likely to observe the

SESSIONAL PAPER No. 22a

regulations?—A. I cannot see how it would. I cannot see how it would be of any advantage whatever.

Q. Do you think that such a system would have the effect of leading fishermen to observe the law and report violations that they happened to notice?—A. I do not think so.

Q. Have the regulations for the protection of the lobster ever been observed in this district?—A. No, because there has always been the restriction in regard to taking berried lobsters. And I do not think that the size limit has ever been observed. I should say the regulations have never been observed.

Q. Are the existing penalties sufficient to deter the packers from violating the regulations if they were enforced?—A. I hardly know what the existing penalties are.

Q. There is a fine for taking berried lobsters and packing undersized ones. Of course the regulations are not enforced?—A. They are not enforced. Any fines they are in the habit of enforcing—that they have enforced so far—are not sufficient to deter the canners from violating the regulations.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry, and should the issuance of further licenses be discouraged?—A. Well, that is rather a difficult question to answer. I should say there were factories enough on the coast. At the same time if a man or a concern wants to engage in the lobster business I suppose there is no reason why he should not have the right to as well as others. For the good of the industry itself I should say that there were quite enough canneries on the coast now.

Q. On the other hand is there any feasible reason why a man who can show that he is prepared to go into the industry and carry it on efficiently on a substantial basis should not get a license to can?—A. I do not see that there is.

Q. Should the number of boats fished by a cannery be limited, and would you limit the amount of gear fished by each boat?—A. I do not think they should. That is determined entirely by local conditions. For instance we have one factory on this shore where we operate 8 boats, and another where we have 17. That is entirely due to local conditions. The fishermen are located at one place and they are not in the other. That would be a pretty hard matter to regulate I should think.

Q. Do you not think the fact of not limiting the amount of gear fished by a cannery puts it in the power of the heavier operator to crowd out the smaller one?—A. It has not worked out so in the past.

Q. The small operators in some places have complained that they are crowded out?—A. I don't think that has been the case on this coast.

Q. The Lobster Commission of 1898, recommended that temporary reserves should be established in various sections along the coast where fishing should not be allowed for one or two years, the location of such reserves to be changed from time to time. That is instead of a general closing down there should be a closing down by sections. What do you think of that idea?—A. It would work quite a hardship on the fishermen in those sections.

Q. Is there any other occupation or industry that the fishermen could take up if the issuance of licenses were stopped for a number of years; what would become of the fishermen in that case?—A. The great majority of them would leave the country. They would probably all go to the United States.

Q. At what time during the present open season is the lobster fishery most actively prosecuted?—A. Do you mean by that when we do get the greatest amount of lobsters? From the 15th of July until the end of the season.

Q. Is the present regulation in regard to the close season satisfactory?—A. I think so generally. There are always some who want a little different from what they have.

Q. Do you think a reduction in the length of the present open season would be of advantage and would tend to increase the supply of lobsters and perpetuate the industry?—A. Of course any lengthening of the close season would tend to increase

9-10 EDWARD VII., A. 1910

the supply of lobsters, but I do not think that the open season could be shortened in this district, or in any of the districts perhaps, and let the factories run profitably or allow the fishermen to make a profit.

Q. What would you say as to a universal close season for the whole Atlantic Coast from July 15th to January 1st?—A. I am hardly in a position to answer that question because I am not familiar with the Atlantic Coast fishery.

Q. What would you say to have such a season from July 15th to January 1st, north of Cape Canso, and from July 1st to January 1st, west and south of Cape Canso, with a large size limit in the latter division than in the former. You see Professor Prince recommended there should be two great divisions and that Canso should be the dividing point. In fixing a season should it not be done in the interest of the lobster, than in the interest of the canner in order to protect his gear?—A. The result of fixing the 25th May for commencing fishing has been to give us no spring fishing whatever. Our fishermen used to always get the advantage of the month of May. They usually began operations about the 10th of May, that would be the average opening time, and they always counted about three or four weeks good fishing. Then they expected four or five weeks doing very little, and at the latter end of the season to pick up a few more. The present season does us out of the spring fishing entirely; we do very little until after the lobster has shed.

Q. Was this season changed at the request of the people on this shore or at the request of the Island people?—A. I think the request must have come from the Island. It was the result of the sittings of the Commission of 1898 that you spoke of. That Commission held a meeting at Port Elgin, or Moncton, and quite a number of the canners and fishermen attended. As I understand from the report I obtained of the proceedings, about every man who attended the meeting had a little different idea as to what the season should be, and I think they practically ignored the result of the sittings here.

Q. What do you think of making simply that one grand division?—A. With those seasons and those limits which Professor Prince speaks of? With all due respect to Professor Prince I think it would close every factory in the province.

Q. Then you are of the opinion that the present regulation regarding the close season is satisfactory for this district?—A. I think so, with the exception of the dividing line here which cuts our district right in two you might say.

Q. You would allow the dividing line to go to the other end of the province?—A. Either there or run it through the middle of Baie Verte and off the Nova Scotia shore.

Q. It has been asked that fall fishing be allowed in some districts owing to the delay in commencing the present fishing season caused by ice remaining on the coast in the spring of the year, what would you say to that?—A. I don't think it would be advisable. There is one I think in the Magdalen Islands.

Q. Are you in favour of limiting the issue of licenses to pack, or would you favour issuing a license to every one qualified to do so?—A. I do not see any reason why a man who could demonstrate his ability to build a properly equipped factory and carry it on properly should not be allowed to pack.

Q. Would it be possible to establish a standard of fitness for a cannery?—A. It seems to me so.

Q. Do you think that the product of the canneries should be subject to inspection?—A. As to quality do you mean?

Q. Yes, as to quality. The tendency of the day is to closely inspect all food products?—A. I understand you have no pure food law in Canada.

Q. I do not know that we have absolutely?—A. I cannot see any objection to it, I think it would be a good thing. I think there should be government inspection of all products.

Q. Do you think the present staff of fishery officers are competent to perform that service?—A. I don't know why they should not be.

SESSIONAL PAPER No. 22a

Q. Would you refuse a canning license to a firm in which only aliens were interested or mainly interested?—A. You can only expect me to answer that in one way: I cannot see any reason why.

Q. They were the pioneers of the industry and have only their capital invested?—A. They employ native fishermen and native help entirely. I don't know why the American money is not just as good as the Canadian.

Q. What would you think of the policy of encouraging fishermen to co-operate in the canning of lobsters?—A. Well, naturally I don't think very much of that.

Q. Are there any co-operative canneries in this neighbourhood?—A. No.

Q. Are you aware of any complaints made by fishermen that the price paid to them by the canners is not satisfactory?—A. You get lots of those.

Q. Is it the case that fishermen have lost their catch by the canners refusing to accept them?—A. What do you mean? The day's catch?

Q. Yes, if you like?—A. I have known the canneries in this district refuse to take the catches for a certain day perhaps..

Q. When there was a glut?—A. Yes. That has never been the case with us.

Q. It has been said that in some localities the canners have combined and have refused to accept the catch of lobsters from the fishermen with a view of coercing them?—A. I have never known of such action. The only time I have known of that action was when the canneries were glutted and unable to handle that day's catch; they had not a sufficient crew or equipment to take care of the lobsters they might get.

Q. It has been alleged that in some cases fishermen have suffered injury by the failure of the canners to operate their canneries although a sufficient supply of lobsters was available?—A. The only time I have known that to be so was at the end of the open season when some of our fishermen would want us to run for a few days longer in order to make a few dollars.

Q. What market would the fishermen have in this district for their lobsters if the canneries were closed?—A. I do not know that they would have any.

Q. From your experience can you say whether the hatcheries have helped to maintain the supply of lobsters or not?—A. From what I know of the Pictou hatchery I should think it has. I think also that possibly this hatchery at Shemogue has helped to some extent.

Q. Can you give me any instance showing the good effects of the hatcheries?—A. I know of a property down near Pictou that could have been bought some ten to fifteen years ago for less than \$10,000. Three years ago that property was sold for \$50,000.

Q. You think that was due——?A. Due to the increase in the supply of lobsters.

Q. Have you anything to suggest which in your opinion would be calculated to further improve the efficacy of the hatcheries?—A. I think that a bi-monthly inspection by a departmental officer might help.

Q. The policy contemplated by the department in its regulations is the taking of large lobsters and permitting the small ones to escape. Is there any kind of trap that would be better adapted for this purpose than the traps now in use?—A. You could build a trap that would let all the small lobsters escape, but the factories would not be able to operate.

Q. The creation of a board to advise the department in regard to the administration of the fisheries has been suggested; would you approve of the idea?—A. I see no objection to it provided the members of that board were competent men and familiar with the business. I do not see why it would not have a beneficial effect.

Q. Is there any other matter connected with the inquiry upon which you would like to express an opinion?—A. No, I think you have covered the ground pretty thoroughly.

Witness discharged.

Commission adjourned.

9-10 EDWARD VII., A. 1910

CAPE TORMENTINE, July, 29, 1909.

JOHN REID, fisherman, Cape Tormentine, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. I think about nineteen years.

Q. On what part of the coast have you carried on your fishing?—A. At Cape Spear and then here at Cape Tormentine.

Q. Did you ever pack lobsters on your own account?—A. Yes, sir.

Q. You did run a cannery?—A. Yes.

Q. Do you still do so?—A. No.

Q. Is there a fishermen's union in this locality?—A. No, there is not.

Q. Are you still engaged in fishing?—A. Yes, I fish, find the gear and own the boat and sell my fish.

Q. To whom do you sell the fish?—A. The Portland Packing Company.

Q. On what terms and conditions do you sell your fish, by the hundred weight?—A. So much a hundred live weight delivered at the factory.

Q. How far off shore do you fish and in what depth of water?—A. This summer we have been fishing about six miles from the shore in from eleven to thirteen fathoms.

Q. Do you fish all season on the same ground or do you move your gear in?—A. We move our gear in.

Q. You follow the fish?—A. Yes, sir.

Q. On what bottom do you fish?—A. Say rock in the spring and sand at this season.

Q. Do you find any difference in the size of the lobsters caught in deep water as compared with the size of these taken in shoal water?—A. Not always. A man might have gear about a week ago right in near the wharf in shallow water and he might have got very large fish; they were fully as large as those outside.

Q. Are the lobsters as large now as when you first began to fish?—A. They will be I think right off here, abreast of here. I think they are as large.

Q. What amount of gear do you fish?—A. 400 traps.

Q. Is that more than you used to use when you began fishing?—A. Yes.

Q. You have increased the quantity of gear you fish; were you obliged to do that to keep up the average of your catch?—A. Yes.

Q. Has the number of traps increased very considerably in this neighbourhood?—A. Since I began fishing? Yes, sir, I think it has doubled probably.

Q. Is there any difference in the type of trap you fish now compared to what you used to fish?—A. We are fishing what we call the wheeler trap. It is considered a more killing affair than the other.

Q. What is the particular merit of the wheeler trap?—A. I can scarcely tell you unless that the bait is always there. When the lobster goes in where the bait is he does not stay there long but goes through to the trap end, and that leaves the bait always clear and another fish is more likely to get in.

Q. And when a lobster goes in he is not so likely to get out?—A. Not so likely to get out. It is a better holding trap.

Q. Do the majority of fishermen own the boats here or are they fished by hired men?—A. I think the majority own their own gear now.

Q. It has been suggested that for the better control of the lobster fishery the fishermen should be compelled to register and take out a license at a nominal fee with a

SESSIONAL PAPER No. 22a

view to making them more careful in their observance of the law; do you think it would have any such effect?—A. I think the main thing lies with the canner. I doubt if it would have much effect upon the fishermen.

Q. How does the price paid for lobsters now compare with that paid when you first began to fish?—A. I think the best offer I could get from the company at that time was about 95 cents a hundred and find my own gear. This season I got \$3. This was a low season, lower than it was last.

Q. What was the price last year?—A. \$3.75 and \$4 last year.

Q. What is the reason for the drop in price?—A. Well I guess probably the hard times in the States had the most to do with it.

Q. The low market?—A. Yes. Times were so hard.

Q. Is there any competition in the matter or are you forced to accept a certain price for lobsters?—A. Well, pretty nearly so here, it comes pretty near that.

Q. Do you think there is any arrangement among the leading packers to keep the price down and not go beyond a certain figure?—A. I am inclined to think there is. I am under oath, I am inclined to think there is such an arrangement.

Q. Do you think the fishermen get a fair share of the profit out of the industry?—A. That is a little difficult for me to say. Take the company's manager here. He claims that the price of canned lobsters is very low. He claims that they pay the fishermen all they are possibly able to pay. It is hard for me to tell. I don't know just what canned lobsters are worth on the market just now.

Q. From having been in the canning business yourself I should have thought you would be in a better position to judge.—A. Even then we did not ship away to the outside market. We sold our pack to the company, so we don't know.

Q. What is the practice here with regard to small and berried lobsters; I suppose the berried lobsters during the time the hatchery is running are all brought ashore and stripped of spawn?—A. They are on a certain part of the coast, I don't know that the practices reaches all the way round.

Q. Does the hatchery boat not come this far?—A. Not beyond Cape Jourmain light.

Q. Did it used to go farther?—A. No, but we understood we were to have a boat to reach up in the bay but it did not come.

Q. What is the practice with regard to undersized lobsters? You know the legal limit is 8 inches but as far as we have gone the practice seems to be for the fishermen to take to the canneries everything that comes into the traps?—A. Anything that will pay.

Q. What is the space left between the slats of the traps?—A. I usually leave about an inch and a quarter. Some nail closer but I don't think it is any use to do so.

Q. And what do you do with the small and berried lobsters?—A. We take anything we get.

Q. And bring everything to the factory?—A. Yes.

Q. Of course you are fishing by weight and naturally want to get all you can out of it. Do the canners ever make any objection to receiving illegal lobsters or do they take all that are brought in?—A. I have never heard of any kick yet.

Q. You expect the canner to take all the lobsters you bring to him regardless of the regulations?—A. Yes, sir, they take everything we bring.

Q. Do you think it is in the interest of the continuance of the lobster industry that such a condition of things should exist?—A. No.

Q. Is the practice of stripping the berried lobsters at sea followed by the fishermen here?—A. I don't know whether it is the general practice or not but we have done it.

Q. What would you say is the spawning season of the lobster in this district?—A. June is the principal month.

Q. Could you give me any idea as to the smallest sized female lobster you ever saw with berries attached?—A. About 5 inches.

9-10 EDWARD VII., A. 1910

Q. Have you seen them as small as that?—A. I think so. I don't think it was more than $5\frac{1}{2}$ inches. I have never measured them but I have seen them very small.

Q. What is the average size of the berried lobster?—A. I would say $8\frac{1}{2}$ or 9 inches, 9 perhaps.

Q. Do you find more spawn lobsters inshore than you do off shore?—A. I don't think so.

Q. Do you consider there is any time when the lobster is not fit for food?—A. I think only while it is in the soft state. As soon as they are firm enough to move about good and strong I think they are all right then.

Q. What proportion of your total catch of lobsters would bear berries?—A. This would be June you are speaking of.

Q. Throughout the season what would the proportion be?—A. I think 20 per cent anyway.

Q. Is the percentage greater at any part of the season than at another?—A. Yes, in June there are more berried lobsters.

Q. Do you recognize when you are taking the lobsters that the season for spawning is past, can you tell?—A. Yes, it is over now.

Q. Do you get many lobsters that spawn now?—A. Practically none at this season.

Q. I suppose any lobster you found with spawn now would not be likely to spawn this year?—A. That is my opinion and it always has been since I have been observing them. Later in the fall we get a number of berried fish and I consider they carry the eggs till next year and they will be hatched in May probably or early in the season.

Q. Do you think the lobster hatches more than once a year?—A. No, sir, I don't think so. I think they hatch every year.

Q. Then as far as you are concerned you would say that the regulation for the protection of the berried lobster is not observed?—A. I don't think it is observed properly along here.

Q. Would you suggest any change in the regulations?—A. Just for our locality here I think a change in the season would benefit us.

Q. What change would you suggest?—A. To begin on the 20th of this month and fish until the 1st of October. That would protect the berried lobsters, they would all have spawned by that time.

Q. I may tell you that is my own idea of the conditions but I find very few people here who agree with me. Fishermen and canners have the same to say, that the month of September is a rough month to fish.—A. I have seen Septembers that I could work from morning till night the same as another month. We have some very fine Septembers, in fact we usually have good weather in September.

Q. Do you think the lobsters are in as good condition in the fall as in the spring?—A. Yes, sir, from the 1st September right through the month they are fully as good. Perhaps they won't average as high to the canner but they make very pretty goods, they are bright.

Q. You think they are as full of meat as in the spring?—A. Scarcely as full.

Q. Will it take a larger percentage of lobsters to fill the same amount of cans?—A. Yes.

Q. If the canner refused to accept berried or undersized lobsters would it not have the effect of inducing the fishermen to return them to the water?—A. They would simply have to do it, if the canners turned them down.

Q. Would they be able to continue fishing?—A. I don't know about the undersized, but as regards the berried lobsters we would not lose any. Of course, if I let berried lobsters go, some one else will catch them. They will be caught with the present season.

Q. How would it be under the season as you propose it?—A. We would have no berried lobsters at all.

Q. Is it the practice of fishermen to avoid dealing with a canner who is known

SESSIONAL PAPER No. 22a

to be careful about not accepting berried or undersized lobsters?—A. We have had no experience of that kind.

Q. Would it be possible to get the fishermen to return all the berried lobsters they take to the water?—A. Yes, I think so.

Q. How would you go to work to get them to do it?—A. Have the canner refuse to accept the berried lobsters.

Q. Do you think it would be possible for the government to buy from the fishermen all the berried lobsters they take in their traps and place those lobsters in pounds?—A. Yes, that would work all right, but this coast is pretty bleak for that kind of thing. I hardly know a place along here where it could be done.

Q. Are you aware that any fisherman has lost his catch of lobsters through the canner declining to accept them?—A. No, sir.

Q. The Lobster Commission of 1898 recommended the establishment of temporary reserves at various points along the coast wherein fishing should not be allowed for a term of years, the location of such reserves to be changed from time to time?—A. I think that would be a benefit if possible.

Q. It has been proposed by other people that the size limit should be done away with altogether, and to make up for it we should fish a shorter season. Do you think that is possible?—A. No. We could not possibly get along.

Q. Is the present regulation restricting the number of canning licenses satisfactory to the fishermen generally?—A. I do not think it is satisfactory. For my own part I have a factory on the farm I occupy now and there is no license for it. I would like to obtain one and I have been thinking of it.

Q. How long has the factory in question been closed?—A. Quite a while before I bought the place.

Q. Do you think that if a man shows his ability to properly conduct a canning business there is any good reason why we should refuse him a license and give it to another man?—A. I cannot see it at all. If a man is allowed to catch fish from the water he should be allowed to handle them if it is to better advantage to do so.

Q. It would not do to give every man a license regardless of whether he possessed the necessary qualifications or not. If that were done I am afraid there would be a good deal of bad lobsters put on the market. Would it be possible to establish any standard of fitness in connection with canning?—A. Yes, I think so.

Q. What market would the fishermen in this district have for their lobsters if the canneries were closed?—A. I don't think they would have any to afford any profit to them. Only a small percentage of the lobsters would be fit for a live lobster market.

Q. Do the facilities exist here for the exportation of live lobsters? You want rapid transit and cold storage and that sort of thing—A. I think lobsters could be properly placed on the market alive from here; I think they could be shipped.

Q. Do you think there is anything in the nature of the lobster taken in these waters which renders him less fit for the live lobster trade than the lobster taken on the Atlantic coast? Is the lobster from these waters as hardy as the others?—A. I think probably he is, although some people have said they think not, that being accustomed to shoal and warm water he is not as tough.

Q. If the present size limit were strictly enforced what effect do you think it would have upon the canner?—A. I think it would put him out of business.

Q. And would an increase in the number of canneries result in an increased pack of undersized lobsters as conditions are?—A. No, sir.

Q. Why would it not?—A. There would not be any more to engage in the fishing. A man might run the same number of traps, but he might choose to pack his fish. There are various reasons for that. A man might want offal from the boat. Say I am running a boat or two, I might want offal for the farm. That is one reason why I should like to run a shop.

Q. What becomes of the offal here?—A. It is all put on the land.

9-10 EDWARD VII., A. 1910

Q. Is it sold by the canner?—A. It is usually given for the rental of the land the factory is on. In a good many cases the canner does not own the land and he gives the offal for the rental.

Q. Do you think it would be in the interest of the lobster fishery, as a whole, to close down the canneries for a number of years so as to allow the fishery to recuperate?—A. I do not think it would be of benefit. I think it would be a number of years before the industry would get back into a state that you might look for those conditions.

Q. Do you think the number of boats run by a cannery should be limited?—A. No.

Q. What is the object of limiting the number of canneries if you do not limit the amount of gear a canner may fish?—A. I believe there is as much justice in the one as the other, and yet if a man sees fit to go out fishing it does not seem fair to say he should not; in other words to lay down the rule that you should fish and I should not.

Q. It does not follow, I should think, that you are going to limit absolutely the number of fishermen if you limit the amount of gear to be fished by each individual canner. Some would fish more and others possibly would not fish as much, the thing would equalize itself in my opinion. But there is a complaint made by small operators and fishermen that large operators are not restricted and are able to put out such an amount of gear as to crowd the smaller fellows out of the way; is there anything in that do you think?—A. I do not think there is anything of that kind along this coast at this time because, as I said before, the majority of the fishermen own their own gear; they are residents here and own their own gear.

Q. Which branch of the lobster industry do you think is the more remunerative to the fisherman and the best calculated to maintain the supply, the live lobster trade or the canning?—A. The canning here.

Q. Who fixes the price paid for lobsters?—A. The canner.

Q. Are you aware of any combination on the part of the packers to keep down the price?—A. I could not say positively that there is, I am inclined to think so.

Q. You think the fishermen would make more money for themselves if they were allowed to can?—A. I think they would in some cases. In my own case I think I would.

Q. Would you encourage the plan of issuing a license to one of a group of fishermen who combine together on the co-operative system for the purpose of canning lobsters and agree to share the profits and losses alike?—A. Yes, sir, I should think that would be a very good idea.

Q. Has the co-operative plan ever been tried in this neighbourhood?—A. No, sir, it has never been tried here. There is one at Cape Bald, I believe.

Q. Is it within your experience that lobster hatcheries have helped to maintain the supply?—A. I cannot say positively, any more than that I have heard the fishermen consider the Pictou hatchery has benefited them a great deal over there.

Q. Would you favour an increase in the number of hatcheries?—A. Either that or a change in the season. We have got to protect the berried lobsters in some way.

Q. And you think that is best done by a change in the season?—A. That is my idea.

Q. Is that the idea generally among the fishermen in this neighbourhood, have you ever spoken to other fishermen here about it?—A. I spoke to some yesterday. Those I spoke to were of the same opinion.

Q. Would you favour any change in the size limit in this district?—A. No, sir. I don't believe the size limit has so much to do with it as the protection of the berried lobsters.

Q. Has there been any noticeable decline in the average size of the lobsters caught in this district during the last ten years?—A. No, sir, not to my knowledge here.

Q. Has there been a decrease in the size limit to your knowledge?—A. I think so. I think they are smaller than they were some years ago.

SESSIONAL PAPER No. 22a

Q. Do you think it is due to persistent overfishing that the average size of the lobster has been reduced?—A. Oh, yes, there is no doubt about that.

Q. Do you think there is any good reason for having different seasons in adjoining sections of the shore?—A. Yes.

Q. Is it your opinion that the lobsters come in from both ends of the Straits and that this is their meeting place?—A. Yes.

Q. Do you think that the lobsters come in shore to spawn?—A. Do you mean from the Straits in or outside fishing?

Q. From the Straits in?—A. No, sir, I think they spawn as much in the middle of the Straits as along the flats.

Q. Do you think they come from the ends of the Straits?—A. Yes, I think that with the inrush of lobsters we have in the spring, it is the spawning time. They come in to spawn because we find so many more females than we do males.

Q. Do you think it is in the interest of the continuance of the lobster industry that we should continue to take immature lobsters?—A. I think we will have to take them in order to carry on the canneries. It is either that or close the canneries.

Q. The statement has been made authoritatively that the strict enforcement of the 8-inch size limit, together with the assistance of hatcheries and pounds, would preserve the lobster industry. Do you concur in that statement?—A. Yes, I think probably it would.

Q. Could a size limit of 10½ inches be maintained in this district?—A. No.

Q. Is it within your experience that a larger number of lobsters would be required in the fall than in the months of May and June to fill a one pound can?—A. Yes, sir, slightly larger.

Q. Do you think that lobster fishing should be maintained farther out from shore, that a limit should be placed upon the depth of water fished in?—A. No, sir.

Q. You do not fish in shoal water?—A. No, sir.

Q. What is the best period of your season?—A. From the 25th of July to the end. Perhaps I might say from the 20th, that is including the district I was just speaking of, our own place right here.

Q. As I understand you would prefer a season beginning, say on the 15th July, and continuing until the end of September?—A. Yes.

Q. Your reason for preferring such a season is that you would absolutely protect the berried lobsters?—A. Yes.

Q. And you think that should be the great aim in the perpetuation of the fishery?—A. It must be. If you kill the goose as she is about to lay you will have no goslings.

Q. Do you think a reduction in the length of the present season would be of any advantage?—A. No, sir.

Q. How about making the season shorter and doing away with the size limit?—A. I do not think it is possible to run the cannery unless we take lobsters pretty well down to what we are catching now. There should be a change in the size limit that would be of benefit but it would not do to stand by an 8-inch limit.

Q. Some people think the size limit ought to be reduced to 7 inches?—A. That would be all right. That I believe would be a benefit but we could not stand a size limit of 8 inches.

Q. Could you stand a size limit of 7 inches?—A. I believe we could. My opinion is this: When we take everything, we take some that are no good to the packer. It is a shame to take them too small. We might have a fair size limit but it could not be 8 inches.

Q. Do you think there would be any greater chance of enforcing the 7-inch size limit than one of 8?—A. I believe it would lie with the cannery, if the inspectors thought the cannery would live up to it. The way it has been in the past it has not been possible to enforce the size limit.

Q. Is there any other matter you would like to express an opinion upon?—A. No, sir, I don't think there is. I think you have gone over the ground pretty well. About

9-10 EDWARD VII., A. 1910

the only thing I can see that is going to benefit us very much is to change the season. This is a natural spawning ground.

Q. You are of the opinion that it would be possible to maintain the fishing with a change of season?—A. Yes, sir, I think it would be.

Q. The gear would not suffer any more loss, you think, fishing later in the season than at present? Would not your gear rot during the month of August?—A. The traps might worm up some, but I think we would get advantage in the way of more fish that would offset that loss even if there was a little more.

Q. That is a secondary consideration, if we could secure the observance of the laws?—A. Yes. While the hatchery is no doubt a benefit I do not think it could be made to meet the situation as thoroughly as allowing the lobsters to spawn in a natural place.

Q. Is there much illegal fishing done here to your knowledge?—A. Not so much in recent years. We used to take a hand at it ourselves but we got this sharp fellow here (pointing to fishery officer) who put a stop to it. As to the character of the fishing we have noticed in the spring that the majority of the lobsters are females. That makes it look to us as though they came in here to spawn. I think perhaps the lobsters have less enemies here than they have outside.

Q. They require a lot of kelp and seaweed?—A. They get that here. We sometimes bring up very small lobsters on the kelp.

Witness discharged.

FRED MAGEE, canner, Port Elgin, called and sworn:—

By the Commissioner:

Q. Are you a native of these parts?—A. Yes, I am a native of New Brunswick.

Q. How long have you been engaged in lobster packing?—A. About five years.

Q. Had you any connection with the industry before that?—A. I was a buyer.

Q. How many canneries do you control?—A. I control nine canneries. We operate five and we smack from the others. We only have the five licenses but we control nine canneries.

Q. Where are those canneries situated?—A. Three in the County of Westmoreland and six on Pictou Island.

Q. How many boats do you employ?—A. About 110.

Q. Owned by the canneries?—A. Yes.

Q. That would represent how many men afloat?—A. That would represent 175 I suppose. Some fishermen have a helper and others have not.

Q. How many men and girls are there employed in the factories?—A. Collectively do you mean? They vary, you know.

Q. Taking one season with another?—A. 150 to 200. As the catch increases we add help, as it decreases we discharge them.

Q. Sometimes you would have more and sometimes less?—A. Sometimes they get away down very fine. Sometimes the number would be 100.

Q. What is the total capacity of your canneries?—A. They have never been taxed, it is a difficult question to answer.

Q. What could you handle?—A. I have no idea. We could handle I suppose 12,000 or 15,000 cases.

Q. What was your actual pack for, say last year?—A. Last year our actual pack was 5,300 cases.

Q. How did that compare with other preceding years?—A. That was a little ahead of other years.

Q. Are you fishing a much larger quantity of gear now than when you began to operate?—A. I increased the second year I operated. Each boat has kept up to that standard ever since.

SESSIONAL PAPER No. 22a

Q. Is it your opinion that the supply of lobsters is being kept up by packing lobsters that formerly would have been rejected?—A. I cannot see any difference in packing short lobsters.

Q. Do you own most of the boats that are fishing for you, and the gear?—A. About 70 per cent.

Q. And the men fishing those boats are paid by the month?—A. By the hundred weight.

Q. Do you not employ any fishermen by the month?—A. No, no wages men.

Q. They are all shares men?—A. Yes.

Q. And from the balance of the fishermen you buy their catch?—A. Buy their catch by the hundred.

Q. How does the price paid to the fishermen to-day compare with that paid formerly?—A. Well, the price paid this year is about 25 per cent lower than in 1908, about 15 per cent lower than in 1907, about 7 per cent lower than in 1906 and on about a par I think with 1905.

Q. So that in preceding years you greatly raised your price?—A. That is on account of the large catch last year. The market went down on account of the high price and the consumption was curtailed.

Q. How are the regulations observed with regard to taking undersigned and berried lobsters?—A. Where a hatchery is in operation the berried lobsters are looked after. Where there is no hatchery in operation the berried lobsters are taken by the canners and packed.

Q. It is your opinion that it would be possible for the canner to continue if the size limit were rigidly maintained at eight inches and the berried lobsters protected?—A. The canners could continue if the berried lobsters were protected, but they could not continue with a rigid enforcement of the size limit in this district. I believe they could on the southern shore of Nova Scotia.

Q. At what size do you consider the lobster to be fully matured?—A. What do you mean by that, egg bearing, reproducing.

Q. Yes, the age of reproduction?—A. A very small percentage will reproduce at eight inches. At nine there is quite a percentage. At ten inches, 5 per cent I think reproduces. Professor Prince is my authority on that point.

Q. Could you give us any idea of the average size of the lobsters taken along this shore; how many lobsters does it take to fill a pound can?—A. That is one of Mr. Loggie's questions, he buys by count. We buy by the hundred pounds and we never keep any record.

Q. How many lobsters does it take to make a hundred pounds?—A. I might reply to that by stating the average number of pounds it takes to make 48 pounds of meat—that is the way we figure our report—is about 230 on this coast and about 200 at Pictou.

Q. You have no record as to how many individual lobsters that means?—A. No, we do not keep any records of that description at all, we buy by the hundred pounds.

Q. Have you come to any conclusion as to the spawning habits of lobsters? There seems to be a great difference of opinion, even among scientists, as to whether lobsters spawn once a year, twice a year or every two years. Do you think they spawn every year?—A. It is my opinion that they spawn every year.

Q. Are the female lobsters found with berries on all through the season?—A. Until about the 20th July. After that we do not see many berried lobsters, very few.

Q. Is it your opinion that when lobsters are found late in the season with berries on they will not hatch out until the following year?—A. I believe some authorities claim lobsters hatch in the fall, in the months of August and September.

Q. Have you ever noticed any evidence that would justify you in coming to that conclusion?—A. No.

Q. The general impression is that if the female lobster passes the present season without hatching out those eggs she will wait until early next season. You would

9-10 EDWARD VII., A. 1910

hardly expect the eggs to be hatched out when the water was getting colder?—A. Do you not think the water is getting warmer in August?

Q. I suppose it is up to the beginning of September?—A. My idea would be that the female lobsters with berries on late in the season would hatch in the fall. Probably I am mistaken, I cannot say for certain anything in connection with that.

Q. Is there any part of the season when the lobster is not fit for food purposes?—A. At the time they are throwing off the old shell. They are not even taken by the fishermen then, they are left in the trap.

Q. Does the new shell harden up very quickly?—A. Very quickly.

Q. What is the percentage of the lobsters taken in your neighbourhood that bear eggs?—A. Do you mean with eggs that are in evidence when they are caught?

Q. Yes.—A. About 3 per cent I would think.

Q. And at what period of the season are berried lobsters most numerous?—A. May and June as far as we can see. We have no winter season therefore I do not know how they are in winter.

Q. Is the custom of stripping or washing off the eggs from the berried lobsters practised by the fishermen in this neighbourhood?—A. No, I do not think it is.

Q. Do you think the fishermen are becoming more conscious of the necessity for protecting the berried lobsters?—A. I certainly do.

Q. Do you think that the decrease in the fishery, which certainly has occurred since its inception, has reached its limit, or is it still going on? A great many are of the opinion that during the last four or five years we have reached the turning point in the condition of the fishery or a standstill at all events?—A. I believe we have. I think the pack shows that to be the case. There has been a certain increase this last four or five years.

Q. You do not think that increase in the pack has been caused by an increased amount of gear?—A. No, I hardly think so. The licenses have been curtailed.

Q. If the canners refused to accept berried lobsters would it have the effect of inducing the fishermen to return them to the waters?—A. Some fishermen would return them to the water, but they would be very few.

Q. Would it be possible to get the fishermen to undertake to return to the water all berried lobsters?—A. If they were under a severe penalty for not doing so I think it would.

Q. Do you think the licensing of the fishermen, or the boats, would have any good effect in that direction?—A. That might tend to assist in protecting the lobster.

Q. Do the canners make any scruple about accepting berried lobsters?—A. None whatever in this district.

Q. If the canners absolutely refused to accept berried lobsters from the fishermen what would happen?—A. About 30 per cent of the fishermen would brush them off; the balance, I think, would observe the law.

Q. It has been suggested that one method of protection would be for the government to buy from the fishermen at a certain advance on the price paid by the canners all the berried lobsters taken in their traps, such lobsters to be liberated at once; would there be anything in that suggestion?—A. You would be buying the same lobsters a dozen times a year.

Q. What would you say if such lobsters were placed in pounds and retained there until the close of the season when they could be set at liberty?—A. Yes, that would be the better method.

Q. Do you think the facilities exist here for establishing pounds?—A. I cannot see any place where we could have a pound in this district.

Q. What would you think of the proposition requiring the canners to pay an increased fee, instead of the 2 cents a case as at present, and in that way realizing a fund for the purchase of the seed lobsters from the fishermen? The idea, of course, is that the fishery should pay for its own protection and that it should not be a tax

SESSIONAL PAPER No. 22a

upon the general community?—A. I have not looked into the argument in connection with that question, and I hardly know how to answer it.

Q. A number of large packers, like Mr. Tidmarsh and others, are in favour of an increased fee. The present fee, of course, is a bagatelle?—A. While there is a surplus in our country I should think the government would have money enough for such a purpose. However, it would be a good move. I am not speaking against it, but I would like to look into the matter a little further before giving a definite answer.

Q. What proportion of the lobsters taken in the traps are below the legal size limit?—A. I have no statistics to go by; there must be 50 per cent.

Q. I suppose the percentage varies in different localities?—A. Yes, I am speaking of this locality entirely.

Q. If the present size limit were strictly enforced what effect would it have upon the canners?—A. It would put them out of business.

Q. Would an increase in the number of canneries result in an increased pack of undersized lobsters?—A. It would depend altogether on where they got their fishermen. If they took their fishermen from those factories that were licensed there might be the same number of fishermen employed in fishing and the same amount of lobsters taken, but the factories would not get the catch they do.

Q. Would you favour any increase or decrease in the present size limit?—A. I would favour abolishing the size limit and regulating the distance between the laths of the traps by government inspection, regulating the traps before they are put in the water in the spring so that by having a certain space between the laths certain sized lobsters could get out.

Q. Has there been any noticeable decline in the average size of the lobsters caught in your district within the last 10 or 30 years?—A. I cannot speak from experience, but I believe there has.

Q. Have you any idea when lobster canning was first introduced in this neighbourhood?—A. You can get exact information on that point, but I cannot furnish it to you.

Q. When lobster canning was first introduced were not the lobsters about the coast everywhere about the same size?—A. I cannot answer that either.

Q. To what cause do you attribute the decline in the size of the lobsters?—A. I think it must be overfishing.

Q. An expert has suggested that a minimum size limit for lobsters of 9 inches be established in the waters north of Cape Canso, and of 10 or 10½ inches in the waters south and west of that point—that is to say, having two grand divisions only; what do you think of it?—A. A size limit of 9 inches would practically put us all out of business. The size limit on the Straits is not observed, and if it were, as I said before, we could not do business. Other localities I cannot speak about.

Q. Is there any reason for having a smaller size limit in one district than in another?—A. Yes, I think so.

Q. Is it in the interest of the lobster fishery that lobsters should be taken before they have reached the age at which reproduction takes place?—A. Having in view our catch for the last five years I cannot see any argument against it.

Q. It has been estimated that it takes nine 7-inch lobsters, which lobsters have never been afforded the opportunity of reproduction, to fill a one pound can. If that is the case what effect must the continued fishing of these immature lobsters have upon the lobster industry?—A. If you protect the berried lobsters as they are caught in the spring the lobster industry will be kept indefinitely in my opinion.

Q. Would you favour reducing the size limit to 7 inches, as has been suggested?—A. I would favour abolishing it entirely.

Q. And shortening the season?—A. Not shortening the season but regulating the traps.

9-10 EDWARD VII., A. 1910

Q. In that case more strictly enforcing the berried lobster regulation?—A. Certainly.

Q. Could a size limit of $10\frac{1}{2}$ inches be maintained in this district without detriment to the lobster industry?—A. No.

Q. Would you think it right, where the live lobster industry could be carried on, to fix the size limit at 10 or $10\frac{1}{2}$ inches? That is to say where that industry could be carried on should it be encouraged?—A. I am not conversant with the conditions of that industry and cannot give a satisfactory reply to the question. I would have to take a broad view of the matter from the standpoint of the canners and the fishermen.

Q. The statement has been made authoritatively that a strict enforcement of the 8-inch size limit, together with the assistance of hatcheries and pounds, would perpetuate the lobster industry?—A. Not in this district.

Q. It has been stated by some one that 30 per cent more lobsters in number are required in the fall than in the months of May and June to fill a one pound can. Is that true?—A. Yes, I believe there is something in that. I should think 30 per cent would be a fair estimate.

Q. Is it the case that canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen?—A. Undoubtedly.

Q. Have the regulations for the protection of the lobster ever been observed in this district?—A. For the protection of the lobster after the season or when it is undersized?

Q. Generally with regard to size and season?—A. After season they have been protected but as regards size limit they have not been.

Q. Nor with regard to berried lobsters?—A. Other than the establishment of a hatchery, that has protected them to a certain extent.

Q. Are the existing penalties sufficient to deter the packer from violating the regulations if enforced?—A. They are not.

Q. In the event of persistent violation of the regulations would the preservation of the industry call for the cancellation of the offender's license to can?—A. I hardly think so.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further licenses be discouraged?—A. I think it should. I mean that to-day there are certain men of capital who are able to employ a certain number of fishermen and who are able to put on the market a good product. Heretofore small packers have ruined the market for lobsters, ruined the conditions of sale, and we have had a very great deal of bad lobster in the market which tends to lower the price; but within recent years conditions are much better. I believe this is on account of curtailing the licenses, and the fact that more interest is taken in the quality of the product by packers.

Q. We find that a gentleman is sent out by some large buyers and financiers in Halifax who makes a sort of inspection at the canneries in this neighbourhood?—A. I believe that system is a good one.

Q. That is not a national system of inspection, that is done by the buyers in their own interest?—A. Yes, to protect their own interest. I believe that has worked out good.

Q. Would you, in the interest of the lobster industry, favour a general closing down for some years?—A. Basing my opinion on the catch of the last five or six years I would not.

Q. The Lobster Commission of 1898 recommended that temporary reserves should be established in various sections along the coast where fishing should not be allowed for a number of years, the location of such reserves to be changed from time to time; what do you think of that?—A. I would not think that practicable.

Q. During what period of the open season is lobster fishing most actively prose-

SESSIONAL PAPER No. 22a

cuted?—A. In our district here from the July 15 to the close of the season. In Nova Scotia, of course, from the commencement of the season until June 1.

Q. Is the present regulation regarding the close season satisfactory?—A. It is with respect to two of my canneries here, but I think as regards the cannery on the Baie Verte side the line from Indian Point across to the Island shore is in the wrong place. I think it should run up the middle of that bay. That would give the same season to this factory, two miles away, as we have here. I think that regulation should be changed.

Q. Would you venture to say that division should extend to the line between the provinces; should not the natural division be the boundary between New Brunswick and Nova Scotia?—A. I rather think that should be, the provincial line.

Q. What would you think of a complete change of season here? Indications point to the fact that lobsters come in from either end of the Straits. What would you think of having a season from 15th July to the end of September in order to protect the berried lobsters? That would give practically the same fishing season?—A. With a view of protecting the berried lobsters I believe that would be a good move, but from the packers' standpoint I think the season is all right as it is.

Q. A season beginning on 15th July would be practically after the spawning season?—A. If the lobsters have spawned you could protect the berried lobsters in that way, but from the packers' standpoint I would prefer to have the season as it is. I think we would have perhaps too much of a catch in the fall, and the worms I think would chew up all our traps. I do not know as to that, but you hear some of the fellows who steal lobsters after the season is closed say the worms chew up their traps. They have to bring them in and dry them every month.

Q. Would you favour a universal close season for the whole Atlantic from July 15th to January 1st following, or have such a season from July 15th to January 1st north of Cape Canso, and from July 1st to January 1st west and south of Cape Canso, with a larger limit in the latter division than in the former, that is a larger limit from Canso south and west?—A. That is a pretty peculiar question to answer offhand, I would not care for that as a packer.

Q. It has been asked that fall fishing be allowed in some districts owing to the delay caused by ice in the spring. What would you say to that?—A. It has never been tried here, the experiment has never been made.

Q. We have September fishing in the Magdalen Islands?—A. There are some very severe storms in the fall of the year which would destroy the fishermen's gear. I hardly think that practicable around here.

Q. Is the present regulation restricting the number of canning licenses satisfactory?—A. To me it is.

Q. Are you in favour of limiting the issuance of licenses to pack and if so what limitation would you suggest, or would you favour issuing a license to every one competent to pack?—A. I certainly would not. I would only issue licenses to those that could invest a certain amount of capital, employ a certain number of fishermen and put up a satisfactory product.

Q. Would it be right or profitable to establish a standard of fitness to can? You would have to do that would you not?—A. Yes, you would have to do that to satisfy me.

Q. How would you establish that canning fitness?—A. The applicants would have to make a report to the department, I suppose, as to what they are able to do and how many fishermen they could employ. I would not make it less than 20.

Q. That would be 10 boats?—A. No, 20 boats.

Q. You would cut out a great many small operators?—A. It is time they were cut out.

Q. Should not the product of the canneries be subject to inspection?—A. It might be as well.

Q. Would it not be in the interest of the consumer that some official inspection

9-10 EDWARD VII., A. 1910

should take place?—A. I think it would be a good move to have government inspection.

Q. Where there are a great many canneries the product, judging from appearances, cannot be up to standard?—A. No.

Q. Would you refuse a canning license to an alien?—A. Burnham and Morrill, and the Portland Packing Co. are competitors of mine. I would treat them the same as we are treated in the United States.

Q. Do you think the fishermen could make more money if they were allowed to can?—A. They were allowed to can here before and they all gave it up. I think they are in a better condition to-day than they ever were.

Q. What do you think of the policy of encouraging fishermen to co-operate in canning?—A. I think it would be a very poor policy.

Q. Are there any such canneries in this district, and if so how have they succeeded?—A. There are none here.

Q. How is the price of lobsters established here?—A. By market conditions at the time of hiring the fishermen.

Q. Do you think the fishermen are getting their fair share of the profits of the industry?—A. Undoubtedly I do, they are getting the biggest share.

Q. Are you aware of any complaints made by fishermen that the price paid to them by canners is not satisfactory?—A. Only what I have read in the papers about that Cape Breton insurrection.

Q. Is it the case that fishermen have lost their catch of lobsters by canners refusing to accept them?—A. I believe it was the case in Gabarouse, was it not?

Q. It has been alleged that in some cases fishermen have suffered injury by the failure of canners to operate their factories although a sufficient supply of lobsters was available. Has any such instance as that come under your notice?—A. No, none.

Q. It has been asserted that if the catch of lobsters were further lessened or curtailed the canners would have to shut down?—A. If it were curtailed by severe restrictions we would have to close.

Q. What market would the fishermen in this district have for their lobsters if the canneries were closed?—A. They would have no market in this district unless they could sell to the canner, or pack themselves.

Q. Which do you consider the most remunerative to the fishermen and the least likely to deplete the lobster industry, the live lobster trade or the canning?—A. I think the live lobster trade is the most remunerative to the fishermen.

Q. It certainly would be so with a 10 or 10½-inch size limit?—A. Yes.

Q. Are any live lobsters shipped from this neighbourhood?—A. No.

Q. Should the shipment of live lobsters be favoured in preference to the canning industry?—A. Not in this district. The shipment of live lobsters is not practicable in this district.

Q. Are the facilities not adequate here for the profitable handling of the live lobster trade?—A. Not here.

Q. From your experience can you say whether hatcheries have helped to maintain the supply of lobsters or not?—A. I believe the hatcheries have done a certain amount of good though I would favour, where hatcheries are operated, impounding the female lobsters in crates until the eggs are ready to be taken off. Then these female lobsters should be taken direct to the hatcheries and the eggs removed by the inside hands within the hatchery, and the female lobsters liberated.

Q. Then you would favour taking the female lobster alive to the hatchery and stripping her eggs there?—A. Not until the eggs are mature enough to strip. According to my idea there are certain stages of ripeness. When the eggs are mature and in a fit condition to strip I think that is the proper time to remove them.

Q. Do you think that a large number of eggs are now stripped when they are not mature?—A. I believe there are.

Q. Do you believe that any considerable percentage of the eggs is lost or destroy-

SESSIONAL PAPER No. 22a

ed in transit from the cannery to the hatchery?—A. A great number. The hatchery at Shemogue is a fiasco.

Q. Would you have any objections to stating the reason for that view? We have heard a good deal along this coast about that hatchery and I will, as an officer of the department, call attention to what I have heard.—A. I would hardly like to make any charges in this way. There is a great site at that hatchery for keeping crates in the harbour.

Q. We have been told there is a possible site near the harbour for a pound, is there any place there?—A. I don't believe there is enough water there although there may be.

Q. Is there a narrow opening, with a lake, or a lagoon or a pond inside, that could be fenced off? It requires a considerable area to hold a large number of lobsters and the water must not be too warm or too shallow?—A. I could not say as to that. I do not think that is a good spot, as far as I can see, although it possibly may be. You would have to get Mr. Baker down here to make an examination.

Q. You have made a suggestion which you think is still further calculated to improve the efficacy of the hatcheries?—A. Yes, removing the spawn at the hatchery at the proper time.

Q. Would it not be possible to take them at any time as they are caught and hold them in crates at the hatchery?—A. At the hatchery. If I said cannery I meant hatchery.

Q. Would you recommend an increase in the number of hatcheries?—A. Where pounds are not practicable I would. As far as I have read, the system of pounds is the best method of breeding lobsters, it is the natural method.

Q. Where it is practicable?—A. Yes.

Q. The policy contemplated by the departmental regulations is the taking of the large lobsters and permitting the small ones to escape. What procedure is best calculated to carry out this object?—A. Regulate the distance between the laths in the trap, have government inspection in the spring of the year before the traps are put into the water. That is all the size limit regulations we want in this country.

Q. You think a sufficient number of small lobsters will escape if the openings in the traps were made larger?—A. No packer wants a four or five-inch lobster.

Q. Such lobsters cannot be profitable?—A. No. No packer wants to be bothered with them. To regulate the traps is the only solution I can see of it.

Q. The creation of a Fisheries Board to advise the department in regard to the fisheries of the maritime provinces has been suggested. Would you approve of the idea?—A. I certainly would.

Q. Such a board should be composed of those interested in fishery work?—A. Yes, undoubtedly and be local men if possible.

Q. There would have to be minor boards, and delegates sent to the central board I suppose?—A. Possibly.

Q. Is there any other matter connected with this inquiry upon which you would like to express an opinion?—A. I think you have covered everything pretty fully as far as I am concerned.

Witness discharged.

JOB TRENHOLM, canner, Port Elgin, N.B., called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. I have been packing for 20 years now.

Q. Do you ever fish for lobsters?—A. I have fished this year occasionally.

Q. Where do you pack?—A. I pack at Northport, in Nova Scotia.

9-10 EDWARD VII., A. 1910

Q. You do not pack in this county?—A. I am packing here now. When the season is over there I come over here.

Q. You have a license in each place, have you?—A. I am packing at Hampton Allen's, in his cannery.

Q. Then you are managing the thing for him?—A. Yes, for him.

Q. How long have you been packing here?—A. On and off for about 8 years.

Q. Would you rather testify as to the conditions of your cannery in Nova Scotia than here?—A. It is in Nova Scotia where I am most interested, but I am interested in a general way here as well as in that province. I live in New Brunswick.

Q. How many boats do you employ in your own factory?—A. Eight boats.

Q. And how many in the one here?—A. Six.

Q. Do you own any gear?—A. I own the gear of two boats here. The rest I buy from.

Q. How is it in Nova Scotia?—A. I own four boats and buy from three.

Q. How are the men that fish your own boats paid?—A. They are paid so much a hundred and found everything.

Q. What number of hands do the boats have, two men to a boat?—A. No, sir, one to a boat on a average. Occasionally there would be two in a boat now and then.

Q. How many traps do they fish to a boat?—A. A single boat 300 to 325 traps.

Q. What number of hands do you employ in the cannery, men, women and children?—A. I have about four girls and three men and boys.

Q. How much did you pack in your Nova Scotia cannery?—A. 140 cases this year.

Q. And last year?—A. I packed nearly 300 cases.

Q. What was the largest pack you ever made in that cannery?—A. 400 cases.

Q. What do you attribute your small pack of this year to?—A. I could not say.

Q. You did not get the lobsters?—A. I did not get the lobsters, that is all I can say. The fish were not there.

Q. Are you fishing more gear now than you used to fish?—A. More gear than I used to fish 10 or 15 years ago.

Q. Would you venture to say it requires more gear to keep up the same pack than it did 20 years ago?—A. Oh, yes, as much again.

Q. Then you have doubled the amount of gear?—A. Doubled the amount as compared with 20 years ago.

Q. Are you packing smaller lobsters than you were 20 years ago?—A. I think so.

Q. What is the best time of the fishing in Nova Scotia?—A. The best time is from the middle of July to the 1st of October. From Pugwash up to Baie Verte.

Q. What, in your opinion would be the best time to fish?—A. From the middle or 20th July to the 20th October.

Q. Is not the weather too rough then?—A. It is not rougher than it is in May.

Q. Would your gear not be destroyed to a greater extent by fishing in the month of August?—A. Yes, to a greater extent, but the amount of fish would more than make up for it.

Q. What is the principal spawning time of the lobster?—A. It is in June.

Q. And you think that by fishing in the season named you would take no spawn lobsters?—A. Yes, sir, there would be no spawn lobsters taken.

Q. And the fishery would be improved by that season?—A. I think so.

Q. What is the average number of spawn lobsters that you take in Nova Scotia where you are fishing; how many out of every hundred would be lobsters with berries?—A. I could hardly say. I have taken lobsters when you would hardly see one at all. At other times there may be ten to the hundred.

Q. Do you think that the female lobsters spawn at the same time in the same season in Nova Scotia as they do here?—A. Yes, they do from Pugwash up, but from Pugwash farther down they spawn later. They spawn earlier up here than they do down Pictou way; that is what I have been informed.

Q. In what depth of water do you fish?—A. From 4 to 7 and 8 fathoms.

SESSIONAL PAPER No. 22a

Q. And how far off shore will that be?—A. From half a mile to three miles.

Q. Do you notice any difference in the quality of the lobsters you get in shoal water as compared with those taken in deep water?—A. I don't know that I do. The lobsters in shoal water shed their shells earlier.

Q. Do you get more female lobsters in shoal water than in deep water?—A. No, I don't think it.

Q. Is there any particular bottom that the female lobster likes to keep on?—A. Yes, I believe there is.

Q. What sort of bottom would you say?—A. I could not say, but I saw one boat land more female lobsters than another. I think it was on rocky bottom.

Q. What is the smallest lobster you ever saw with berries attached?—A. About 7 inches I think.

Q. What size would the majority be?—A. From 7 to 10 inches.

Q. Do you think there is any part of the season when lobsters are not fit for human food?—A. Just after they have shed I think. When they are soft shelled they are not very good.

Q. Does the boat from the hatchery run to where you are canning?—A. No, sir.

Q. Then what is the regulation with regard to berried lobsters?—A. We throw away what we can and some we put through.

Q. Are you obliged to receive them from the fishermen; do the fishermen expect you to receive them?—A. Yes, they expect us to receive them.

Q. Would you lose your fishermen if you did not accept them?—A. I do not know that I would because there are very few anyway; they don't amount to much.

Q. Is the practice of stripping or washing the eggs off the berried lobsters followed by the fishermen in your neighbourhood at all?—A. Not that I know off. I don't believe they do that.

Q. Do the canners make any objection to receiving berried lobsters?—A. Some do. I have refused them sometimes myself; I told the fishermen not to bring them.

Q. Do you think the fishermen would be more apt to sell his catch to the canner who is willing to take illegal lobsters?—A. I hardly know. He would be very apt to.

Q. We have heard canners say they have been obliged to take illegal lobsters otherwise they would lose their fishermen?—A. It would have a tendency that way.

Q. What would happen if the canner did absolutely refuse to take berried lobsters, would the fishermen put them back in the water?—A. Well, I suppose they would.

Q. Do you think they would?—A. I think they likely would if they could not sell them anywhere else.

Q. You think the fishermen would strip these lobsters?—A. They would be very apt to.

Q. As to the size limit of 8 inches, what is the practice?—A. The practice is to take all you can get hold of.

Q. Are you obliged to do it?—A. Obligated to do it to keep the thing running.

Q. What would happen if the law were strictly enforced and no one was allowed to can anything under 8 inches?—A. I don't think one factory out of 50 would be able to run. They would be closed.

Q. What proportion of the lobsters taken is under the 8-inch size limit?—A. Well, I never measured them.

Q. Have you formed no estimate for yourself; we don't want to tie you down to anything absolutely exact?—A. This time of the year there would be very few under 7 inches. Along from June they are small; there is a smaller run of fish.

Q. In June you would get a larger percentage of small fish?—A. Yes.

Q. Do you understand that berried lobsters should not be taken?—A. Yes.

Q. Do you think it is right to take the small lobsters?—A. Well, if they are under 7 inches there is not much profit in packing them.

Q. But apart from the profit, do you not think that ultimately the practice of

9-10 EDWARD VII., A. 1910

taking berried and small lobsters before they can breed at all must have a bad effect upon the fishery?—A. I think so.

Q. So you think if the size limit were strictly enforced it would close down most of the canneries?—A. Sure.

Q. What is your opinion of the present system of licensing canneries, do you think there are enough canneries licensed at present?—A. I think likely there are.

Q. Do you see any reason why any man who is competent and has the means to pack, should not have as much right to get a license as another?—A. I don't know that there are any reasons why he should not, but I know that people ruined themselves from packing lobsters. Before they went to pack they sold their fish and did all right. They made a little money then and thought there was such a fortune in it that they went into the packing. The result was it ruined them. Since that they have been fishing and selling their lobsters.

Q. Do you think the average fisherman would do better selling his lobsters than canning them?—A. I think the average would.

Q. Still among the fishermen there will be young men of enterprise and ability. Do you think the department would be justified in encouraging a number of young men who wish to club together and get a license to can, provided they could show they were able to carry on the industry properly?—A. I believe they would.

Q. Has there been a noticeable decline in the average size of the lobsters caught in your district since the early days, say 30 years ago?—A. Oh, yes.

Q. Do you think that decline has reached its limit?—A. Well four years ago this summer it was very slack fishing in Nova Scotia compared with this summer down where I fished, but three years ago we had a good catch.

Q. I suppose with lobsters it is the same as with every other fishery, you have good years and bad years? You must always expect that from the conditions of weather and one thing and another?—A. Yes, we must expect that.

Q. Would you favour any change in the present lobster season?—A. Yes, I would suggest beginning fishing July 20 and continue fishing until October 10.

Q. Do you think it would take a larger number of lobsters to fill a pound can in September and October than it would in May and June?—A. Yes, because in June you know the lobsters are very full.

Q. But if you fish during the season you have suggested you would not commence until after the lobsters have done spawning?—A. No.

Q. And your theory is that is the best way to protect the lobsters?—A. Yes, that is my theory.

Q. But that would only apply to this district?—A. From here to Pugwash. We want the same season in Nova Scotia down as far as Pugwash that they have here because it is runious down there the way our season is. I wrote several letters when the other Minister of Marine was in, asking for that change. I wrote several letters to Mr. Préfontaine and he promised to send down a commissioner to hold a meeting but he died before anything was done.

Q. How far is Pugwash from here?—A. About 20 miles south. You see it is the same waters from here to Baie Verte as it is from Pugwash on the other side of the division line.

Q. Within your recollection were the regulations ever strictly enforced?—A. Oh, no, they have not been, we all know that. If they were strictly enforced the canneries would be all closed long ago.

Q. If the regulations were strictly enforced they might make slack times for a few years, but would not the industry eventually pull up again? The enforcement of the regulations is with a view to improving the conditions?—A. I think likely it would, but in my opinion what would have the most benefit would be a change of season so as to let the lobsters cast their spawn before you handle them at all.

SESSIONAL PAPER No. 22a

Q. There are many places on the coast where you could not fish in the fall but here you have comparatively sheltered water?—A. Yes.

Q. What in your opinion has been the cause of the decrease in the supply of lobsters?—A. Overfishing.

Q. Have you formed any opinion as to the number of lobsters it takes to fill a pound can?—A. To fill a pound can it takes from six to nine.

Q. To which cannery are you referring?—A. It is about the same in both canneries that I am interested in.

Q. Would you favour reducing the size limit to 7 inches?—A. Yes.

Q. Do you think if the size limit were reduced, the fishermen and cannery would be more apt to observe that regulation and refuse everything under 7 inches?—A. I think they would.

Q. What would you say of a regulation abolishing the size limit and making the season a little shorter to compensate for that? You know the size limit is not observed?—A. I know it is not observed. As to the size limit I hardly ever see a lobster under 6 inches. It is rare that I ever see one where I fish, but they tell me in other localities there is an immense number under 6 inches.

Q. That is a big lobster in some places?—A. Yes, but where I fish I rarely see less than a 6-inch lobster.

Q. Is it the case that cannery are compelled to accept undersized and berried lobsters for fear of losing their fishermen?—A. I think so.

Q. What weight of green lobsters does it require to pack a case?—A. Would that mean the season through?

Q. At various times if you like?—A. From May to July 1 it will average about 195 pounds, something like that. Then from July to October it will average 215 or or 220 pounds.

Q. It has been suggested that it would be a good idea to require the fishermen to take out a license for each boat. Do you think if they did that they would be more apt to observe the law?—A. I would not think it would be advisable to license their boat.

Q. Do you think it is wise to allow every canner to fish as many boats as he pleases, or would you limit the number of boats fished by him?—A. Yes, I think I would limit the number of boats fished by a canner.

Q. What would be a fair limit?—A. About 10 or 12 boats.

Q. You do not think a canner should fish more than that?—A. No, I don't think he should.

Q. Would you limit the number of traps fished by a boat?—A. Yes, to 325.

Q. Have the regulations for the protection of the lobsters ever been observed?—A. Not strictly.

Q. What would be the effect of strictly enforcing the present regulations?—A. The effect would be that no canneries could run.

Q. Do you think the existing penalties provided by the law are sufficient if they are enforced?—A. Yes.

Q. What would you think of a general closing down for a number of years with a view to letting the fishery improve in the meantime?—A. I don't think it would be advisable.

Q. Instead of that, some people have proposed to close down in sections, to shut off certain parts of the coast and to keep changing the location of those sections?—A. I have thought it would be a good move to permit fishing every other year and give a longer season. By doing that they would get a good many fish and next year they would not go to any expense, they could carry on something else.

Q. What would the fishermen do in the meantime?—A. They would go farming.

Q. The men who fish lobsters are not regular fishermen, they fish lobsters and nothing else?—A. Nothing else, that is the majority of them around here.

9-10 EDWARD VII., A. 1910

Q. During what part of the season is the lobster fishery at its best?—A. About September.

Q. Do you think the product of the canneries should be inspected in order to see that the lobster meat is put up in a proper way?—A. I don't think that is necessary.

Q. How does the price paid the fishermen now compare with that paid when you first became connected with the industry?—A. The price is now about three times what it was when I first commenced, or more. When we first began, the price was 40 cents a hundred, the fishermen finding their own boats and boarding themselves. During the present season we have been paying from \$1.25 to \$1.50, finding them boats, board and everything.

Q. Are the fishermen making more money to-day than they did then?—A. Well, some do and some do not.

Q. The majority of them do?—A. No, I don't know that they do.

Q. Are you aware of any complaints made by fishermen that the price paid for lobsters by the canners is not satisfactory?—A. Not around this locality.

Q. You do not know of any serious complaint?—A. No.

Q. Is it to your knowledge that fishermen have ever lost their catch of lobsters by the canners refusing to accept them?—A. No.

Q. It has been alleged that in some places the fishermen have suffered injury by the failure of canners to operate their factories although a sufficient supply of lobsters was available; do you know of any such instance as that?—A. No, I do not know of any such instance.

Q. Supposing the canneries were closed would the fishermen find any market for their lobsters?—A. No, I think not, or only for a very small portion of them.

Q. Which branch of the lobster industry do you think is the most remunerative to the fishermen and the least calculated to injure the fishery, the canning or the live lobster trade?—A. The canning in our section.

Q. Have you ever known live lobsters to be shipped to the market from your district?—A. No.

Q. Are there any facilities to enable live lobsters to be shipped?—A. They were trying to do it this spring but they failed.

Q. Where?—A. From Port Elgin to Boston.

Q. They ship live lobsters from Shediac?—A. Yes, but it is more direct there, and they have a better opportunity.

Q. There is no chance to do it here because there are no facilities?—A. No.

Q. Do you think the hatcheries are helping to keep up the supply of lobsters?—A. I would suppose they are but I don't know because I was never in one.

Q. What would you think of buying the berried lobsters from the fishermen and putting the lobsters in pounds to hatch out themselves?—A. I think that would be too expensive.

Q. Do you know of any place where pounds could be established?—A. No, I do not.

Q. Would you recommend an increase in the number of hatcheries?—A. Yes, provided the season stands as it is.

Q. But you prefer to see the season changed?—A. That is my idea.

Q. Is the trap at present in use the same that you always fished with?—A. About the same.

Q. But you use the parlour traps?—A. Yes, we have been using them for 10 or 15 years.

Q. Why did the fishermen adopt that trap?—A. Because it was the best I suppose.

Q. In what respect, does the parlour trap keep the lobsters better?—A. I don't know what you mean by the parlour trap.

Q. You call it the wheeler trap?—A. Down in Nova Scotia they have what they call the jail trap, one head more.

SESSIONAL PAPER No. 22a

Q. With an opening in the side?—A. Yes, an opening in the side. They claim they are better than the wheeler traps.

Q. Are the slats not put closer together than when you began to fish at first?—A. Very little.

Q. Do you think that a larger percentage of small lobsters would escape if the slats were kept a little farther apart?—A. Sure.

Q. Would you advocate requiring the slats to be put farther apart?—A. Yes.

Q. Have you anything further to say?—A. If the season in New Brunswick stands as it is, I would prefer for the division line to extend from Pugwash to Crapaud on the Island instead of from Indian Point to Crapaud. Northport is 10 miles west of Pugwash bay. From Pugwash down the straits there is about 75 or 100 miles in the spring of the year that are literally filled with traps so that it is almost impossible for lobsters to get up to Baie Verte, the season opens so very late. As soon as the ice is clear the Straits are filled with traps and you seem to have no chance up there of getting the fish until after they have shed. Then there is good fishing at Northport. Two years ago they got up a petition from Pugwash down to River John to have the season changed, beginning in the middle of July. I think another petition was sent in opposition to that. Some of those against it thought it would be ruinous. That was about three years ago.

Q. Do you think the lobsters that enter this portion of the Straits come up from either end of Prince Edward Island?—A. Yes, I do.

Q. And they come here to spawn?—A. Yes. Four years ago this summer at Northport the lobster fishing was very slack until after the lobsters had spawned. After the lobsters had spawned they came in there and there was any amount of them. The next spring we had good fishing. That was three years ago. They come in after they have spawned and that shows me they come in from outside somewhere. All through the Straits that summer it was a very poor summer. There is an immense amount of spawn destroyed, but if the fish were allowed to deposit that spawn in the sea it must have a tendency to increase the fishing.

Witness discharged.

Commission adjourned.

PRINCE EDWARD ISLAND,

TIGNISH, July 30th, 1909.

CHARLES McINNIS, fisherman, Tignish, called and sworn:—

By the Commissioner:

Q. How long have you been fishing?—A. About 18 years now, I think.

Q. Have you always been engaged in lobster fishing?—A. Ever since I started.

Q. Do you do any other fishing?—A. Mackerel or cod sometimes.

Q. At what part of the coast do you carry on your fishing?—A. Out of Tignish harbour.

Q. Have you always fished in the same place?—A. No, I fished farther up the shore, about two miles farther.

Q. Have you any union of fishermen in this locality?—A. No, sir.

Q. Are you fishing lobsters this present season?—A. Yes, sir.

Q. For whom do you fish?—A. The Portland Packing Co.

9-10 EDWARD VII., A. 1910

Q. On what lay do you fish, do you own your own boat and gear?—A. My own boat and gear.

Q. Have you always fished your own boat and gear since you first began fishing?—A. I fished three years when I started first with another man's gear.

Q. Do you fish off shore into the gulf?—A. Yes, sir.

Q. How far off shore do you fish for lobsters?—A. About two and a half to three miles.

Q. In what depth of water?—A. About 13 fathoms.

Q. What number of traps do you fish?—A. 250.

Q. That is divided into how many trawls?—A. Into five.

Q. What is the least water you fish in?—A. About two fathoms.

Q. Do you run your trawls off shore or parallel to the shore?—A. Parallel to the shore.

Q. Do you suffer much loss of gear here?—A. Yes, very much.

Q. In the early spring particularly?—A. In June, about the middle of the season is the worst.

Q. How much of the gear have you to renew every year?—A. Some years I have to renew about 150 and 200 traps.

Q. What is the life of a trap?—A. Not over about two or three years.

Q. What is the lowest value you place on a trap, counting the trawl, gear and everything?—A. It is worth a dollar.

Q. Are there many other fishermen engaged in the industry in your locality?—A. Oh, yes, quite a number.

Q. Could you venture to give us a rough estimate of how many fishermen are engaged in fishing lobsters around this coast, with their own gear or without?—A. There are 60 to 80 boats and there are two men in each boat.

Q. Do you fish throughout the season in the same depth of water?—A. No, after about half the season we move inshore.

Q. And is that the practice of all the fishermen?—A. All the fishermen.

Q. Do they move inshore as the season advances?—A. Yes, sir.

Q. Have you always fished the same number of traps?—A. Well, not always, it is just this last few years I have increased the gear.

Q. To keep up your catch have you found it necessary to increase your gear?—A. Well, although we increased our gear this year we did not keep up anything like it.

Q. On the whole, going back to the time that you first began fishing how has the catch been?—A. I don't see much difference, not much difference at all.

Q. You think you deliver the same weight of lobsters now that you did when you first began to fish?—A. Yes, I think that last year and the year before I landed more than others.

Q. With the same gear?—A. The same gear.

Q. And is that general with the fishermen?—A. Oh, yes, that is general.

Q. Are the lobsters as large as when you began to fish first?—A. I don't see any difference, just about the same run of lobsters.

Q. Has the total number of traps increased in this district?—A. Oh, yes.

Q. There are many more fishermen?—A. Oh, yes.

Q. Has the number of traps fished doubled from what it was when you commenced?—A. Oh, yes, it has doubled; I suppose it has trebled in 18 years.

Q. Is there any difference between the trap you fish now and the one you used when you first began to fish?—A. Oh, yes.

Q. You fish what is called the parlour trap or the wheeler trap?—A. We call it the parlour trap.

Q. What led to the introduction of the parlour trap; why is it used in preference to the other?—A. It holds the fish, that is the idea.

Q. Are the slats placed closer together now than when you first began to fish?—A. I think they are a little.

SESSIONAL PAPER No. 22a

Q. Do you take much smaller lobsters than you did when you first started fishing?
—A. Not on this shore.

Q. When do you commence to fish here?—A. This year we commenced the 26th April and fished until the 10th of July.

Q. Do you fish right up to the end of the season as a rule?—A. Oh, yes, we always do.

Q. What is the size limit here?—A. There is no limit here; we take the lobsters any size at all.

Q. What about berried lobsters?—A. We have to throw them out.

Q. Are they thrown out?—A. Yes, this year.

Q. This year they have been thrown out for the first time?—A. The first year, yes.

Q. Before that were the berried lobsters brought in?—A. Yes, sir.

Q. The canners used to take them?—A. Yes.

Q. But they refused to take them this year?—A. Yes, they did.

Q. Is the practice of stripping the eggs off the berried lobsters followed here at all?—A. Not that I know of at all.

Q. Do the majority of the fishermen own their own boats and gear?—A. Oh, no.

Q. Most of them fish for the factory here?—A. Yes.

Q. How do the fishermen that own their own boats and gear sell their lobsters?—
A. They get \$2.50 per hundred weight this year. Last year they got \$3.50.

Q. There was a drop of \$1 in the price?—A. Yes.

Q. What caused that drop?—A. I don't know. I know just a little way down where they have been paying \$4.25 this year right along, in Richmond bay. At Egmont bay they are paying \$4.25 yet, the season is still on.

Q. And from this point down how is it?—A. They only got \$2.50.

Q. What sort of bottom do you fish on?—A. Rocky bottom.

Q. Do you find that the bottom makes much difference?—A. Oh, yes.

Q. You find more fishing on——A. Rocky bottom, sure.

Q. What is the best fishing month for you?—A. As soon as we can get our traps out. The earlier in April we go the better fishing we get.

Q. At what time of the fishery do you find most female lobsters with eggs attached?—A. Well, this year along about the 1st of June, along in June, they were the most.

Q. And how about other years?—A. In other years it would be generally about the first of the fishing we would find more berried lobsters.

Q. Where do you find them, on the outside shore?—A. On the outside shore.

Q. Do you find more of them in shoal water?—A. Oh, yes, you get more of them in shoal water.

Q. At what time of the year do the lobsters spawn here?—A. All seasons of the year.

Q. That is they have spawn on them at all seasons?—A. Yes.

Q. Do you notice that on the lobsters about to spawn the eggs are riper?—A. Yes, certainly.

Q. And do you find some fish that have spawned?—A. Yes, lots of them.

Q. At what time do you find them with the ripe spawn? Some of the lobsters carry their spawn all the year round, do they not?—A. They do.

Q. You get them with the spawn in the fall as well as in the spring?—A. They don't allow themselves to spawn in the fall.

Q. How does the price now paid for lobsters compare with that paid when you first began to fish?—A. It is just about the same as when I first commenced.

Q. When you first commenced here eighteen years ago what price did you get?—
A. Then I got, I think, \$1.50 or \$1.75 a hundred.

Q. Is there any competition in the matter or are you forced to accept the price you get?—A. We are forced to accept the price we get.

Q. You have got to take the price or leave it?—A. Yes, sir, sure.

9-10 EDWARD VII., A. 1910

Q. Do you think there is any combination on the part of the packers to keep the price down?—A. I think there is.

Q. Do you take to the factory everything you catch?—A. Yes, sir.

Q. And the canners take what you bring them?—A. Always until this year. We threw the spawn fish away this year.

Q. You expect the canner to take all you bring to him?—A. Sure.

Q. Regardless of the size or anything else?—A. Yes, sir.

Q. And you say there is no size limit here?—A. No.

Q. And there has never been any?—A. There was, some years ago.

Q. What was the size limit that was established?—A. It was 9 inches.

Q. It was 9 inches at first and later on 8 inches?—A. Yes.

Q. And that size limit has never been enforced?—A. Not in my time.

Q. Do you not think it is wrong to destroy the female lobsters?—A. Sure.

Q. Along with the young lobsters that have not reached the age at which they will reproduce themselves?—A. Yes, sir.

Q. How can you expect to keep up the supply of mutton if you kill off the lambs?—A. I think if the spawn fish are not allowed to be landed but are allowed to mature, that will be sufficient to keep up the lobster industry here. I know if I could get all the spawn on one lobster for a season after they all matured, I would be quite satisfied.

Q. What is your average catch, how many tons do you deliver?—A. From 22 and 23 down this year.

Q. You are selling them by weight?—A. Yes, by the hundred pounds.

Q. How many hundred weight have you delivered at the factory in your best catch?—A. Somewhere about 23 hundred weight.

Q. I mean in a season?—A. Oh, in a season? Well about 23,000 would be about the best.

Q. From your observation as a fisherman what do you think is the spawning season of the lobster?—A. About June.

Q. Do you find more spawn on the lobsters in that month than you do at any other time?—A. I think so.

Q. Is there any time when the lobsters are not fit for food?—A. Yes, about the 1st July and along there.

Q. That is when they cast their shell?—A. Cast their shell.

Q. What is the smallest size at which you have ever seen a female lobster with eggs on her?—A. About 8 inches I think. I have seen them as small as that.

Q. Not less than 8 inches?—A. No, I don't think so.

Q. What size would the female lobsters with eggs on them run on the average?—A. About 10 inches.

Q. They are generally good full fish?—A. Yes.

Q. What proportion would they bear to the total catch, how many out of every hundred lobsters would be females with eggs?—A. Not over five or six.

Q. What would you think of the proposition to require fishermen to take out a license—either license the boat or license the fisherman—do you think they would be more likely to observe the law if they were licensed?—A. Not a bit.

Q. Have the canners in this neighbourhood ever objected to accepting berried or undersized lobsters?—A. Never, before this year.

Q. Is it to your knowledge that they ever made any examination at the factories for the purpose of detecting undersized or berried lobsters?—A. I don't think so.

Q. Where large quantities of lobsters are brought and thrown into the factory quickly, would it be an easy matter to cull them over for that purpose?—A. No, it would not be a very easy matter then.

Q. If the canners refused to accept berried lobsters would it have the effect of inducing the fishermen to throw them overboard?—A. Sure.

Q. They did so this year, you say?—A. Yes, sir.

SESSIONAL PAPER No. 22a

Q. Is it the practice to avoid dealing with a canner who is known to be careful on this point and to go to another canner who is less scrupulous?—A. No.

Q. Do you think it would be possible to get the fishermen to return to the water all the berried lobsters they take in their traps? Of course, they do not all do it?—A. As far as we know here they do, because one fisherman looks after the other.

Q. Do you think the fishermen are beginning to realize the advantage of sticking to the regulations as far as they can?—A. I think so.

Q. Do you think it would be possible for the government to buy from the fishermen all the berried lobsters taken in their traps and place these lobsters in pounds?—A. Sure they can.

Q. Do the facilities exist in this district for having pounds? You must have a sheltered place with a free rise and fall of the tide, a certain depth of water and a narrow outlet that can be barred?—A. I think it could be handled here fine.

Q. Where is there a place to establish a pound?—A. There is a place in the wharf that was left to haul in boats.

Q. You want a large space where you could impound a great many thousand lobsters?—A. This is big inside you know. It is a space left in the wharf for pulling boats through.

Q. What depth of water is there?—A. Three feet.

Q. That would not do. We must have at least three or four fathoms of water. It will not do to expose the lobsters to the sun or the heat. You have no hatchery in this neighbourhood at all?—A. No, sir.

Q. What is your opinion about hatcheries?—A. I think they are a great thing.

Q. Do you know anything about the effect of hatcheries?—A. No, sir.

Q. Are you aware of any fisherman having lost his catch of lobsters owing to the refusal of the canner to accept them?—A. Not around here.

Q. In some places the cannery have refused to accept lobsters because more were delivered than they could handle, and on other occasions it is alleged they have refused to accept delivery of lobsters with a view of compelling the fishermen to obey them strictly. That has never happened about here has it?—A. We have had to lay off a day or so here on account of having too many lobsters and not facilities to handle them all.

Q. Do you think the number of boats fished by a cannery should be limited?—A. Oh, I don't know; I don't think so.

Q. You do not think you would limit the number of boats or the amount of gear fished by any cannery?—A. I don't think it makes very much difference.

Q. What do you think of the practice of limiting the number of canneries and only giving licenses to certain persons?—A. Well, I don't think much of that, because the man that wants to go to work and start a factory to make a few dollars out of it is not allowed to do so, he cannot get a license. The bigger fellows get the license; they come around and buy them up year after year; they are buying up all the licenses here. The company owns them all now with the exception of Myrick's.

Q. You think, then, that any man who shows his ability or his fitness to can should get a license? There would always have to be some guarantee of fitness to can because all men are not competent?—A. Certainly not.

Q. What do you think of the idea of allowing fishermen to co-operate in canning?—A. That is all right.

Q. It has been suggested as one way of restoring the fishery to its former good state to close down for a number of years altogether, to stop canning in all directions; what do you think of that?—A. I don't know I am sure.

Q. What would the fishermen in this neighbourhood do if canning were stopped for a term of years?—A. They would have to go back to the farms I suppose, any of them that have farms, or leave the country, and I guess most of them would do that.

Q. Are most of the men engaged in fishing lobsters confined to the lobster industry?—A. Pretty much.

9-10 EDWARD VII., A. 1910

Q. They do not do any other fishing?—A. Not very many.

Q. They are generally farmers?—A. No, there are a lot of them are not farmers.

Q. What do they do when they knock off lobster fishing?—A. They don't do anything so far as I can see.

Q. Do they trust to the lobster fishery entirely for a living?—A. That is about all.

Q. It is an awkward thing to have all their eggs in one basket. The Lobster Commission of 1898 recommended the establishment of temporary reserves, that certain sections of the coast should be shut off from year to year, and allowing other sections to fish, and changing these sections from time to time, the idea being to improve the lobster fishery. What would you think of that?—A. I don't think that would do a great deal of good.

Q. What is your idea of the best regulation to adopt with a view to preserving and protecting the fishery? The lobster fishery is running down, there is no question about that?—A. Well, I think the average catch this last few years, with the exception of this year, has been good.

Q. But it has been made up by catching immature lobsters; you say the size limit here has never been observed?—A. Never.

Q. You surely see the necessity for having some regulations governing the fishery?—A. Well, the only thing I see, if it is carried on right, is to put back all the spawn fish into the water. That is all you want.

Q. And catch the lobsters as small as you like?—A. Yes.

Q. You would put no limit to the size?—A. I would put no limit to the size.

Q. What would you say to abolishing the size limit altogether and shortening the season somewhat but protecting the berried lobsters?—A. That would be all right.

Q. How much could the season be shortened and the fishermen still make a livelihood? The idea of shortening the season is to make up for the fact that you would be taking smaller lobsters and that in the course of a few years the fishery would improve. How much do you say the season could be fairly shortened?—A. Well, take ten days off the last of the season.

Q. That is the ten days in July?—A. And make the season say to the 1st July.

Q. And do away with the size limit?—A. Yes.

Q. Do you think there are any sections of the coast where lobsters should not be fished at any time?—A. No, I don't think so.

Q. Do you think that fishing should be allowed in the inner bays and lagoons where lobsters naturally go to spawn, would you not confine the fishery to places farther off the shore?—A. If the law were carried out there would be no doubt it would be.

Q. The trouble with the present law is that it does not appear to be enforced. I suppose if it were enforced and you were tied down strictly to an 8-inch limit you could not continue fishing?—A. Yes, certainly I could.

Q. Would you get enough lobsters to pay you for fishing?—A. I don't say we would get enough to pay us but when a man gets his living that way——

Q. What would happen to the canneries if they were tied down to an 8-inch limit on this coast. Most of the canners we have come across say that if restricted to that size limit they would have to shut down because they would not get enough lobsters to continue packing profitably?—A. They tell me on the west side here they get a smaller lobster than we do.

Q. From what we have heard there are factories where they do not see a lobster which is up to the size limit. What would be your idea? You have told us that you would do away with the size limit and shorten the season?—A. Yes.

Q. Do you think that would be acceptable to the majority of the fishermen?—A. I think so.

Q. Do you think the fishermen would have no right to complain if that regulation was enforced say on the north side of the Island?—A. No.

Q. And what do you think of fishing in shoal water and lagoons?—A. Those are

SESSIONAL PAPER No. 22a

places that the lobsters go into, hatch out and come out again. Certainly in those places it should be stopped.

Q. Do not the lobsters go back into deep water in the winter?—A. They tell me they can get lobsters in most places in winter time.

Q. Any quantity of them?—A. No, I have not heard of a quantity, I have heard of fishermen catching them.

Q. How would you determine the fitness of an applicant for a canning license; supposing we decided to issue a license to can to every applicant who considered, and was able to show, that he could conduct a canning business properly, how would you fix that matter?—A. It is a pretty hard question for me to answer.

Q. Would the fishermen here find any market for their lobsters if the canneries were closed? In some places there is the live lobster trade?—A. There could be a little of it done here but nothing to pay.

Q. The facilities do not exist here for carrying that trade on, you are too far away from the market?—A. Too far away from the market.

Q. It has been alleged that in some instances the fishermen have suffered injury by the failure of those holding canning licenses to operate their factories, are you aware of anything of that kind?—A. I don't know anything about that. I just heard about that in Nova Scotia this year.

Q. Who fixes the price paid for lobsters?—A. The canners.

Q. Has the fisherman any say in the matter?—A. Not much. He can just take what they offer him.

Q. Do you think the fishermen could make more money if they were allowed to can for themselves?—A. While we were at it for a year or so we made more money.

Q. Then you yourself have canned?—A. Yes.

Q. How did you come to give it up?—A. The man sold the factory. The Portland Packing Co. came along and bought it out.

Q. You were not operating in your own cannery, you had a lease of the factory?—A. The man owned it and we went into partnership with him.

Q. And he sold out to the company?—A. Certainly. That is one thing that ought to be stopped, allowing these people to come down here and buy up all the licenses.

Q. If we did not limit the number of licenses perhaps that would not happen so easily?—A. They own now on the west side from West Cape to North Cape with the exception I think of two factories.

Q. And are they running all the factories?—A. Oh, yes.

Q. You say that you do not notice any very great decrease in the size of the lobsters caught in your district during the last ten years; are the lobsters getting smaller?—A. I don't see very much difference at all in them.

Q. What do you think of having different seasons in different sections of the coast? To the south you have another season altogether, they are still fishing there and will continue to do so until the 10th of August.—A. I think that suits them all right because in our season here it seems they do not get any lobsters.

Q. Do you think that is right; there are a number of people who think there should be one general season?—A. The lobsters don't strike in that part when they strike around here, so it is right. I should think they should have their privilege too.

Q. Is there any reason why the size limit should be smaller in one district than in another?—A. I don't see that it should be.

Q. Do you think that the lobsters in the beginning before the fishery had declined at all, were pretty much of the same size all over?—A. I think so, pretty much. I know there were some larger lobsters caught here last year than there ever was.

Q. Do you not think your entrance hoops are so small that large lobsters cannot get into the trap?—A. Well, if some of these chaps had to make a hoop to suit them every lobster would go out.

Q. What is the size of your hoop?—A. Four and a half inches.

9-10 EDWARD VII., A. 1910

Q. There are some smaller than that?—A. Yes, I suppose there is. That is the average on this side.

Q. At what distance apart do you put your slats?—A. About an inch and a quarter.

Q. Do you think it would be possible to allow a larger proportion of small lobsters to escape if the slats were kept farther apart?—A. Yes, I suppose it would.

Q. Would that not be one way of saving the small lobsters?—A. Certainly.

Q. There are places where the slats in the trap are not farther apart than half an inch?—A. I suppose there are some traps here too.

Q. Some districts have asked to be allowed to fish in the fall, what do you think of that?—A. It would be all right if it would not do away with the lobster industry altogether.

Q. Could you fish in the fall here?—A. Yes.

Q. The weather is not too rough in September?—A. Well, we could work it all right I guess if we had the privilege.

Q. Are there any live lobsters shipped from this district?—A. There have been a few.

Q. To what market were they shipped?—A. To Boston.

Q. Do you know whether it was a profitable venture or not? It could not have been or the business would have been kept up I suppose.—A. We shipped a few ourselves and they turned out all right.

Q. During what period of the year did you ship?—A. In May.

Q. In the early part of the season before the hot weather came?—A. Yes, sir.

Q. Do you think shipments could be made during the hot weather?—A. Not very well I think.

Q. Do you think the live lobster industry is the more profitable one to the fisherman than selling to the canner, where it can be carried on?—A. I think so, the live lobsters are more profitable.

Q. Have you any recollection how much the lobsters you shipped brought you?—A. I think it was somewhere about \$5 per 100 pounds.

Q. That is they netted you that much?—A. Yes, clear of everything.

Q. Is there anything you would like to add to your testimony?—A. No, I think that everything has been covered pretty well.

Q. If there is anything you wish to add you are at liberty to do so.—A. No, I have nothing further to say.

Witness discharged.

ALEXANDER J. MCFADYEN, packer, Tignish, called and sworn:—

By the Commissioner:

Q. Do you desire me to go through the list of questions or do you prefer to make a statement yourself?—A. The latter course might be shorter. I heard Mr. McInnis's evidence in part. His evidence, of course, has been very good from the fisherman's standpoint. There are a few things that might have been further stated by him and perhaps you have already gone over the subject. Before proceeding I would like to hear his opinion on the close inshore fishing.

The COMMISSIONER.—I think he has stated that if it could be proved the inshore fishing was injurious and destroyed an unfair proportion of breeding lobsters, he would do away with that fishing altogether.

The WITNESS.—I would ask also was there anything said with reference to the bay fishing? For instance Alberton bay, that is what we call Cascumpeque—

The COMMISSIONER.—We did not go into that because we will hold a sitting at Alberton to-morrow.

SESSIONAL PAPER No. 22a

The WITNESS.—When you are questioning the Alberton fishermen you will have men directly interested in that. Here I think it would be right to have the opinion of the outside fishermen.

Mr. McINNES.—That is what I meant by the bay fishing and harbour fishing. Inside say two fathoms of water.

The WITNESS.—Do you think that is an injury?

Mr. McINNES.—Oh, yes, sir, it is certainly.

The WITNESS.—As to hatcheries we have none in Prince county, and we have looked upon these bays as natural hatcheries but they are interfered with. They are fished extensively, in fact the fishermen have done better there this year—both the fishermen and the packers—than anybody else in the province.

By the Commissioner:

Q. Do you think it is late in the season that the lobsters get in there?—A. I think they get fishing a few days later than we do outside.

Q. Do you think the lobsters winter in these bays?—A. Oh, no, not at all. Their object, like that of other fish, is to go into deep water to escape the ice. Cascumpeque and Richmond bays are covered by shoal water beneath which there is eel grass into which the fish like to get in summer.

Q. At the lagoons in the Magdalen islands, similar conditions prevail, and fishing for lobsters is not allowed in them at any time of the year?—A. I think that in the bays of the Magdalen islands they have very deep water.

Q. They have deep water in the Grand Entry lagoon, but all the same there is no fishing allowed. Once the lobsters get into the lagoon they are protected because we look upon those lagoons as natural breeding grounds?—A. I think the same thing might apply to this province. Referring to another question asked Mr. McInnis there is one matter that I would take a little exception to. As this province is not a very large one the coast is not extensive and I think that one season will answer the whole of Prince Edward Island.

Q. You mean for the south shore?—A. For the north and south side. Of course what he said is true from the fisherman's standpoint. The witness said that at the present time they are having the best fishing but they were obliged to wait until the fish shelled or molted. On this side—

Q. We have been all along the southern part of that district, along the coast of New Brunswick, and it is very clear from the evidence given that they only get their fishing after the other fishing is over?—A. That is true. You are undertaking to protect the fishery but if you are going to give the fishermen the season when they can get the fish, you are protecting the fishermen and not the fish. I would also say in reference to Mr. McInnis' proposal to shorten the season. He wants to take ten days off the last part of the season. I would take ten days off the first part.

Q. Why would you take ten days off the first part?—A. For several reasons. The first is that the fish are in very much better condition for packing then; they are more profitable to the canner, and the canner can afford to pay the fishermen a better price. The early catch, if they can get to work by the 20th April, as they will sometimes, will not begin to compare in average with those that are caught from the 1st of May up, and in consequence it reduces the average of the number to the can.

Q. What was the reason for fixing the 20th or 26th April for opening the season, why was that done?—A. That was done to protect the fish. At one time we had quite a long season and fall fishing. They cut out the fall fishing and found that the only regulation that was of any use whatever, was that of shortening the season. That was the only regulation they could enforce or did enforce. There was some attempt made to enforce that, but unfortunately it has not been too stringently enforced yet, to the injury, I think, of the fishery.

9-10 EDWARD VII., A. 1910

Q. To what are you referring?—A. The close season.

Q. Is there any fishing after the season is over along this shore?—A. Yes, always.

Q. Any local packing?—A. Always.

Q. How is the packing done in that case?—A. It is not done in the regular canneries.

Q. It is done in shacks and odd places?—A. Yes.

Q. What kind of pack is put up in that way, is it a poor pack?—A. Yes, it is not a good pack.

Q. And it injures the general industry?—A. The fish that are caught later on make a better pack than those caught immediately after the close of the season. For some reason there is a difference between the quality of the fish canned after the close of the season, and those canned in the season. It may be from the inexperience of some engaged in the canning and the nature of the methods employed, or the difference may lie in the fish themselves. It is something that I cannot say.

Q. Do you think that the present limitation of the number of canneries should be maintained, that is the limitation of the number of licenses issued?—A. That has a tendency towards monopoly. If there was no privilege for an individual to open a factory those holding licenses might be bought up, and there are several phases of that. For instance you might take ourselves. We profess to run but one place. That central place is supplied by a number of fishing stations. At one time we had a large number of packing places around, but we found that every one of those, some dozen or more, would have a different pack in quality and variety, so that when you came to sell your pack there was a great deal of difficulty. Then you cannot always secure expert or experienced foremen. One thing or another of that kind led us to centralize and we have but the one packing place. The Portland Packing Company pack all round the shores in separate places. Now we will take our friend Mr. Agnew who packs at North Cape. He is on record as having only one place while he virtually has as many places—not quite as many, as the Portland Packing Company, but as ourselves anyway—by having individuals who pack for him at these stations.

Q. All under separate licenses?—A. All under separate licenses. You can see how that works. Now, if you limit it to the present number of packers, those individuals who have the licenses may trade on that and turn them over to one. Then aside from that there are a number of small packers who run single places and own and operate them. I know of no place in Prince County, of no man in Prince County who takes up a license and does not operate it.

Q. Do you know of any good reason why a number of enterprising fishermen that can show they have the necessary means and are able to establish and run a cannery, should not be able to do so?—A. Not at all, they should have that privilege and any individual fisherman should have the privilege of opening a cannery if he feels he is not properly treated by the canner.

Q. Another question arises that perhaps you are interested in. Do you think that licenses should be granted to aliens?—A. That is a question that I feel rather delicate in treating; I am interested with aliens. But I would go this far, to say there are aliens here who have had an interest in this business for a great number of years.

Q. They were the pioneers in the lobster canning business were they not?—A. They were the pioneers and they have a vested interest that it would be very hard to meddle with.

Q. The reason I ask this question is because it is connected with another: Would we be allowed canning privileges in the United States?—A. I am not prepared to answer that question. Perhaps I had better go this far and say, that no new licenses should be granted to aliens.

Q. Do you think the number of boats or the amount of gear fished by canneries should be limited?—A. I think that is a matter that would be of no benefit whatever. You might limit the number of boats to every cannery but after all that matter will

SESSIONAL PAPER No. 22a

govern itself in this way: Fishermen and packers are all agreed that a certain amount of gear on a certain territory will catch all the fish that is there, and they may crowd in there for one year, but they will not repeat it the second.

Q. The complaint in some places is that large canners, by fishing their own boats and gear, have crowded out the individual fishermen off the ground?—A. Well, I have no experience in that respect other than this: In certain cases where men own their own gear the threat may be made to them: 'You come and fish for us and we will only put on a certain number of boats. If you won't do that, we will make it up with enough boats to cover the ground.' But I think that has never been enforced.

Q. Who fixes the price paid for lobsters?—A. Largely the canners. Every year previous to the present, the canner has been in the position of being able to contract ahead and he could estimate just about what it would be. For instance, you have the record of the previous year as to the number of pounds that it will take to make you a case. You base your estimate on that and then deal as generously as the spirit will prompt. But the fixing of the price is largely in the hands of the canners and their competitors.

Q. Is there competition in the matter?—A. There is sufficient competition to keep it right. I think in this vicinity, outside of this year, the fishermen have never had any great cause of complaint.

Q. Was the lower price this year due to the bad market conditions?—A. This year the canners have been squeezed pretty well. I think that would be the general evidence of the fishermen themselves.

Q. Is there anything further you would like to say?—A. I would like to impress on the department the importance of shortening the season. I do think it is of very great importance.

Q. And how about the size limit?—A. Now about the size limit. If you enforce the laws that are on record, you will close up every factory in this province. I will guarantee to take one factory—at our factory I would pack every lobster over 8 inches that is caught in the whole province. That regulation has never been enforced and it would be simply useless to try to enforce it.

Q. Do you think it would be impossible to enforce it?—A. I think it would be impossible. As to the matter of the trap. You touched on a subject there that I think is of some importance. Previous to the year 1907 our fishery here ran along very uniform for the last ten years—in fact there was scarcely a variation, and if anything the fish were increasing in size. Things were going along so comfortably that we thought we had a permanent industry that would continue. Well, the fishermen got on to building what they call the parlour trap, and, whether that is the case or not, the years 1907 and 1908 were the largest within the last ten.

Q. Do you mean that you had the largest pack?—A. The largest pack and the largest catch. I do not know whether that can be attributed, although some of us think it can, to the new method of fishing. With the old trap if you got to it every day, you would get fair average fishing. Now the fishermen are indifferent whether they get off every day or not; they expect to find the fish.

Q. Do you find that the parlour trap holds all the small lobsters?—A. It holds all the lobsters. With the old fashioned trap if it were left for two or three days until the bait disappeared, when you went to it you found the large lobsters there but the small ones were driven out. Moreover, formerly they had more uniform fishing and we take it for the reason they would not catch lobsters all the time. You put the parlour traps out and they fish up everything, it is all caught. Speaking of the laths being placed further apart to permit the small lobsters to escape, my opinion of that is, a portion would escape but not a large quantity; you would save some. And as Mr. McInnis said, I think you could better enforce the putting back of the spawn fish. The fishermen are inclined to do that and I think this year it was very well practised, there was very little difficulty. Of course the threat was given out in the spring that the fishery would be closely watched, and the packers generally I think

9-10 EDWARD VII., A. 1910

told the fishermen they must observe the regulation and not bring in the spawn fish. Consequently there was no difficulty at all in having the fishermen do so. I think there is one point that perhaps the fishermen might give you a little information on and that is, I have understood that some of them take the spawn fish and keep them in the trap for a certain time until they drop their eggs or deposit the spawn. I have only heard it spoken of. We have heard of it this way, that fishermen have experimented in the matter themselves, have held a spawn lobster in the trap to see what would happen.

Q. Has the regulation in regard to berried lobsters ever been observed—A. It has never been observed until this year. I think I am safe in saying that the regulation was never observed in this province. Of course protecting the berried fish and shortening the season are the only feasible regulations you could now undertake, unless you close up the factories and that will next to ruin the whole outfit. Personally I think other methods could be resorted to.

Q. I do not think the fishery has reached that point of exhaustion when it is necessary to go so far as that?—A. Not at all if there are proper methods of protection. There is one other point I would like to have the department understand: they should have some means of educating both the canners and the fishermen with respect to the law. The education in this part of the country has been entirely the opposite.

Q. They have been encouraged to violate the law?—A. Yes. I think such a course of education will do no harm to any of us.

Q. Do you think if you could get the fishermen together and explain the importance of the berried lobster regulation it would be carried out?—A. Seventy-five per cent of the fishermen will do it and the remainder will do the opposite. Then the others say: 'I may as well do it as so and so.' Unfortunately about every fourth or fifth year a number of men are seeking votes and it is quite a vote catcher.

Q. Is there any opportunity here of adopting the system of pounds? Where it can be done the best means of preserving the berried lobster seems to be to take and place her in a pound where she will hatch out herself?—A. The only pound we have ever attempted here was in the manner of trying to hold them until they would be ready for packing and we always came to grief. That was on the outside shore. Here on this sandy beach anything you put there in the shape of pounds will stand up every storm, the kelp piles in and we have troubles of that kind. I think it an utter impossibility to do anything of the kind. A number of years ago the department thought they would do something in the way of small hatcheries. They sent out little incubators. We had one down and tried it for a spell anchored, but we never accomplished anything by it for that very reason: the storms would come and demolish anything that was in it. Cascumpeque bay is, I think, near enough for hatcheries and pounds, and the hatching of lobsters could be handled there very nicely. In Malpeque it is the same way; that is near enough for all practical purposes. I do think the department should take measures to look upon these places as the nurseries of the lobster fishermen.

Witness discharged.

MICHAEL LYNCH, fisherman, Tignish, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing?—A. About ten years.

Q. Have you always fished in this immediate section?—A. Yes, sir.

Q. What do you do when you are not lobster fishing?—A. I do a little at cod and mackerel fishing sometimes.

Q. How has the mackerel fishing been this season?—A. Very poor.

SESSIONAL PAPER No. 22a

Q. For whom did you fish lobsters this season?—A. The Portland Packing Co.

Q. Do you own your own gear?—A. Yes, sir.

Q. What amount of gear did you fish?—A. About 450 traps.

Q. Those traps are set in what depth of water?—A. From 13 fathoms in.

Q. What is the shoalest water you fish in?—A. About two fathoms.

Q. Do you fish entirely on the outer coast?—A. Yes, sir.

Q. What is the best time for your fishing?—A. The first of the season, as soon as we can get the traps out.

Q. You get a better run of fish?—A. Yes.

Q. A larger weight of fish?—A. A larger weight of fish.

Q. And a larger run of fish?—A. A larger run of fish.

Q. Is it your experience that towards the close of the season you are getting smaller fish?—A. Yes, they do run a little smaller.

Q. Do you think you get smaller fish in shoal water than you do in deep?—A. Yes.

Q. Are there certain bottoms where you find more fish than in other bottoms?—A. Yes, sir.

Q. Is the bottom all alike outside?—A. No, sir, there are different bottoms.

Q. What would you say is the average size of the fish you catch?—A. Taking big and small, between 9 and 10½ inches.

Q. What percentage of the fish you bring ashore would be under the legal size of 8 inches?—A. I would say one-third.

Q. Is there a greater proportion at one part of the season than another?—A. No, it generally runs that way right straight along.

Q. Do you fish throughout the season in the same depth of water?—A. No, we shift inshore.

Q. Do you find that the fish have passed you and gone inshore?—A. Yes.

Q. During the ten years you have been fishing have you noticed whether there is any decrease in your annual catch?—A. No, sir.

Q. Of course there are off years?—A. There are some years. This has been a poor year.

Q. To what do you attribute the poorness this year?—A. Well, the ice I think spoiled us this year.

Q. The ice remained very late?—A. Yes, it frightened the lobsters and they did not come in.

Q. Are the lobsters as large as when you first began to fish?—A. Yes, just about the same. I have never seen very much difference in them at all.

Q. Are you fishing the same amount of gear now that you did when you began, or have you increased your gear?—A. We have increased our gear.

Q. Was that with the view of keeping up your catch, or is it because you have become more expert and are able to fish more?—A. More because we have got more expert and are able to fish more.

Q. Has the total number of traps fished in the neighbourhood increased in your experience of the fishery?—A. Yes, it has.

Q. Will you venture to say by what amount?—A. They have increased one-half any way.

Q. Has it been to keep up your catch that the fishermen have had to increase the gear?—A. No, there are more people coming into the business.

Q. Do the majority of fishermen own their own boats and gear?—A. No, sir.

Q. Most of them fish with the factory outfit?—A. Yes.

Q. What do you think of requiring the fishermen to register and take out a license?—A. I think it is all right.

Q. Those who advance that proposition say they think if a man felt he was registered he would have more responsibility than he has now and would be a sort of fishery

9-10 EDWARD VII., A. 1910

officer on his own account. Do you think that would be the effect?—A. Well, I don't know, I think it would.

Q. I do not see the object of compelling fishermen to take out a license unless it would have a good effect in some way or another. Do you think the average fisherman would care?—A. I don't think the fishermen would care as long as they got a decent price for their fish.

Mr. McINNIS.—What would this license cost?

The COMMISSIONER.—It would only be a nominal fee, it could not be very high.

By the Commissioner:

Q. What price did you receive for your lobsters this year?—A. \$2.50.

Q. How did that compare with last year?—A. It was \$1 less.

Q. The price went up last year did it not?—A. Yes, it went up last year. We got somewhere about \$3.50.

Q. When you first began to fish what price did you get?—A. \$1.50.

Q. You furnishing your own gear?—A. Yes.

Q. Do you think there is any competition in the matter, or are the fishermen forced to accept the price offered?—A. They are forced to accept the price offered.

Q. Are the regulations as regards berried lobsters and size limit observed in this neighbourhood?—A. Not until this year.

Q. This year they were observed as regards berried lobsters?—A. Yes, sir.

Q. Before that they were not?—A. No.

Q. Is there any fishing after the close of the season?—A. There is.

Q. Where is it done?—A. Along the coast.

Q. Outside as well as inside?—A. Yes.

Q. Has it been the practice, up to this year, to take to the factory everything caught?—A. Yes.

Q. Have you ever found a canner refuse to accept anything you brought him?—A. No, sir.

Q. Do you understand or admit the necessity for having regulations to govern the fishery?—A. No, sir. I do not see——

Q. Should there be no regulations at all; should fishermen do as they please?—A. I mean to have the season. The present regulations I think are pretty nearly all right.

Q. If they were enforced?—A. If they were enforced.

Q. Would you favour the idea of removing the size limit altogether and shortening the season?—A. I think it would be all right to shorten the season at the latter end, but not at the first end.

Q. Do you think there is any use attempting to enforce the regulation governing the size limit?—A. I don't think it.

Q. If it were withdrawn altogether where would the fishermen draw the line? How small a fish would you bring in?—A. Oh, well, the smallest I suppose would be about 6 inches.

Q. You think there would not be much coming in under that size?—A. No, I do not think it.

Q. You think that if the regulation as regards spawn lobsters were observed and the season shortened somewhat the fishery would improve?—A. I think so.

Q. What would you say is the proportion of berried lobsters in your catch?—A. They would be five or six to the hundred pounds.

Q. Is the number greater some times than at others?—A. I never saw any difference.

Q. The number is just about the same all through the season?—A. Yes.

Q. What is the smallest lobster you ever saw with berries?—A. About 8½ inches, somewhere along there.

SESSIONAL PAPER No. 22a

Q. What will the size of the spawn lobsters run generally?—A. 9½ inches.

Q. They are pretty good lobsters generally?—A. Yes, a fair sized lobster.

Q. Do you find more spawn lobsters inshore than offshore?—A. Yes, sometimes.

Q. Do you think there is any time when the lobster is unfit for food?—A. Well, I don't think, not to my knowledge.

Q. While the lobster is in the act of shedding its shell is it good?—A. At the time they are soft shelled I do not suppose they would be very good.

Q. Those lobsters would go all to pieces in the boiling, would they not?—A. Yes, I think so.

Q. What changes would you suggest in the regulation, putting it in your own words, or what would you suggest as the regulations to be enforced?—A. I do not see that a change would be very much good in the season or anything. I think it is all pretty well the way it is now except taking a little off the latter end of the season. Say we stopped fishing at the 1st of July.

Q. So as to protect the berried lobsters?—A. Yes.

Q. Have you any experience in the matter of hatcheries?—A. No, sir, I have not.

Q. Would you favour an increase in the number of hatcheries?—A. Oh, I would. I think hatcheries are a very good thing.

Q. How do you think we could best set to work to induce all the fishermen to return the berried lobsters to the water?—A. Well, I think the fishermen are commencing to realize pretty well that it should be done.

Q. You think there is a change of sentiment?—A. I think there is a change; I see a feeling in that direction.

Q. Are you aware of any fisherman having lost his catch of lobsters through the refusal of a canner to accept them?—A. No, sir.

Q. A number of people have suggested closing down the fishery altogether for a number of years; what do you think of that?—A. I don't think that would be a very good move, in this part of the country anyway.

Q. How would it affect the fishermen generally?—A. There would not be anything in fishing at all, they would have to leave it.

Q. Is there anything the fishermen can turn to?—A. Nothing in the way of fishing to make a living.

Q. The Lobster Commission of 1898 suggested closing down fishing for a term of years in successive sections along the coast; how would you regard that idea?—A. I don't think that would be a very good move. I think if the spawn fish were properly looked after and saved there would be no need of it.

Q. Would you favour issuing a license to every man who showed himself competent to pack?—A. I would.

Q. Do you think the practice of limiting the number of canning licenses is a fair and just one?—A. I don't think it.

Q. Would the fishermen here have any market for their lobsters if the canneries were closed?—A. No, I don't think it. We would not get enough large lobsters to ship for the live lobster trade.

Q. And I suppose you are rather far away from the market?—A. Yes, rather far away from the market.

Q. As between the two which do you think the most profitable industry for the fisherman, the live lobster trade or selling to the canner?—A. The live lobster trade if the lobsters could be got to the market.

Q. There are some sections of the coast where the live lobster trade only exists, that is where they are near the market and have facilities for shipment?—A. Yes.

Q. It has been said that in many districts no canner could continue in business if the law were strictly enforced regarding the size limit?—A. I believe that to be a fact.

Q. It has been alleged in some instances that the fishermen have suffered loss through the failure of those holding canning licenses to operate their factories; has anything of that kind occurred in this neighbourhood?—A. No, sir.

9-10 EDWARD VII., A. 1910

Q. In some places, it would seem, canners have taken out a license in a certain section and not operated the factory. The fishermen in those districts could not get licenses themselves and have suffered loss?—A. Nothing of that kind has occurred here.

Q. Do you think there is any combination on the part of the packers to keep down the price?—A. I think there is.

Q. What are your reasons for thinking that?—A. Well they seem to co-operate and keep the price down.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. I think they would.

Q. How would you establish the competency of a fisherman to can? You would have to have some guarantee in issuing a license to a man that he has the necessary capital, knowledge, and so forth to put up the proper article. How should we govern ourselves in a matter of that kind?—A. It would be pretty hard to say. If he was a good practical man and had the means.

Q. He would have to have a cannery of a certain size?—A. Certainly.

Q. And fitted up to a certain standard?—A. Yes, and have fished successfully.

Q. The practice of the Department lately has been, wherever it was possible, to encourage the fishermen to group together and apply for a license to can on the co-operative plan; do you think that policy should be encouraged?—A. I think so.

Q. Is there any opportunity, as far as you know, of establishing pounds where berried lobsters could be held on the coast here?—A. I don't know of any place nearby except Alberton Harbour.

Q. Then as to the question of harbours, bays and lagoons, what do you think of allowing fishing in them?—A. I think that should not be allowed.

Q. Have the fishermen always fished in them?—A. I think they have.

Q. Are there many canneries established in among those lagoons?—A. Yes, quite a few.

Q. Any very large ones?—A. No very large ones.

Q. Do you think the lobsters go in there to spawn?—A. I do.

Q. Do you think the lobsters winter in those places?—A. There may be a few but not very many.

Q. What is the average depth of water there?—A. From three to four fathoms. On the flats there would be about a fathom of water.

Q. Is there eel grass everywhere?—A. Yes.

Q. Even in the channel?—A. Not in the channels, just along the flats.

Q. Has there been any noticeable decline in the average size of the lobsters caught here within your recollection?—A. No, I think they hold about the same.

Q. What do you think about having different seasons for fishing in neighbouring sections of the coast; for instance you have to the south of you here a section of the coast where they fish a different season from you?—A. I suppose they want to get a share of the fishing there as well as we do.

Q. Do you not think they get a larger share of small lobsters, immature fish that have escaped around the rear end of the Island and go in there, and that perhaps too many spawn fish are killed?—A. I think perhaps they do.

Q. It has been proposed by a leading expert in this country to have only two great sections of the Atlantic coast, north and south of Canso, the same season and size limit to apply to all alike. What is your opinion about that?—A. I don't know. I don't think that would suit everybody very well.

Q. But how would that proposition suit the lobsters, we are looking at it from the lobsters' point of view?—A. I could not answer that.

Q. Do you think it in the interest of the lobster fishing generally and the future of the industry, that immature and undersized lobsters which have not reached the age at which they could reproduce themselves should continue to be caught; must it not have a destructive effect upon the industry?—A. It certainly must.

SESSIONAL PAPER No. 22a

Q. Do you think that a larger percentage of lobsters is required in the fall than in the months of May and June to fill a pound can?—A. Yes, I think so. After the lobsters have shed their shell they are not so full.

Q. At what period of the season do you expect to make your best catch?—A. As soon as we can get our traps out.

Q. How would you regard the proposition to ignore the size limit altogether, protect the berried lobsters and shorten the season?—A. I think it a very good plan to protect the berried lobster and shorten the season at the last end, that is, take off the ten days in July.

Q. How about the size limit?—A. Leave the size limit where it is.

Q. Could you enforce such a regulation? There is no use having a regulation on the statute-book that cannot be enforced. Do you think it would be possible to continue the fishery and have the 8-inch limit?—A. I don't think so.

Q. What do you think of the present trap as compared with the old-fashioned one?—A. The present trap seems to hold the fish better.

Q. What do you think should be the right distance between the slats in the trap?—A. I think about an inch and a quarter, along there. This would permit a good many of the small lobsters to escape.

Q. You think a certain portion of the small lobsters would escape if that were done?—A. Yes.

Q. What sized lobsters would get out through an inch and a quarter?—A. A 7-inch lobster would make a hard fight.

Witness discharged.

Mr. McFADYEN recalled:—

By the Commissioner.

Q. There is one question I would like to ask you: Do you think there should be an inspection of canned lobster?—A. I think it is unnecessary, because the packers have been driven to adopt sanitary conditions for the protection of their pocket. You will find the factories very greatly improved in that respect within the past few years.

Q. We still see some factories that are not improved.—A. As I understand your question you mean that the Inspection Act should be enforced with reference to—

Q. With reference to canned lobster as well as other canned products.—A. In this province we have been rather opposed to the whole business of that inspection.

Q. But inspection of food products is the tendency of today.—A. To apply inspection to one thing will mean that it will be made applicable to all. The difficulty of that Inspection Act is that it affects us on other things, on the matter of meats which is a thing we are having a good deal of trouble over.

Q. Is there much meat canned here?—A. Not since the Inspection Act came into force ; we have kept out of it just on account of the inspection. There was a good deal of meat canning in this vicinity previous to that exposure in Chicago and we dropped it, not from reasons of putting up a bad article but the effect of the whole business of stock yarding on the consuming community resulted in the fact that there was no call for it. There has been considerable inquiry about that trade lately and of course if it was started up the Inspection Act would be enforced.

Q. There is a great difference in canneries and it would seem only right that some standard should be adopted. Many of the cracking tables and the tables on which the lobster meat is handled are not what they ought to be.—A. That is right.

Q. There is a standard cannery in my division at Anticosti, owned by Mr. Menier, where all the meat is handled on marble slabs, it is in every way a model cannery. It gives one a shock to go from a cannery of that kind into some of the places where

9-10 EDWARD VII., A. 1910

we see rough tables of soft boards all chipped up, and not half scraped in a good many cases, and detect the sour odour. It must be impossible to put up a good product in a cannery of that kind?—A. That is right. The factories here have been using zinc on their tables.

Q. Do you think zinc is the best?—A. It is the best available unless you go to greater expense—that is galvanized iron or zinc. It is pretty thoroughly sanitary.

Q. Marble, glass or agate ware has been suggested. I know of canneries where they have nice tables of agate ware and they look very well. Whether such tables will stand the hard work is another matter.—A. The introduction of that would be equal to a restriction of licenses. The small packer would certainly be crowded out, he could not afford the expense. Of course it is up to the government to do the best they can in the matter.

Q. It is proposed to establish for the maritime provinces an advisory board something like the Fisheries Board they have in Scotland; what would you say to the establishment of such a board?—A. In that I am heart and soul with you. I believe it would be the salvation of many things in connection with the fisheries, and if the fisheries could be taken out of politics entirely it would be an elevating process.

Q. Would it be possible to get the fishermen together in the winter and explain to them the importance of observing the lobster regulations? The average fisherman seems to entertain the idea that regulations are carried out for the purpose of worrying him, which is manifestly absurd.—A. In connection with our dairying and farming that system has been of very great benefit; it has been a source of education. But all the same in the matter of the berried lobsters, when the announcement came from the department that the regulation must be observed, then it was up to the packers and fishermen combined to see that it was carried out.

Q. It rests very largely with the packer rather than with the fisherman?—A. I might mention a couple of instances we had in our experience last spring. We had no trouble with the exception of about two boats, and the fishermen in them said they would not carry out the regulation, that others were not observing it and they would not. Then we said: 'You will do it or the warden will be here to see you when you land.' That ended it; there was not a murmur for the rest of the season. I think that when the department's decision is reached it should be given to the fishermen as soon as possible so that they may know what they will have to face another year. The same with the packers.

Witness discharged.

Mr. McINNIS recalled:

By the Commissioner :

Q. Have you tried any experiments in keeping berried lobsters in the trap for the purpose of letting them hatch out the spawn?—A. I tried that this year. I had three in a trap but a storm came about a week after I had them there and the next time I went out the three lobsters were dead, they were killed in the trap.

Witness discharged.

Commission adjourned.

ALBERTON, July 30th, 1909.

Mr. J. E. L. HUNTER, manager, Alberton, called and sworn:—

By the Commissioner :

Q. Are you identified with the lobster industry?—A. Yes, I am manager for Hunter Bros.

Q. How long have you been engaged in the lobster business?—A. Four seasons as a packer.

Q. Did you do any fishing before that?—A. No, we had no connection with the business at all. Of course we had a general idea of it just the same.

Q. Where is your cannery situated?—A. At Kildare Cape.

Q. What other canneries are licensed in your neighbourhood?—A. There are fishing places scattered all along the shores where they boil fish and haul them to a central cannery. You have been at Tignish; there is Myrick's factory there. They have a boiling place immediately north of us. Then the Portland Packing Co. have a factory to the south of us. That is the nearest to us.

Q. What number of boats do you employ in connection with your cannery?—A. You want a sort of idea? There are some men we buy from. They are farmers and they just fish as such. I think I told Mr. Matheson, the inspector, about ten boats.

Q. Do you own your own boats and gear?—A. We run about 1,200 traps of our own.

Q. What would that represent?—A. Three boats.

Q. On what lay are those men that fish in your own boats?—A. By the hundred.

Q. And as to the men in the other boats how do you buy their fish?—A. We buy them by the hundred pounds.

Q. What is the difference between the price paid to the fishermen fishing your gear and that paid to the others fishing their own gear?—A. Of course that is a thing that every man does for himself. I pay the men that I buy from slightly more than twice as much as I give the men fishing by the hundred. If I gave the men fishing by the hundred \$1.25 I would probably give the other men—well this year I paid my own men \$1.30 and the other men \$2.75, a little more than twice the price.

Q. What about your pack this year?—A. About 300 cases.

Q. How does that compare with the other years you packed?—A. This year I had one-third more traps than I had last year and still we only got 300 cases. Last year I got 475 cases, so you will see that this year was a very poor season.

Q. What was your best year?—A. 1908.

Q. 1907 and 1908 were both good years here were they not?—A. 1907 was good but not nearly as good as last year. The first three years we had practically speaking the same amount of gear. This year we had more men with their own gear selling to us. The amount of our own gear has practically been the same from the start. There might have been a little increase in 1908, but very little. Our gear has been about the same right through and we get half as many fish.

Q. What number of lobsters do you consider it takes to fill a pound can?—A. There have been no measurements taken.

Q. How many lobsters does it take to make a hundred pounds?—A. They vary very much with us. We fish from four fathoms out to as deep as twelve and some-

9-10 EDWARD VII., A. 1910

times you will get a batch of fish that will run very small. Another year, from that part of the ground there will be altogether different fish. I would not like to say for sure but I have an idea that the fish would average three-quarters of a pound in weight apiece, something in that neighbourhood.

Q. Could you not make a definite statement?—A. We expected a man to measure the lobsters but he did not come. I will tell you what I did for my own satisfaction. One day I was not busy and the foreman and I got talking about the size of lobsters. He said: 'If the government enforced an eight-inch limit it would put us out of business.' I said: 'There are not nearly as small fish in the lot as you imagine. When you come to straighten the fish out, a seven-inch lobster is small and a six-inch very small.' The foreman said: 'There are lots of them not five inches.' Well we measured the lobsters and there was a very odd fish that was less than seven inches in size.

Q. What proportion of the entire catch would you say is less than seven inches?—A. The difference between seven and eight will include a great many lobsters. There are a great many lobsters that will not go more than eight inches.

Q. What is your opinion as to that very question, would a strict enforcement of the size limit put the canner out of business?—A. Well it would make it very unpleasant. Still it might not put him out of business. It would be almost impossible to enforce it I think.

Q. What has been the practice in your district with regard to berried lobsters?—A. The general practice has been to can the berried lobsters; they are not protected at all.

Q. What do you think is the principal spawning month of the lobsters?—A. It varies on different parts of the coast. With us, where we are located, I would say the time when you see most berried lobsters would be from about the 1st to the 20th June. We see an awful lot then, but afterwards they seem to pass us. That is when you see the most.

Q. Do you see many berried lobsters of eight inches?—A. As small as that? No, sir.

Q. What is the smallest sized berried lobster you ever saw?—A. I don't think I ever saw any smaller than nine inches.

Q. How will the average of the berried lobsters run?—A. The average would run I think about nine inches. They are mostly pretty large.

Q. You fish from 4 fathoms to what depth?—A. Four to say 11. The fishermen do not very often go to 12.

Q. How far will 11 fathoms take you off shore?—A. I would imagine about 2½ miles.

Q. What sort of bottom have you out in that depth?—A. It varies. In some places it is sand and in other places hard rock. We try to get on the ledges, it is ledges and sand.

Q. When you first begin in the spring do you find the lobsters running any larger than late in the season?—A. Well the other three years we did, and this we did not. This was a peculiar season. I think the ice and local conditions had something to do with it. The first catch of lobsters were smaller. I have fishermen who have been fishing for 25 years and when they saw the first catch they were disgusted, they thought it was going to be a poor season. I don't know whether it was imagination or not. The lobsters were better about the middle of the season.

Q. Which is the best fishing month?—A. About May.

Q. At what time do you generally begin to fish here?—A. That is the moment when we actually catch the fish?

Q. When do you make your first pack?—A. It is very rarely we pack fish before the 1st of May, sometimes the 28th or 29th of April. The ice controls that generally. The 20th April season is early.

SESSIONAL PAPER No. 22a

Q. What percentage of the lobsters taken in the traps bear eggs; out of every hundred how many lobsters bear eggs on the average?—A. I could hardly say. I would imagine there would not be over 3 or 4 per cent by count. What would that be; about what other men say?

Q. In some places they give us a little more. A. Well, as I say, I could not speak definitely on that.

Q. Some say as high as 5 or 6 per cent. A. It may be that, I could not say.

Q. Does the number vary much with different parts of the season?—A. Yes.

Q. As a rule they are good lobsters for canning purposes, full of meat?—A. Except at first. They are not good at first.

Q. What would happen if the canner absolutely refused to accept from the fisherman undersized and berried lobsters?—A. That is a pretty hard question to answer. That is you mean the 8-inch limit?

Q. Yes—A. I believe if those two regulations were enforced absolutely, that is if the men knew that they were absolute, I believe it would be pretty hard to get good fishermen to go out; they would be afraid. Personally I don't think it would make so much difference but you know that class of men imagine it would.

Q. Is the practice of stripping off the berries from the female lobsters followed by the fishermen?—A. It is a thing I would not care to say very much about. I do not know except from hearsay and that is not very good evidence. I know one or two cases where it has been done but the fishermen never tried it this year because they never had to.

Q. Can you tell when the lobsters come in whether the eggs have been stripped off?—A. No, sir, it is a very difficult thing to detect. There were two or three cases this year where I saw a lobster and I challenged the man who brought it in. I said: 'You stripped that lobster.' He said: 'I did not, the tail was soft.' If you do not happen to take the lobster in your hands it is very hard to detect, because sometimes you will find a lobster that has run up against another and there are some eggs on them. I have found eggs on the male lobster. Mr. Matheson told us if we had one berried lobster in a box of lobsters it would mean a fine. I found several eggs on a male lobster but I would hardly say that lobster had been washed.

Q. Do you think the fishermen could be induced to return the berried lobsters to the water?—A. Some could and some could not. They won't return the berried lobsters to the water if they think they can get clear of them. If the fishermen will not return the berried lobsters to the trap it makes very little difference afterwards whether those lobsters are canned or not, they will die. There were lobsters returned by me at different times which men had brought ashore. I would say: 'Take these lobsters out.' I was satisfied at the same time that these lobsters would all die but what could I do? If I saw them and anybody happened to come around I could not say I had not seen them; I had to send them out. But I knew they would die; the fishermen chucked them out in the warm water near the shore.

Q. Failing any possibility of enforcing the size limit regulation, what would you think of the proposition to do away with the size limit and shorten the season somewhat, of course always protecting the berried lobster? Could we be more strict in carrying out such a regulation than we have been with the present ones?—A. On our part of the coast it would make little or no difference to us if the season ended 1st July, practically no difference. That is my experience.

Q. You do not do much fishing after that date?—A. We do not any more than pay expenses one year with another. This year I had the place shut down and was home at my own house on the 10th July. But there is a great difference of opinion about the first part of the season and some are greatly in favour of having that shortened. Personally I am not, that is not to shorten it till the 1st of May. This year they shortened the season to the 26th April. That date is probably reasonable because we do not run lines on the 20th April one year out of ten. But there is this reason, and

9-10 EDWARD VII., A. 1910

nearly every man will tell you the same who has been running on this north side where we have it pretty rough: That immediately after the ice leaves, nine years out of ten or perhaps more, we have three or four days of good off shore wind. That is after the ice leaves. Then there are good times. After that we get easterly weather and we cannot put the lines out but still you can fish.

Q. What reason is there for putting any limit to the spring season, why not begin to fish when you can?—A. It won't do at all. Some foolish fellow would start about the middle of March and we would be practically out a month before the season commenced; it would be a needless expense.

Q. That is not a matter that the government need have anything to do with?—A. It is not a hardship to the government to make a reasonable limit to the fishing season. It just amounts to this: There are a lot of the fishermen want to get to the shore just as soon as ever they can to get the ground. As long as they get the ground they are not particular whether they work or not. Some would like to get out the 1st of March if you are foolish enough to let them.

Q. But supposing the canner is not ready to pack?—A. They will want to go all the same. There may be an odd year when you would have to go a fortnight sooner and waste your time nine years out of ten. I would not be in favour of making the opening any earlier and of the two I would make it later.

Q. That affects the canner and the fisherman. It does not affect the fish, the fish are there?—A. No, sir, the fish are not there on our shore.

Q. Then there is no object in the fishermen getting out so early unless they want to lose their gear. It does not seem to me any part of the duty of the department to look after that?—A. That is true but there is always some crack-brained individual who is foolish enough to take unnecessary risks if he can get the chance. It only makes it the harder for other people. I don't think you will find any who want to make the season any earlier. You spoke of taking it off altogether.

Q. The proposition has been advanced to make one general season for the whole of the interior Gulf, that is to say, to fish from the 1st January until the 1st or 10th July?—A. Of course it would be as fair for one as the other and, as I say, nine years out of ten the ice fixes that anyway.

Q. Has there been any noticeable decline in the average size of the lobsters within your experience, are they getting smaller?—A. No, not since we went there. We thought this year they were going to be a lot worse but they were not. At the last end of the season we were getting good large fish, as good as I ever saw.

Q. What number of cases will an average fisherman turn out?—A. They will run all the way from 40 to 100. I had two boats last year that packed very nearly 100 cases. Taking the same two boats this year with the same two crews and the same number of traps, one packed, I suppose, about 50 cases and the other about 45. There is just the difference.

Q. What style of trap do you use here?—A. We use the parlour trap as we call it.

Q. Why was the parlour trap brought into use, what are you supposed to gain by it?—A. Well, it holds the fish in stormy weather and over Sundays.

Q. What distance are your slats put apart?—A. About an inch or seven-eighths of an inch.

Q. Would anything be gained by having the slats a little farther apart?—A. I think possibly there would. It would be about the same thing as putting on a size limit. It would govern the fishing in an easier way but would probably have the same result.

Q. Has it been the practice here for the canner to take everything the fisherman brought him?—A. Regardless of size?

Q. Regardless of size or up to this year even with the berries on?—A. Up to this year, yes.

SESSIONAL PAPER No. 22a

Q. What would you think of the proposal to abolish the size limit altogether and to regulate the trap so that it would be made with a reasonable opening between the slats? What would be a reasonable opening, an inch and a quarter?—A. I think, an inch and a quarter would be too large. I do not know, I would not like to say what effect that would have. That is another thing that is pretty hard to enforce, perhaps as hard as the size of the fish. The fisherman might do a little lathing outside on a lot of their traps.

Q. That matter would have to be looked into. Any regulations that are proposed for the future you may be sure will be strictly enforced. There has been no attempt in a great many places to enforce the regulations for several years back?—A. No, and there was not this year.

Q. What would you think of compelling the fishermen to register and take out a license? Do you think a fisherman who had registered and taken out a license would be any more careful if he understood that a violation of the law would mean prohibition from fishing lobsters in the future?—A. What difference would the license make? You could, if you caught him, take his name down and rule him out just the same whether he was licensed or not.

Q. Not very well. If we insist upon every lobster fisherman taking out a license those who have no license will not be allowed to fish lobsters.—A. That is those fishing by the hundred lobsters, those who own their own gear?

Q. It is only a proposition, it has been thought that it would be a good idea to license the fishermen as well as the packer?—A. I don't know as to that.

Q. Some people seem to think the fisherman who has a license would take greater interest in the observance of the law.—A. There are all sorts of people I think. The trouble with these fishermen is that one year a man fishes and the next year he does not. They are a floating class.

Q. Are the men regular fishermen who fish for cod and mackerel as soon as the lobster season closes, or are they farmers?—A. Some of them follow the business up more or less but a great many of them do not. A great many are farmers who get somebody to put in a bit of a crop for them and then when the lobster season is over go back to the farm. Some of them merely fish lobsters and are labourers until they get a chance to fish oysters. There are very few real fishermen who follow the business up all the time. In certain places they are. On this shore mackerel and cod fishing is a very poor business and many of the fishermen do not follow up fishing. A great many of them come from the farm.

Q. Do you think it is wise to restrict the number of licenses to can, or would you give a license to every man that applied for it?—A. Well it is pretty hard to say. Sometimes it appears to be a hardship for a man not to be able to get a license, and sometimes I think it is the best thing that ever happened to him that he did not get one, because when the industry is good so many people have a tendency to rush into it. Then there comes a year like this and they would be sorry for it. But still, after all, what is the difference? The license system might as well be abolished from the way it has been here latterly. If you counted the traps four years ago and counted them this year in the same two miles of water, you will find there is one-third more gear now, and some of the packers have not increased one. Another thing, it is pretty hard to restrict those outside men fishing their own gear. What are you going to do with them? I am speaking of fish protection. What I mean is this: The license does not prevent any independent man at all from putting out as many traps as he feels like. There is just what I was telling you. We had ten boats this year, whereas we only had seven or eight last year. There were two men came to me this year.

Q. What do you understand by a co-operative license?—A. I am told it is a license that entitles a certain number of fishermen, who cannot find any place to sell their fish, to can, and they are supposed to share the profits and losses. That is what I understand the government mean by a co-operative license.

9-10 EDWARD VII., A. 1910

Q. I believe the department, so far as they have instructed me, are encouraging that sort of thing. The idea is not to sell out one license in exchange for another, but that a number of enterprising young fishermen, who thought they saw an opportunity to club together to go into the canning business, should be encouraged to do so. That is legitimate enough.—A. There are lots of things done that should not be done.

Q. Would you limit the number of boats fished by any particular cannery?—A. If the gear was owned by the canner you could restrict it. There is a man here named Mr. Agnew who made a proposition to me the other day. He said: 'Look here. We want to get the government to restrict the gear and make it so that a man should put out 3,000 traps this year and only 2,000 next year.' 'Do you think it would be right?' I inquired. 'Yes,' he said, 'I do.' I said: 'We will say a man has 1,000 traps of his own, and is buying from 2,000 traps. If they are going to restrict him next year what is he going to do? Is he to put all his own gear on the shore or tell the other man, 'I cannot buy from you this year you will have to look elsewhere.'

Q. What do you think of the proposition to close down for a number of years? That has been suggested with a view of protecting the lobsters.—A. It would be very hard, and I don't think it could be any lasting good.

Q. Do you not think if the fishing were stopped for a while the lobsters would recuperate in the meantime?—A. Well they would certainly, but there is a simpler way of doing it than that.

Q. What is your proposition?—A. I mean it would be a great hardship. There are an awful lot of men dependent on lobster fishing. They make perhaps \$150 out of it, and they have nothing else. Some of the packers could get along perhaps and some could not. For men right here, lobster fishing is their only way of making a living at the present time. If shut out from that fishing for two or three years they would have to look out for something else, and then at the end of that time they would need to start up again.

Q. Then what change would you suggest, what is your idea of the proper regulations to enforce in order to protect the lobster industry?—A. A great many other men will say my opinion is prejudiced, but if the bay fishing were stopped you need no other regulation than protecting the spawn. What I suggest is to protect the spawn and shut off the bay fishing.

Q. What do you understand by bay fishing?—A. I mean fishing inside the mouths of harbours.

Q. How would you restrict bay fishing?—A. Would that shut off such a place as the Baie des Chaleurs?

Q. No.—A. Well that is a different thing.

Q. I mean the lagoons inside sand banks, the natural breeding grounds of the lobster?—A. I mean the places inside the sand hills, they are inshore places altogether.

Q. Do you think those are places where the lobster go to spawn?—A. I think that is the objective point of every berried lobster although she does not always get there. Is not that your opinion? I believe that if the bay fishing had never been allowed to start on the island here you would not have needed it. That would have regulated the size limit as well as anything else.

Q. You would have to shut down all the canneries in those places would you not?—A. I would give them a chance to fish the outside shore and take pot luck with all the rest. There are a great number in Richmond bay and places like that. I don't want to insinuate to put those men out of business and leave us intact, but you asked me what would be needed to recuperate the fishery and I think that would do it.

Q. Have the fishermen always fished in those bays or was fishing confined to the offshore waters at first?—A. I could not say. It is a long time now since the fishery started. I know a good many men have been fishing in the bays for a good number of years.

Q. Do you think the product of the canneries should be inspected? The tendency of the day is to inspect all food products that are being canned, such as vegetables,

SESSIONAL PAPER No. 22a

fruit and so on; is there any reason why the lobster packer should be exempt from the same inspection?—A. Well I hardly think it is necessary with the lobster because as far as I know no one attempts to add anything to the can in the way of preservatives. Certainly it is not the custom here, and as far as the quality goes I think every packer for his own interest tries to put up the fish as good as he can. You mean of course just inspecting the fish itself?

Q. Inspecting the lobsters themselves, the way in which the meat is put on the table, and is prepared, and the manner in which it goes into the tins?—A. It may be a good idea perhaps to inspect the condition of the factories a little.

Q. That is the reason I asked the question because we have seen a good many canneries where things were not as they should be; the tables were not kept properly cleaned and were unprotected. Where you have a softwood table used throughout the whole season it is cut up and the meat of the lobsters that are broken and handled on it does not appear to be as clean as it should be.—A. I daresay there are some places in that condition except some of the modern factories; they are a credit now.

Q. Are you aware of any complaints made by fishermen that the price paid by the canners is not satisfactory?—A. Oh well they are always trying to get what they can.

Q. Is there any combination on the part of the packers to keep down the price paid to the fishermen?—A. Not that I know of. There may be certain ones put their heads together, but different men pay different prices.

Q. They do?—A. Certainly.

Q. Then who fixes the price to the fishermen?—A. Every packer fixes his own price as far as I am aware. I think there is a little understanding among some. My own opinion is the fishermen have been in the habit of getting pretty nearly as much as they should except, perhaps, in some cases. This year I think some of the canners cut them down a little. As a rule I think the fishermen gets all the business will stand.

Q. Have you ever heard of a fisherman losing his pack of lobsters because the canner refused to accept them?—A. Not in our district certainly. You mean in the case of a rush that the fisherman could not get a cannery to sell to?

Q. There have been instances where the canners, in order to compel the fishermen to accept a lower price, have refused to accept their lobsters?—A. I have never known it to occur here.

Q. What would the fishermen do in this district if the canneries were closed?—A. Some of them of course could live on their farms, but I think it is safe to say a good many of them would be almost forced to leave the country and look for something else. The canneries give employment directly and indirectly to a great many people.

Q. Is there any opportunity here for carrying on the live lobster trade?—A. That is shipping them in ice?

Q. Shipping them alive in ice or in whatever manner it can be managed?—A. I understand one or two men have tried it but they did not appear to be able to make a success of it. There were no proper facilities for shipping and they were too far from the market.

Q. Where it can be done do you think it offers a more profitable market for lobsters than the canning does?—A. I could not say, I have never had any statistics on that at all.

Q. Would you be in favour of an increase in the number of lobster hatcheries?—A. Well, the general opinion among the fishermen here is that nature has provided us with a hatchery if the fish were protected in it.

Q. In the shape of lagoons do you mean? Have you any knowledge as to whether there are places in this neighbourhood that could be used as pounds? In some places, like the State of Maine and Cape Breton, the berried lobsters are bought from the

9-10 EDWARD VII., A. 1910

fishermen and held in pounds until they have spawned and then are liberated. Do the conditions for that sort of thing exist here?—A. I am not acquainted with any place that would be suitable.

Q. Is there any other matter connected with the inquiry that you would like to express an opinion about?—A. I will tell you what occurred to me when you were speaking of trying to enforce the berried lobster regulation, to preserve the berried lobsters. I think it is rather unfair to throw the whole brunt of the enforcement of this regulation on the packer, because there may be times when it is almost impossible for him to see those lobsters and still if the officer who comes round is inclined to be strict and finds one or two he may fine him pretty heavily, whereas in reality the canner might be acting pretty conscientiously as well as he is able. It is a pretty serious thing for a man to lose all his time overhauling the lobsters. It struck me that the easiest and most satisfactory way to enforce the regulation instead of putting the whole business on the packer, would be, seeing that the gasoline boats are working so good, to put a patrol boat on the coast—to every 25 miles of coast, perhaps less, I am not prepared to say—and let her cruise around. Have a large boat, or two, on the north side and let them keep jogging around without any specified hours of patrol and have men in them that know the business thoroughly. In that way you could protect the berried lobster thoroughly. In no other way can you put fear into the fishermen. The fisherman has no fear as long as he can pass the berried lobsters on the packers. The penalty is not on him once the berried lobsters are landed at the factory. Then they are out of his hands, they are not in his possession.

Witness discharged.

ALBERTON, July 31, 1909.

Mr. M. A. MACNEILL, packer, Alberton, called and sworn:—

By the Commissioner :

Q. How long have you been engaged in the lobster packing business?—A. 26 years.

Q. How many canneries do you operate?—A. Just the one.

Q. How many boats do you employ?—A. Five.

Q. Do you furnish the complete outfit of boats and gear for those boats?—A. To three boats. I buy from two.

Q. Those boats are fishing by the hundred?—A. Yes.

Q. And you buy the product of two boats?—A. Buy the product of two boats, two extra boats.

Q. What number of hands do you employ afloat, two men to a boat?—A. Yes, two men to a boat.

Q. And in the cannery how many hands do you employ?—A. Thirteen to fourteen. That is boys, girls and men.

Q. What did you pack this year?—A. Three hundred cases.

Q. And last year?—A. Four hundred.

Q. What is the best pack you ever made there?—A. Five hundred and forty cases.

Q. When was that made?—A. Five or six years ago. We had a larger outfit at that time.

Q. Did you fish more boats then?—A. I fished more boats at the time we packed the 540 cases and I bought from what we call the Bay. Now we carry on the fishing outside altogether.

SESSIONAL PAPER No. 22a

Q. You have abandoned the Bay?—A. We have abandoned it.

Q. Why did you abandon it?—A. Simply because it was a little too far for me to bring the fish in hot weather.

Q. Is there any difference in quality and size between the Bay fish and those outside?—A. Yes, sir.

Q. In what way?—A. They are all small fish in the Bay; you get no large fish in the Bay. Of course you get a very odd one but they are all under 9 inches in the Bay.

Q. In what depth of water do your outside boats fish?—A. From 7 to 10 fathoms.

Q. How far would that take them off shore?—A. One mile and a half.

Q. What is the average number of traps they fish per boat?—A. Four hundred to a boat, double boats.

Q. Do the fishermen remain fishing on the same ground all through the season, or do they move in?—A. They shift round considerable you know. They move in sometimes to three fathoms of water, three, three and a quarter and four fathoms, nothing shoaler. That is later in the season.

Q. As the season advances they move in?—A. Yes, sir.

Q. Are you fishing a larger number of traps than you fished when you first began?—A. No we started with about the same number I guess.

Q. 26 years ago?—A. Yes, 26 years ago.

Q. Where there as many canneries on the coast as there are now?—A. No, sir.

Q. Who were the canners operating then?—A. Just along our shore there were three of us where now there are six.

Q. Were the Myricks, the Portland Packing Co., Mr. Agnew and the others operating then?—A. The Myricks, Agnew and the Portland Packing Co. were not here then.

Q. Were they not fishing at this end of the island at all?—A. No, they were not fishing.

Q. Do the fishermen generally along this shore own the boats and gear, or is most of the gear owned by the canneries?—A. Most of it is owned by the canneries, although I think probably within the last year there may be one-third of it owned by the men who have their own boats.

Q. Has the tendency been that more gear is owned by the fishermen and less by the packer?—A. Yes, that has been the tendency.

Q. Would that indicate an improved condition on the part of the fisherman, because as a rule when we find him owning his own gear he is more substantial?—A. The result of it is they think they can make more money. As far as I am concerned I would just as soon pack every fish, if they would supply me, as I would furnish the gear.

Q. From your experience what is the best fishing season?—A. May and June are our best months along this shore.

Q. Do you find the lobsters run pretty much the same size all through the season?—A. They get smaller along in July, I find.

Q. Would you say that on the whole they get smaller as you approach the shore and that you have larger and better lobsters in the early season?—A. Oh yes, they are certainly smaller inshore, there is no doubt about that, although the first time you set your gear inshore—the first day or two—you will get probably as large fish as you will get outside.

Q. But it peters out?—A. It peters out.

Q. Do you think the lobsters as a rule approach the shore for the purpose of spawning?—A. That is a pretty hard thing to settle but I think they do.

Q. Do you think there would be any advantage in keeping the lobster fishermen to a certain depth of water? In certain places they fish in very shoal water, into a fathom, and I think the experience is that when they do that they catch an inferior proportion of fish?—A. Yes they do. I have taken notice with regard to that. There is along our shore an outside bar. Between those two bars the water is about two

9-10 EDWARD VII., A. 1910

fathoms in depth and I have noticed you will hear tell of them catching lobsters in the channels, harbours and bays very plentifully. The next day or so you will catch them if you set traps in this two fathoms the same size right along coming out of this channel.

Q. In the early days of the fishery did the fishermen fish in these bays and lagoons?—A. No, sir.

Q. The fishery was confined to the outside water?—A. Yes. I suppose it was about 10 or 12 years since they began to fish in the Bay.

Q. At what period of that fishery do you find the largest run of female lobsters with berries extruded?—A. The first part of July and the latter part of June.

Q. What is the smallest female lobster you ever saw carrying eggs?—A. They are 10 to 12-inch lobsters and larger.

Q. That is the general run?—A. Yes, sir.

Q. As a general thing they are good sized lobsters?—A. Good large lobsters.

Q. And well filled?—A. Yes. I heard of one being caught this year $8\frac{1}{2}$ or 9 inches in size, a berried lobster, I think. I did not see it but Mr. Matheson told me he had found one in measuring some of the fish.

Q. Is there any part of the season when lobsters are not fit for food purposes?—A. Yes, I think so. Of course we have not fished them in that time on the north side, but on the south side they have fished when they are not fit, when they are shelling.

Q. Do you not find them shelling during the season you fish?—A. I think they shell after we are done here. We get a very odd one on the north side.

Q. Out of every 100 fish caught what percentage would be female lobsters carrying eggs?—A. I would not like to answer that question; there would not be a great many.

Q. The percentage is not very large. At least half the lobsters are males and of the female lobsters only a certain percentage have the eggs outside?—A. Some days you get a good quantity.

Q. Are there certain seasons when the berried lobsters are more numerous than others?—A. There are certain seasons when they are more numerous than others.

Q. Do they seem to come in runs or schools?—A. That is what they seem to come in.

Q. From your observation have you formed any opinion as to whether the lobster spawns every year, twice a year or only once in two years?—A. No, I have not, sir.

Q. Do you ever fish in the the fall here at any time?—A. No, sir.

Q. Is the practice of stripping or washing off the berries from the female lobster followed by the fishermen here?—A. I have heard tell of it.

Q. Would it be easy to tell when the lobsters are brought ashore whether they had been stripped?—A. It is pretty hard to tell without a very close examination. Of course a man could tell but he is not supposed to go over—

Q. Have the regulations on this part of the coast ever been strictly observed? Of course the regulations are that berried and undersized lobsters should not be taken. What is the size limit here? Some of the fishermen at Tignish told us there never was a size limit?—A. There was a size limit at one time, but it was never carried out.

Q. It was 9 inches at the beginning and afterwards reduced to 8 inches. What has been the practice here with regard to berried lobsters, have they always been taken?—A. Yes, they have always been taken up to this year.

Q. Was there any attempt made this year to stop the taking of them?—A. I think there was an attempt made this year. With several there was. I know we did.

Q. Do you think there is any general feeling on the part of the fishermen that it is a mistake to destroy the berried lobsters?—A. Yes. .

Q. Are they beginning to appreciate the fact, do you think?—A. I think so. I think that law is quite easily observed, easier than any other part of the regulations I think. I would blame the packers more than the fishermen if it is not observed.

Q. What would happen if the packer absolutely refused to accept berried lobsters, do you think the fishermen would put them back in the water?—A. Yes, certainly they would.

SESSIONAL PAPER No. 22a

Q. Or would most of the berried lobsters be stripped outside?—A. I think you would find an odd fisherman that would do that. I think there would be an odd man that would attempt that kind of thing.

Q. Have the canners ever made any scruple about accepting berried lobsters in the past?—A. No, sir.

Q. The practice has always been to take them within your recollection?—A. Yes, sir.

Q. From the beginning?—A. From the beginning.

Q. What do you think would be the best means of inducing the fishermen to return the berried lobsters to the water?—A. I suppose the best thing would be to pay the fishermen for them probably and then they would be sure to. But I think, as far as I am concerned, if every fisherman is educated up to the matter, that it is necessary in the interest of the fishery upon which he has to depend for a living, it will be quite easy to get him to understand its importance.

Q. Do you think there would be any use in getting the fishermen together and explaining to them thoroughly the importance of observing the regulation?—A. I think perhaps it would.

Q. You know the Department of Agriculture has been in the habit of getting the farmers together and explaining to them the merit of certain crops, a certain style of tillage and so forth. Do you think the same thing might be followed in the case of the fishermen with good results?—A. I think it might indeed.

Q. What proportion of the lobsters taken do you think would be below the legal size limit of 8 inches?—A. I think it is a very small proportion, on the north side here anyway.

Q. And among the outside fishermen?—A. Yes.

Q. Do you think there is a larger proportion of undersized lobsters taken in the shoal waters and in the lagoons?—A. Oh, yes, there are.

Q. Do you think there is a large proportion of berried lobsters taken in lagoons?—A. Inshore?

Q. Yes?—A. No, I do not know that there are any larger than there are outside.

Q. What effect would it have upon the canners to strictly enforce the law with regard to undersized and berried lobsters? You see it has been stated in the evidence already given that it would mean the absolute closing down of the canneries; is that your opinion, too?—A. Oh, well, I don't know.

Q. Taking your own individual case, do you think you could continue canning if the regulations were strictly observed?—A. Well, I think so on our shore. But still, of course, I have noticed they have been getting smaller in the last few years. That is the fish do not turn out per hundred as well in the past two years as in former years.

Q. Could you give us any opinion as to the number of lobsters it takes to make a hundred pounds here? How many lobsters will it take on an average to fill a pound can?—A. It takes along between 6 and 7 to make a pound of meat, about 6.

Q. We find by actual measurement that it takes 9 seven-inch lobsters to fill a pound can?—A. I dare say it would. To a thousand count we can put up three cases. That is on an average for the whole summer run.

Q. To what do you attribute the decline in the size of the lobsters?—A. Well, I don't know. I suppose it is that they have not really had time to grow. There are so many after them and so much gear.

Q. Have you any idea when lobster canning first began in this neighbourhood?—A. Mr. Bell can answer that question pretty fair.

Mr. BELL.—About 1875. Keefe began about two years before that.

By the Commissioner:

Q. Has there been a noticeable decline in the average size of the lobsters within the last ten years?—A. Yes, there has been a small decline.

9-10 EDWARD VII., A. 1910

Q. When did the most serious decline take place, before that?—A. That is in size?

Q. Yes?—A. No, since then.

Q. Since the last ten years?—A. Yes.

Q. What were the regulations when you first began packing?—A. None at all. There were no regulations regarding size limit, berried fish or anything of that kind.

Q. What were the regulations that were first introduced?—A. The first introduced was that the bottom lath of your trap should be an inch and a quarter.

Q. And then a limit was put to the fishing season?—A. Had we a close season then?

Mr. BELL.—The 15th of August. That was a good while before the regulation as to the space between the laths came into force.

Mr. MACNEILL.—We had the whole of July at one time, did we not?

Mr. BELL.—To the 15th of August.

By the Commissioner:

Q. Do you think that different size limits and different seasons in adjoining sections of the coast are unsatisfactory and encourage violations of the law? There are some parts of the coast which adjoin where they have different size limits and different open seasons; do you think there is any reason for that?—A. We have that on this island, too; a different time in the north and on the south it is different.

Q. Was there any necessity for that?—A. Well, I think those who operate on the south side wish now they were back to their old season. I understand that, don't you, Mr. Bell?

Mr. BELL.—Well, in some sections they are getting the best fishing now; they are getting the heaviest fish.

The COMMISSIONER.—Have you ever fished on the south side?

Mr. BELL.—I fished one season.

The COMMISSIONER.—We have been all along northern New Brunswick and the southern shore, and from the evidence we gathered and what we saw ourselves, the bulk of their fishing only begins after the fishing has stopped at either end.

Mr. BELL.—That is a remarkable thing; that is a puzzle.

The COMMISSIONER.—I should think there is very little doubt the lobsters retire from the centre of the straits in winter towards the end of the island, and they move in again and they only catch them when they get there.

Mr. BELL.—Those fish appear to be a different species altogether. In the first of the season when they put out their traps they get scarcely any at all, but they get them off shore. Then the latter part of the season they move out. If it is the opposite with us. We move in as the season advances.

By the Commissioner:

Q. Do you think it is in the interest of the lobster fishery that lobsters should be taken before they have reached maturity or the age when reproduction takes place?—A. No, I do not think so.

Q. The undersized lobsters that are taken have undoubtedly not reached maturity?—A. Sure.

Q. Are you fishing the same traps now as when you began?—A. No, sir, there is a difference in the traps now, in some of them; some operate with a different kind of trap.

Q. Is the parlour trap in very general use now?—A. It is on our shore now.

Q. What is supposed to be the merit of the parlour trap?—A. It holds the fish better in stormy weather.

Q. Are the slats kept as far apart to-day as when you first began to make traps?—A. Yes, sir, about the same, I think.

SESSIONAL PAPER No. 22a

Q. What is the space between the slats now?—A. The bottom laths are always an inch and the rest are in the vicinity of about three-quarters of an inch.

Q. Were the slats always put as close together as that?—A. Yes, sir, always.

Q. Do you think that any increase of the space between the slats would have the effect of allowing the undersized lobsters to escape?—A. Yes it certainly would, especially in the bottom laths. I don't know that it makes any difference about the others, but in the case of the bottom laths I think it would.

Q. Would making the space between the slats larger be one way of allowing a greater number of immature fish to escape?—A. Yes, certainly it would.

Q. Could a size limit of 10½ inches be maintained on this coast without detriment to the lobster fishery?—A. I don't think so.

Q. Are there any facilities here for carrying on the live lobster trade?—A. No, sir.

Q. Has it ever been attempted here?—A. Not on the Island I guess.

Mr. BELL.—Oh yes, the year before last.

The WITNESS.—Yes, I believe so.

Mr. BELL.—They made quite a number of shipments and successful ones too. It happened to be a cool season.

The COMMISSIONER.—Still on the whole the facilities don't exist here?

Mr. BELL.—No, sir.

By the Commissioner:

Q. Where it can be carried on do you think the live lobster industry is the most profitable one for the fishermen?—A. I don't know, sir, I am sure.

Q. Where the live lobster trade exists, the price the fisherman obtains for lobsters is very much greater. Of course they require larger lobsters?—A. Yes, far larger lobsters. Nothing under 9-inch lobsters will do for that business.

Q. What would you think of a new regulation which would do away with the size limit altogether, but shorten the season somewhat?—A. To shorten the season, I think, would be probably the best way out of it.

Q. The regulation concerning the size limit is a very difficult one to enforce apparently?—A. Yes, I know.

Q. What would you think of doing away with the size limit, increasing the opening between the slats of the trap so as to allow a larger percentage of small lobsters to escape, and closing the season on the 1st of July instead of the 10th; how would that affect the fishermen and packers generally?—A. I think it would be satisfactory, sir, in this part.

Q. Do you think that would be the means of improving the industry and saving it?—A. I think it really would.

Q. Other people have proposed closing down altogether for a term of years, what would you think of that?—A. I would not think very much of that.

Q. The Lobster Commission of 1898 reported in favour of closing down certain sections for a number of years and moving on in rotation all around the coast in the same way; what would you think of that?—A. Well, that might work probably a little better, but I would think the shortening of the season would work better than all.

Q. Of course in any event there would have to be a strict protection of the berried lobster?—A. Yes, a strict protection of the berried lobster. I think if the berried lobster law is observed and the season shortened there will be no lack of lobsters. I think that would save the industry.

Q. Is it the case to your knowledge that the canners are compelled to accept undersized and berried lobsters for fear of losing their men?—A. I don't think so.

Q. It has been stated by some canners that they must accept undersized and

9-10 EDWARD VII., A. 1910

berried lobsters because if they did not do so they would lose their fishermen who would go to other canners less scrupulous?—A. I don't think so.

Q. It has also been suggested that for the better control of the lobster fishery, fishermen should be required to register and take out a license at a nominal fee. Some people have stated that if the fishermen were registered and licensed they would feel themselves in a more responsible position, would be more likely to observe the law, and perhaps inform on others who did not?—A. It might probably make them feel they had a little more responsibility.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further licenses be discouraged?—A. I think myself there are plenty everywhere around the coast now. Perhaps it is not a question for us to answer.

Q. Is there any good reason why a license to pack should not be given to any man who shows his ability to do so?—A. No, I don't think it.

Q. Do you think the amount of gear fished by any individual factory should be limited?—A. Well, I daresay that that would be——

Q. It seems rather an odd thing that we should limit the number of licenses to pack and not limit the amount of gear a factory may use. We find in some places canneries fishing thirty boats, we will say practically all their own. That must have the effect of crowding out independent and individual fishermen sometimes. What would you say is a fair number of boats to fish as a limit?—A. That would depend on what ground a packer may have. Of course there are some factories now that are quite cramped up for ground. In such a case three boats would be as good as five or six for they would get as many lobsters. Others again have a wider scope.

Q. Do you think it would be difficult to limit the amount of gear a factory should fish?—A. I think probably it would be difficult all around.

Q. What is the best period of the fishing?—A. May is the best month we have, and the first two weeks of June.

Q. What do you think of the regulation fixing the date of opening in the spring?—A. I think the present time is too early. It is only one year out of ten we do anything in April that amounts to much.

Q. Why should we fix the opening of the season?—A. There is one thing. If the opening was put at the 1st of May, which I consider is early enough myself, to a certain extent you get clear of any risks of running your gear out too early.

Q. What has that got to do with lobster protection, is not that protecting the canner?—A. Yes.

Q. It is the canners' gear that runs the risk of loss?—A. Yes, that is what it is, sir, it is not protecting the lobsters. But take ten days off July——

Q. We can give good reasons for shortening the season up at that end, but why we should do it at the opening of the season is a thing I myself could never understand. I do not see why you should have a different opening here from what they have in Nova Scotia where fishing begins on 1st of January. Nature provides the time at which you may begin.—A. Yes.

Mr. ROGERS.—I think the reason they have for an opening date is to give every fisherman an opportunity to get his share of the ground.

Mr. MACNEILL.—That is so, but as the commissioner says that is not protecting the industry.

Mr. ROGERS.—It protects the weaker fishermen.

Mr. BELL.—It simply means a protection to the packers.

The COMMISSIONER.—There are many parts on our coast in the Gulf division where the conditions are such that you could begin to pack in March.

Mr. BELL.—The packer has more interest than the fisherman has in it.

The COMMISSIONER.—Where the packer owns the gear.

SESSIONAL PAPER No. 22a

By the Commissioner:

Q. It has been asked in some places that fall fishing be allowed in addition to the spring fishing?—A. That would soon run out the lobster industry.

Q. The policy of the department seems to be to encourage fishermen to group themselves together and obtain what is called a co-operative license; what do you think of that policy?—A. I never thought over that.

Mr. ROGERS.—That is done right here in this harbour.

By the Commissioner:

Q. Do you think that policy is one to be favoured?—A. I do not know I am sure.

Mr. BELL.—As the government lays it down that policy is all right, but that is never done; it is usually done for individual parties.

By the Commissioner:

Q. Do you think the product of canneries should be subject to inspection?—A. Yes, I think so, sir.

Q. Do you think that inspection could be carried out by the existing staff of fishery officers?—A. Well, I should think it could.

Q. Would you refuse a license to can to an alien?—A. I don't know, sir, I am sure.

Q. What is the price paid for lobsters in your district?—A. The price to people who have their own gear has been generally \$3 this year. Last year I think it was more. \$3.25 or \$3.50 I guess it was last year.

Q. What did you pay when you first began to pack?—A. When we first began to pack we paid along from 25 to 30 cents a hundred count. That was to our own boats. The price increased along from that up to 80 cents and \$1.

Q. The price has greatly advanced?—A. Yes, sir.

Q. Of course the price of the resulting product has also advanced?—A. Yes.

Q. Proportionately or to a greater degree?—A. Proportionately I think.

Q. Who fixes the price paid to the fishermen?—A. I think the packer generally does.

Q. Do you think there is any combination on the part of the packers tending to restrict the price to the fishermen? Fishermen have complained they are not getting a fair value for their lobsters, that there is an organization on the part of the packers to keep down the price?—A. I don't think so, not along our shore here.

Q. You think there is competition in the matter?—A. I don't think there is any combination on the part of the packers.

Q. Are you aware of complaints by the fishermen that the price paid for lobsters by the canner is not satisfactory?—A. I suppose there are some complaints in some cases but I think perhaps it is not very general.

Q. Is it the case that fishermen have lost their catch of lobsters by canners refusing to accept them?—A. Well, I think there were a few last year. During the heavy rush of fish I think there were a few.

Q. That was owing to the glut?—A. Yes, sir.

Q. It is not to your knowledge that there has been any attempt to squeeze the fishermen by refusing their catch?—A. I don't think so.

Q. It has also been alleged that canners have taken out licenses for certain districts and have not operated their canneries, thereby putting the fishermen to loss in that immediate neighbourhood?—A. I heard tell of one this season.

Q. That has occurred here you think?—A. I believe that has occurred, has it not Mr. Bell?

Mr. BELL.—I never knew of it.

9-10 EDWARD VII., A. 1910

By the Commissioner :

Q. Would the fishermen find any market for the lobsters if the canneries were closed?—A. I think they would find a market, that is for the green fish.

Q. Have you any idea as to which branch of the fishery, the live lobster trade or the canning, would be the most profitable for the fishermen if the facilities existed for carrying on the live lobster trade?—A. I have had no experience at all in the green fishing, I don't know what the prices are.

Q. Are the present facilities adequate for the profitable handling of live lobsters?—A. I think so.

Q. Are you not rather far from the market?—A. That is the only thing. Of course it can be done.

Q. I should almost think that owing to your comparative isolation and the difficulty of transshipping, the trade could not be profitably carried on.

Mr. ROGERS.—It takes 36 to 40 hours from here to Boston. A friend of mine sent some three years ago direct from St. John to Boston. They went off in very good condition. They were given ice at St. John by the express company.

By the Commissioner :

Q. Is there anything in the quality of the lobster in this neighbourhood that should make it weaker and more unsuitable for shipment alive than the lobster on the Atlantic coast? Some people have said that the lobsters from this section will not stand transshipment as well as the Atlantic lobsters.

Mr. BELL.—I think that is owing to so much fresh water.

By the Commissioner :

Q. Have you had any experience in the matter of hatcheries?—A. There are some on this island. There is one at Charlottetown.

Q. I suppose that has not been long enough established to determine very accurately whether it has done much good or not?—A. I don't suppose it has.

Q. What is your opinion on the matter? Do you think that an increase in the number of hatcheries is desirable?—A. Certainly they must do good, there is no doubt about that, but I think myself if the regulations were strictly carried out with regard to the berried fish and the size limit it would be better than a hatchery.

Q. Do the facilities exist anywhere on this coast for the establishment of a pound?—A. Yes, sir, I guess Malpeque bay would be a good place and Alberton bay too.

Q. What is your opinion of fishing in bays towards which the lobsters seem to gravitate near the close of the season?—A. It is a question that is pretty hard to answer. Some people maintain that they——

Q. Looking at it from the point of view of the protection of the lobster what would you say?—A. I think myself that the river fishing, where I may say I consider the lobsters also come up to spawn, should be prohibited. Of course in many cases it is pretty hard to do at the present time, as for instance, Malpeque bay where there has been a lot of money expended on the fishery. Having in view that outlay it is pretty hard to prohibit it.

Q. Is there any other matter connected with this inquiry, that we have neglected or overlooked, upon which you would like to express an opinion, or is there any personal statement you would like to make?—A. No, I don't think so, Commander. I think I gave my views at the outset when we first started in.

Q. It has been always recommended by our leading fishery expert, Professor Prince, that we should only have two grand divisions, the Atlantic waters and the Gulf waters, and as little difference in seasons and size limits as possible. He proposes for the inner Gulf a season beginning 1st January and ending 1st July. How would such a season suit you?—A. I think ending 1st July would be all right but I don't see why it should be started 1st January.

SESSIONAL PAPER No. 22a

Q. There are some divisions where fishing could begin earlier than with you?—
A. Of course that is the way it is.

Witness discharged.

Mr. ROBERT BELL, packer Alberton, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster business?—A. I started nearly 30 years ago.

Q. Where are you packing now?—A. I am packing at Kildare Cape. I formerly packed on the west shore, at Skinner's point. I sold that factory last spring.

Q. How many boats do you employ?—A. I ran two this spring and intended to run three.

Q. Are you fishing your own boats and gear?—A. Yes.

Q. How many cases did you pack?—A. 100.

Q. With two boats?—A. Yes.

Q. How do you find your pack, is it increasing on the whole or decreasing?—
A. It is decreasing.

Q. What is your experience with regard to the fishery? You have had 30 years at it now, is the general trend of the industry downwards?—A. I think there is a downward tendency. When I commenced packing at Kildare, where Mr. Lovitt is now, some thirty years ago, I had fairly good fishing. There was one of the fishermen wanted to have a gear of his own and came out to Kildare Cape where the Hunter Brothers now fish. I said he might as well have gear and I would give him so much for his lobsters. He had 300 traps, built a house and started very economically and the fishing got so poor, he got so few fish there were not enough to compensate him for his outfit and there was no factory between Kildare and Tignish. There was not a trap either, only his 300. He came out in debt and I had to buy the gear from him. Now on that space of ground there are over 50 boats.

Q. Do you think the lobsters have a tendency to follow bait, that if there is a large distribution of bait they will gravitate towards it?—A. Yes, but the lobsters did not appear to be in existence.

Q. Do you think the regulations have ever been enforced in your recollection?—
A. Not strictly.

Q. Were they ever, at any time, more strictly enforced than they are now?—
A. Some 15 years ago there was a law passed that the first two laths of the trap had to be an inch and a quarter apart. That was strictly enforced. At that time also there was a limit regulation and that was very strictly enforced. I know that because I was fined once.

Q. Have you ever heard of anybody being fined recently?—A. Not very recently.

Q. Was that when Sir Hibbert Tupper was Minister?—A. Yes, sir.

Q. What do you think yourself of that regulation limiting the space between the slats?—A. I think it had a great tendency to protect the small lobster and the really small lobsters are of no value to the packer. It is a great injury to the industry to destroy them.

Q. Before they have reached the age of reproduction?—A. Yes.

Q. What would you say as to the proposition to do away with the size limit, strictly protect the berried lobster and close the season on the 1st of July?—A. I think that is about the whole solution. There is no other way whereby a packer can run a successful business on a size limit.

Q. The regulation fixing the size would be a very difficult one to enforce in any case, would it not?—A. You could not enforce it, you could not get the fishermen to fish.

9-10 EDWARD VII., A. 1910

Q. You think the proposition referred to offers the solution of the difficulty?—

A. Yes, that is the one.

Q. And you would fix an opening day for the spring?—A. Yes, sir. The 1st of May, not earlier.

Q. In what depth of water do you fish in your neighbourhood?—A. All the way from 2 fathoms to 12.

Q. Would you say what percentage of the lobsters taken are below the 8-inch limit?—A. I should say there is probably two-thirds under 9 inches.

Q. Do you think as much as that?—A. Yes, sir. Of course I have only had one year's experience on this shore. On our other shore I know it for a fact because I have kept strict records. Probably you had an interview with a man named Butler, an overseer over there. I saw one of his cards. He kept a regular score card at the request of Mr. Matheson, the inspector. Instead of going around from one place to another he kept a strict record for himself. I saw one of his records recently, and he had 445 lobsters from $3\frac{1}{2}$ inches in size to $10\frac{1}{2}$ inches, and the 445 lobsters weighed 101 pounds. Now, I saw that with my own eyes, and there were even lobsters $3\frac{1}{2}$ inches and a good many 4 and a good many 5 and 6. There were some $10\frac{1}{2}$ inches, but just a few.

Q. Would they pack those small lobsters?—A. Yes, sir.

Q. What sort of meat do you get from them?—A. Well, the meat is firm and white, but it is tedious to get out of the shell.

Q. You told us, I think, when we were examining the previous witness, that you had some experience of the South Shore district where they fish up to the 10th August?—A. I took some traps down there as an experiment.

Q. A great many fishermen in that district have told us they would prefer, and they think it would be wise, to change the season altogether, to let them begin to fish on the 15th July and knock off at the last of September, by which means we would save the berried lobsters altogether?—A. Well, I think it would be a very good idea. When I went down there about the 12th July the lobsters then were hardly fit to can; they were just like a sponge, and a good many had no shell on at all. A singular thing about the fish down there is that you have an increase after the 10th July.

Q. You see the fishing is stopped on both sides then?—A. Some people say it is the drainage from the northern fishery, but I don't think it is anything of the kind; they are not the same kind of lobsters at all.

Q. Do you think it would be possible to fish there during that time? Some canners complain that by leaving the gear out in July and August the rope would be destroyed very rapidly owing to the warm weather and the borer would injure the traps. The average life of a trap under present condition is three years?—A. They never get broken by storms there, but they are eaten by worms.

Q. The fishermen there say that if that change were made, even if they did lose some gear, they would make it up by an improved catch and the lobsters would be most thoroughly protected?—A. I think it would be a splendid law. It would be a good law for the packers too, because they actually lose money from the 25th of May to the 1st July; they do not get enough lobsters to pay expenses.

Q. You heard the evidence of the previous witness, do you approve of it in a general way?—A. Yes, in a good many things.

Q. Are there any points on which you differ from him?—A. There is one thing about the limit of traps that is not right at all. There are big monopolists in this industry that are just wiping the smaller packers out of existence by overcrowding. For instance, in recent years they have bought out one factory at Kildare, formerly owned by William Whitman, who ran five boats. The Portland Packing Co. got hold of it and instead of running 5 they ran 13, 5 of which are gasoline boats. Then to the northward of that they bought out another factory, then ran three or four boats, and possibly could have bought from some three or four more. Now, the company are

SESSIONAL PAPER No. 22a

running from 15 to 16 or 20 boats, and, of course, they are running a large amount of gear. In former days 300 traps were considered an ample number for any two men. Those men are running 400, 450 and 500 each; they have got to crowd in somewhere. I am speaking from experience, and I think it is a most unfair case. This year when we commenced to run our lines inshore we ran them as close as $2\frac{1}{2}$ fathoms, and we put probably 150 to 200 traps along the beach. Well, one of these monopolists came down one day and ran a mile or two miles—a long way inside of us. We were getting 150 to 200 lobsters a day, but when they ran their lines inside we did not get much over half that number; it simply spoiled the fishing for both. They lost a lot of gear by it, but at the same time I think it is a most unfair thing, because these monopolists are bound to wipe out the weaker men, and I think the sooner there is a change in that respect the better. If not there will be no small packers, the Americans will have the whole thing to themselves.

Q. What do you think yourself about the general practice of issuing licenses to aliens?—A. I think there should be a limit to it because they are squeezing our people and driving them out.

Q. Would you venture to say that where licenses are issued in future our own citizens should have the preference?—A. Most decidedly, because if those men get a monopoly of the business they will do as they like.

Q. Do you think that under altered conditions or circumstances the Canadian citizens would be allowed a license to can in the United States?—A. I don't suppose he would. The Yankee is too cute for that, he wants it all to himself. I think we ought to have the lion's share here too but we have not got it.

Q. Was there an attempt made this year to prohibit the packing of the berried lobster?—A. Yes. I think it was pretty generally observed.

Q. Would you say there is an increasing disposition on the part of the fishermen to protect the berried lobsters, are they beginning to realize the necessity for saving them?—A. They realize the necessity for it all right but still they don't like to throw a cent over their shoulders. They don't value the lobster, it is the money they are after.

Q. Do you think if the canner absolutely refused the berried lobsters, the fishermen would put them back in the water?—A. I suppose they would but still the fishermen argue this way: They say if they throw them over, so and so takes them.

Q. Do you think there is anything in the proposition to license the fishermen?—A. I don't know I am sure, I don't think there is. The only way to do with the fisherman, I think, is to let the government pay him for the lobsters and take care of them, gather them up and put them into breeding pounds. It is no use in the world for fishermen to take the berried lobster out of the trap to-day and chuck it overboard, because somebody else will pick it up to-morrow and the next man may brush the berries off and try and deceive the packer. I don't think that is worth a straw. I think it is really absolutely necessary that the government should take steps to have smacks go around, take up the berried lobsters and pay a good price for them. Then the fishermen will take care of them.

Q. Would you favour the placing of berried lobsters in pounds or bringing the spawn to hatcheries?—A. Well, the hatcheries would be rather difficult, there would not be enough of them, but the shore is strewn with suitable pounds that could be put into use at a very small cost. The berried lobsters could be put into these pounds and afterwards conveyed to the hatcheries.

Q. The berried lobsters have to be fed when they are in these pounds on mulched herring?—A. I was showing Mr. Matheson and Mr. Lovitt the advisability of having pounds to receive the berried lobsters. There is a very good place near us.

Q. What is the depth of water?—A. All the way from two to ten feet. That is the most important thing of all, to look after the berried lobsters when they are delivered by the fisherman.

9-10 EDWARD VII., A. 1910

Q. All this would mean an increased cost. Do you think the department would be justified in asking the canners to pay an increased fee, instead of the 2 cents fee at present charged, so as to carry out that plan?—A. I think so.

Q. Because it would seem to be necessary that the cost of protection should come out of the industry itself?—A. In that case the packer would be as much interested in the protection of the lobster as the government. I think it would be a capital idea so long as the fee would not be excessive.

Q. Do you think there is any part of the season when berried lobsters are more numerous than at another?—A. You get the berried lobsters from May 1. to July 1. I think there is more probably the last of June and along about the 1st of July.

Q. What is your opinion, or would you care to express an opinion, as to the advisability of fishing in lagoons, harbours and inshore waters generally?—A. I don't think it should be allowed at all.

Q. Would you confine the lobster fishing to the outside shore?—A. To the outside shore.

Q. In every instance?—A. The main feature in this whole industry is to have some restriction as to the number of traps and save the berried lobsters. I can take care of myself, but really and truly if there are not some steps taken very soon the thing will take care of itself in a very few years. I say it is a most ridiculous thing to allow monopolists to go around and buy the small factories and squeeze themselves in in every imaginable case. It is simply going to wipe the Canadian out of existence altogether in a very short time. Where Mr. MacNeill is canning he has got nothing like that to contend with but he may have in the near future; they may be trying to get in there as well. I am speaking from knowledge because I have had an experience of over fifteen years. Now I will give an instance of it. I saw the overseer myself and he showed me a score card on the 6th July. I said: 'How are the fish?' He said: 'This is how it is. There is a particular catch of 445 lobsters.' He had the sizes all the way from $3\frac{1}{2}$ to $10\frac{1}{2}$ inches. I said: 'You have 445 lobsters.' He asked: 'How many pounds have I got there?' I replied: 'You ought to have 160 according to the lobsters I have been using.' He said: 'I have just 101.' I said: 'That is too small to can.' He said: 'We are losing by it. The Portland Packing Company would give me \$1.30 if I took them over there.' I said: 'They are not worth catching.' He said: 'What is the odds as long as they will pay?' I told him 'It would not be right to leave the man who paid you for the 100 pounds last season.' He replied: 'I want the money.' Another man that had 400 lobsters weighing 100 pounds would not give them to Doucet at \$2.75 a hundred weight but took them to the Portland Packing Company at \$1.30 a hundred count. That was nearly double what he got formerly. You see these companies can afford to run the factories at a heavy loss whereas a poor man cannot do that, he will have to go out of business altogether. Now as to the trap I think it would be advisable to have the first and second lath an inch and a quarter apart and allow the small lobsters a way to escape. I think one of the main destroyers in this business has been the introduction of the parlour traps that take and hold everything, there is no escape from them.

Q. Do you think the number of licenses issued to one individual or company should be limited? We find in some parts of the coast that there are scores of canneries run by one firm. The smaller operators are being gradually squeezed out or, having abandoned packing, the cannery has been taken over by a large operator and there seems to be practically no limit to the number of licenses controlled by one incorporation. Do you think there should be a limit put to that?—A. I think there should certainly be a limit. A great many packers are in favour of free licenses, but I have a different opinion. I think it would have a tendency to hurt the industry, to hurt the quality of the pack.

Q. To overdo the issuance of licenses?—A. Yes, to have too many small packers. Supposing a man would get a license to pack his own catch, a boat's catch or the like

SESSIONAL PAPER No. 22a

of that. I think it would be something like butter; there would be so many different qualities that the lobsters would not be of an equal quality. I think that the fishermen to-day get just as much out of the business as the packer, and I do not know but they get more. They have not any reason to complain, but they are a dissatisfied class of people. That is a fact. I have had an experience of thirty years now with fishermen and they have had just as good a thing of it as the packers compared to the amount of expense.

Witness discharged.

WILLIAM MACLEOD, fisherman, Alberton, called and sworn:—

By the Commissioner:

Q. How long have you been engaged as a fisherman?—A. About eighteen years.

Q. When you are not lobster fishing what do you occupy yourself with?—A. Fishing mackerel.

Q. Are the majority of the lobster fishermen in this neighbourhood men who practically fish all through the season?—A. Yes, sir.

Q. We find in a great many places that the majority of the lobster fishermen are farmers, labourers and others, who fish lobsters and nothing else; that is not so here?—A. Not as a general rule.

Q. Have you always carried on your fishing on this same coast?—A. Yes, on this same coast.

Q. Do you own your own boats and gear?—A. Yes.

Q. What amount of gear do you fish?—A. 385 traps this spring.

Q. In what depth of water do you generally fish?—A. From six fathoms to eight.

Q. How far off shore is that?—A. Four to five miles.

Q. What is the nature of the bottom on which you do most of your fishing?—A. Rocky bottom.

Q. Is it rock all over, or are there reefs with sand bottoms between?—A. Rock all over.

Q. Is there any Fishermen's Union in this neighbourhood?—A. No, sir.

Q. For whom do you fish?—A. John Agnew.

Q. How many boats does he run at that factory?—A. Ten.

Q. Those ten are his own boats, are they?—A. I was the only one that had my own gear. Well, there was another man who had two boats there.

Q. Do you fish throughout the season in the same depth of water?—A. Pretty much.

Q. Is it the practice there to move the traps farther in as the season advances?—A. Yes, sir.

Q. Since you have been a fisherman has the catch been decreasing?—A. It is decreasing.

Q. Decreasing in what way, are you getting a smaller run of fish?—A. A smaller run of fish.

Q. Have you to fish more gear to-day than you did when you first began to keep up your catch?—A. Yes, sir.

Q. Do the lobsters average as large now in size as when you commenced fishing?—A. No, sir.

Q. At what period in the fishery do you make your best catch?—A. The middle of May to the 1st of June.

Q. When do you find the berried lobsters?—A. Coming on the last part of May and the 1st of June.

Q. And when do you find them in the greatest abundance?—A. That is about the time. We don't find a great many.

9-10 EDWARD VII., A. 1910

Q. What would you say is the percentage, how many berried lobsters do you find to the hundred lobsters?—A. I suppose they would average about two.

Q. Will you average more at certain seasons than at other seasons?—A. They would average more at the latter part of the season.

Q. Do they seem to come in runs or are they scattered?—A. They are scattered.

Q. Do you notice much difference in the egg as the season advances, do you notice the egg ripening?—A. All I ever noticed was to see half of the spawn gone.

Q. Did you ever try to hold a female lobster in a trap?—A. No, sir.

Q. Is there any difference between the trap you use now and the one you first fished?—A. There is a difference. There is the four headed trap now. We used to use the two headed trap.

Q. Where do the fishermen consider the advantage lies in the present trap?—A. It holds the lobsters longer.

Q. Are you putting the slats closer together now than you did formerly?—A. Yes, sir, a little closer.

Q. Do you think that a widening of the space between the slats of the trap would have the effect of letting the immature lobsters escape?—A. I think so.

Q. Do you think it would be wise to do this?—A. It would be wise to do this.

Q. I suppose you will admit it is unwise to destroy an immature lobster?—A. Yes, sir.

Q. What has been the practice in the past with the canner, has he always been ready to accept everything you brought him?—A. Yes, sir.

Q. Without regard to the size or the fact that the lobsters were berried?—A. This summer he refused.

Q. Refused to take the berried lobsters?—A. Yes.

Q. Do you think there is a general disposition on the part of the fishermen towards realizing the necessity for protecting the lobster, especially the berried lobster?—A. Oh yes, sir.

Q. It has been proposed by some people that the fishermen should be licensed, as well as the canner, with the object, we will say, that in the event of any considerable violation of the law the license could be cancelled and the offender not allowed to fish lobsters any more. Do you think there would be any advantage in trying to do that sort of thing, would it be wise or necessary to do it?—A. It might be a good thing.

Q. Do you think there would be anything gained by sending somebody around who would address assemblies of fishermen and explain to them the advantage and the necessity of their observing the law?—A. Yes, sir, I think so.

Q. There seems to be a feeling on the part of the fishermen that these laws are made, not for their good, but for the purpose of restricting or pinning them down, and the idea would be to show them that such is not the case, but that these regulations are necessary for the protection of the industry. Do you think it would be possible to so educate the fisherman so that he would observe the law and understand the necessity for doing so?—A. I think so.

Q. How does the price paid for lobsters compare with that paid when you first began to fish?—A. The price was very low this year.

Q. Why was that?—A. There was a glut in the market I suppose.

Q. Due to the overcatch of the last year or two?—A. Yes.

Q. What did you sell your lobsters for this year?—A. \$2.50.

Q. And last year?—A. \$3.15.

Q. And previous years?—A. \$3.

Q. What did you get when you began to fish first?—A. \$3.

Q. Have you as a fisherman a feeling that you are not getting enough for your lobsters?—A. This year I did not get enough.

Q. Do you think there is any combine to keep down the price?—A. There was a combine this spring.

SESSIONAL PAPER No. 22a

Q. Who fixes the price paid for lobsters?—A. The Portland Packing Co. fixed it this year and Mr. Myrick.

Q. You think there is no competition in the matter and that you are forced to take what is offered?—A. The fishermen have to take what they get.

Q. Do you think there is any time when the lobster is not fit for food—A. I think when they are soft shelled.

Q. What is the smallest size at which you have known a female lobster to carry eggs?—A. I would say about 8 inches.

Q. I suppose there is a very small proportion at that size?—A. I hardly ever see them, it is generally the large lobster that carries eggs.

Q. What proportion of the lobsters you take, would you say, were below the size limit of 8 inches?—A. About one-quarter.

Q. Out of every 100 lobsters, how many are below eight inches in size?—A. I suppose there would be 25 to 30, that is a rough estimate.

Q. Now, with a view with protecting the fishery, are there any changes you would suggest in the regulations?—A. I would suggest to put the laths in the trap far enough apart to let a 7-inch lobster go. It would be a little hard for a few years but it would bring the fishery up again to its former state.

Q. What would you say to a regulation which would do away with the size limit, control the distance between the slats, and close the fishery on the 1st July, always protecting the berried lobster as thoroughly as possible?—A. I think that would be a good thing.

Q. Do you think if that were done and carried out strictly it would have the effect of preserving the industry?—A. It would have that effect.

Q. And in a few years the fishermen would reap the benefit by an increased catch?—A. Yes.

Q. What do you think of the present practice of limiting the number of licenses to can?—A. The way it is with our people we have our own gear. If three or four could not get a license we would have to take what we could obtain from the packers.

Q. Then would you favour the practice of granting a license to a group of fishermen to club together and engage in packing?—A. Yes, sir.

Q. We would have to have some standard for canning; how could we fix that? It would not do to give licenses indiscriminately to everybody, it would be for the benefit of the fishermen themselves that that should be done; how could we arrange that matter, how could we ascertain that any of these men were competent to pack?—A. You would have to know that he had so many traps, his own gear.

Q. And was prepared to run a cannery that would be up to a certain standard?—A. Yes.

Q. What is the average number of cases packed per boat, what would it run?—A. It would run about 220 or 230 lobsters to a case.

Q. We find the average has been about 50 cases to a boat, some more, some less; do you think that would be a fair average? We would have to fix a standard somehow, would it be fair to put a limit of 50 cases per boat?—A. No, I don't think it would be.

Q. Do you not think so; as a fisherman would you not run that number?—A. I would overrun that.

Q. Has it ever been the habit of fishermen here to strip the eggs from the female lobsters outside?—A. I have not seen them at it but I have heard them talk about it.

Q. Is fishing carried on after the close of the season?—A. Well, there is.

Q. It is still done, do you think?—A. Yes, it is done every year.

Q. Is it done among the outside fishermen or among those who fish inside in the harbours and lagoons?—A. It is done on both sides.

Q. Is it done extensively, is there quite a lot of it?—A. No, sir, not a great deal.

Q. Where are those lobsters packed generally?—A. They are packed in different places, smuggled.

Q. They are not packed openly in the canneries are they?—A. Oh, no, sir.

9-10 EDWARD VII., A. 1910

Q. Is it the practice of the fishermen to avoid dealing with a canner who is known to be careful in regard to the receiving of berried lobsters, and to go to another who is less scrupulous?—A. No.

Q. Would it be possible to get the fishermen to return to the water all the berried lobsters they take in their traps?—A. It would.

Q. How do you think they could be induced to do it?—A. By one fisherman watching another it could be done.

Q. Do you think it would be possible, or wise, to buy the berried lobsters from the fishermen, impound them and liberate them after hatching out?—A. I daresay it would.

Q. Are there places about this coast where pounds could be built? What is needed is an enclosure, having a narrow outlet with the tide flowing freely in and out, and a certain depth of water—a pretty large area to hold thousands of lobsters?—A. I don't know where you could get the place.

Q. What would you think about hatcheries?—A. I think they would be a good thing.

Q. Would you favour an increase in their number?—A. I would.

Q. Are you aware of any fisherman having lost his catch of lobsters through the canner refusing to accept them?—A. No.

Q. Some people have proposed with a view of saving the fishery to close it down altogether for a number of years, what would you think of that?—A. I don't think there is any need of it.

Q. Others have proposed to close down by sections. The Lobster Commission that came around in 1898 proposed that solution; to close certain areas for a term of years, and vary those areas all around the coast so that there would not be a complete, but only a partial, closing down. Would that be possible and less harmful?—A. I don't see how that would be possible.

Q. If lobster fishing were stopped for a term of years what would the fishermen do; what would they turn to?—A. They would have to go away, the most of them.

Q. Would it be possible to ship the lobsters alive to the market if the licensing of canneries were stopped?—A. It is pretty hard; we are so far away. Boston is the handiest market for live lobsters and it is pretty hard to get there.

Q. Have you any idea which is the most profitable to the fishermen, selling the live lobsters to the market or selling them to the canner?—A. It is according as they are situated. If they were situated handy to a railroad I think the live lobster trade would be the more profitable.

Q. Do you think where it is possible the live lobster industry should be favoured rather than the canning?—A. It should be favoured I think.

Q. There are certain sections of the coast where that fishery seems to be the most profitable of the two. Do you think the lobster canner would have to go out of the business if the present size limit were strictly enforced?—A. I don't think so.

Q. It has been stated in some instances that fishermen have suffered injury by the failure of those holding canning licenses to operate their factories; do you know if that has been the case here?—A. No, that has not occurred here.

Q. I understand you would favour the plan of issuing a license to a group of fishermen who would combine together to can on the co-operative plan?—A. I would.

Q. Are you aware if ever that has been done in this neighbourhood?—A. It has been done.

Q. How long ago?—A. A couple of years ago.

Q. Is that cannery in successful operation?—A. Yes.

Q. Do you think there is any reason why the size limit should be smaller in one district than in another?—A. I don't see it.

Q. Is it your opinion that when the fishery first commenced lobsters were about the same size and run all over the coast?—A. There were big and small.

Q. Of course, old and young. Do you think in the original times, before canning

SESSIONAL PAPER No. 22a

commenced at all, the lobsters were about the same size all over?—A. I always heard of there being big lobsters before the canning commenced.

Q. Do you think it would require a larger percentage of lobsters in the fall to fill a pound can than it does in May and June?—A. Oh, no.

Q. What would you say in regard to inshore and lagoon fishing; do you think it should be allowed or would you prohibit that?—A. If the laths were so as to let out small lobsters, there would be no need of it. Of course, the small lobsters come inshore to grow.

Q. Is there anything else you would like to say?—A. No, sir, I think you have asked me all I have knowledge about.

Q. I understand you to say that you would favour an increase of space between the slats?—A. Yes, sir.

Q. And the shortening of the season by ten days at the end?—A. Yes.

Q. And would you do away with the size limit or leave it where it is at 8 inches? Do you think we could venture to do away with the size limit altogether if we enlarged the space between the slats?—A. I think if the space was looked after it would be all right; there would be no need of looking after the size limit.

Witness discharged.

JOHN IRELAND, fisherman, Alberton, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing?—A. Two years lobster fishing.

Q. Where do you fish?—A. North Cape.

Q. There is no inside fishing there?—A. No.

Q. Are you fishing your own gear and outfit?—A. No, sir, I have got an interest in it, it is not all my own.

Q. What cannery do you fish for?—A. John Agnew.

Q. Did you hear the evidence of the other gentleman?—A. Yes.

Q. In a general way do you agree with what he has stated?—A. Yes, sir.

Q. Is there anything else you would especially like to allude to?—A. I think to shorten the whole thing up; to have a standard size, to have a standard sized trap, that is a standard space between the laths, and make a larger mesh in the head of the trap to allow the small lobsters to get out.

Q. Do you mean to say a larger hoop?—A. It does not make so much difference about the hoop as long as the mesh is large enough to allow small lobsters to get out.

Q. And you would protect also the berried lobsters?—A. And protect the berried lobsters.

Q. I suppose there can be no doubt but that breeding lobsters should be protected?—A. Oh, yes. We kept pretty nearly all we got and put them in traps by themselves but we could see no change in them.

Q. What percentage of the lobsters you take are female lobsters bearing eggs would you say?—A. I should say we had about one hundred weight of them.

Q. What was the weight of your total catch?—A. About 46,000 pounds.

Q. And out of that you will have about one hundred weight of berried lobsters?—A. Yes.

Q. Could you tell us the percentage of undersized lobsters you take?—A. It is according to the district. In some districts I guess 90 per cent. In others again of course——

Q. I suppose about North Cape you have a pretty good run of lobsters have you?—A. Coming on the last of the season it gets pretty small when you fish in near the shore.

9-10 EDWARD VII., A. 1910

Q. Who fish in there?—A. The majority of men do. There is a small ledge off there where we fish. We fish the season off there.

Q. As regards this matter of lagoon fishing and inshore fishing in harbours and inside channels, what is your opinion of it as compared with the off shore fishing?—

A. I think the inshore place is a kind of a natural hatchery. By making the space larger between the slats in the trap the small lobsters will escape and will get a chance to grow.

Q. As to the price of lobsters, do you think the fisherman is receiving his fair share of the profits of the fishery?—A. Up to this year I think he did, but this year they cut him down a little too far.

Q. That I suppose is because the market was bad?—A. The market was bad, but not sufficient to cut it down as much as it was.

Q. Within your time of fishing has the regulation with regard to taking berried and undersized lobsters been observed?—A. Not as to undersized lobsters. This year the packers as a rule would not take berried lobsters.

Q. Last year they took everything that came I suppose?—A. Everything that came.

Q. And was that the practice for many years?—A. Yes.

Q. What do you think of the practice of limiting the number of canning licenses?—A. I don't see where the benefit comes in of limiting the number.

Q. Do you think a license ought to be given to every man who applies for one?—A. Not to every man that applies.

Q. But if a number of fishermen combine together and prove they are prepared to do canning in a substantial way, would you favour giving them a license?—A. Yes.

Q. Do you think a large number of licenses should be given to one individual, or corporation, or is it better to confine it?—A. I think the rule is now where a corporation owns a lot of factories the license is issued to the manager. I don't think the corporation holds the license, I think it is each manager who holds it.

Q. It is true the license is made out in the name of the manager but it is always stated in the license by whom the cannery is owned?—A. The rule here in the case of a factory that has a license is, that if they buy the factory out the license continues to them.

Q. Do you think that should be continued, does it not lead to a monopoly?—A. On the other hand if a poor man had a factory and sold it he would get no benefit because it is the license they want and not the factory.

Q. Do you think there has been any combination on the part of canners to keep the price down?—A. This year there was undoubtedly.

Q. What do you think would be the best way of making the fishermen understand the necessity of strictly observing the regulations, especially that in regard to berried lobsters? You realize the necessity yourself but there are a great many fishermen who do not, they only think of the present moment.—A. I think the most of them do, but they do not care.

Q. How could you make them care?—A. If there could be some arrangement made for the packer to buy the lobsters, and then impound them or place them in hatcheries, or something of that sort, I think that would be the best way.

Q. You do not think we could trust to the intelligence of the fishermen to take care of the berried lobsters?—A. I won't say the intelligence, it is the honesty.

Q. Do you think if the canners refused absolutely to receive berried lobsters the fishermen would not be obliged to put them back?—A. I think here they knock the berries off.

Q. In that case you think they would knock the berries off?—A. Yes.

Q. What do you think of the proposal to license the fishermen?—A. I don't think there would be any advantage gained.

SESSIONAL PAPER No. 22a

Q. You do not think it would make any difference to do that?—A. I don't think it would go, especially in this country. A great many of our fishermen, as soon as the season is over, go away, probably to the woods. They never come home until the last moment and would not have sufficient time to look after getting their licenses.

Q. Do you not think it might have the effect of putting the fishery in the hands of more responsible men?—A. It might in that case.

Q. What do you do when not lobster fishing?—A. I go to sea or fish.

Q. Is there a very large proportion of the lobster fishermen here who carry on other fishing, or are they men who fish lobsters and nothing else?—A. There is quite a few but there are a lot of farmers. The majority of them make a living at fishing.

Q. What is the smallest size at which you have seen a female lobster carrying eggs? The reason I ask the question is because there is a good deal of difference about it?—A. I have not measured them but I should say about 8 inches. I think that is about it.

Q. What would be the average run, as a rule they are pretty good lobsters are they not?—A. As a rule they are the best lobsters.

Q. Have you any opinion to offer regarding the shipment of live lobsters to the market, do you think it could be successfully carried on here?—A. Yes, right here in Alberton, I think it could. In other districts they are perhaps too far away from the railway.

Q. And the facilities for successful shipment do not exist?—A. No.

Q. Do you think it would be a wise policy to encourage that branch of the industry rather than the canning?—A. Yes, there would not be such a large pack then and you would get an all-round price.

Q. That is in places where the shipment of live lobsters could be successfully carried on?—A. Yes.

Q. Are you aware of any fisherman having lost his catch of lobsters through the canners refusing to accept them?—A. Not in this neighbourhood.

Q. What would you think of the proposal to close down for a term of years?—A. I don't think it is necessary if the fishery is properly looked after.

Q. And in any case it would be a very great hardship would it?—A. It would be a very great hardship.

Q. What would you think of the other proposition of closing down by sections? That would not be as great a hardship?—A. Oh, no, it would not, but it would come very near it because those sections left over would be overcrowded.

Q. Do you think there should be any inspection of the product of a lobster cannery?—A. If there is meat inspection I do not see why it should not be done in the case of the lobster.

Q. Do you think the lobster canner would be put out of business altogether by a strict enforcement of the size limit as it is at present?—A. No. It would be hard on him for a few years.

Q. But ultimately he would be benefited?—A. Yes.

Q. Do you think the fishermen would make more money if allowed to can for themselves?—A. Yes. Of course these packers are not in it for pleasure.

Q. You would favour an increase in the number of hatcheries would you?—A. I think hatcheries would be a good thing around the shore.

Q. You have not been fishing long enough to enable you to say whether there has been any noticeable decrease in the size of lobsters, have you?—A. No. Of course I have been around here a good many years.

Q. As a matter of fact you know there has been a decrease?—A. Oh yes.

Q. Do you think there is any reason why the size limit should vary in different districts?—A. No, I do not.

Q. You have heard the evidence given by the other fishermen who preceded you, would you approve of it?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Would you favour shortening the season to the 1st of July, increasing the space between the laths in the traps and the width of the mesh and dropping the size limit altogether?—A. Yes. You cannot enforce the size limit.

Q. And either buying the berried lobster or making serious effort to protect it?—A. Yes.

Q. Have you ever made the experiment of preserving female lobsters in the trap?—A. All we could. We put them into empty traps and put them on the ground. We could see no change, they had no more sign of shedding the berries at the close of the season than they had at the beginning.

Q. They did not shed the berries?—A. No.

Q. And they had not shed the berries when you liberated them?—A. No.

Q. If they have not hatched out at the close of July, when the hatching season is generally over, then these eggs are carried over to another season?—A. We liberated those lobsters about the 1st July.

By the Commissioner:

Q. It is possible that if you had kept the lobsters a little longer you may have seen a change because when they hatch out the eggs tumble off?—A. Possibly.

Witness discharged.

JOHN SKINNER, packer, Alberton, called and sworn:—

By the Commissioner:

Q. On what part of the coast do you pack?—A. Alberton South.

Q. How long have you been engaged in packing?—A. Ten years.

Q. Do you operate more than one cannery?—A. Only one cannery.

Q. What number of boats do you employ?—A. Two boats.

Q. Do you own the gear and boats?—A. Yes, sir, I own the outfit.

Q. And your fishermen fish by the hundred?—A. Yes, sir.

Q. What is the average number of traps fished by these boats?—A. 650.

Q. Between the two?—A. Yes.

Q. Each boat fishes two men?—A. One boat fishes two men and the other one.

Q. What number of people, men and women, do you employ?—A. Eight in all.

Q. How many cases did you pack this year?—A. 95 cases.

Q. And last year?—A. Well, I had just twice as much gear last year. I packed 140 cases.

Q. What is the best pack you ever put up in that factory?—A. According to the gear, that was the best year I ever run.

Q. Where do you carry on your fishing?—A. One boat inside and one out.

Q. Take the outside boat, in what depth of water does she fish?—A. All the way from nine fathoms to five, not inside of five.

Q. Does she always fish in the same water throughout the season or do your fishermen move in?—A. As near as they can, they cannot always get in the same place.

Q. Some fishermen begin fishing in deep water and move in as the season advances to shoaler water?—A. Well, we don't get inside of five fathoms of water.

Q. Then as to your inside boat, what depth of water would it fish in?—A. From three to four fathoms and five, along there.

Q. Where does it fish?—A. In the bay.

Q. What do you call the bay?—A. We call the inside harbour in the bay. We have a great bay here.

Q. Is that what is called Cascumpeque bay?—A. Cascumpeque bay.

Q. How long have you fished in the bay?—A. I think I am the only fisherman here inside. I have been fishing for 20 years.

Q. What is your experience with regard to that fishery?—A. I have been fishing inside about 20 years. The first year I fished inside I fished 50 traps and I fished 100

SESSIONAL PAPER No. 22a

outside. I think the fishing is better to-day in the bay than it was then, a lot better.

Q. By better do you mean that you are getting more fish?—A. More fish with the same amount of gear.

Q. Then what about the size of the fish, will they run as large to-day as when you began to fish there?—A. I think they are running better.

Q. Do you get a larger percentage of female lobsters in the bay than you do outside?—A. We don't get any berried fish inside at all. This year I think we got two.

Q. How do you account for that?—A. I don't know. Whatever fish we got we got outside.

Q. Do you think the female lobsters spawn outside rather than inside?—A. I think they do.

Q. What do you think brings them into the harbour?—A. They naturally come to the harbour and come inside.

Q. Is there a better feeding ground inside for them?—A. Yes, sir, it is inside the feeding ground is.

Q. Are there a large number of other boats fishing on the inside ground where you are?—A. There is a thousand traps this year I should say.

Q. What number of traps would you say are fished inside in Cascumpeque bay altogether?—A. About a thousand this year, that is the last of the term.

Q. Are there not more than that in the whole of Cascumpeque bay?—A. I don't think so.

Q. There are a number of canneries licensed in that neighbourhood?—A. Not in this place, there are only three canneries in this bay. In Richmond bay there are quite a number of canneries.

Q. Are the conditions pretty much the same in Richmond bay as in Cascumpeque bay?—A. Pretty much the same I should say.

Q. Do you begin to fish as early in the bay as you do outside?—A. No, sir.

Q. At what date do the lobsters reach the bay?—A. I can hardly tell. I know we have quite a number of lobsters outside before we get inside.

Q. How long do the lobsters remain in the bay; they come in late, but do they remain all the season?—A. They remain until the snow flies.

Q. Do you think they leave the bay and go out to sea?—A. Yes, sir.

Q. They do not winter in the bay?—A. No, sir.

Q. Then in your opinion the fishery in the bay is no more injurious than it is outside?—A. No, sir.

Q. What do you think is the spawning month of the lobsters?—A. Well, in the month of May a school of spawn lobsters come on the shore, but I think the lobsters spawn every month in the fishery season.

Q. Do you think the lobsters spawn also in the fall or does the spawning end with the fishing season?—A. I think it ends with the fishing season.

Q. Do you fish the same trap inside as you do outside?—A. Yes, sir.

Q. You fish the parlour trap?—A. Yes, sir.

Q. What do you think of the proposition to allow a larger space between the slats; do you think that we would in that way allow a greater proportion of immature lobsters to escape?—A. Its all owing to your limit, whatever your size of lobsters. Five-inch lobsters are not good to the packer or the fishermen.

Q. But that sized lobster is still held in the parlour trap with a three-quarter inch slat?—A. Yes.

Q. What width between the slats do you think would be large enough to hold decent lobsters and allow the small ones to escape?—A. I think if the three lower slats were lathed one and a quarter inches apart, the five-inch lobsters would escape.

Q. How would you favour the proposition to do away with the size limit, to increase the space between the slats of the trap and knock off fishing about the 1st July?—A. And have fall fishing the same as in the Magdalens?

9-10 EDWARD VII., A. 1910.

Q. No, have no fall fishing?—A. I don't think there is any necessity for that; that would make our season too short.

Q. Does your season continue later inside than outside?—A. Yes.

Q. The size limit is not observed at present, is it?—A. Yes.

Q. Then if we did away with the size limit we would naturally ask for a little compensation in the way of a shorter season?—A. If the bottom slats were left at one and a quarter inches that would let the small lobsters escape.

Q. You would protect the breeding lobsters?—A. Certainly, by all means.

Q. What has been the practice in the past with regard to berried lobsters, were they all canned?—A. They were all taken and canned up to this year; there has been a little regard paid to them this year.

Q. And of course the undersized lobsters have always been taken?—A. Yes.

Q. Were the regulations ever strictly enforced to your knowledge?—A. No, sir.

Q. What do you think of the present regulation limiting the number of licenses?—A. Well, I think there are licenses enough.

Q. Do you see any reason why a man who could show that he was competent to can should be refused a license?—A. Well, if they go as far as that they might just as well say they are going to give all hands, all the fishermen, a license.

Q. That thing would soon cure itself?—A. Yes, that would soon cure itself.

Q. Do you think the number of licenses issued to one individual should be limited?—A. Well, there is no use in us giving any opinion on that.

Q. Yes, it is, because you are a voter?—A. We have them here now. When they give those permits here to pack fish there is no use in us forming any idea about that.

How do you mean permits?—A. Two or three of the canners have got permits to pack lobsters, not licenses, but yearly permits.

Q. Without a license?—A. Without a license; they are right here.

Q. Do you think there are men running factories to-day who have merely permits and no licenses?—A. Yes, sir. They have not got to pay a dollar. We pay \$2 per hundred cases, and if it is 102 cases we pay \$4, and these men go scot free.

Q. Will you tell me who they are?—A. Charlie Vigneault, Sea Cow Point, and Daniel Fraser of Cascumpeque Harbour.

Q. I do not understand that at all, I do not see how that can be.—A. I am telling you what are the facts, you can call up anybody in the room.

Q. These men you say are running canneries?—A. Yes.

Q. Employing and paying fishermen, packing lobsters and selling them?—A. Yes.

Q. And yet they have no license?—A. No, sir, they say they got a permit. Vigneault got his two years ago. Daniel Fraser, this is only his first.

Q. These must be what they call co-operative factories; if so they have a license. The license is not in the name of the individual who appears to be running the cannery but it must be issued to somebody. You see the department consents to issue licenses on the co-operative plan.—A. If that can be done there will be lots of canneries around the island.

Q. What is your opinion about the practice of issuing licenses to aliens?—A. I don't think it should be done.

Q. Do you think the amount of gear fished by any cannery should be limited?—A. I think to-day we have too much gear in the water.

Q. We pretend to limit the number of licenses but we do not limit the amount of gear.—A. If we give more licenses there will be lots more gear.

Q. Unless the amount of gear fished by each individual canner should be limited?—A. Yes.

Q. Do you think it would be wise in issuing a license to limit the amount of gear fished?—A. I do.

Q. Do you think there is a tendency on the part of the heavier operator to increase the amount of his gear and crowd out the smaller operators?—A. I think these

SESSIONAL PAPER No. 22a

packers that have got 15 to 20 boats, if they were cut down to one-half it would take that much more gear out of the water. Of course us little fellows are not in it at all.

Q. How many lobsters does it take to fill a pound can with you?—A. There is one thing I am going to ask you: How are you going to preserve the berried lobsters?

Q. How would you preserve them; can we persuade the fishermen to put them back in the water?—A. They can stand lots of persuasion. Half the fishermen we have in this country are farmers. They will say: 'Well, never mind, when this thing is played out we have our farms to fall back upon.' In our case we are fishermen, we have to drag our living out of the water, we have not got farms. These men have got good farms and when they play this business out they can fall back upon those farms. We have got no farms to fall back upon.

Q. Would you favour issuing a license to the fisherman as well as to the canner?—A. I think we have licenses enough.

Q. How are we going to limit the fishery to the actual fishermen? It is from you people that we have got to get suggestions that will enable us to formulate proper regulations for the fishery.—A. I am a fisherman as well as packer. I fished for 25 years.

Q. What do you say? How are we going to go to work to protect the berried lobsters? You admit that must and should be done?—A. It is all in a nut shell. There is just this to it: The government will have to give each fisherman a bounty, let it be little or much, to chuck away those spawn fish. One half the fishermen to-day if the packer will not take the berried fish, will take their mitt and slash the spawn off. It is much better to take the fish ashore than do that. There is just one thing for the government to do—to give the fishermen a little bounty to protect the spawn lobsters and take care of them.

Q. How would you suggest taking care of them?—A. Chuck them away.

Q. If you throw them overboard you will catch them to-morrow?—A. Chuck them away again.

Q. Then we would be buying them over and over again?—A. No, only once.

Q. In what way should the bounty be paid?—A. To each fisherman fishing in one of these boats.

Q. How much would you pay?—A. I am not prepared to state that at all.

Q. How would you get funds to pay that bounty, would it be fair to ask a canner to pay an increased fee?—A. I think he is paying enough.

Q. A fee of two cents a case is not a serious charge. I am afraid the majority of people would turn round and say 'This industry must pay for its own protection'; the ordinary taxpayer would not care to pay that sort of bounty.—A. That is all right. I suppose the fisherman that has got to drag his living out of the water would not ask for a bounty, but as I tell you the biggest part of the fishermen are farmers and when they play the business out they will say: 'We don't care, we have got our farms to fall back upon.'

Q. The spawn is hatched sometimes in hatcheries, would you favour an increase in the number of these institutions?—A. We have a splendid chance for a hatchery here. Why would not the government give us a hatchery, because we have none here?

Q. Would you favour purchasing the berried lobsters from the fishermen or from the canner?—A. Certainly.

Q. Removing the berries and hatching them out in hatcheries?—A. Yes.

Q. That would be a way of paying the bounty that would seem to be the most natural?—A. Yes, they would not want a bounty then. As far as I can understand they have very fine hatcheries at Pictou Island and Charlottetown. Well, at Pictou the fishermen save the spawn of the lobsters, a little smack goes round and gathers it up and puts it into the hatchery. That is all right.

Q. You think that is what you want here?—A. Yes, that is what we want here.

Q. Do you think it would be possible to find any place where we could establish

9-10 EDWARD VII., A. 1910

pounds in which the berried lobsters could be placed to hatch out for themselves?—A. You could put a place right at Cascumpeque Harbour in this bay. We have it right here, lots of water and lots of room.

Witness discharged.

JERRY DALTON, fisherman and canner, lot 7, Burton, called and sworn:—

By the Commissioner:

Q. Do you speak as a canner or fisherman?—A. Both.

Q. In what part of the west shore do you fish?—A. Off lot 7, Burton. That would be about ten miles to the northwest of West Point.

Q. Near Cape Wolfe?—A. About three miles farther north.

Q. How long have you been engaged in the canning industry?—A. About twelve or fifteen years.

Q. Before that did you fish?—A. Just a few years.

Q. Do you run more than one cannery?—A. No, sir.

Q. What number of boats do you fish?—A. We have just the one boat and do our own fishing and packing.

Q. Do you buy from other fishermen?—A. No, sir.

Q. You confine yourself to one boat?—A. Yes, sir.

Q. What number of cases did you pack this year?—A. We carried on the business a little different this year. There was another man that took our license privilege like, and he packed and I put my lobsters in with him. This man had brought from about fourteen or fifteen boats.

Q. Was there only the one license for the cannery?—A. Yes, sir.

Q. But the other man operated on your license?—A. Yes, sir.

Q. Who was the other man?—A. The Hon. Benjamin Gallant.

Q. Is he interested in other canneries?—A. No, sir, that is the only one that I know.

Q. Are there many other canneries along that shore?—A. Well, there are some all along. The Portland Packing Company run quite a business about two miles from our place, and there is another factory at Campbellton, that is, three miles away.

Q. What is your experience with regard to the condition of the lobster fishery? How does it compare with the condition when you began packing?—A. This year it is very dull indeed.

Q. What was it due to, bad weather?—A. That didn't affect it.

Q. To what do you attribute the poor fishing this year?—A. It is pretty hard to say. Some seem to think that the lobsters took a different course in their travels this year. There was a great deal of ice around and they think they went in other directions.

Q. Has that been the experience of other canners in your neighbourhood, all along that shore, that the fishery has been a poor one?—A. I have heard different ones speak to that effect.

Q. Would you say that between North Cape and West Cape the fishery generally has been poor this season?—A. Very poor indeed. I don't think there is a fisherman on that shore, when all expenses are paid, that will have a cent coming to him. Last year and the year before there was very good fishing.

Q. On the whole how does the fishery compare with the time when you commenced packing; is it falling steadily?—A. I cannot say that. Last year and the year before were our best seasons.

Q. How does the run of lobsters compare with what it was when you began to pack?—A. I think it is just about as good.

Q. What percentage of undersized lobsters do you take?—A. I could hardly say, but I don't think there are many. The lobsters are pretty uniform in size.

SESSIONAL PAPER No. 22a

Q. Have they always been so? Of course there are certain parts of the coast where the run of lobsters is better than at others. The lobsters were measured this year at your cannery?—A. No, sir, not that I know of. They may have been there when I was absent. There was some notice given to that effect and I sent to Mr. Gallant to look after it.

Q. What has been the practice in the past on your section of the coast? Have the canners received everything that was brought to them by the fishermen?—A. Yes, I think so.

Q. Was the regulation regarding berried lobsters enforced this season, do you know?—A. I don't think it has ever been enforced very strictly, the fishing was so poor.

Q. You were inclined to pack everything that came?—A. And they did not follow the fishermen up very closely. Of course it is hard enough upon them when they have to throw those fish away.

Q. As a man of some experience what would you suggest as the best regulations to be enforced with a view of protecting the lobsters? There is no doubt the industry is running down?—A. I think hatcheries would be of great benefit.

Q. Do you believe it would be an improvement and permit the escape of a fair number of lobsters if the slats in the trap were put farther apart?—A. I rather do. I don't see that those small lobsters are much good.

Q. Is it not wrong to destroy the immature lobsters, is that a question there can be any doubt about?—A. I would rather be inclined to think the immature lobsters should not be taken.

Q. Nor the berried lobsters either?—A. Well no, they should be protected of course. But as I say in a poor season like this, if the fisherman has to throw these lobsters away and get nothing for them at all it is pretty hard. You must remember there are a great many fishermen dependent on the fishing.

Q. Would you favour shortening the season and closing on the 1st of July instead of the 10th?—A. I don't think the season is any too long.

Q. It is proposed to do away with the size limit, that is a regulation that has never been enforced, and appears to be very difficult of enforcement?—A. Yes, I believe that.

Q. Supposing we do away with the size limit altogether? We must have some slight return for that and the compensation we would expect would be a slight shortening of the season. What would you say to a regulation which would do away with the size limit, permitting you to can practically everything you caught, and provide for the escape of a certain proportion of small lobsters by an increased space between the slats of the trap? We would expect to shorten the season to the 1st of July in return for that. Do you think that would be an unfair proposition?—A. I do not.

Q. We would expect that after a few years owing to these measures, the run of lobsters would improve, that you would get more lobsters and larger lobsters and thus recoup yourself?—A. No doubt it would benefit the lobster fishery but you know the fishermen are, some of them, pretty hard——

Q. It might cause things to slacken for a little while but in the end you would gain by it?—A. That is right.

Q. It has been proposed to close down for a number of years and in that way allow the fishery to recuperate; do you think that would be a hardship?—A. I think it would.

Q. Do you think if the present size limit were enforced the canners would be put out of business?—A. I think not.

Q. Practically all the packers that appeared before the Parliamentary Committee last year stated that if the size limit were enforced it would put them out of business?—A. Is that possible? Well I would not think so. With the lobsters we get I don't think it would.

9-10 EDWARD VII., A. 1910

Q. About North Cape the run of lobsters must be very much larger than you find in some other places?—A. The west shore is very much like North Cape. On the south side, around to Summerside and that coast, I think the lobsters are very much smaller. Probably it would affect them seriously that way.

Q. Could you give us any idea of the percentage of berried lobsters that you take? How many in a hundred are berried?—A. I really could not. They seem to be very scarce, noticeably so this year.

Q. What is the smallest size lobster you ever saw bearing eggs?—A. I don't think I ever saw anything under 9 inches.

Q. What would be the average run of the female egg-bearing lobsters?—A. About 10 and 11-inch lobsters, as near as I can judge.

Q. Could you venture to tell me how many they run to the hundred?—A. This year I don't think it would be more than four or five, in other years probably eight or ten.

Q. If the canners absolutely refused to receive berried lobsters at the cannery what would happen?—A. Well that depends on the lobster fishing. If the lobster fishing was poor I think it would certainly put some of the fishermen out of business.

Q. If the canners refused to accept berried lobsters would the fishermen put them back in the water?—A. I think so.

Q. Is the practice of stripping or rubbing the eggs off the female lobsters carried on to any extent in your neighbourhood?—A. Not that I know of, it may possibly be done.

Q. Do you think the average fisherman would be likely to return the berried lobsters to the water, or brush the eggs off and bring the lobsters in?—A. If he could brush the eggs off, and do it so it would not be known, I think the chances are that he would do it.

Q. Do you think there is any way of getting at the fisherman so as to induce him to protect the berried lobsters?—A. The only thing I can see is to have a hatchery and have them bring their lobsters there.

Q. Is there any place along the west shore where pounds could be established—A. I think at what they call Big Miminigash would be a fine place.

Q. We want an inlet with a narrow mouth, having a large area of water of sufficient depth. What water have you got there?—A. Well, I can hardly tell you. There would be several square miles with a pond inside.

Q. What is the depth of water, two or three fathoms?—A. I daresay there would be a couple of fathoms and a narrow inlet, I should say about 50 feet, so that schooners can go right in.

Q. Is it much used as a harbour for fishing vessels?—A. There is quite a lot use it.

Q. Is there any means of barring it above where the vessels use it?—A. Yes, it could be because the vessels just come in about a hundred yards or so. There is a wharf on either side, that would be all right.

Q. You heard the evidence of the other witnesses?—A. Some of them.

Q. Do you approve of that evidence in a general way?—A. Yes, especially about the hatchery.

Q. Do you think you can stand a slight increase in the end of the season, doing away with the size limit, widening the space between the slats and protecting the berried lobsters by hatcheries, pounds or any other way?—A. I think so.

Q. You think if these measures are carried out there is no doubt about the future of the industry?—A. I think that is correct.

Q. Is there anything else you would like to express an opinion upon?—A. I don't know that there is.

Witness discharged.

Commission adjourned.

SUMMERSIDE, August 2, 1909.

JOHN J. McNALLY, packer, Cape Egmont, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. Altogether on my own account, for the last 17 years.

Q. And prior to that what did you do?—A. I had been working in factories for the last 28 years.

Q. Where is **your** cannery situated?—A. At Cape Egmont.

Q. Are you interested in more than one cannery?—A. Just one.

Q. How many boats do you employ?—A. 13.

Q. Do you supply the boats and the gear?—A. Ten of them.

Q. And three of them are boats that are selling their catch to you?—A. Yes, sir.

Q. What number of hands do you employ in the cannery, that is men and girls?—
A. Inside, 13 hands.

Q. Are there two men in each boat?—A. There are two boats, single.

Q. What is the **capacity** of your cannery, what did you pack this year?—A. Up to date between 340 and 350 cases.

Q. What is the largest pack you ever made?—A. Between 750 and 800 cases.

Q. When did you make that?—A. Three years ago. Last year my pack was 630 cases.

Q. You are still running this year, will you go up to that—A. I don't think so.

Q. Are you fishing a larger amount of gear now than when you first began to pack?—A. No, just about the same. Well, for the last seven years I have been fishing a little larger. I bought another factory seven years ago. I was running at a smaller cost up to seven years ago. I have not extended since; it is about the same gear for the last seven years.

Q. Is it your opinion that the supply of lobsters is being kept up by taking lobsters that formerly would have been rejected, as well as using an increased amount of gear; are you keeping up your pack by making an extra effort?—A. I don't think we are quite. Some years we do better and other years we do poorly. It seems the fish are later in coming in some seasons than in others. They are later coming this year.

Q. Is there a very extensive fishery carried on in the neighbourhood of Cape Egmont—A. Yes.

Q. Are there many other canneries licensed there?—A. Oh, yes, I guess there are six or eight factories in the vicinity of six miles.

Q. Your season here is from about 25th May to the 10th August. During that time what is the best period of the fishery?—A. The latter part of the fishing. We find from about the 20th July as a rule up to the 10th August we get the most fish, up to our closing time we get the most in number. Of course there is a difference in years. Last year we began to pack about the 1st June. A year ago up to the 20th June I had 184 cases, and this year on the 21st July, starting the same time, I had only 183 cases.

Q. Have the regulations ever been strictly observed in your neighbourhood?—
A. No.

Q. They never have?—A. No.

Q. As regards the berried lobster or as regards size?—A. As regards size, no. As regards the berried lobsters we looked after them this year very carefully.

Q. Was this the first year that was done—A. It was the first year.

9-10 EDWARD VII., A. 1910

Q. What led to that?—A. The department notified us.

Q. At what period of the fishery do you find the most berried lobsters?—A. In the early spring.

Q. Do you think the spawning season has passed before you close down?—A. Oh, yes.

Q. What percentage of your catch would be below the legal size limit?—A. What size limit is it? The fact of the matter is we hardly know. It is nine inches is it?

Q. It used to be nine inches and then it was reduced to eight.—A. Eight inches. In my catch this year I venture to say there would be 50 per cent.

Q. How does the catch in the neighbourhood of Cape Egmont compare with the catch up about Cape North, do the lobsters run larger?—A. There are larger fish at Cape Egmont.

Q. You get the larger fish?—A. We get larger fish at Cape Egmont than they do at Cape North.

Q. Can you tell me how many fish it will require to fill a pound can?—A. On an average?

Q. Yes.—A. Well, it will take about four fish to fill a pound can on an average, four or five fish. That is what I get. Of course there are different sizes. Along Cape Egmont and farther off they are smaller. I fish right off a ledge there.

Q. Far from the light?—A. No, just exactly at the light.

Q. Do the fishermen expect you to take everything they bring in?—A. Oh, yes.

Q. What would happen if you lived strictly up to the regulations?—A. Well, they would not fish at all I don't think.

Q. Some witnesses stated in the evidence before the Parliamentary Committee last winter that a strict enforcement of the law would put them out of business, they could not run.—A. No, they could not run I do not think.

Q. And you think the fishermen on the other hand would not fish?—A. The fishermen would not fish and in that way we could not operate the factory.

Q. Where you are fishing your own boats and gear and hiring men by the month, would they not fish; you do not do that here?—A. We don't do that. We supply the rig mostly and give them so much.

Q. Is it on account of the small run that you are able to do that?—A. Supply the rig?

Q. No, that you engage the fishermen in that way?—A. I don't know that it is.

Q. In many places the fishermen are hired by the run.—A. We would prefer hiring them by the hundred because they interest themselves more.

Q. Do you think that the lobsters approach the shore for the purpose of spawning?—A. I don't think so, not on our coast. We get as many spawn lobsters in the sea as inshore.

Q. What distance off shore do you fish?—A. From one to six miles.

Q. What is the greatest depth of water?—A. Twelve fathoms.

Q. Then you get as many egg bearing lobsters off shore as you do near the shore?—A. Yes.

Q. Have you any idea as to the spawning habits of the lobster, whether the lobster spawns every year, or twice a year or every second year?—A. If you take a female lobster that has no spawn about it and separate it, you will find the roe inside in every one. So by that it appears to me as if they spawned every year or once a year.

Q. What period of the year would you think was the spawning season?—A. They spawn in the early spring on our coast. Of course you will get an odd berried lobster at present but the most of them are in the spring.

Q. What is the smallest size at which you have ever known a female lobster to carry eggs?—A. Eight inches. I measured several and eight inches is about the smallest size I have over seen.

Q. What would be the general run of egg-bearing lobsters?—A. Anywhere from nine to ten inches. They are generally fairly good sized lobsters.

SESSIONAL PAPER No. 22a

Q. At what size would you consider the lobsters to be fully matured?—A. About eight inches.

Q. Is there any part of the season when lobsters are not fit for human food purposes?—A. There is no time that I find them not fit, but only when they are really soft. When they get their second shell and get hardened up I consider they are fit for food.

Q. What percentage of the lobsters taken in the traps in your neighbourhood will bear eggs?—A. Well, in the early spring about 75 per cent would some years.

Q. That is in certain runs?—A. This year not so much. Now there would not be any more than two or three lobsters in a thousand I would say.

Q. When you were taking 75 per cent of berried lobsters that must have been for a very short season surely?—A. In the early spring. That is we have counted them at times. That was my own experience, of course I don't know any other man's.

Q. All through the season what would you put the average at?—A. I would hardly know. This year we threw them out. I could hardly say what the average would be this year.

Q. It would be hardly 75 per cent?—A. No.

Q. One-half the lobsters are males and the female lobsters do not all bear eggs extruded?—A. It would be hard for me to make an average. I notice there are very many more in the early spring.

Q. Is the practice of stripping or washing off the eggs from the female lobster followed by the fishermen in your neighbourhood?—A. Not to my knowledge.

Q. They have always brought the berried lobsters in?—A. Until this year. It is almost impossible to have that regulation carried out by the fishermen. Of course you cannot always tell. I had fishermen come in this year who were willing to bet \$10 and put the money down that they had not a berried lobster in their catch. It was only after the lobsters were boiled and put on the cooler that you could pick them out. There would be one or two.

Q. Do you think it would be difficult for the fishermen to comply with the regulation requiring them to put the berried lobsters overboard?—A. They might be as determined as could be to comply with the regulation, and still if an officer came he might catch them right off.

Q. Do you think there is any disposition on the part of the fishermen to observe the berried lobster regulation better than they have been doing?—A. There is just one thing they claim: They claim that if there was a hatchery they would bring the she lobsters in and have spawn preserved the same as they do along the New Brunswick coast, south of us some distance.

Q. That is within a short distance of a hatchery; there is a limit to the distance you can go to collect the eggs for that hatchery?—A. Well, that is about what they say, the fishermen.

Q. If the canners refused to accept these berried lobsters would it not have the effect of inducing the fishermen to return them to the water?—A. Certainly, they would return them to the water I suppose.

Q. Have the canners made any scruple about accepting berried lobsters?—A. This year they have. Well, I am speaking for myself. I have given the fishermen strict orders not to bring in berried lobsters, and they have obeyed them as much as possible. I am well aware of that.

Q. And you think the best way, or the only way, of getting the fishermen to protect the berried lobsters would be to bring them ashore and take the spawn to a hatchery?—A. Yes, I really do think it is the only proper means along the coast, because to my mind if they are left out, there is an army of perch and other fish that will devour the spawn.

Q. Do they tear it off the lobster?—A. I don't know where they get it.

Q. Of course you know the lobster does not part with its spawn. It retains it

9-10 EDWARD VII., A. 1910

until it is hatched out?—A. It hatches out its spawn, but it does not deposit the spawn all at one time, because I have noticed even this year a lobster with perhaps a hundred or two hundred spawn on it and the rest all gone.

Q. The eggs do not all leave at once? What would you think of a proposition requiring the canners to pay an increased fee, instead of two cents a case, as at present, and in that way realizing a fund for the purchase of the seed lobster from the fishermen? The general public would say, of course, that the lobster industry ought to pay for its own protection?—A. I would not think that was good. I think the packer is paying enough now.

Q. The present fee is only a bagatelle?—A. It is, but still I don't know; I don't think that all should come out of the packers.

Q. I suppose it would eventually come out of the fishermen if it were imposed. Is there any opportunity in the neighbourhood of your cannery for the establishment of pounds? That is one of the methods most highly recommended for the preservation of the berried lobsters?—A. That would be to put them in a place like a bay, would it?

Q. You would want an inclosed place with sufficient depth of water and a considerable area?—A. What depth of water?

Q. Not less than two fathoms or the water would get too warm?—A. There would be a place inside the lighthouse, inside the reef, I suppose. We have a bay, but there would not be that amount of water in it. There is a place, however, inside of Cape Egmont reef. Right up in Egmont bay would be a good place, but there would not be enough water there.

Q. Would you favour any change in the present size limit?—A. Well, if we only took the 8-inch lobsters we would be getting very few, some years especially. I would think the fishermen could take them smaller than 8 inches.

Q. Do you think it is wise to take the lobster before it has reached the age at which it reproduces itself; what must be the ultimate effect on the industry if we destroy the immature fish?—A. Of course that is about the size of it. If you destroy the immature fish of course you might destroy the industry.

Q. Has there been any noticeable decline in the average size of the lobsters caught in your district within the last ten years?—A. No.

Q. During the last 30 years then?—A. Yes. At first they were larger than they are now, but in the last ten years I think they have just about held their own.

Q. When was lobster canning first introduced in your neighbourhood?—A. About 28 years ago.

Q. They were canning on the north side before they canned there, were they not?—A. I was pretty young then. There was only a factory at New London Harbour previous to that. The first man who started a factory here came from New Brunswick about 28 years ago I think.

Q. To what do you attribute the decline in the size of the lobsters?—A. There is not much decline on our side.

Q. But during the last 30 years, since canning first came into vogue?—A. The lobsters had not been caught I suppose and when they began to catch them they picked up all the old fellows first.

Q. Would you be of the opinion that the decline is the natural result of over-fishing?—A. Well I do not quite think that they are overfished. I think the cause of the fish not being quite so plentiful is due a great deal to the factories themselves in fishing by leaving out old traps and taking up some of the ground that the lobsters used to be on. That is a matter I think should be dealt with by the department. Of course if one packer tells a fisherman he can leave out a lot of old traps that won't be of any use for next year, then the fisherman cuts them loose.

Q. Is there old gear left in the water?—A. There has been a terrible lot of old gear left in the water along the Straits. I attribute the poor fishing in sections to-day to that. That is the cause of it. I think if that was looked after better the fishing

SESSIONAL PAPER No. 22a

would be better. My reason for that is there will be boats fishing in the straits, and within a distance of five or ten chains one boat will be getting good fishing whereas the others on each side of him will be getting nothing.

Q. What becomes of these old traps; do they not break up eventually and disappear, do not the worms destroy them?—A. They gather a terrible lot of dirt, I imagine, at the bottom. They will mostly sink like a stone and having been so long in the water stay at the bottom.

Q. Does it pay better to leave them in the water than to save them?—A. The fishermen should bring them ashore.

Q. Are they worth saving?—A. They are usually not worth saving, old traps.

Q. What is the life of a trap?—A. Generally three years.

Q. Are the traps at Cape Egmont injured by the borer?—A. Not off Cape Egmont.

Q. Why was the season changed in your division?—A. The fish never struck in to any extent until from the 15th to the 25th or 26th July every year. We had an early season, the same as they have on the north side, at first and we found our fish never struck in to any extent until from the 15th to 28th sometimes, of July. For that reason we gave up the month of May, or up to the 25th of that month.

Q. Was that always the case in the Straits?—A. Mostly always the case.

Q. What would you attribute that to?—A. I can hardly say. The fish come in there later in the season than they do elsewhere. It is only just a narrow strait in places and the lobsters come in there later in the season.

Q. Do you think that was the case before there was so much gear outside at either end?—A. It was the case always.

Q. Was it so at the beginning of the fishery?—A. Yes, it was the same always. Even when we began fishing, there never was any after the first couple of years; the fish did not come in some years. They used to have the season very nearly up to September, up to the 20th August.

Q. There was no regulation at all at the beginning?—A. They used to fish in the early season up to July then. I have known packers not to get fish of any kind up to the 1st of August and then they get a good catch.

Q. How would fall fishing suit in that neighbourhood?—A. It would suit up in the bay. Farther west than our district it might suit, but off Cape Egmont I hardly know whether the fall would suit us any better or not. We have no harbours there and it would be very windy. There would be an awful destruction of gear very likely.

Q. The statement has been made authoritatively that a strict enforcement of the 8-inch limit, together with the assistance of hatcheries and pounds, would perpetuate the lobster industry; would you concur in that statement?—A. Well if they put up a hatchery I don't think they need be so very severe on the size limit. I would think they could give us a little smaller sized fish then.

Q. Would you favour reducing the size limit to 7 inches?—A. Yes, I would.

Q. Or would you abolish the size limit altogether and shorten the season?—A. No, I would not be in favour of that.

Q. Is it possible to enforce the size limit regulation?—A. In certain sections of the Island I suppose you can. In other sections it would be pretty hard to.

Q. It never has been enforced?—A. No.

Q. Is it your opinion that 30 per cent more lobsters in number are required in the fall than in the months of May and June to fill a pound can?—A. Yes, it takes more.

Q. Will those lobsters fill up as the season advances?—A. Yes.

Q. Is it the case that canners are compelled to accept undersized or berried lobsters for fear of losing their fishermen?—A. Yes.

Q. How many pounds weight of green lobsters does it take to fill a pound can?—A. It takes about 200 pounds to a case. That would be four on an average.

Q. It has been suggested that for the better control of the lobster fishery, fisher-

9-10 EDWARD VII., A. 1910

men should be required to register and take out a license at a nominal fee; what do you think of it, do you think it would have the effect of making the fishermen observe the regulations?—A. I believe that it would prevent them fishing altogether, they would not fish at all.

Q. Of course the fee would not be anything excessive. The idea of some people seems to be that if the fishermen were registered and licensed to fish, they would observe the law better?—A. Some would. I hardly know how to answer that.

Q. Do you think such a thing would have the effect of leading the fishermen to observe the law and report the violations they happened to notice?—A. I don't think that would.

Q. In a sense to make each fisherman a fishery officer on his own account?—A. I don't think that would have such an effect.

Q. Were the regulations for the protection of the lobster ever observed in your district?—A. No, not until this year.

Q. What would be the effect of strictly enforcing the present regulations?—A. If the present regulations were strictly observed you would not get very many fishermen to fish.

Q. Are the existing penalties sufficient to deter packers from violating the regulations if they were enforced?—A. I guess so.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry, and should the issuance of further licenses be discouraged?—A. There are licenses enough, too many as far as I can see. You can judge for yourself when I tell you that within a distance of about six miles there are eight factories in operation.

Q. Is there any reason why a man who shows his competency to pack lobsters should not be given a license?—A. Every man thinks he is a competent packer but he sometimes does not prove to be.

Q. You ought to find out by experience?—A. His experience sometimes is very bad to others that do know how.

Q. You do not think that one man has as much right to a license as another?—A. If any man wants a license he can have mine.

Q. Do you think any restriction should be put upon the number of licenses to be held by a company or an individual?—A. In some places we notice scores of canneries all licensed by the same party. I know on this island parties have bought up a lot of licenses.

Q. Does that have the effect of squeezing out the small canner?—A. Not on our coast.

Q. Do you think there should be any limit placed on the amount of gear that any canner should use? We limit the number of canneries but not the amount of gear to be fished?—A. I suppose if the fishermen had not their own rig; but if they had their own rig and wished to sell to a factory it would be a choice of selling more to one than to another. One packer might have a whole lot of traps.

Q. Do you not think the amount of gear should be limited?—A. I think it would be just enough but in that way a man putting out his own rig might be limited. As far as purchasing fish from the fishermen, I think he should be at liberty to purchase from whom he wished if they had a rig of their own.

Q. We find many canneries where they are employing altogether their own gear and fishing a very large number of boats. Do you not think that must have the effect of crowding out the small men, the independent fishermen?—A. Where they have their own rig?

Q. Yes, an enormous amount of their own rig?—A. On our coast there are not very many with their own rig.

Q. In the future interest of the lobster fishery would you favour a general closing down for some years?—A. For my part I would just as soon see it close as not for two or three years.

SESSIONAL PAPER No. 22a

Q. What would become of the fishermen in the meantime?—A. That is a question. I think it could be better arranged than that.

Q. I do not say it will be arranged that way, that is merely a suggestion that has been made.—A. I don't think it will be suitable at all.

Q. The Lobster Commission of 1898 recommended that temporary reserves should be established in various sections, that is to say you should close down by sections and move on continually—close one section down for a couple of years then afterwards fish there and shut down somewhere else, and keep that going all round the coast.—

A. I don't think that would be advisable to do. If they close at all close all round.

Q. During what period of the season is the lobster fishing most actively prosecuted with you?—A. About from the 20th July to the end of the season.

Q. Is the present regulation regarding the close season satisfactory?—A. Yes, I would think so; as far as I am concerned it is. At Cape Egmont we enter into a bay and what suits just off our coast does not exactly suit some other packers up in the bay.

Q. A different season begins at West Point does it not?—A. Yes, the early season begins there. Egmont Bay seems to get the fish a little later than we do. It is only a short distance and I don't think the fish move very fast. Some way or other they get them after we do mostly.

Q. Has any attempt ever been made to look for lobsters in the winter?—A. No, not for lobsters.

Q. Of course if the size limit were abolished, as has been suggested by some, and you were allowed to catch fish below 8 inches in size, we would naturally look for a shorter season to compensate for that?—A. I do not know as to that. It would be just according to what time we had the season. Of course even as it is, some years our fish come in later than at others and in more years they come in earlier than at others. A shorter season would suit some years and it would not others.

Q. How would a season beginning 15th July, and closing at the end of September do?—A. I don't know. Some years it might and more years it would be very bad on our rig, our traps. It would be pretty rough and they might get all smashed in a very short time. There is no harbour for our boats. We fish in the open sea and it would not suit us very well. That is not myself, I am speaking for myself.

Q. On the corresponding shore of New Brunswick, abreast of you, witnesses seem to favour that change in the season there?—A. They have more shelter I guess.

Q. I do not think they can have much. If a northerly wind prevailed towards the fall they must feel it worse than you.—A. Well, they have harbours in which to keep their boats.

Q. In some places, but not everywhere. Would you favour a universal coast season for the whole Atlantic from July 15th to January 1st?—A. No, I don't think I would; not for the whole of it.

Q. Do you think it would be possible or right to establish a standard of fitness for a license to can?—A. Yes, I would think it would be.

Q. Do you think the product of the canneries should be inspected?—A. I would think it would be all right to have it inspected.

Q. Do you think the existing staff of fishery officers would be competent to make that inspection?—A. I think they should be.

Q. Would you refuse a canning license to an alien?—A. Yes.

Q. What would you think of the policy of encouraging the fishermen to co-operate in canning?—A. Well, I don't think it would be very advisable myself, I would not approve of it.

Q. Are there any co-operative canneries licensed in your neighbourhood?—A. No.

Q. What is the price at present paid for lobsters in your neighbourhood?—A. Those that I supply by count—the fishermen won't sell by pounds on our coast, we buy by count—we pay them 60 cents a hundred and find everything. Those that I am buying from, I pay \$3 a hundred pounds. They sell by weight. We find the rig.

Q. Who establishes the price?—A. Both fishermen and packers. They have a hard time to settle it. We give all there is in it and I guess more too.

9-10 EDWARD VII., A. 1910

Q. Are you aware of any complaint by the fishermen that the price paid for lobsters is not satisfactory?—A. They have not complained on our coast.

Q. Is it the case that any fishermen have lost their catch of lobsters owing to the refusal of the canners to accept them?—A. No.

Q. Was the price paid by you this season as high as that paid last year?—A. No, we did not pay so much this season.

Q. It has been alleged that in some places the fishermen have suffered injury by the failure of canners to operate their canneries although a sufficient supply of lobsters was available; has any such instance come under your notice?—A. No, sir.

Q. What market would the fishermen in your neighbourhood have for lobsters if the canneries were closed?—A. They could not find any market anywhere.

Q. Has there ever been any attempt to ship lobsters alive to market?—A. Yes, there have been attempts made.

Q. With what result?—A. It did not prove a success.

Q. The necessary facilities for that purpose do not exist?—A. The facilities do not exist. There was a party from Boston who tried to make it a success and failed.

Q. Should the shipment of live lobsters be favoured in preference to canning?—A. We cannot ship live lobsters here. We are too far away from the market.

Q. Do you know what price has been paid for live lobsters?—A. I think 8 cents a pound, between four and eight at times. That is those that are shipping them.

Q. From your experience can you say whether the government hatcheries have helped to maintain the supply of lobsters or not?—A. I cannot say because we have no hatcheries here. I know on the New Brunswick coast they claim they have been of great help to them altogether.

Q. Would you recommend an increase in the number of hatcheries?—A. Yes.

Q. Are you fishing the same style of trap now as when you began?—A. Yes, the same trap.

Q. You are not using the parlour trap?—A. Oh, the parlour trap? I have been using that ever since I started in myself.

Q. Why did the parlour trap supersede the original double headed trap?—A. For the reason that if, on account of bad weather, a man happened to be two days from his traps and went out, he would find the lobsters there. You lost more when you were pulling up the trap with rings at both ends.

Q. The idea is that the parlour trap holds all it takes?—A. It does not hold because they squeeze out through the laths, lots of good sized lobsters too.

Q. What is the space between the slats in your trap?—A. From three-quarters to an inch and a quarter.

Q. Do you think there would be anything gained by insisting upon a greater width between the slats, would it help to preserve the small lobsters and allow them to escape?—A. It would let some out, but you would get a lot of small lobsters just the same.

Q. Do you not think that the new trap, especially with the narrower space between the slats, has been unusually destructive?—A. I don't know. I cannot say it has been on our side, because our fish are just about the same with any sized trap, that is on our coast.

Q. Is there any other matter connected with this inquiry upon which you would like to express an opinion?—A. No, only that I would like to see the department take up the matter of old traps, and have every packer make his fishermen land his rig and put him under a penalty if he did not, fishermen and packers both. I would not allow any of the traps to be left out.

Q. Do you think there is any disposition on the part of the fishermen to observe the regulations, especially in regard to berried lobsters, more faithfully; are the fishermen beginning to understand the necessity for the better protection of the lobster?—A. They are. They are beginning to understand that the berried lobster is not protected. But they claim that although they are heaving the spawn lobsters out

SESSIONAL PAPER No. 22a

there is a lot of spawn destroyed, and it is no good when it is left there to feed other fishes.

Q. They are mistaken in that because the female lobster retains its spawn until it is hatched out.—A. But even when it is hatched out they are not even alive to protect themselves. They are left there and any other fish can come along and pick them up.

Q. The eggs will still be attached to the mother until the young lobster emerges?—A. I understand that in a hatchery they have in New Brunswick, they keep the young lobster until it is from three-quarters to an inch and a quarter long.

Q. They do not keep the young lobsters very long, they have to put them out.—A. The man that gathers the spawn was telling me at different times. As to the destruction of spawn there is a factory above Egmont Bay. Last year they got a very big eel. They noticed him very big and fat and thought he was full of small lobsters likely. They split him open and took two pound cans and half a can of lobster spawn out of him. That would be a considerable amount for one fellow for a meal. If there were many more eggs destroyed in that way they would be nearly all devoured. My opinion is that the perch and other fish also devour the spawn of the lobster.

Witness discharged.

JOHN G. ARSENAULT, packer, Cape Egmont, called and sworn:—

By the Commissioner:

Q. You are from the same neighbourhood as the previous witness and heard the evidence that he gave?—A. Yes.

Q. Do you coincide with his testimony?—A. Yes, I agree with it right through.

Q. Are there any other points that you would like to express an opinion about, anything that we did not mention to him?—A. Well, about spawn fish. I don't find although it is not very far away, that there are as many spawn fish, where they land fish, for me as they do there.

Q. What percentage of berried lobsters would there be from your observation?—A. Well, up to about the 20th June this last two or three years I don't think they would average any more than 12 or 15.

Q. And after that date in June what would you say?—A. There are not very many, I don't think there would be one per cent.

Q. Do you fish close by?—A. We fish some close and some outside.

Q. Are you located east or west of the previous witness?—A. We are east.

Q. Farther in the Strait, this side of Cape Egmont?—A. Yes, outside Cape Egmont.

Q. How many boats do you employ at your cannery?—A. Nine this season.

Q. Did you furnish the boats and the gear?—A. Clear of two. I have two that I buy from.

Q. What number of cases did you pack last year?—A. Well, last year I did not run as many boats as this year. I only put up about 300 cases with one boat less. I only had 8 boats altogether.

Q. What is the best pack you have ever made in that neighbourhood?—A. It is pretty hard to tell because I have been increasing some years and decreasing other years. I have packed as high as 80 cases to a boat some years.

Q. How long have you been packing?—A. For ten years.

Q. And before that were you engaged in the business?—A. Yes, I have been working ever since I have been able to work in a factory.

Q. What do you consider to be the conditions of the lobster fishery to-day, compared with the conditions when you began packing, or when you first commenced to

9-10 EDWARD VII., A. 1910

have anything to do with the industry?—A. Well, I think there is a good many more lobsters caught now than there was then, both in number and weight. My experience is there are 3,000 traps fished now as compared with what there were 15 years ago.

Q. That is to say, there are 3,000 traps fished now where how many would have been fished—1,000?—A. I don't say they used to get more to the boat then, but there were only about 1,000 traps where there are 3,000 now.

Q. That is, to keep up the fishery you have to use an increased amount of gear?—A. We don't have to do that, but there are more going into it. It seems that fishing was a paying business for some years and every one started to go into it. There were so many went into it that it makes the profits small for all hands to divide up.

Q. If you were fishing the same number of boats and gear that you were when you began, do you think you would catch the same number of fish as at the outset?—A. Yes, I believe we would.

Q. Would you get fish of the same size?—A. Yes, I think we would, because I remember looking over my book and in 1900 up to the 30th July it took an average of $12\frac{1}{2}$ lobsters to the pound. This year we never went over 9. Of course I could not give you the average, but it would not be over $6\frac{1}{2}$ to the pound.

Q. Then the lobsters are improving?—A. They are improving in size.

Q. You are not of the opinion that the fishery is run down?—A. No, not in size. They seem to be scarcer in number, this last two years especially.

Q. What proportion of the lobsters taken by you are below the 8-inch limit?—A. I would say between 50 and 60 per cent.

Q. Do you think that in the early days of the fishing you would have taken any such percentage of undersized lobsters?—A. Well, the first of the spring they are a fairly good size, but there are a good many small ones.

Q. And always were?—A. Yes.

Q. Out of every hundred lobsters you see how many of them would be egg-bearing?—A. Do you mean outside alone? Because they have eggs inside the body.

Q. We want to know about the eggs that are outside, the percentage of what are called berried lobsters. Of course all the females bear eggs?—A. I think between 12 and 15 per cent.

Q. Was that percentage always the same to your recollection?—A. Well, in the first years I was a kind of young in the business and I never recollected them very much, but this last three or four years I commenced to take more notice.

Q. What is the smallest lobster with eggs that you ever noticed?—A. I never measured them but I would say that about 8 inches would be about the size.

Q. And the ordinary run of female lobsters is about what size?—A. Between 9 and 10 inches, they are generally a good size.

Q. And they are generally pretty full of meat are they not?—A. Yes.

Q. Have the regulations ever been enforced in your district?—A. No, sir, not that I know of.

Q. Neither with regard to the size limit nor the berried lobster?—A. No, sir, until this year. This year we have done all we can with the fishermen to leave the berried lobsters out. Notwithstanding that, they would slip in a few and they would be cooked before we would notice them.

Q. That would always be liable to happen?—A. Yes.

Q. Still there was an attempt made this year to protect the berried lobsters?—A. Yes, there was this year.

Q. But you think the fishermen generally return them to the water?—A. I think they do.

Q. Has the practice of stripping or washing off the eggs from the berried lobsters ever been followed by the fishermen here at all?—A. Not to my knowledge.

Where a canner refused to accept berried lobsters would the fishermen brush them off outside?—A. I have heard some of my fishermen say they did. They had

SESSIONAL PAPER No. 22a

heard it and they tried some one day to see whether they could brush them off or not. It used to be said that the fishermen would get them by the claws and hit them on the water. They tried that and slapped them for 15 minutes, and very few came off. It might be all right at a time when their spawn would be ready to drop off.

Q. In other places they use a brush?—A. I suppose you could brush them off.

Q. And in other places still they use only a coarse woollen mitt?—A. Oh, of course they could take them off if they had a mind to.

Q. If you absolutely refused to accept berried lobsters from the fishermen what would happen?—A. This year I heard some of my outside fishermen say—those that fish outside get more than those that fish inside—that if they had known they had to fire them away they would not have come to the shore at all.

Q. They would not fish then?—A. They said they would not come to the shore and fish at all, they would stay at home.

Q. Then they did observe that regulation?—A. Some of them. Those that fish outside where they would get as much as 20 and 25 per cent. I took particular notice of them this spring seeing that we were enforcing the berried lobster regulation.

Q. What do you think is the best way to get to work to protect the berried lobster?—A. Well, I have not got enough experience to speak about a hatchery. We never had one on our shore and therefore I could not say whether it would be any good, but it runs in my mind that it would be.

Q. Anything that will save the eggs must be of some use?—A. Yes, if they can save the eggs.

Q. On your section of the coast is there any place where a pound could be established?—A. Not as I heard you awhile ago explain. The handiest place where there would be deep water would be in Summerside.

Q. What effect would it have on you if the present size limit of 8 inches were strictly enforced?—A. I don't think I could get enough fishermen to fish so that I could stay in the business.

Q. What is your opinion of the present method of issuing canning licenses, do you think the number should be restricted?—A. As far as I know there are perhaps too many putting up lobsters now. Still it does not look quite fair for one man to be allowed to can lobsters and another man not.

Q. Would it be fair, if we entered into a general system of issuing licenses, to expect those that applied for them to show that they were able to can properly and had a cannery of a certain size?—A. No. As I said before I would not enforce that because it would be depriving some men of the right to can and giving liberty to others.

Q. Do you think that the present policy of encouraging a number of fishermen to co-operate and carry on canning is a good one? The only new licenses that have been granted within the last few years are what are called co-operative licenses; there have been several of those granted I think?—A. Yes, I know there have been, but I have had no experience of it.

Q. I think you said there has been no noticeable decrease in the average size of the lobsters caught in your district within the last ten years?—A. No, there has not, because we are getting a better size this year than we had ten years ago.

Q. Your lobsters will run larger?—A. Yes.

Q. How would a season beginning on the 15th July and ending at the last of September suit you?—A. I don't think it would suit at all.

Q. Why?—A. Because the lobsters generally commence to cast their shell about the 20th or 25th June, and some years about the 4th or 5th July. They come in very fair quantities somewhere about the 5th July. As a general rule they come about the 15th July, but some years it is nearly the last of that month. Some years it would be all right, only commencing on the 15th, and other years we would lose the best fishing.

Q. Has it been your practice to take everything the fishermen brought you?—A. Yes, sir, mostly.

9-10 EDWARD VII., A. 1910

Q. How small a fish have you canned?—A. Oh, sometimes there would be an odd little lobster that would not be more than 4 or 5 inches; we would throw them in. There was never much said about it, being that there would not be very many.

Q. How would the lobsters run to the hundred pounds?—A. You mean how many lobsters would it take to the hundred pound weight? I could not tell you that, I never weighed them.

Q. How do you establish the weight in your case?—A. We buy the lobsters by count. Of course I could tell you what they would average to the pound pretty well.

Q. Please tell us then?—A. They will average about $6\frac{1}{2}$ lobsters to the pound at the present time.

Q. That is it takes that number to fill a pound can?—A. Yes, sir. That is this year. They did not do that for the last ten years.

Q. How would you favour the change that has been suggested of doing away altogether with the size limit and somewhat shortening the season?—A. Well I would favour reducing the size limit because if we were forced to observe the size limit at the present time I don't think we could get enough lobsters to continue our business. I would not be in favour of shortening the season. As to the limit I think there should be one to a certain extent, but I would not like to see it very dangerous.

Q. What would you put the limit at?—A. I should think that lobsters that would be about 6 inches would be too small altogether to destroy.

Q. Do you think a lobster 6 inches in size has reached the age at which it could reproduce itself?—A. I do not think it has. I am speaking not only for myself but the fishermen. I know that if there was a size limit of 8 inches strictly enforced they would not fish.

Q. Do you think that if it were strictly enforced, in a few years it would pull up the fishery, and the time would come when you would be able to fish at that limit?—A. I daresay that would be all right, but there would be less go into it. It am sure it would not be hard to get a license then because I would sell mine at any time if any one wanted to buy it.

Q. You would favour reducing the size to six inches and leaving the season as it is?—A. I think there should be a size limit, because where there are too small lobsters and a man has to pay for them it is no good.

Q. If you continue to destroy the lobsters before they have reached the age at which they reproduce there can only be one end to the thing?—A. I don't see that it has destroyed the fishery up to now even with the size limit.

Q. Are you compelled to receive undersized or berried lobsters for fear of losing your fishermen?—A. We never were compelled to accept berried lobsters. We never tried very hard, we never objected to taking them very hard but this year we have objected and the fishermen left them out pretty well. But it is just as I was telling you a while ago. There are some of the men fishing outside, if they had known they would not be able to put them in they would not have come to the shore at all.

Q. What would you think of the proposition compelling fishermen to register and take out a license as well as the canner; do you think that would have the effect of making fishermen observe the law and report others who violated it?—A. I don't see that it would.

Q. What would you think of closing down for a number of years in the interest of the fishery?—A. I would not think it would suit very well because people like me have a whole lot of goods accumulated at a lot of expense. You would have that gear on hand during all the time the factory would be closed.

Q. Another proposition is that we should close down by sections, is that possible?—A. I do not see that that would be any better.

Q. During what period of the season is the fishery at its best?—A. When we get the most? It is about the 20th July and the 25th.

Q. Up to the end of the season?—A. About that time we get the heaviest catch.

SESSIONAL PAPER No. 22a

Q. You are in your best season now?—A. The last week in the season was the best we are going to get because they are going down in number.

Q. Then the best of the season is over?—A. Yes.

Q. Is the present season satisfactory in your case, from the 25th May to the 10th August?—A. It is not in some years. Some years the lobsters are very late in coming in. I noticed the year before last it was pretty well on to the last of July before they struck in here at all.

Q. What season would you favour if the present one is not satisfactory?—A. I would not like to advocate any other season because if I would look one year for a later season I would be shutting myself off.

Q. You think all things considered the present season is the best?—A. I think it is just as good for us.

Q. Do you think it would be possible to protect small lobsters by making a larger opening between the slats in the traps?—A. I would not think so. Of course they should be protected if they have the openings too small, the slats too close together.

Q. They are down to one-half or three-quarters of an inch in many places?—A. They have them still closer than that in some places. They catch only very small fish and they have to throw them outside I suppose.

Q. Do you not think that if the opening was universally made one and a quarter or one and a half inches in the lower three slats, it would have the effect of allowing a number of small lobsters to escape?—A. When the lobsters are soft shelled they sometimes escape, lobsters that would be of fair size. If the bottoms of the traps are wide spaced the lobsters will shove out their claws and break them off. In that way you would injure the life of the lobsters, they would be dead before they came in.

Q. Then you would leave the space between the slats as it is now?—A. Yes, I would.

Q. Do you think the product of the cannery should be inspected?—A. Yes, I think it ought to be.

Q. Do you think the present staff of fishery officers would be competent to perform that inspection?—A. Well it is pretty hard for me to tell. They would not know very much about the quality of the goods when they are in the cans.

Q. What do you think of the policy of encouraging the live lobster trade, is it possible to carry on that trade successfully where you are packing?—A. I think so, especially if they limit the size to what size they had some years ago when they came here to buy.

Q. The foreign market exacts a certain size and the size limit for export would be made larger.—A. I don't think for a good size it would be limited.

Q. Which do you think is the most profitable to the fisherman, the live lobster trade or the canning?—A. The canning.

Q. Do you think that applies to everywhere?—A. On our shore.

Q. What price are you paying for lobsters?—A. We are paying 60 cents and we find the board and everything.

Q. And what is the price paid to those who find their own gear and sell here?—A. I buy by the case from them. I give them so much a case for lobsters.

Q. You pack their lobsters and charge them so much a case?—A. Charge them so much a case, about \$2.25.

Q. Do you think the fisherman to-day is getting a fair price for his lobsters?—A. I think they are getting all we can afford to pay them. I don't say they are getting any too much for their fish.

Q. Do you think that the thing is fairly adjusted, that the fisherman is getting all he is entitled to?—A. I think for the last few years if they did not make much money they are getting more money than we are.

Q. The price is less than last year, what is that due to?—A. To a drop in the market.

9-10 EDWARD VII., A. 1910

Q. Are you aware of any case where any fisherman has had his catch of lobsters refused by a canner?—A. No, sir, not in our section. We always complain we cannot get enough.

Q. In the matter of hatcheries would you be in favour of an increase in the number?—A. Yes, I would.

Q. Do you think we could venture to charge the canner an increased fee for his license so as to raise a fund to buy the eggs for the hatcheries?—A. I would not think so.

Q. Then who is to supply the money to purchase the eggs that you take from the fishermen?—A. I don't see that we could afford to pay any higher license when we can hardly make a living out of it. We would have to drop the business and let somebody else try it.

Q. Is there anything you would like to state of your own account concerning the regulations, any alterations or improvements that you would suggest?—A. I would like to see the gear that is put out in the season all hauled in as much as possible.

Q. How long has it been the practice to leave the gear in the water?—A. Ever since I remember. It is a shorter job to leave them out there.

Q. Ever since you remember that has been the practice?—A. Yes, sir. They don't seem to think it is any injury to let the old gear that was no good lie there instead of taking it to the shore.

Q. Would that not be a very difficult thing to follow up, what check could we have on it, how could we know?—A. It would be pretty hard to compel a man to haul it in, he might lose some of his gear. Still if the law were enforced in that way and all hands had to observe it, it would surely do some good.

Witness discharged.

PATRICK SONIER, fisherman, Summerside, called and sworn:—

By the Commissioner:

Q. Are you fishing now?—A. Not this summer. I have fished ever since 33 years ago every summer but this. I am about the oldest fisherman there is here now.

Q. Do you carry on any other fishing except lobsters?—A. Yes, oysters and quhaugs. I have been mackerel fishing also.

Q. On what part of the coast have you always done your fishing?—A. Along this coast, all round the Island.

Q. Is there any fishermen's union here?—A. No.

Q. Do you generally fish your own boat and gear when you are fishing?—A. Some years I do, more I do not. I fish my own gear sometimes but not generally.

Q. When you first began fishing for lobsters in what depth of water did you set your traps?—A. I commenced in about 4 fathoms. You mean these present years or years before?

Q. Beginning away back as long as you can recollect: tell us what you did in the beginning?—A. In the beginning I was fishing in three or four fathoms of water.

Q. How many traps did you fish?—A. In those days we used to fish very few traps at the first. My first gear was only 54 traps.

Q. That was the old-fashioned trap?—A. Yes, sir, the big one.

Q. Did you ever fish with hoops or anything of that kind?—A. No, I did not.

Q. You always fished with a trap?—A. Yes.

Q. And what season did you fish through?—A. At that time I used to fish from the spring until the 20th August, that is a good long while. I commenced away back you know.

Q. And with that amount what did you catch at that time?—A. A big catch.

Q. How did the lobsters run?—A. Big.

SESSIONAL PAPER No. 22a

Q. Were they as small then as they are now?—A. No, sir, not as small.

Q. You fished a much larger head?—A. That was the reason.

Q. You do not get as many big lobsters now because they cannot enter the traps?—A. They cannot get in.

Q. How long did the fishery continue in that way?—A. It continued for a few years.

Q. Were you fishing for a cannery then?—A. Yes, sir, for George Leblanc of Cape Bald. He was down at Cape Egmont then.

Q. What amount of gear did you fish last year?—A. Last year I fished a small gear of my own. The year before I had 300 traps.

Q. In what depth of water did you fish then?—A. We fished in two depths of water then. The first season we fished right along the shore at Sea Cow Head, and after the lobsters cast their shell, moved farther in after them to about 10, 11 and 12 fathoms of water.

Q. How far off shore would that be?—A. It would be about four miles from the Head.

Q. What class of lobsters did you get?—A. Large fish.

Q. To what size did they run, have you any idea?—A. Last year we did not weigh them at all. This year there were some weighed there and they would average over a pound a piece in weight.

Q. Did you get the same kind of lobsters throughout the season or only when you went into deep water?—A. We would get the smaller fish inshore.

Q. What would you say is the average percentage of berried lobsters caught?—A. You cannot average them very well. Some seasons there are more than at others but this season on the south side—of course I was not fishing—but those that were fishing told me there were a great many spawn fish this spring, more than there used to be. I would not make an average, but I suppose there ought to be anywhere handy 20 per cent.

Q. What percentage of the lobsters taken within recent years would be below the 8-inch limit?—A. It is according to where you take them and they do not run alike on the same shore.

Q. Give the information to us the way it is?—A. This year where I was I don't believe there was more than 10 above 8 inches.

Q. Where was that?—A. Here on the North Point. I was not fishing there but I was working at the factory and could see all the fish coming in.

Q. How was it when you fished last year?—A. It would average about half on the south side or better.

Q. One half would be below the 8-inch size limit?—A. That is inshore. Outside there would not be so many.

Q. What kind of trap were you fishing these last years, a parlour trap?—A. Yes, the three headed trap.

Q. What distance do you leave between the slats of that trap?—A. About an inch.

Q. When you first began to fish what was the trap like?—A. The space was about an inch and a quarter to an inch and a half in the first trap I made.

Q. Now the slats in the trap are put closer together?—A. Yes, some.

Q. Why is that done?—A. To get the smallest fish so far as I know.

Q. Is the annual catch of lobsters by the fishermen decreasing or not?—A. Well it is decreasing some. Some years ago we used to get not more than we do now according to the season. It seems as though the fish do not work now as they did then. When the fish strike in now they seem to be numerous, but in the first part of the season it is not as it used to be. At the first season we used to get fair fishing all through, but they are slack now; you get a little spurt in the spring and then there is fairly nothing.

Q. I understand you to say you have to fish a larger amount of gear to catch the same quantity of lobsters you caught in the early years?—A. That is true.

9-10 EDWARD VII., A. 1910

Q. Has the number of traps greatly increased since you began fishing?—A. Yes, trebled and more.

Q. Do the majority of the fishermen own their own boats and gear?—A. Not on the south side.

Q. What do you think about the proposition to license the fishermen?—A. I don't know what it would be for.

Q. The idea of those who have made the proposition is that if the fishermen were licensed they would be more careful about obeying the law, and more likely to inform on those that did not observe it; do you think it would have that effect?—A. No, sir, not at all. It would be of no effect at all.

Q. How does the price paid for lobsters now compare with that paid when you first began to fish?—A. It is better now.

Q. What did you get in those early days?—A. We were fishing for 25 cents a hundred pounds the first summer I fished. A fellow had to find his own board and boat and fish for 25 cents a hundred pounds then. Now I suppose with the same thing he would get about \$2 anyway. I don't know of any one fishing that way now, but they would get that now.

Q. Do you think the fishermen are satisfied with the price they are getting now?—A. It is the canners' price. When the canned goods sell high the fishermen want more, but if the price is low the canners claim they cannot pay it. The fishermen have got to have a share and the packers know it.

Q. Do you think the profit is fairly divided?—A. That is a hard thing for me to discuss, but I will tell you: The more a man has the more he wants. You know that yourself.

Q. Who establishes the price?—A. The packer himself makes his own price, says what he can do as far as I know.

Q. Is there any combination to keep the price at a certain figure?—A. There has been but it is all gone now. There was a combination on the north side. I see one shaking his head but I know better than that because I was there myself. However it is all past now.

Q. Is there any competition or are the fishermen forced to accept a certain price?—A. No, we can sell our fish or can do as we like.

Q. Is the regulation observed in regard to berried or undersized lobsters, or do you expect the packers to take everything you bring them?—A. As long as there is anything like that, they are going to take all the fishermen fetch them of course.

Q. Has the regulation ever been looked after?—A. Yes, I have seen it years ago when it used to be looked after, but these late years it has not been. It was looked after in my time both as to size and spawn lobsters.

Q. How long ago was that?—A. I don't remember exactly but I know that for two or three years it was done.

Q. What has been your practice with regard to small and berried lobsters, have you expected the canner to take them?—A. I don't know, since there is no kick with anybody, what was expected; you do all you can.

Q. Have you ever had a canner refuse to accept such lobsters?—A. Yes, in those times when the regulation used to be looked after.

Q. But not recently?—A. Not lately.

Q. Do you admit the necessity for having some regulations governing these matters with a view of protecting the lobsters?—A. There should be.

Q. Do you think the berried lobsters should be saved?—A. Yes, sir.

Q. And do you think the undersized lobsters should be canned?—A. I can hardly answer that. The small lobster is not worth as much as a big one, and if it is let go it is going to grow and be more profitable for the packer and the fisherman both, if the lobsters are sold by weight. If the fisherman sells by count it is the same thing to him.

SESSIONAL PAPER No. 22a

Q. What do you think would be the best way to get the fishermen to observe the law, you know all the tricks of the trade?—A. Keep them on land.

Q. Do you think you cannot trust them afloat? Have you ever remarked what was the smallest berried lobster you ever saw?—A. The smallest size? They are quite a size. I would not think they would be under 8 inches anyway. I don't believe I ever saw any under that.

Q. Have you had any experience of hatcheries?—A. No I never have.

Q. Nor pounds either?—A. No, sir.

Q. Do you think pounds are advantageous?—A. Sure they are.

Q. And would you advocate the establishment of more hatcheries?—A. Sure. I will tell you the reason why. About three years ago when I was fishing I was taking up a trap about four miles off Sea Cow Head and the little lobsters used to pour out of our traps—little lobsters about that long (illustrating by a gesture). We guessed they were from the hatcheries by the number of them. There is no doubt you find them right out there.

Q. Is the practice of stripping or washing off the eggs from the female lobsters followed by the fishermen here?—A. That would be telling. I cannot say it is not.

Q. They have never been obliged to do it because the canners took the berried lobsters from them?—A. I saw it done some years ago. Not lately but when it was not looked after strictly.

Q. Have you ever known of a canner refusing to accept undersized or berried lobsters?—A. Yes, I have, but not lately.

Q. If the canner refused to accept undersized or berried lobsters what would happen?—A. I suppose they would have to return the fish back to the water, that is the only thing I know of.

Q. Could you do that and still continue fishing profitably?—A. Oh, yes, we could do that.

Q. But would you make enough out of it?—A. Not to pay unless the price came up better. You mean the undersized lobsters? Oh no, a man could not put out his gear at all, he could not make enough out of it. Unless, as I say, the price would go up in the market. Whether the packer could stand it or not I could not say. It would be their own business then.

Q. Has it been the practice of the fishermen to avoid dealing with a canner who is known to be careful about the observance of the law? Some canners have always been careful and they complain that they cannot get fishermen—the fishermen will not fish for them—they will go to another canner less scrupulous?—A. That is more than I can say, I never heard that.

Q. Do you think the fishermen are more careful about returning the berried lobsters than they used to be, are they beginning to understand they should not destroy these lobsters?—A. That is right. I hear that among a good many fishermen now. This summer the outside fishermen were talking over that.

Q. Do they understand they should not destroy the berried lobster?—A. That is right.

Q. Do you think anything would be gained by having somebody go around and explain to the fishermen the advantages of observing the regulations?—A. They could meet together all right, but it is hard to get a man who can tell them anything about it unless he is a fisherman himself.

Q. Such a man would have to understand all about fishing?—A. Yes, but I don't see it would be any advantage in one way after all. The fisherman has got to learn knowledge for himself or else he is no good.

Q. You think he understands already that he should not destroy these lobsters?—A. Oh yes, that is correct enough.

Q. What would you think about leaving an extra width between the bottom slats in the trap?—A. That would be all right. There is no use to leave it between one.

9-10 EDWARD VII., A. 1910

Make it all around the same. Make the whole size of the trap like that. That would be a better way. If it be the rule at all let it go all round the trap.

Q. Do you think it is of much consequence to have the space on top as well as below?—A. I don't know if it is not better having it up rather than down. If the lobsters shoved their claw into the bottom of the trap it is very likely to be broken and hurt the fish. If it is on the top when the lobster gets his claws through the trap in that way he will get clear. The bottom is no good; we have tried it here. I fished with it myself. It gives liberty to the smallest fish to get out. It is a very good thing enforcing a law like that in one sense, but how are you going to keep it?

Q. Do you not think it would be possible to watch the traps and see them before they go into the water?—A. Yes, before they go into the water it is all right, they can be inspected, but who is going to see them after they are out?

Q. Do you think the traps are going to be altered after the fishermen get out?—A. I don't say it would be done but it could be done.

Q. Is there any time of the year when you expect to get more berried lobsters than at others, and if so, what time is that?—A. Yes, it is the first of the season we have now on till the 25th of July.

Q. That is from the 25th May?—A. Yes till the 15th or 20th July. Now we get none.

Q. You think the spawning season is over now?—A. Yes, sir.

Q. Are you aware of any fisherman having had his catch of lobsters thrown back on his hands by the canner refusing to accept them?—A. Not that I know of, no one. The packers cannot get enough of them.

Q. What do you think of the proposition to close down altogether for a number of years?—A. What was it proposed for?

Q. With a view of protecting the lobster industry—A. Then they want the lobsters and not the money. The fishermen are all the other way, they want the money and don't care for the lobsters. If they closed down for a number of years there would be more lobsters would there not?

Q. Yes.—A. Less money and less price.

Q. Less money where?—A. In the cannery. The lobsters would be rushing up and it would be like it was in the first start. As I told you we were fishing then for 25 cents a hundred and now we are getting \$2 for the same quantity of fish. It is not fish we want, but it is the money.

Q. You think then the fisherman is doing better than he did in former days?—A. He is doing just as well, he gets a little more. There is no use to close down.

Q. The fishery is not in a bad enough condition yet?—A. No.

Q. Within your experience has the fishery got any worse during the last five or ten years?—A. Oh, yes.

Q. Is it still going down?—A. I believe it is, that is over the whole season.

Q. Some people have reached the opinion that the decline in the fishery has reached the limit, that the fishery has not gone down within the last five or six years?—A. Well, not much, take the last five years it has not gone back to a great extent.

Q. In regard to the department's practice of issuing licenses, do you think the number should be restricted?—A. I believe myself it was a very mean thing for the department to do in the past and it would be still worse if you continue it.

Q. What policy do you favour?—A. I favour giving every man his own chance, his own liberty.

Q. Do you think we would be justified in expecting him to show that he was prepared to can, that he could put up a suitable cannery and carry on the business properly?—A. That would be no necessity, that would be nothing in the way at all. Every buyer goes to the factory and buys the kind of fish he wants. He opens that can and looks it over. If it is not good he doesn't buy it. If he does it is a good article.

Q. You think then that every man who applies for a license should be given one?—A. That is any man of experience.

SESSIONAL PAPER No. 22a

Q. Would it not hurt the other canners if that man put up an inferior pack?—
A. If I see fish myself, that is not good, it goes back again. It is only his own lookout.

Q. Do you know anything about the live lobster trade?—A. I have not been in it myself, but I have seen it carried on.

Q. Do you know whether it would be possible to establish a live lobster trade here?—
A. It would be very hard here. That is for putting live lobsters into the market at Boston and other places. It is difficult to put them there in good condition.

Q. The facilities do not exist?—A. No, although it has been tried here.

Q. It has been said that no canner could continue in business and observe the law as it is at present?—A. At the present time, the way it is now, they are packing everything, is that not what you mean?

Q. If the law were strictly enforced could the canner continue in business?—
A. No, I don't think it.

Q. What would you think of a regulation doing away with the size limit altogether and shortening the season a little, always protecting the berried lobster of course?—A. I don't know about that. I guess the season is short enough now. As to size, eight inches is rather large, but I don't know that three or four, or even five inches is good for the packer or the fisherman very much. But an eight inch size limit I don't believe would be right. The smaller size could be taken.

Q. Do you think it is possible to strictly enforce that regulation about size limit?—
A. It is a pretty hard thing to do. It could be done, no doubt, if you posted a man at every factory and let him stay there and pay his wages. If the government is willing to do that, I don't know whether it is, that is the only way you can do it.

Q. Do you know if there is any place on the coast around here, or where you have been fishing, where it is possible to establish a pound?—A. I don't know much about pounds. How has a pound got to be made?

Q. We want a certain depth of water and a free flow of tide, but there must be no fresh water in it?—A. Would the space of a bridge do? There are some places like Egmont Bay where the water comes through the space of a bridge.

Q. What is it, fresh or salt water?—A. All salt water, four or five feet in depth.

Q. Do you think it would be possible to fish here in the fall?—A. Sure.

Q. What would you think of a change in the season?—A. A change in the season I believe myself would be the right thing at a good many points.

Q. Permitting fishing from the 15th July to the end of September?—A. That would be two and a half months, it might go a little over. There is fine weather then too. You can fish later than that. I have done so myself.

Q. Do you do it still?—A. Not now. I have not done it the last two or three years.

Q. Do you think there is much illegal fishing after the season?—A. You cannot tell, there is all kinds of fishing sometimes and there might be.

Q. Do you think there are many lobsters canned after the close of the season?—
A. That is more than I can say. There might be, or there might be not, you cannot tell.

Q. Do you think that lobster fishing should be kept farther out than it is at present? Some people have proposed that we should limit the depth of water in which fishing is carried on?—A. You can do that, we could stand it if the season was put back. With the present season we cannot do it. We cannot live on it.

Q. What is your idea of changing the season?—A. The idea would be a good thing, a splendid thing for us outside here. I tell you, as I was saying, that to put back the season all the spawn fish would be gone then. At the same time when they have not got the spawn out they have it in. Then it don't show as bad I suppose. All these lobsters would have spawned by the 15th July all right. You don't get one after that. I don't remember I ever caught one after the lobsters had shelled.

Q. Are the fish as full then?—A. They are not as full at first but they would come near about the same after our season here. Say we ran the season a month

9-10 EDWARD VII., A. 1910

back, the lobsters would be nearly as good as in the spring. You can easily tell. They are getting good from this time out.

Q. Which do you think the most profitable for the fishermen, the live lobster trade or the canning?—A. There is no other way that suits. The expense would be too great to export them to the different places.

Q. Was there anything else you wished to say?—A. As to the fishing, some years it is good and more years it is bad. One year it will be fairly good, the next year not so good, and the next year again it may be worse. The fishing is up and down.

Q. But on the whole the fishery has failed?—A. Oh yes.

Q. To what do you attribute that failure?—A. It is hard to tell. I suppose of course it is because there is fishing generally, but I believe the most of it is when the fish are not hungry. They are getting used to the trap and won't go in.

Q. What do you think of the practice of leaving the gear outside, is there much of that done?—A. It has been done. Off this cape we don't leave out much. I dare say it is dirtying the bottom but I cannot see that it does any harm. The trap only stands three or four weeks and it is all gone. It is only wood that is left there and a little twine. I don't suppose it interferes much with the bottom at all, the old gear. It is all gone in a few years. Old gear that is not fit to take in does not last long.

Q. I suppose it is only the old gear that is abandoned?—A. That is right.

Q. Is there much of it abandoned?—A. Some years there is a good deal of it as I understand. Not these late years, because every packer wants to store the old traps.

Q. How long will a trap last?—A. About three or four years.

Q. What do you consider a trap worth now?—A. What we chuck over is worth about 30 cents clear of the labour.

Q. And a new trap is worth how much?—A. It is a new trap I mean. What we leave on the bottom costs when new about 30 or 35 cents.

Witness discharged.

JAMES HIERLIHEY, fisherman, Brae Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing?—A. Six years. It was in 1903 that I started.

Q. Have you been fishing or packing?—A. Both. I represent the fisherman and the packer. We try and do it all ourselves, a little of it.

Q. Taking you as a fisherman first of all; in what neighbourhood do you fish?—A. In Egmont Bay.

Q. In the bay itself?—A. It is a large bay you know. From West Point to Cape Egmont is what we call Egmont Bay.

Q. Do you fish your traps throughout the whole season in the same part of the bay?—A. Not as usual.

Q. How do you do then, what is your manner of proceeding?—A. In the spring we usually set our traps pretty close in, probably in three fathoms of water.

Q. You begin about the 25th of May?—A. The 25th of May. Then along this time of the year we always have to move off. I think eight fathoms is as deep as ever we go, I don't think we were ever any deeper.

Q. Is that far out in the bay?—A. It is pretty well in line with the headland.

Q. You own your own boat and gear?—A. Exactly.

Q. What amount of gear do you fish?—A. Three hundred traps to a boat or thereabouts. It may be one or two over or one or two less.

Q. There is no Fishermen's Union, is there, in your neighbourhood?—A. No. Thank God we are clear of that.

Q. You are speaking as a canner now are you? What number of boats do you employ at the cannery?—A. Well, they vary. Last year we had 11 or 12.

Q. All your own boats?—A. No.

Q. How many did you own?—A. We had six I think.

SESSIONAL PAPER No. 22a

Q. The others were owned by people from whom you bought the fish?—A. Yes.

Q. Then your practice is to move as the season advances out to deeper water?—

A. We have to in order to make ends meet, to get the fish.

Q. Do you think the fish back off?—A. Undoubtedly.

Q. Have they spawned before you move out?—A. Sure.

Q. Then after they have spawned you find them backing off?—A. After they shell we get a very small percentage of spawn fish.

Q. Do you think they go into the shore to spawn?—A. I believe they do. That is my belief.

Q. What percentage of berried lobsters do you find in your catch?—A. It is a pretty hard thing to answer to be any way near correct.

Q. Could you not form an idea?—A. I would not say there was over 10 per cent or somewhere along that.

Q. What is the smallest lobster you ever remarked bearing eggs?—A. Well I remarked this summer catching as small a lobster as ever I did that was berried, and I would say it was about an 8-inch lobster. She seemed very small, but it was the only one that I remarked.

Q. In some sections, where they have watched the lobsters carefully, it is an exception to find berried lobsters at 7 inches, only one in a hundred thousand, they say?—A. Yes.

Q. The average run of berried lobsters would be about what?—A. I should say they would be 10 or 11.

Q. They are good large fish?—A. Good large fish. It seems hard to throw them away.

Q. But you recognize the fact that they ought to be saved do you not?—A. I certainly do.

Q. You have always been fishing with the so-called parlour trap, have you?—A. Yes.

Q. Are those traps in general use now?—A. In our locality they are.

Q. The other trap has been abandoned?—A. Yes.

Q. What do you think is the reason the fishermen adopted the parlour trap?—A. Well in broken weather we find that we can make better averages by using the three-headed trap than by using the two. For average fishing I don't know, the old trap may be just as good.

Q. What distance do you allow between the slats?—A. I would say that the average for my fleet of gear would be somewhere in the vicinity of three-quarters of an inch.

Q. That is all the space allowed?—A. The medium-sized trap may be an inch and a little less than three-quarters of an inch, but I would say in the neighbourhood of three-quarters.

Q. Has not that space been narrowed down with the idea of saving the small lobsters?—A. Not in our case. I consider a lobster that gets out through three-quarters of an inch space too small to can.

Q. What lobster will get out through a three-quarter inch space?—A. It is pretty small. It is only about that long (illustrating by a gesture).

Q. Do you think that lobsters under 8 inches should be canned?—A. Undoubtedly. I don't see why they should not.

Q. Do you think it is right to destroy the fish before it has reached the age at which it can reproduce itself. You say you never saw a female lobster with eggs, under 8 inches. That I suppose is the age of maturity?—A. Yes, I would say so.

Q. Do you think it is right to destroy the immature of any stock?—A. No, I don't think there is any fisherman would land a lobster—well under 7 inches, that is to measure the tail and the body—I don't think that we do although I would not state that positively, because we never measured.

9-10 EDWARD VII., A. 1910

Q. Well has it been the practice to bring to the cannery everything that was caught?—A. No, not in my case.

Q. How about the berried lobsters?—A. We give them their liberty.

Q. Always?—A. Not always, but this year.

Q. But up to this year what was the practice?—A. Well it was the general practice. Of course, in my own experience, when I got a good big lobster with spawn on her I really hated to take that fish ashore and I have liberated them, but I don't make a practice of doing it.

Q. You think the berried lobster should be protected in some way?—A. Undoubtedly.

Q. What do you think is the best way of protecting her?—A. A hatchery is the only way.

Q. Do the majority of the fishermen in your neighbourhood fish with gear belonging to the factory, or do most of them own their own gear?—A. I think the majority of the gear is owned by the canners.

Q. What do you, as a practical fishermen, think of the proposition to compel the fishermen to take out a license?—A. In my opinion it would be all right. That is for fishermen that have their own boats and gear I believe it would be all right, but I don't believe that a packer could get fishermen to come and take his gear and pay a license to fish.

Q. The license would be a nominal thing, the idea is more for the sake of registering the fishermen?—A. In Massachusetts it is done. Every man that fishes lobsters has got to have a license and send in his own report too. I don't know, it is a question I never thought about.

Q. The idea is that the men would be more careful and more apt to inform on those they know were violating the law?—A. They might.

Q. Is there any competition in the matter of price, or are the fishermen forced to accept what is offered?—A. Well, I don't know. I am hardly in a position to answer that question from the fishermen's standpoint, because I never had any fish to sell.

Q. Then you can answer it from the canner's standpoint?—A. Yes, I can answer it from the canner's standpoint.

Q. Is there any competition?—A. There is competition enough so that a man can—if I don't pay him what he thinks is fair and he can get any more from the next canner alongside of me, he is perfectly free to do so.

Q. Is he likely to do that; is there any arrangement among the packers in regard to the price?—A. No, there is no arrangement to my knowledge.

Q. Do you think if the packer objected to taking undersized and berried lobsters the fishermen would be forced to return them to the water, that is if the packers generally did that?—A. If all the packers did it, then they would be obliged to.

Q. Well, whose fault is it that berried and undersized lobsters are taken at the factory?—A. In the majority of cases I would put it on the fishermen, because you may take a packer that is ever so careful and there will be berried lobsters get into his cannery that he does not know anything about until the tails are pulled. Now I know that to be a fact.

Q. Do you think the fisherman has a better opportunity to cull them?—A. Certainly the fishermen have. They handle those lobsters one by one out of the traps, and it is far easier for the fisherman to detect the berried lobster, when he is taking it out of the trap, than when they are placed in the hand barrow to take to the factory. That is my experience.

Q. Could you give us any idea as to how many lobsters in your neighbourhood it takes to fill a pound can?—A. The 1st of June they run about $4\frac{1}{2}$ we will say.

Q. Up to the 1st of June?—A. Well along to the 15th of June. Then they commence to fall off until the latter part of June and the 1st July. They took or did take, at our factory this summer, $6\frac{1}{2}$ to the pound packed.

Q. Six and a half pounds green to the pound packed?—A. No, $6\frac{1}{2}$ lobsters.

SESSIONAL PAPER No. 22a

Q. What would you think of the proposition to increase the fee paid by the canner with a view of purchasing the berried lobsters from the fishermen?—A. Well, I don't know. I think the canners pay——

Q. The present fee of 2 cents a case is only nominal?—A. It is very small. As far as I am concerned personally I would not be against a small increase.

Q. What would you limit the amount to?—A. How many canneries are there in operation?

Q. It has been suggested by some packers themselves that that should be done.—A. I would not for my own part be against it. I would say \$3 per hundred, which would be another cent a case.

Q. Do you think that any considerable increase in the fee for a license to can would have the effect of crushing the smaller canner?—A. Well, I don't know. I did not look at it that way.

Q. Do you think there is any disposition among the fishermen to be more careful, realizing the necessity of saving the berried lobster?—A. There is at the present time, but a few years ago there was not.

Q. Is this the first season the question has been agitated among them at all?—A. No, I, for one, always said I thought it a great shame to destroy the berried lobsters.

Q. Do you think that feeling is growing among the fishermen?—A. Yes, I really do.

Q. Is the practice of stripping, or washing off, the eggs from the berried lobster followed here at all?—A. Well, I have not done it. I did see one man doing it, although I could not say who the man was. He did not belong to our shore. I was sailing by him and I would take it from the actions of the man that is what he was doing.

Q. Have the canners in your neighbourhood ever objected until this season to accepting berried and undersized lobsters?—A. Not to my knowledge.

Q. Is there anything we could do that would educate the fishermen up to the practice of fishing more carefully?—A. Yes.

Q. It has been suggested that somebody should be sent around to address meetings of the fishermen, as is done by the Department of Agriculture in the case of farming.—A. I believe myself that if a man who understands more about berried lobsters than we fishermen do, were to come here he would probably do good. I don't see why he should not.

Q. What would be the best season of the year to send somebody around for that purpose?—A. I don't know. It would be better to come after the fishing season than in the fishing season.

Q. How would the winter do?—A. Yes, the winter would be all right.

Q. Are the bulk of the fishermen here then?—A. Well, that is another question. The majority of the boys go away in winter.

Q. Where do they go to?—A. They go to the Northwest and to Maine.

Q. To the lumber camps?—A. Yes.

Q. What are most of the men engaged in the lobster fishery, are they actual fishermen, or do they fish only for lobsters?—A. You mean they just make——

Q. We find that in a great many places most of the men who fish lobsters are not bona fide fishermen; they don't follow the fishery all season?—A. The majority of the people around our way don't fish only lobsters, they fish herring. There is no mackerel. We can get codfish, but not to any great extent.

Q. Do you know of any place in your neighbourhood where a pound could be established?—A. What kind of bottom do you want for a pound, rock bottom?

Q. No, not necessarily a rock bottom; in fact we want weeds?—A. A seaweed bottom? Yes, there are lots. We have the best opportunities in Egmont bay of any place in Prince Edward Island for that very reason.

Q. What part of the bay?—A. There is a place right in Brae. I think it could be used all right. There is a good flow of water in and out.

9-10 EDWARD VII., A. 1910

Q. And not too much fresh water?—A. You would not get enough fresh water, except it was early in the spring, to amount to anything.

Q. After the floods are over?—A. Yes.

Q. What do you think about the live lobster trade, are there any facilities for carrying it on in your neighbourhood?—A. No, I don't think it would be feasible at all.

Q. You cannot say whether it would be the most profitable one to the fishermen or not?—A. We investigated that thing with a view to trying it, but we never got around to it.

Q. The facilities do not exist here for carrying it on?—A. No, they do not.

Q. What is needed is rapid transport, cold storage and things of that kind?—A. If they could be put on board the Boston train in Point du Chene they would get into Boston next morning at 7 o'clock, along there; you might keep some of them all right, and some you would not.

Q. Where it can be carried on successfully do you think that trade is a more profitable one to the fishermen than selling to the canners?—A. As far as I have learned it is. I have been talking with men from Nova Scotia.

Q. On a large part of the Nova Scotia coast it is the principal trade to-day?—A. Yes.

Q. What would you think about the proposition to have a universal shutting down for a number of years?—A. Unless there is some change made in our season I guess you will not have to shut us down, for we will quit.

Q. What change would you suggest in your season?—A. That again is a hard proposition, and you will get a great many different opinions on just that very thing. It is a hard thing to come to any definite conclusion on it. I will speak for myself, that as far as my experience has gone in the six or seven years I have been canning, the best of our fishing is from the 15th July until we have to quit, and if there was a change made, it would be to begin not later than the 15th July, and then give us the same length of time as we have now from that on.

Q. That would be to the end of September, about two and a half months?—A. Yes, that would be my idea.

Q. By doing that you would escape taking berried lobsters altogether?—A. Yes, there would not be two per cent then.

Q. Is it your opinion that if the government regulations in regard to berried and undersized lobsters were carried out strictly the canners would have to shut down?—A. Well, I don't know; I am hardly prepared to answer that question.

Q. Do you think we could enforce the law strictly as it stands?—A. Well, it would cost a good deal. I don't think you could ever get it enforced. I don't think you could get a man capable of following the factories around.

Q. There would have to be a great many officers?—A. Well, it would be a hard job.

Q. Do you think it is right that the number of canning licenses should be limited?—A. I do; I honestly do.

Q. Would you favour the present policy of encouraging groups of fishermen to come together and obtain what is called a co-operative license?—A. Yes, provided the men who undertake that are all fishermen, I think it is all right. The regulations call for 15 fishermen, don't they?

Q. From 15 to 30?—A. Well, leave it at 15. Provided 15 men have got gear of their own and they go to the different packers and cannot get what they think is a reasonable price for their fish, then I say the department is doing right to issue to 15 men a license, but otherwise I say it is doing wrong.

Q. Do you not think it would be right to exact that they should comply with some standard of fitness?—A. Yes, I do.

Q. Do you think the canneries should be inspected, having regard to their product?—A. Yes, and the sanitary equipment of the factory and all that.

Q. Do you think the existing staff of inspectors and officers would be competent to carry out that inspection?—A. I would rather not answer that question.

SESSIONAL PAPER No. 22a

Q. Is it too near home?—A. No, I have no connections in it.

Q. It has been alleged that in some instances fishermen have suffered injury by the failure of those holding canning licenses to operate their factories; do you know anything about that?—A. Well, I don't know——

Q. That is what led to the granting of co-operative licenses. In some parts of the coast, it is alleged, the canners combined and closed their factories and the fishermen were left without any market at all.—A. It never was done here to my knowledge.

Q. Are you aware of any combination on the part of the packers to keep down the price?—A. None in our locality. There is more of a tendency to bid one another up.

Q. Has there been any noticeable decline in the average size of the lobsters caught within your time?—A. They vary. Some years we get a good average, other years we are small.

Q. You think on the whole the lobsters are becoming steadily smaller?—A. I should not say so, although it is pretty hard to say. I do not think the average of the lobster is getting any less.

Q. During the last five years?—A. No.

Q. Do you think lobster fishing could be carried on farther out from the shore; would you establish a limit within which fishing should be carried on?—A. I don't think it would be——

Q. In some places they fish within a fathom of water. —A. The island is different as you go around. You take round the north of West Cape and you can get three or four fathoms right out from the cliff. Off our shore you have got to go a couple of miles.

Q. In what depth of water do you fish?—A. I set my lines in two and a half or three fathoms, but you can see the bottom plain.

Q. Have you any experience of fishing in harbours or lagoons?—A. No, sir, we have nothing to do with that.

Q. Do you think the loss of gear would be much greater by fishing in the fall?—A. I cannot say by worms, but by storms we never lose any gear. I might say we have lost a few traps, but nothing to amount to anything.

Q. Do you suffer from the borer up in your district?—A. The worm? Yes, desperate. Last year we had 1,500 or 1,800 traps with six boats and 300 to a boat, and there were two boats not running this year. We had to build for the four boats. We have now 1,000 new traps, and we only got what made the other 200 out of what we had before.

Q. What is the average life of a trap with you?—A. We have got five years out of one trap and the new traps that were built last spring—a year ago—some of them we could not get aboard; they broke right at the hollow when we were taking them on board.

Q. What do you think of the practice of deliberately leaving the gear in the water?—A. It should not be done at all.

Q. It might be done by accident?—A. We never make a practice of doing it as fishermen. I might leave a few drifting, but as a rule we take them ashore.

Q. What becomes of these traps that are left in the water?—A. The traps we would cut adrift in August would be all gone before the fall. I think the worms would just eat them right up.

Q. I have nothing else to ask you, is there any statement you would like to make on your own account?—A. I don't think there is anything; you went over the questions pretty well.

Witness discharged.

9-10 EDWARD VII., A. 1910

C. B. MORRIS, canner, Cape Egmont, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in packing?—A. Seven years.

Q. Had you any connection with the industry before that?—A. Yes, sir, as a buyer.

Q. A buyer for other canneries in the neighbourhood?—A. No, buying for dealers.

Q. How many boats do you employ?—A. Only five this year.

Q. Are they all your own?—A. All my own.

Q. Are there many other canneries near you?—A. Yes, sir, I am in the midst of them. There is a bunch of six or seven around me within a mile or two.

Q. Where do you fish, in the bay or out in the straits?—A. Out in the straits.

Q. Off Cape Egmont?—A. Yes, sir.

Q. What was your pack last year?—A. Last year with seven boats I packed less than 200 cases.

Q. What is the best pack you ever made?—A. Four hundred cases with five boats.

Q. How is your pack up to the present for this season?—A. It is very small, sir, I think about the same as last year, no better.

Q. The years 1907 and 1908 are spoken of in some parts of the island as having been good years.—A. Last year was an exceptionally good year everywhere else excepting in the straits.

Q. What number of hands do you employ in the cannery?—A. Regularly I have eight.

Q. During the time you have been canning what has been your practice with regard to small and berried lobsters?—A. To take everything that came.

Q. Was any attempt made this year to enforce the regulation with regard to the berried lobster?—A. I told my fishermen we were given notice to leave out all berried lobsters and they did not appear to take very kindly to it. They said they would not leave them out. I told them we were subject to a fine if they were brought in, and they said they would bring them in without any spawn.

Q. Have you any idea of the percentage of the lobsters taken in your traps that bear eggs?—A. I cannot tell you. There are not nearly so many now as there were a few years ago.

Q. What do you attribute that to?—A. I attribute it to over-fishing, nothing else.

Q. What is the average run of lobsters with you; how many do you consider they run to the pound can or to the case?—A. It depends a good deal. There are never two seasons when they average the same. Some years we have better than others. In certain seasons of the year they are much better again. In general this year they are good, in fact they are always good in June. Coming on now they are getting very small.

Q. Could you give us any average for the whole season?—A. Yes, the average this year would be about, I think, eight lobsters to the pound.

Q. Do you think that if the law were strictly enforced in regard to size limit and berried lobsters you would be able to continue canning?—A. No, sir, I would close down to-morrow.

Q. Then the practice of stripping, or washing off, the eggs from the berried lobster has been followed here by your fishermen?—A. I cannot say it has.

Q. Has it been done by the fishermen in the neighbourhood?—A. They tell me they have done it.

Q. What has been done this year, have they been got rid of outside?—A. In every case the fishermen say they would leave the lobsters in their traps day after day until the spawn left them.

Q. Do you think the fishery is decreasing?—A. That is my opinion.

Q. And that it is necessary to do something to preserve it?—A. Exactly.

SESSIONAL PAPER No. 22a

Q. Various suggestions have been made having that object in view. One is to enforce the regulations as they stand, and it is said that will put a good many people out of business. ?—A. It would, sir.

Q. Another suggestion is to have a universal closing down for a term of years; what would you think of that?—A. I think it is unnecessary. In case they decided to close down what would the fishermen do in the meantime, the people that are dependent upon the fishery for a living? They would all leave. They leave every year. Every year it is harder for us to get fishermen for the simple reason that they cannot make a living wage out of it now.

Q. What did the people do before they went to this fishing?—A. They have been fishing for 25 and 30 years, most of them all their lives.

Q. There was an alternative proposition made by the Lobster Commission in 1898, that the fishing should close down by sections?—A. The fishing is all done in sections now.

Q. The idea was that there should be no canning, say on the north side of Prince Edward Island this season, but allow canning on the south. The next year they would change to somewhere else, and so on?—A. I don't think it would be feasible at all.

Q. Another proposition was to do away with the size limit altogether but to fish for a shorter season?—A. Yes, that might be better. The season of course is almost short enough now for a person that has to depend upon it for their living.

Q. What do you think of the suggestion made to us by the fishermen in some places that the season for the Straits should be changed, instead of being as it is now from the 25th May to the 10th August, that it should be to the last of September?—A. I would like to know how, in your opinion, it would be any better than it is now.

Q. You would not get berried lobsters?—A. You can catch berried lobsters, a certain percentage, at any time.

Q. Do you think the lobsters with berries on them late are going to spawn the same season?—A. I must say that, in my opinion, they do.

Q. You think they will spawn later?—A. I think so.

Q. What do you think is the spawning season?—A. I think they spawn the whole season, but the majority of them, I think, spawn in June.

Q. Could you venture a statement as to how many of the lobsters taken are below the legal size limit?—A. At the present time there would be 75 per cent.

Q. Has there been any noticeable decline in the average size of the lobsters caught in your district within the last ten years?—A. Some years, and some years they are better again. In 1907, we never got any better lobsters than we did that year. In 1906, they were very small.

Q. To what cause do you attribute the decline in the size of the lobsters?—A. I suppose the decrease in lobsters is the main thing.

Q. To what is that decrease due?—A. To over-fishing, I suppose.

Q. You did not answer my question about the change in the season; would you be opposed to it?—A. I would be opposed to it until I was satisfied the late season would be of benefit to us, which I am not now, or any other man, unless he has fished all the season. That would not be a fair trial, because a few traps would fish a lot better than a whole lot, there is no doubt about that.

Q. Do you think it is in the interest of the future of the lobster fishery that lobsters should be taken before they have reached that period of maturity at which reproduction takes place?—A. It is a mistake, unless there is some way of planting them again and taking care of the seed lobsters.

Q. What plan would you suggest?—A. The only possible plan I can see is hatcheries.

Q. Have you had any experience in the matter of hatcheries?—A. Nothing personal.

Q. Have you experienced any improvement from the hatchery on the other side?

9-10 EDWARD VII., A. 1910

Lower down Straits near Cape Bear they claim they have derived benefit from the hatchery on Pictou Island?—A. I think it is doing injury more than good the way the hatchery is run at the present time.

Q. Which one?—A. The handiest one, at Shemogue.

Q. In what way do you think?—A. They fish from Cape Bald. We are directly opposite Cape Bald. They get the spawn lobsters there and fish more than half way across the Straits on our side. They gather up all our spawn lobsters and take them into their hatchery and plant the young lobsters within the three miles limit and they do not bring them back again. So it would be hardly fair for us to leave out the spawn lobsters and for them to take them in.

Q. Would you favour reducing the size limit to seven inches?—A. I would by all means.

Q. Or would you favour abolishing the size limit altogether and shortening the season?—A. No, I would not favour shortening the season any. I would prefer taking the ten days off August and giving us ten days earlier in the spring.

Q. Is it the case that canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen?—A. Yes, sir.

Q. Is it your opinion that it takes 30 per cent more lobsters in the fall to fill a pound can than in the months of May or June?—A. Not in the fall, it would be at this time of the year.

Q. How many pounds weight of green lobsters does it take to fill a pound can with you?—A. On an average I should judge about 210 pounds to the case.

Q. What would you think of the proposition requiring fishermen to register and take out a license?—A. I don't think very much of it.

Q. Do you think it would have the effect of leading the fishermen to observe the law?—A. I don't think so at all.

Q. Have the regulations for the protection of lobsters ever been observed in your district to your knowledge?—A. No, sir.

Q. Do you think the existing penalties are sufficient if they were enforced?—A. I think they would do.

Q. Have they ever been enforced?—A. Not to my knowledge.

Q. Have you ever known anybody to be fined?—A. I have for fishing after the season.

Q. Is there much of that done?—A. Not around our way.

Q. Do you think that the number of canneries has reached a maximum compatible with the preservation of the industry?—A. In certain sections it has; it has been far over-reached.

Q. Do you think there is any good reason why we should make the distinctions we do in issuing canning licenses; do you think there is any reason why any man who shows his ability to pack should not be granted a license?—A. I suppose it is necessary to protect people against themselves at times. The men who are in the business now, I don't think there are any of them making any money. Up our way none of them make a living out of it, they have all gone behind.

Q. Is the present season satisfactory?—A. I am satisfied with the season, but if there was any change I would take off the last ten days and place it at the beginning of the season.

Q. What in your opinion, would be the ultimate effect of a shorter open season with no restriction as to the size limit?—A. I hardly know what effect it would have, I don't think it would have a great deal. Of course there are certain times in our season when it does not pay us to run.

Q. When is the best period of your fishing?—A. 15th July to the 1st August. I might say some seasons from the 10th or 15th July to the 1st August.

Q. Do you think it will be possible to establish a standard of fitness for canneries?—A. By all means.

Q. What would you suggest?—A. Have inspectors.

SESSIONAL PAPER No. 22a

Q. Then you would inspect the pack too, would you?—A. Yes, sir.

Q. Do you think the present staff of officers would be competent to carry on that?—A. They would want to learn the business first.

Q. Would the present staff of fishery officers not be competent to decide whether the packing was carried on in a cleanly and fit way?—A. I should not judge they would be without considerable practical experience.

Q. Would you issue a canning license to an alien?—A. No, I don't think I would.

Q. What do you think of the policy of the department in encouraging fishermen to co-operate in canning?—A. It would be hardly fair to issue fishermen a license after the canners who had already been in existence had gone to the expense of putting up canneries and paying a big price for the licenses already.

Q. The price they pay for the license is not a very big one?—A. I paid \$400 for mine. That ought to be large enough.

Q. How did that come about?—A. I had to buy another party's license. I could not get a new one.

Q. What is the price at present paid to the fishermen for lobsters in your district?—A. I am paying 65 cents a hundred.

Q. How is that price fixed?—A. I simply hire the fishermen at that price.

Q. You offer the price and they take it?—A. Yes.

Q. Are you aware of any combination on the part of the packers to keep down the price?—A. Not our way.

Q. Are you aware of any complaints made by the fishermen that the price paid them by the canners for lobsters is not satisfactory?—A. I think it is an understood fact among the fishermen that the canners are paying all they can afford to.

Q. Do you think the fishermen themselves understand that?—A. I think so.

Q. Are you aware of any fisherman having lost his catch of lobsters by a canner refusing to accept them?—A. No, sir.

Q. If the canneries here were closed would the fishermen find any other market

Q. If the canneries here were closed, would the fishermen find any other market

Q. The facilities do not exist here for the carrying on of the fresh lobster trade?—A. No, sir.

Q. Which branch of the industry do you think is the most profitable to the fisherman where it can be carried on?—A. The canneries are the most profitable to the country. The exporting of live lobsters is no good except to the fishermen themselves and a few dealers; there would be no employment of labour in connection with it.

Q. Has any attempt ever been made to establish a live lobster trade here?—A. I believe so, sir.

Q. Have you any idea how it resulted?—A. Well, I think disastrously. I went into the subject myself two or three years ago and saw there was nothing in the thing and I dropped it.

Q. Are there any facilities in your neighbourhood for the establishment of pounds?—A. It altogether depends. There are bays, but of course I have no idea what would be required.

Q. What is required is a bay having rather a narrow outlet which could be fenced across.—A. We have no bay with a narrow outlet, not very narrow.

Q. The creation of an Advisory Board with regard to matters concerning the fisheries has been proposed; what do you think of the proposition?—A. I think it is what is needed.

Q. How should such a board be constituted would you say?—A. That is taking in all kinds of fishing?

Q. All kinds of fishing. It has been suggested that a voluntary board should be created to advise the department on all matters concerning the fisheries and fishery regulations.—A. I hardly know which would be the better method.

Q. I suppose the local Boards of Trade might recommend members for a board of that kind?—A. It would be better for the fishermen, or men interested in fishermen,

9-10 EDWARD VII., A. 1910

to look after that matter themselves. I know our Board of Trade gentlemen take no interest in the fishery business.

Q. Is there any other matter connected with this inquiry upon which you would like to express an opinion. You heard the evidence given this morning; how does it tally with your views?—A. To a certain extent fairly well. There is one matter that has not been taken up, at least it has to a certain extent, and that is leaving the gear and traps in the water. I don't think there is a great deal of that done now, and I know it has never been done around my place. I always insisted on the gear being brought ashore and I think all around that part of the coast it is brought ashore. What has injured our fishing to a certain extent in my opinion is crabs. There are a great quantity of them and they are increasing very fast. I believe it would be policy on the government's part to do something in order to try and reduce them in some way.

Q. What would cause the increase in the number of crabs?—A. I cannot say.

Q. They have increased you think?—A. They are increasing a hundredfold every year apparently.

Q. Is there any other matter that you have omitted to explain to us?—A. What we are mostly interested in is hatcheries. At a meeting of packers up there last week we came to a unanimous decision that hatcheries were our only hope now. Our case is getting desperate so far as lobsters are concerned.

Q. Do the packers think that the hatcheries alone will keep the industry going?—A. They do. If we are going to get a hatchery we would let everything else stand the way it is at the present time. But it is almost too late. We should have had hatcheries years ago. It will be two or three years before the hatchery will be of any benefit to us. We would try and regulate things ourselves if we had any encouragement.

Q. You think the establishment of hatcheries alone would be a sufficient protection to the fishery?—A. That was our opinion.

Q. Without any other regulation?—A. Without any other regulation. On about 40 miles of coast there are almost half the factories of Prince county; there are some 40 odd factories in that part. They are more thickly situated there than in any other part of the island. In fact Prince county has almost as many factories as Kings and Queens counties together. On the north side again they have got lots of shore room. On this side of the coast we have only got about 60 or 70 miles on each side and there are factories running at both sides.

Witness discharged.

JOHN D. MURPHY, fisherman and packer, Sea View, called and sworn:—

By the Commissioner:

Q. Where is the neighbourhood of your fishery?—A. Richmond Harbour.

Q. Do you speak as a canner?—A. As both, sir.

Q. Where is your cannery situated?—A. In Sea View, sir.

Q. What number of boats do you employ?—A. We employed this year 9 boats.

Q. Were they all your own?—A. No, sir, there were 6 boats of our own.

Q. Did the fishermen in the other boats sell their catches to you by the hundred pounds?—A. Some of them were paid by the case, and some by the hundred pounds.

Q. Have you always carried on fishing and packing at the same places?—A. We have for 6 years.

Q. Are there many other canneries in your neighbourhood?—A. There are two other canneries right on the same beach.

SESSIONAL PAPER No. 22a

Q. Who do they belong to?—A. One goes by the name of Duggan and Co. and the other is Sudsbury Bros.

Q. How far off shore do you fish?—A. From two to three miles off at the first of the season.

Q. In what depth of water do you fish?—A. From 10 to 14 fathoms.

Q. What number of traps do you fish there?—A. From 250 to 300.

Q. Do you always fish in the same depth of water through the season?—A. At the latter part of the season, after the latter part of June or the 1st of July, we shift inside.

Q. Into shoaler water or into the bay altogether?—A. Into shoaler water, we don't go near the bay at all.

Q. What is your experience with regard to the run of fish at various times in the season; how do you find the fish, are they larger off shore?—A. Larger fish off shore, yes, sir.

Q. And towards the end of the season inshore, do you get a smaller run of fish?—A. A smaller run of fish, yes, sir.

Q. What proportion of your fish would be under 8 inches in size?—A. That would be pretty hard to say. There is quite a few of them caught inshore under the mark.

Q. As to the female lobsters with their eggs extruded, what proportion of them do you get in a catch do you think?—A. We don't get a great many of them at any time. The fishermen are supposed, and I think generally do, throw them all overboard. I think it is to the interest of the fishermen to do so.

Q. Do you think they have done so?—A. They mostly have, the majority of the fishermen. I think I can safely say the majority have.

Q. This year or every year?—A. This year and every year since the law has come in force they have disposed of all their berried lobsters.

Q. Is the practice of brushing the eggs off the female lobster followed by your fishermen do you think?—A. That would be a thing I could not say.

Q. Is the catch decreasing or otherwise since you commenced fishing?—A. The catch has increased according to our Fishery Inspector's report, the report of Mr. Matheson, for the last ten years up to this year. This year there has been a decrease, but that was chiefly on account of the ice and the large storms at the opening of the season.

Q. Are you fishing a greater amount of gear now to keep up your pack do you think?—A. We have not been fishing any more since we started the factory. We have not been increasing our gear to any extent.

Q. How do you find the fishing compared to what it was when you began?—A. I find it pretty much the same, I don't see very much decrease or increase. Of course we were cut off this year, we had six days taken off the season at the commencement, but it would not have made any difference.

Q. That change was making the opening of the fishery later?—A. It was shortening the season.

Q. Were you not in favour of that?—A. I was not. I don't think you would get the fishermen down our way in favour of shortening the season.

Q. Why should there be any date fixed for the opening of the season?—A. There should be a date, or there would be no starting point at all, one would be a few days ahead of the other. That would not make very much difference I suppose, but there should be a fixed date.

Q. Why not fix the opening the same as it is on the Atlantic coast, for 1st January?—A. It would be all right.

Q. Do most of the fishermen own their own boats and gear or are they owned by the canners?—A. The majority of them in our settlement own their own boats and gear.

Q. What do you think of the proposition to license the fishermen?—A. Well, I think it would be all right.

9-10 EDWARD VII., A. 1910

Q. Do you think if the fishermen were licensed and registered they would be any more apt to observe the law?—A. I don't know that that would have anything to do with observing the law, but it would be more satisfactory probably to the fishermen.

Q. The idea of those who made the suggestion probably is that if the fishermen were registered and held licenses, they would feel themselves more or less guardians of the law and would obey it themselves and see that others did?—A. That would be all right.

Q. How does the price paid for lobsters now compare with that paid when you began to fish?—A. When I began to fish it was about 18 years ago.

Q. What was the price then?—A. The price was about 50 cents a hundred by count. You paid for your own boats, your own board, and your own bait. This year it is different. They pay \$1.10 to the fishermen on the north side for the same advantages.

Q. Who establishes the price paid to the fishermen?—A. It is pretty much among the fishermen. They say we will take so much.

Q. And the canner is obliged to give it?—A. The canner is kind of obliged to give you that.

Q. Does the fisherman expect the canner to take everything he brings to him, regardless of size, berries or anything else?—A. I could not just answer that. I suppose the fishermen would expect him to, but it would be a question whether he would or not.

Q. Do you think it is the practice of the canner to refuse anything?—A. It is his place to refuse it and he does refuse it. He does in our case I know.

Q. Some cannery have complained that if they lived strictly up to the law they could not get fishermen to fish for them?—A. The great majority of our fishermen on the north side are all opposed to taking these berried lobsters. We don't have very much trouble in that respect.

Q. And how about the undersized lobsters?—A. Of course they will row about that part of it. You have got to do the best thing you can.

Q. Do you find more berried lobsters offshore than inshore?—A. No, sir, just about the same, I don't see very much difference.

Q. Is there any time of the season when lobsters are not fit for food?—A. Except perhaps when they are shelling.

Q. What is the smallest size at which you have ever known a female lobster to carry eggs?—A. Some do not carry eggs very small. To the best of my knowledge I would not think over eight or nine inches.

Q. What style of trap do the fishermen fish in your neighbourhood, the parlour trap?—A. Well, chiefly.

Q. Are there still some of the old traps fished?—A. Yes, there are still some old traps fished. Most of them fish with a line of 60 or 70 of these old fashioned traps.

Q. They fish both traps?—A. Both kinds, yes.

Q. Which do they find catches the most?—A. The most of them claim the parlour trap is the best trap.

Q. It holds the fish longer?—A. It holds the fish longer in the stormy season.

Q. If the regulations regarding the size limit and the taking of berried lobsters were strictly enforced, how would it affect you, could you continue to can?—A. The size limit would affect us quite a bit, I imagine it would.

Q. Could you get the fishermen to fish?—A. I don't think you could get the fishermen to fish. The fish would be all right the first of the season, but part of the season they would be so small no fisherman would bother fishing.

Q. Do you think it would be possible to have a trap that would allow a fair proportion of small lobsters to escape; for instance, by leaving a greater space between the slats, could we not save a greater number of immature fish?—A. There is a thing to be considered in that too. At the first of the season the fish are kind of slack and the small fish could not go out any way, none of the fish would go out. The latter part of the season they are more smart and the small fish would go out anyway.

SESSIONAL PAPER No. 22a

Q. How small?—A. They would go out through a three-quarter inch opening away down to five or six inches.

Q. Do you think a six inch lobster could go through a three quarter inch opening?—A. Yes, sir, I think he could get out through a three quarter inch opening.

Q. What do you think would be the best way of teaching the fishermen to comply with the law?—A. I don't know, sir.

Q. Who should we hold responsible for taking undersized and berried lobsters, the fisherman or the canner?—A. I would imagine almost both of them. The fisherman that gets them ought to be the man. The canner has always got something else to take up his occupation to pay any attention to them. The fisherman has nothing else to do but take them out of the trap, and he ought to pay attention to them.

Q. In your neighbourhood is there a place where pounds for the breeding of lobsters could be established?—A. There is one at Malpeque and New London I would imagine.

Q. Do you know anything about fishing inside in the harbours and bays there?—A. No, sir, I don't know anything about it. I fished 18 years ago in Richmond Bay, but clear of that I don't know anything about it.

Q. Have you anything to tell us about the fishing in that bay?—A. No, sir, I have got nothing to say about fishing in Richmond Bay.

Q. Do you know what the fish caught in there are like?—A. No, sir, I don't know very much about them. They say they are very small fish, but I don't know anything about them.

Q. What do you think of the practice of fishing in inner bays and harbours, do you think those waters should be reserved?—A. Some of the fishermen think they ought to be reserved. I think some of them ought to be reserved to some extent, but the larger parts of the bays ought not to be reserved if the fishermen are to make a living the same as on the north side.

Q. Do you not think the fish go into these harbours and bays for the purpose of spawning?—A. I would not agree that Richmond Bay is a kind of hatchery. I would not agree that it is a protector of small fish. It might be, but I am only giving you my opinion.

Q. Does the lobster not go into shallow water to spawn?—A. We find the female lobster in 13 or 14 fathoms of water in the spring with her berries almost ready to shed.

Q. What time do you think is the spawning season—A. I think the spawning season is almost any time; I don't think there is any chosen time at all for the berried lobsters. Sometimes you will get one almost ready to spawn, and perhaps a month after that you will get another in the same condition. I don't think there is any fixed time for the fish to spawn at all.

Q. What suggestion would you make as to the regulations that should be enforced for the protection of the industry, what do you say should be done?—A. Do you mean for the north side of Prince Edward Island?

Q. Yes.—A. My suggestion would be to leave the season as it was before, from the 20th April to the 10th July. It used to be the 20th April, but last spring they shifted it to the 26th.

Q. Was that done at the request of the fishermen or the packers?—A. It was done at the request of the Local House by the Dominion House I guess, but I don't say that it did us any harm. I would imagine it did harm to the fishermen more than benefit.

Q. Do you think there is any absolute necessity for fixing an open date in the spring?—A. There would have to be some fixed date, otherwise they would all be going wild after a while.

Q. What has that got to do with the protection of the lobster?—A. That has got nothing to do with the protection of the lobster.

Q. That provides for the protection of the gear?—A. I should imagine the fisherman has got to use his own judgment anyway.

9-10 EDWARD VII., A. 1910

Q. Are you aware of any fisherman having lost his catch of lobsters by the canners refusing to accept them?—A. No, sir, I have not.

Q. What would you think of the proposition to close down altogether for a term of years?—A. It would be ruinous to the lobster packer and the fishermen. They have got the gear now.

Q. What would you think of the suggestion to do away altogether with the size limit, but protect the berried lobster and shorten the season?—A. My opinion would be to protect the berried lobster by all means, but shorten the season and give us back the old season we had.

Q. Shorten it at the after end, not the fore end?—A. They could shorten it at that end if they have to, but it would be a great injury at Richmond Bay where there is the best catch of the season. It would be a benefit to us to open on the 20th April and run till 10th July. If they want to take off any part, take six days off the latter part.

Q. And put it on the fore part?—A. No, sir, give us our same season. We used to have the 20th April when we would start early in the morning. As a general rule the fishermen goes out at sunrise, we always get up early in the morning.

Q. Has there ever been any attempt made in your neighbourhood to carry on the live lobster industry?—A. No, sir, we are too far from the railroad.

Q. What do you think of the present method of issuing licenses?—A. It would be all right. They could issue all the licenses they wished and I would be satisfied.

Q. Do you think every man who shows his ability to pack properly should be granted a license?—A. Yes, I am satisfied with that.

Q. Do you think the amount of gear fished by any canner should be limited?—A. I don't think so, because it would be pretty hard to do. I don't see just how it could be done.

Q. Are you aware of any combination on the part of the packers to keep the price down?—A. No.

Q. Who fixes the price paid for lobsters?—A. Chiefly the fishermen and the packer.

Q. Would you favour the establishment of a hatchery in your neighbourhood?—A. I would be in favour of establishing hatcheries on the north side and I imagine we should have one.

Q. Would you as a canner be prepared to pay an increased fee to cover the cost of collecting the eggs to be hatched at the hatchery?—A. Yes, sir, I would.

Q. What do you think of having different fishing seasons and size limits in different places? For instance, you have on the south shore one fishing season and on the north shore another; is there any good reason why the season should not be alike everywhere?—A. There is a good deal left to the fishermen. Probably the fishermen on the south side imagine their fishing is all right and think they ought to know the best about it. They have fished there and I imagine the opinion of the fishermen ought to rule the day.

Q. Would you say that generally the fishermen should establish the regulations and be allowed their own way entirely?—A. All meetings should be on the same principle as this one to-day so that people can give their opinion on the subject.

Q. Do you think a larger percentage of lobsters is required in the fall than in the months of May and June to fill a pound can?—A. That fishing has never been done here.

Q. Do you think lobster fishing should be kept at a regular distance from the shore and a limit fixed beyond which they should not set traps?—A. Yes, I imagine there should be.

Q. What depth of water would you fix the limit at?—A. I should say there should be no traps set inside two fathoms of water, that is twelve feet.

Q. Is there much loss of gear in your neighbourhood from the stormy weather?—A. Yes, sir, quite a lot.

SESSIONAL PAPER No. 22a

Q. What proportion of the gear would you say is lost every year?—A. It depends a good deal on the year.

Q. But one season with the other it averages up I suppose?—A. The fishermen this year have lost a great deal of gear that was set very close inshore. Some of them have lost as high as 50 per cent of the gear, but there are others that have not because they were not in those storms.

Q. Those who fish in shoaler water are more apt to lose their gear than the men in deeper water?—A. That is the idea. By an early season they would not have to come into shoal water.

Q. We are told there is a good deal of gear left in the water in the fall?—A. Most of our gear is housed in the winter.

Q. Is there anything you want to suggest of your own accord?—A. There is nothing I would like to suggest except to get our season back to the 20th of April, if it could be done. If they want to take six days off let them take it off the latter part of the season, because the fish are smaller then.

Q. The resolution postponing the opening to 26th April was carried in the Local Legislature, was it not?—A. Yes, the Local House.

Q. Then the majority of fishermen must have been in favour of it?—A. I don't think they ever asked their opinion at all.

Q. Then what led to the passing of the regulation?—A. I could not say that. It is my opinion that you should take the six days off the latter part, if you want to take any off at all.

Q. I could never understand why an opening date was ever fixed at all?—A. It was to put every man upon the same footing.

Witness discharged.

CHARLES MARKLEY, fisherman, Richmond Bay, called and sworn:—

By the Commissioner:

Q. Are you speaking as a fisherman?—A. Yes, sir, I fished for 13 years and canned for one.

Q. Are you still canning?—A. No, I have given it up. We canned last year, but the price was too high and I sold out my shares.

Q. Have you always fished in the same locality?—A. Always in Richmond bay.

Q. Do you own your own boat and gear?—A. Yes, sir.

Q. To whom have you sold your fish?—A. We always had our fish packed by the case except this last few years and then we sold to Mr. P. H. Wright.

Q. Is it a common practice to have the fish packed by the case among the fishermen?—A. No, sir.

Q. Is there any Fishermen's Union here?—A. No, sir.

Q. In what depth of water do you generally fish?—A. From four feet up to forty, I guess.

Q. What number of traps do you fish?—A. From 200 to 250 traps.

Q. When do you begin your fishing?—A. 26th April this year.

Q. Did you find the fish at once when you began?—A. Yes, sir.

Q. What is the best period of the fishery with you?—A. The first few days, and then the last ten days in July.

Q. Is there a lapse between those periods?—A. Yes, sir, about shelling time there is.

Q. Do the fish not trap at that time?—A. Not as well.

Q. What particular kind of trap do you use, is it the parlour trap?—A. There are some parlour traps used, but they are mostly the two-headed traps.

Q. What is the size of the entrance hoop?—A. Always three to four inches.

9-10 EDWARD VII., A. 1910

Q. How far apart do you put the slats in your trap?—A. They are pretty close.

Q. Are you making them closer now than you did when you began to fish first?—

A. No, sir, I don't think it.

Q. Was the parlour trap in use when you commenced fishing?—A. No, sir.

Q. What number of boats fish in Richmond bay?—A. I could not tell you that.

Q. About how many would there be?—A. I don't know, hundreds I guess.

Q. Do those that fish in the bay confine themselves to the inside waters?—A. The inside fishermen never go out, but the inside fishermen come in, according to the season.

Q. They go in near the close of the season as a rule?—A. The warmer the summer the sooner they go in.

Q. What brings them in?—A. The fish get scarce outside.

Q. How do the fish you take in the bay compare with those that are caught outside?—A. I don't see very much difference.

Q. How do the bay fish compare with the fish you caught when you first commenced to fish there?—A. I don't see very much difference.

Q. They are just about the same run?—A. Yes.

Q. Has there been any decrease in the size of the fish?—A. I don't think it.

Q. What percentage of berried lobsters did you find in there at different times of the season?—A. It is according to the way you have got your traps. There are more on rocky bottoms, there are more berried lobsters.

Q. Could you venture to fix any percentage at all, is it a large proportion of your catch, or only a small one?—A. A very small one. There are hardly any caught at the head of the bays and rivers. They are mostly down towards—

Q. In deeper water?—A. Mostly on rocky bottoms.

Q. What percentage of the fish you catch there would be under 8 inches in size?—A. Pretty nearly the half of them.

Q. I suppose when you put your traps down you do not move them, you fish throughout the season in the same place?—A. We have kept them sometimes in deeper water.

Q. You shift about?—A. Yes.

Q. Do you think there is any more harm done by fishing in the bay than in fishing outside?—A. I could not tell you that, I never fished outside.

Q. It has been claimed by some people that the bays and lagoons are the natural nurseries and spawning grounds of the lobsters and should be protected; what is your opinion about fishing inside?—A. I don't say that the bay is a hatchery.

Q. You do not think it is?—A. There are no more spawn lobsters caught there than there are outside?

Q. How does the present fishing season suit you in the bay?—A. It suits us all right. If we had five or ten days more at the last of it, we would be better pleased.

Q. What do you think of the proposition requiring fishermen to register and take out a license?—A. I don't see that it will do much good.

Q. Do you think it would have the effect of making the fishermen more careful about observing the law?—A. No, I don't think it would.

Q. What has been the practice with you in disposing of your lobsters, do you expect the canner to take everything you bring him?—A. I think so, clear of the spawn lobsters.

Q. Did you always observe the law with regard to the spawn lobsters, or only this year?—A. Last year they were very strict. There were instructions sent around and there were very few spawn lobsters landed.

Q. Do the bay fishermen follow the practice of stripping the berries from the female lobsters?—A. I don't know that they do. I never did it myself. If I got one, I threw it overboard.

Q. Is there any illegal fishing, any fishing after the close season in the bay?—A. Well, only on the sly.

SESSIONAL PAPER No. 22a

Q. Is it not done on the open? We generally find that among the lagoon and bay fishermen there is more of that sort of thing practised than among the outside fishermen?—A. I don't think it. None of the factories can those lobsters.

Q. But the lobsters are caught and canned elsewhere are they not?—A. I cannot say, I have never done any, nor have I seen any one packing them.

Q. How does the price paid for lobsters now compare with the price paid when you first began?—A. We get a lot more.

Q. Are you fishing any more gear now, do you require more gear to catch the same weight of lobsters than you did when you began?—A. No, I don't think it. We know how to do it better, we are better fishermen than when we started.

Q. And you use a trap that is more likely to hold everything you get than the old trap did?—A. Yes, sir.

Q. How is the price of lobsters fixed?—A. I think it is pretty nearly a mutual thing between the fishermen and the packers.

Q. Generally speaking, it is satisfactory to the fishermen?—A. Yes, it has been very satisfactory to the fishermen except this year. This year, I think, the canners tried to bind them a little too low and there was a kick, and I think they got more than their own towards the last.

Q. As a result of the fishermen's kick, did they get a higher price?—A. The canners offered \$2.50 and they came up to \$4.

Q. Was that all through the season, or only as the season advanced?—A. All through the season. It came up gradually, but they paid it from the first.

Q. Do you think the fishermen are beginning to understand the necessity for regulations, and that it is to their advantage to protect undersized and berried lobsters?—A. Well every fisherman is in favour of protecting berried lobsters.

Q. He is not so careful about the undersized lobsters?—A. No.

Q. Do you think there is any period of the year when lobsters are not fit for food?—A. When they are casting their shell.

Q. What is the smallest size at which you remember to have seen an egg-bearing lobster?—A. Seven or eight inches I think. They are mostly big ones.

Q. But you think you have seen the size down to seven inches, they go down to that size sometimes?—A. I never measured them of course.

Q. What is the average size of the berried lobster?—A. I never measured one, but they are mostly big fish, the ones that I found this year.

Q. Do you think if the regulations were strictly enforced the canners would be able to keep operating?—A. Not with the size limit. If the size limit were enforced, they would have to shut down.

Q. And if the canner refused to accept undersized, or berried fish, what would happen to the fishermen?—A. They would have to take them somewhere else.

Q. The fishermen would have to shut down too?—A. Yes.

Q. Do you think it would be an easy matter to enforce the size limit regulation?—A. No, sir, I don't think it could be done unless they measured every lobster that was landed at the factory.

Q. Some of them were measured by an officer of the department this year, were they not?—A. Not at our factory.

Q. What number of cases did you put up at your factory?—A. I could not say for this year. We had over 400 cases last year.

Q. How do you think we could get at the fishermen with a view of inducing them to observe the law; I suppose they recognize the need of some regulations?—A. I would put a heavy fine on anybody that was caught landing spawn lobsters.

Q. What about the small lobsters?—A. If you enforce that you shut them down.

Q. What would you think of a proposition to do away with the size limit, protect the berried lobsters, and somewhat shorten the season?—A. The season is short enough.

Q. How does the regulation fixing the opening of the season suit you?—A. Well

9-10 EDWARD VII., A. 1910

the ice is generally in the bay up till nearly that time now. Some years we can start on the 20th April, but not very often. It does not make very much difference.

Q. Are there any places in your neighbourhood where pounds could be established?—A. I don't think it. I have not much idea what the kind of place would be.

Q. You want a large area with about two fathoms of salt water and a narrow mouth, where the lobsters could be fenced in?—A. About where our factory is there is a channel of pretty salt water and it could be easily barred across the mouth.

Q. How many acres of water have you there?—A. There would be 100 acres of water.

Q. What would you think about establishing a hatchery?—A. I think it would be a good thing.

Q. What do you think about the present practice of issuing canning licenses, is it satisfactory to you?—A. I think any man that wants a license should get it.

Q. Do you think any man competent to pack should be granted a license; should not some standard of fitness be established?—A. It is pretty hard to judge that. This year there was only half the quantity of lobsters. My pack was 200 or 300 lobsters last year and I got 100 this year.

Q. Do you think the product of the canneries should be inspected?—A. It is a man's own business to pack as good as he can. The better the pack; the better market he has.

Q. Are you aware that any fisherman has suffered loss through the refusal of the canner to purchase his lobsters?—A. Not this year. Last year they were restricted in some cases. They are fishing all their gear.

Q. Was that owing to a glut?—A. Yes.

Q. Have you any experience of the live lobster business?—A. No, sir.

Q. Do you think any facilities for carrying on the trade exist where you are?—A. We are not very far from the railway, if we could ship them alive. They could put them into Boston, I suppose, in a day, if they could ship them by express.

Q. What would be necessary to facilitate that trade, fast communication?—A. You would want to have proper cars I suppose.

Q. Do you think there is any reason why the size limit should be smaller in one district than in another?—A. If the fisherman wants to have a limit, let him have it. It is his own business I suppose, he is mostly interested in it.

Q. Do you think it is in the interest of the fishery generally that lobsters, or any fish, should be taken before they have reached the age at which they reproduce themselves?—A. I suppose it would be against the fishery.

Q. Against the interest of the fishermen?—A. I think so.

Q. Do you think a larger percentage of lobsters is required to fill a pound can in the fall than in May and June?—A. I could not say, I have had no experience.

Q. During what portion of the season is the fishery most actively prosecuted with you in the bay?—A. I think they do their best all the time. The whole season they fish.

Q. Is there not one portion of the season when they would expect to have a larger run of fish than another?—A. Generally the last run of fish has turned out the best.

Q. When does it occur?—A. Along in July. The first fish we get are a good size too. As the season gets along the catch dwindles down smaller.

Q. Do you think the fish remain in the bay all winter?—A. Yes.

Q. Have you ever caught them in the winter?—A. I have seen them brought up in mud diggers and smelt seines.

Q. That is all through the winter?—A. Yes, in January.

Q. Do you think they all remain there?—A. I think they do. In Grand River there is better fishing when the season opens than anywhere else in the bay, so the lobsters must stay there.

Q. How long does it take to get out your gear?—A. It depends on the weather. If fine, a day or two; if stormy, it takes a week or a fortnight.

SESSIONAL PAPER No. 22a

Q. The weather will not affect you up in the bay as much as it will outside?—A. We cannot do anything in rough weather.

Witness discharged.

P. M. ARSENAULT, canner, St. Chrysostome, called and sworn:—

By the Commissioner:

Q. In what part of the Island are you located?—Egmont bay.

Q. Are you a canner or a fisherman?—A. A canner, sir.

Q. You have heard the evidence given by the other gentlemen who represented the cannery here, do you on the whole agree with it?—A. To a certain extent.

Q. How long have you been engaged in canning?—A. Seventeen years.

Q. Always in the same place?—A. Yes, sir.

Q. Do you control one cannery or more?—A. One.

Q. What number of boats do you fish?—A. Fourteen.

Q. Are they all you own?—A. Twelve my own, and I buy from two.

Q. Do the men in your own boats fish by weight, or by the hundred?—A. By the hundred.

Q. How is it in the case of the other boats you buy from?—A. It is by the hundred too.

Q. What is the average price paid for lobsters per hundred?—A. My own boats I pay from 60 to 75 cents. The others get \$1.50.

Q. What number of hands do you employ in your cannery?—A. About fourteen girls and six men.

Q. You are still packing now?—A. Yes.

Q. How has your pack been this season?—A. Very poor.

Q. How does this year's pack compare with that of last year?—A. It is only about a half.

Q. How did you do last year?—A. Just fair.

Q. And in 1907, how was the pack?—A. Good.

Q. What did you can that year?—A. We canned over 900 cases.

Q. Have you any idea what you will run to this year?—A. We might pack 450 cases.

Q. How does the run of fish you are packing now compare with what you used to get when you first began to pack?—A. This year they are fairly good in size.

Q. But scarce in quantity?—A. Scarce in quantity. They are about double in size what they were last year.

Q. Does your experience vary from year to year considerably as to size?—A. Yes.

Q. Then I suppose they come in runs all the season?—A. Yes, that is right.

Q. What percentage of the lobster, taken in your neighbourhood, do you think would be female lobsters with spawn?—A. This year we did not get many. In June we got from 15 to 20 per cent, and I have seen them 75 per cent on the cooler in that month.

Q. Would they be a good run of fish?—A. A fairly good run.

Q. What percentage of the fish taken in your neighbourhood will be below the legal size? Of course it is generally admitted that there has been no enforcement of the size limit regulation.—A. It depends where we are fishing. If we are fishing inshore, they would be smaller than if we were fishing outside.

Q. Is it safe to say that, as a rule, you get a smaller run of fish inshore than you do off shore?—A. Yes, sir.

Q. How far off shore do your men fish?—A. We fish from a mile and a quarter to ten miles.

Q. What is the average depth of water there?—A. We have from two to ten fathoms.

9-10 EDWARD VII., A. 1910

Q. Do they fish in the same depth of water all through the season?—A. No, we only get into deep water coming on the last of the season.

Q. You reverse the usual procedure: Most fishermen begin in deep water and move into shoal?—A. We commence in shoal water and gradually work out.

Q. Experience has shown you that you follow the fish better by doing that—A. Yes, sir.

Q. What is the smallest sized female lobster you ever saw bearing eggs?—A. We get them as small as 8 or 9 inches, but the general run are a pretty large fish.

Q. Do you think there is any part of the season when lobsters are not fit for food?—A. I don't think there is.

Q. I suppose when they are casting their shell they are fit?—A. Yes.

Q. When do you have the best of your fishing?—A. We get our best fishing from the 15th July towards the close of the season, the 10th of August.

Q. What would you think of the proposition which has been made by some fishermen to change the season in your division?—A. We want a change of season bad. We want to start about the 1st or 15th July and fish about two and a half months.

Q. Would you favour that change?—A. Yes.

Q. We met a great many on the New Brunswick shore who spoke of that. A. Yes, sir, we will protect the lobsters by doing so.

Q. On the other hand some people have told us that the loss of gear—the rotting of the rope in warm weather and the destruction of traps by the borer—would be much greater than when fishing in the present season. A. There would not be any greater difference in that kind of thing I think.

Q. Some of the fishermen have told us that the gain from the change of season would be such that they could afford to put up with any loss of that kind?—A. Yes.

Q. Have you ever spoken about that change to the fishermen or canners?—A. Yes, sir.

Q. And how do you think they generally feel about it?—A. They are in favour of it in our locality.

Q. What is the opinion generally?—A. At Fifteen Mile, farther up this way, they are opposed to it. But from our locality up to West Point they are strongly in favour of it.

Q. That is from Cape Egmont to West Point?—A. Yes, sir.

Q. Have the berried lobsters always been brought to the factory?—A. Up to this year.

Q. Has there been a good effort made this year to stop the practice?—A. There has been an effort to a certain extent, but not a very big effort.

Q. Would you be in favour of the establishment of hatcheries?—A. Yes.

Q. Of course if you change the season, you will not get the eggs for a hatchery?—A. No, that is right. Oh, yes, I would be in favour of a hatchery, if they did not change the season.

Q. Is there any place in your neighbourhood where pounds could be established?—A. Right at Egmont bay. There are two places that would be good places for pounds.

Q. Do lobsters go there already?—A. Yes, in one place in Percival river.

Q. There would be no doubt about their living there?—A. No.

Q. What proportion of the lobsters taken in your neighbourhood would be below the 8-inch size limit?—A. About 12 to 15 per cent.

Q. They were measured in your cannery this year?—A. No, sir.

Q. What would be the effect on you if the present regulation confining you to 8 inch lobsters, were strictly enforced?—A. It would hurt me to a certain extent.

Q. Would it shut you up?—A. I don't know whether it would or not. It would shut me down inside, and I would try and fish outside.

Q. The idea of enforcing the size limit strictly would be that, in a very few years to come, the fishery would have improved so that you would not suffer any loss by it?—A. No.

SESSIONAL PAPER No. 22a

Q. What do you think of the present method of restricting the issuance of licenses to can?—A. It is a pretty hard thing for me to answer that. I think there are too many licenses issued already, for the reason that there are too many traps out.

Q. That leads to another question: Do you think there is any object in limiting the number of canneries, if you do not limit the amount of gear?—A. No, I don't think so.

Q. Do you think it would be possible to limit the amount of gear fished by each canner?—A. No. From here it could hardly be done.

Q. Do you think there is any reason why anybody who establishes his competency to pack should not be given a license?—A. No, he should be given his license, I think, as far as I know.

Q. Do you think that the decrease in the fishery has been due to over-fishing?—A. Yes, I think so.

Q. What do you think of the various propositions that have been made at various times; take for example closing down altogether for a term of years?—A. I don't think that would work at all.

Q. What about closing down by sections?—A. I don't think that would work either.

Q. Or doing away with the size limit and shortening the season?—A. That would not work very well in our section.

Q. Do you think there is any good reason for having a smaller size limit in one district than in another?—A. No, I don't think so.

Q. What do you think of the live lobster industry; in your opinion is there any opportunity of encouraging it in this neighbourhood?—A. No, I don't think so.

Q. The facilities do not exist here?—A. No.

Q. Do you think there is anything in the statement made by some people that the lobsters from Prince Edward Island will not stand transshipment; some people have said that the Atlantic lobster is much hardier than the Prince Edward Island lobster?—A. We exported some a few years ago and they did not prove satisfactory. There was a certain party in Summerside buying live lobsters. He tried the business and bought a good many, but it did not prove satisfactory and he lost money on it.

Q. Was that due to the fact that he could not get his lobsters direct to the market?—A. Yes.

Q. Do you think that if facilities were provided and the trade inaugurated, it would be a more profitable one for the fishermen than selling to the canners?—A. If he could get them to the market in good condition.

Q. How many lobsters do you estimate it takes to fill a pound can in your neighbourhood?—A. It varies from year to year. We take them from $6\frac{3}{4}$ up to 9. This year it will be somewhere about 7. Last year it was about 8. We get them some years as high as $9\frac{1}{2}$.

Q. Have you ever known a fisherman to suffer loss by the canner refusing to accept his catch of lobsters?—A. Never.

Q. Do you think that, as a rule, the fishermen are satisfied with the price they receive for lobsters?—A. Yes, so far as I know.

Q. Who fixes the price?—A. The packers generally do.

Q. Do the same fishermen as a rule fish year after year?—A. Yes, sir.

Q. A man usually attaches himself to the same packer?—A. We generally get new ones.

Q. Do you think the existing penalties are sufficient; have you ever known of anybody being fined?—A. Yes, I know of a few.

Q. Were you one of them?—A. Yes.

Q. It must have been a long time ago; was it fishing after season?—A. Doing something wrong.

Q. Have you any other change you want to suggest?—A. We want to protect the lobsters in the month of June. That is the only suggestion I have to make.

9-10 EDWARD VII., A. 1910

Q. Do you think the canneries should be inspected?—A. I don't know anything about that.

Q. What do you think about giving a license to an alien?—A. I don't think it would be right.

Witness discharged.

G. SHELTON SHARP, canner, Ellerslie, called and sworn:—

By the Commissioner:

Q. In what part of the Island is Ellerslie?—A. That is the location where I fish out of—Hardy's channel and Richmond bay.

Q. How many canneries do you control?—A. Two.

Q. Are they both in the same neighbourhood?—A. They are within three miles of one another. One in Richmond bay and the other on the back shore, the outside shore.

Q. What number of boats do you run?—A. We have nine boats of our own, seven on the outside shore and two in.

Q. And you buy from how many?—A. We buy considerable inside, none outside.

Q. What would be the price paid inside?—A. We generally buy by weight. This year it ranged all the way from \$3.75 to \$4.

Q. That is where the fishermen are supplying their own gear?—A. Supplying their own gear.

Q. What is the practice with your outside fishermen as to the placing of their traps, do they fish far off shore in the opening of the season?—A. They never shift their traps off our shore, they fish from two to three miles out.

Q. In what depth of water?—A. From six and a half fathoms out to twelve.

Q. Is there any particular bottom they like to get on?—A. All on rock bottom, the sand is no good outside.

Q. Is the loss of gear considerable outside?—A. This year it would be about one-fifth of the total amount.

Q. At what period of the season do you find the outside fishery at its best, at the opening of the season?—A. At the opening of the season.

Q. Does it become necessary to move traps there?—A. No, we never shift. There are some of the other factories doing what they call gully fishing in shore at two to two and a half fathoms of water, but it is very destructive to gear and all the factories do not do it.

Q. Besides being destructive to gear does gully fishing result in the catching of more immature lobsters?—A. Smaller fish.

Q. Do you think it is safe to say, other things being equal, that in shoaler water you get smaller fish?—A. If you leave the rock and get on to the sand it is.

Q. Is there any period of the season when you expect to get a larger run of female lobsters?—A. Along the first of the season we get the females, but egg-bearing lobsters we don't get many of.

Q. What percentage do you get?—A. They claim not over three per cent.

Q. It is not very likely to be large all through the season. We have heard of 75 per cent, which must be just a run. A. There is never any run on our shore of that description.

Q. Do you notice that the eggs are riper at any time of the season?—A. No. On different lobsters they are advanced in different stages.

Q. They are riper on some than on others?—A. Yes, but the season does not make any difference.

Q. You can detect the young lobster with the naked eye?—A. Yes.

SESSIONAL PAPER No. 22a

Q. Do you think it takes a greater amount of gear now to keep up the catch than it did formerly?—A. If we can get it on the same ground it does not.

Q. What prevents you from doing that?—A. The crowd.

Q. Are there many canneries in your neighbourhood?—A. On the outside shore there are two besides ourselves fishing out of the same harbour.

Q. And inside how is it?—A. Inside we are by ourselves but we are in competition with all the bay factories.

With regard to the bay fishing, when does it begin?—A. There is no fishing to speak of there until July, not until the lobsters shell.

Q. You don't find the fish there in the fall?—A. Just a few, what fish there is in the bay.

Q. Do you think the lobsters winter in the bay?—A. A certain quantity.

Q. What is the greatest depth of water you get there?—A. As deep as ten fathoms.

Q. With a muddy bottom?—A. A muddy bottom. I don't know that there would be ten fathoms, there may be only six or seven.

Q. What would you say was the spawning season of the lobsters?—A. We find them as early as we set out in the spring, and we find them when we finish, but the largest quantity I would think would be along in May and the first of June.

Q. Do you think the lobsters approach the shore for the purpose of spawning?—A. I don't think so, I think it is for the purpose of shelling.

Q. Would you fix a limit along the shore within which you would not allow any fishing?—A. I don't know. You could not in regard to the bay. For the outshore fishing you might fix a limit.

Q. What is your candid opinion with regard to bay fishing, you have had experience of both. We hear various accounts of it. Some people say it is evidently destructive, others say that it does no harm whatever.—A. Since I was big enough I have been fishing and we find them just as plentiful and of the same size as we did then, although there is more gear and the lobsters are divided up more.

Q. You do not find that you are packing an unfair proportion of breeding lobsters?—A. There are very few of them in the bay, that is, the spawn lobsters.

Q. What would you think of the proposition to increase the space between the slats in your trap? It seems to have been narrowed down a great deal of recent years. A. I don't think it would be a bad idea at all.

Q. Do you think it would allow a greater proportion of small lobsters to escape?—A. Yes.

Q. What would you fix the width at?—A. That would be just hard to say on account of the lobster itself. Some say in the bottom lath they used to take about an inch and a half.

Q. Do you think the required width should be all over the trap, or would it be enough to have the space widened between the three bottom slats?—A. I think the three bottom slats.

Q. And what about the bottom?—A. They could not get out at the bottom. That would remain on the rock, or whatever formed the bottom.

Q. At what size would you consider the lobster to be fully matured?—A. Well we measured them this summer and we got them all sizes, 10½ inches and 12 inches.

Q. Would that be lobsters with berries?—A. The outside lobsters. Oh, the berried lobsters you mean?

Q. What is the smallest berried lobster you have seen?—A. Not very small, not under 8 inches. I don't think you would get very many at 7 inches.

Q. About one in a hundred thousand where any record has been kept. Generally speaking the berried lobster is a good fish?—A. A nine or ten inch lobster.

Q. Is the practice of stripping or washing the eggs off the berried lobster followed in your neighbourhood?—A. Not in our neighbourhood.

9-10 EDWARD VII., A. 1910

Q. To your knowledge is there any illegal fishing?—A. No, when we close down every factory stops, that is as far as I know.

Q. Has it been the practice for you to receive all lobsters that were brought to you whether undersized or berried?—A. We refuse all berried lobsters.

Q. Yes, but only this year?—A. No, last year too. Mr. Matheson wrote the warden in our district to keep an account of them and we kept an account for a while. Afterwards the fishermen claimed they threw them over; they never brought them in anyway.

Q. Do you think there is a growing disposition on the part of the fishermen to observe the law in that respect?—A. Oh, yes.

Q. Do you think the fishermen realize the necessity for doing so?—A. They realize the necessity of throwing away spawn lobsters.

Q. Do you think there would be any advantage in trying to get the fishermen in your neighbourhood together and speaking to them on that matter?—A. It would be a good idea.

Q. Some of them I suppose would listen to what you had to say?—A. Oh, yes.

Q. On whom do you lay the blame for the non-observance of the law, on the canner or on the fishermen?—A. Both are equally to blame. If the canner takes the fish, I would say he was to blame.

Q. Some cannery have told us they felt themselves obliged to take the fish, because if they did not, they would lose their fishermen.—A. We never had any trouble of that kind. We simply told the fishermen we would be fined if we took them.

Q. Would you be in favour of establishing a hatchery in your neighbourhood?—A. Certainly.

Q. And be willing to pay a larger fee for the purpose of raising a fund to purchase the berried lobsters?—A. Yes.

Q. What would you think of the proposition to do away with the size limit altogether; I suppose the size limit is one that would be difficult to enforce?—A. Oh, yes, it has not been enforced this last few years.

Q. Was it enforced at one time?—A. I believe at one time they were very strict on this 8-inch law. I think it was under the Conservative government.

Q. Sir Hibbert Tupper tried to live up to it pretty thoroughly?—A. Yes.

Q. If the present size limit were strictly enforced what effect would it have on the canner?—A. He would get only half his fish.

Q. Would it put him out of business?—A. It would put him out of business under present conditions.

Q. What do you think of restricting the number of licenses?—A. It would seem that any man that wants to pack ought to be able to pack, but at the same time—

Q. Do you not think we ought to get from such a man some guarantee that he was able to pack up to a certain standard?—A. You would think so. The people already in the business have built it up and put a good article on the market.

Q. Do you think it would be possible to limit the amount of gear fished by a canner?—A. I think it would be pretty hard to do of course.

Q. It seems unnatural to limit the number of cannery and not limit the amount of gear?—A. Yes.

Q. What do you think is the real cause of the decrease in the fishery?—A. Well in our section we have not had any noticeable decrease. They were better this last few years than they have been—that is on the outside coast—and there were as many caught in the bay, but they were more divided up on account of the traps.

Q. You think then that in your section there is no diminution in the fishery?—A. No.

Q. Neither in size nor quantity?—A. Neither in size nor quantity.

Q. Would you say it was in the interest of the lobster fishery that lobsters should be taken before they had reached the age of maturity, or the age at which repro-

SESSIONAL PAPER No. 22a

duction takes place?—A. That would be pretty hard to say. There are other things that destroy lobsters before they reach the age of maturity especially on our side. We often find the fish destroyed—the small lobsters.

Q. But those were causes that always existed?—A. They always existed, yes.

Q. Could you tell us anything about the live lobster trade?—A. No.

Q. Was that trade ever attempted from your section of the Island?—A. Not from our section. The facilities do not exist. You cannot get the lobsters in time to ship them off on the morning train, and we would have to have special cars for them.

Q. Could you tell us how many pounds of green lobsters it takes to fill a pound can with you?—A. We generally go by the case, from 210 to 230 pounds to the case.

Q. Do you think the existing penalties are sufficient?—A. Unless they made the berried law more stringent.

Q. Is the recent law regarding the close of the season satisfactory in your case?—A. It is on the outside, but we claim we ought to have a longer time inside. On the outside we are satisfied with the season as it exists.

Q. What do you think of the opening day, does it suit you?—A. We protested last year against the change from the 20th to the 26th. There are certain years we can get out on the 20th and run out lines.

Q. What led to the change?—A. The amount of old stock on hand last year they claim. They wanted to create the impression abroad that we had a shorter season.

Q. Do you think the product of the canneries should be subject to inspection?—A. We generally have to have a good article now before we can sell it.

Q. What do you think about issuing licenses to aliens?—A. The Canadian should have the preference I think.

Q. What is your opinion of the policy of encouraging fishermen to co-operate in canning?—A. It is a good idea.

Q. Are there any co-operative canneries in your neighbourhood?—A. No.

Q. Are you aware of any complaints made by fishermen that the price paid for lobsters is not satisfactory?—A. No, there is generally a difference between the packer and the fisherman when the former is making his arrangements in the spring, but after that they are generally pretty well satisfied.

Q. Is it to your knowledge that fishermen have ever suffered injury by the failure of canners to operate their factories?—A. Not in our section.

Q. If canning were stopped would the fishermen find any market for their lobsters?—A. No, I don't think so.

Q. Do you think that the shipment of live lobsters should be encouraged by providing the necessary facilities?—A. Well I don't know. In this section we are a long piece away, and everything in the States is sold on commission. Sometimes it pays well and sometimes it does not. We can the lobsters here and we give employment to people.

Q. Where it is possible for the live lobster industry to be carried on, do you think it should be encouraged rather than canning?—A. I would think so.

Q. You take the southern coast of Nova Scotia, the bulk of the trade there today is in live lobsters, but of course they have the necessary facilities for carrying it on successfully. Which branch of the fishery do you think would be the most profitable to the fisherman?—A. The live lobster trade would.

Q. That is where it can be carried on successfully?—A. Yes, carried on successfully.

Q. It has been suggested that a fisheries board should be created for the maritime provinces to advise the department with regard to fishery regulations; would you approve of such a scheme?—A. Yes, sir, I would.

Q. Is there any other matter you would like to express an opinion upon?—A. Nothing in particular only those hatcheries. I would recommend them.

9-10 EDWARD VII., A. 1910

Q. You have already said you would have no objection to paying a slightly increased fee?—A. Yes.

Witness discharged.

DOMINICK MURPHY, fisherman, Egmont bay, called and sworn:—

By the Commissioner:

Q. Are you a fisherman or canner?—A. I did get a chance this year to can a few.

Q. Through a co-operative cannery?—A. Yes. I have always been a fisherman and I did get a chance this year.

Q. How many of you were united together?—A. There were 15, but the 15 did not stay. They were too late getting their license and some of them had to sell. Some of them saw they could not fish for what they were getting by the hundred weight and they gave up their gear and went away to Boston.

Q. That left you with how many associates?—A. Me and another man had to use the license and do the best we could, packing and fishing, seeing that it was granted to us.

Q. What number of boats did you fish?—A. Only two of my own and the other man's.

Q. And what number of traps?—A. I only fished 127.

Q. How many did the other boats fish?—A. Well I suppose he has got probably a little over 200.

Q. Did you fish alone?—A. No, sir, I fished with my boy.

Q. What number of cases did you pack as a result of your operations?—A. We were late. It was somewhere about the other day before we did any packing at all.

Q. You have some days to run yet?—A. I think we have something near about 9 cases, I am not sure exactly, but that is just for the one boat with 127 traps. It may be over that.

Q. And before this year were you engaged always as a fisherman?—A. Well I think so. Year in and year out I think I have fished on that shore since 28 years ago.

Q. When was the first cannery opened there?—A. Mr. George Longworth and Mr. Brown on the West Point, I think, were the first.

Q. How does this proposed change in the season strike you?—A. I believe the early fishing is the more expensive to the fish and to the people engaged, because here on our shore the lobsters come in to spawn, and the month of July you may have good sized fish but he is awful light, there is no cooking in him.

Q. Under the regulations as they are now you are allowed to fish from the 25th May until the 10th of August?—A. Yes, sir.

Q. How would it suit to change that season and make it 15th July to the end of September?—A. That is what we want in our neighbourhood.

Q. I suppose there are no fishermen here from the lower sections, you are all from Egmont bay?—A. I think there are some here from around the north shore.

Q. You think that by fishing in the later season you would escape the capture of spawn fish?—A. It is the case of a man fishing and at the same time trying to save his hay fields and all the rest of the goods he has got an interest in. That is the time I think that the fish spawn, and as soon as they have shelled, there have been very few spawn lobsters seen. By fixing that term I think the spawn lobsters would be pretty nearly gone altogether.

Q. Some people say it will take at least 30 per cent more lobsters in number to fill a pound can in that season than in May and June. A. It is all right for those who go fishing early in May. Up to July now they are small fish.

Q. Then when should you fish again?—A. Just now they are commencing to be good fish.

SESSIONAL PAPER No. 22a

Q. How far off shore do you fish?—A. It depends upon the weather and wind.

Q. Are you fishing in the bay?—A. In the bay, very close to the shore.

Q. On what shore do you fish?—A. On the north shore of Egmont bay.

Q. Nearer West Point?—A. Yes, sir.

Q. In what depth of water do you fish?—A. We had, I should say, about two fathoms where we started in this spring.

Q. What time of the season do you get your best fishing generally?—A. Up to the 10th or so of July. In July our fishing slackens off.

Q. Do you fish all the time in the same depth of water?—A. I do that. I hardly ever shift my gear.

Q. You do not fish that way all the time but devote yourself also to farming?—A. I have got a farm on the shore and I farm and fish.

Q. What is your opinion with regard to the condition of the lobster fishery, do you think it is as good as ever it was?—A. It is not so good. The lobsters are not so numerous and the fishing is not so good; there is just as much money in it as when the price was so low per case. Mr. Longworth told us he has sold a case as low as \$5.50; he hired men and gave them as much by the hundred weight and by count as he does now. Still prices go as high as \$10.50 and \$15 now; they cannot go any higher in price, those that are buying.

Q. Have you any idea what number of lobsters it takes to fill a pound can?—A. We had a kind of memorandum up to July. I am not certain because I am not the fellow that keeps the books.

Q. Still you have secured your license and are sure of it another year?—A. Yes, we are packing now. There were 15 men signed and the rest all died away or had to leave.

Q. Do you expect to re-organize?—A. I do, yes. I have got two young men fishing by the hundred. One young man is fishing out in deep water with about 180 traps. There is another packer who has about the highest number of traps to a boat that we have in the harbour. My oldest boy is fishing with him. I think I made as much as the two of them out of 170 traps. I did not intend to fish at all or sell because I could not live. I could not provide for my house and get a little tobacco and sell at \$2 a hundredweight.

Q. Would you say the fishermen, generally speaking, could make more money if they were allowed to pack than by fishing on their own hook?—A. I am prepared to prove it. I used to fish by the hundred, by count and by weight, and I have figures to prove it.

Q. What quantity of lobsters were you prepared to can?—A. We could not expect to can very much. We had only a small rig. Still, as the license was granted, somebody had to take hold of it. I would not fish at all selling by count; it would not pay me. A man could not live.

Q. Is there any competition in the matter, or are you forced to accept a certain price?—A. It is like this: A man has got to have something for his labour or else he must leave the country and go somewhere else. You cannot live in this country without value for your labour. If men cannot get to-day what they want in order to enable them to live they must do something else.

Q. What is your practice with regard to small and berried lobsters?—A. We have had them brought ashore pretty small.

Q. Do you take everything you get?—A. Pretty much. One fisherman will say: 'What is the good of my saving these fish because another man will have them?'

Q. You are speaking of the berried fish?—A. Yes.

Q. When you were fishing did you take to the factory everything you caught?—A. Pretty much. That is what we counted on.

Q. Did a canner ever raise any objection?—A. We have among ourselves, because if we were going into the business we would need to save the fish. It is like a man

9-10 EDWARD VII., A. 1910

saving his credit or anything else. If you are interested in the business and saving anything out of it, you want to try and secure it for another year.

Q. Have you any idea of the percentage of spawn or berried fish in your catch?—

A. I do not keep any account.

Q. Could you give me any idea of the smallest sized berried lobster you ever saw?

—A. Upon my word it would be pretty small, but I could not give you any statement and do it right.

Q. Have you anything to say regarding the establishment of fish hatcheries?—

A. Well, I suppose if there was a fish hatchery in the place it would be better than taking the spawn lobsters and using them. A man who had any interest in packing so as to prove successful and do what he could, would want to see them saved.

Q. Would you suggest anything for the improvement of the fishery?—A. That is to save the spawn lobsters?

Q. For the protection of the industry in the matter of spawn or undersized lobsters or anything else?—A. I don't see any way more than that a man who packs them should be put under a penalty. The packers should not take any of these fish from any fisherman. If the fishermen don't wish to stay, let them hire them by the month or give them so much wages and leave the fish there.

Q. Do you think the packer would be able to keep on if he were confined to the present size limit?—A. As far as the spawn lobsters are concerned it would be all right to save them. But with the medium fish, I would say it would be all right to pack them. The big ones in deep water are poor looking fish. The inshore fish shell earlier than the deep water fish. Then they fill up and give better returns than the great big fish.

Q. Is the practice of stripping or washing the eggs off the female lobster followed by the fishermen in your neighbourhood?—A. I heard tell of it and tried it myself on one. I don't think that any man would go to the bother for the sake of a lobster. I think the fisherman if he was frightened would not bother about them. I would not. I tried one so that I would know for myself.

Q. Is it the practice among fishermen to avoid dealing with the canner who is known to be scrupulous on the subject of taking undersized or berried lobsters?—A. I don't know, sir.

Q. What do you think is the best way to get at the fishermen to induce them to observe the law on this subject?—A. The only way I see is for the fishermen themselves that can handle the matter between them. The men that use their own fish, and pack them, are likely to be careful, they are not going to put themselves out of pocket. In the case of hired men that are fishing by the hundred they have got to make a count to make wages. That is where the value of the license comes in. Every man along the shore who can pack his own fish and wants to continue packing, will be careful about those fish the same as he is about his hay and oats.

Q. Then as I understand you would give a license to every man that applied for it?—A. I would say to every man that used his own gear and produced fish fit for the market.

Q. Are you aware of any fishermen having lost his catch through the canner refusing to accept them?—A. No, they would sooner take some pay for them or take anything. Some people say: 'What are you paying a hundred?' 'Fifty-five and sixty cents.' Probably some of the people that would go to fish at the first part of the season would say 'I am getting 60 cents a hundred.' Well, he has a double boat, that is plenty. That would be 30 cents a hundred for the boat for one man; it is not 60 cents for each man but 30 cents. The lobsters are put up that way and if the thing is not given out so that people will understand it, they will say 'That man is getting 55 or 60 cents.'

Q. He has to hire his men?—A. He has to hire his men so that he gets 30 cents and his man gets 30. At the rate they are paying now, \$2 or \$3, a man does well to get 50 cents and go out at the first part of the season and rig his traps.

SESSIONAL PAPER No. 22a

Q. Do you know anything about the live lobster trade?—A. We have seen some men buying around here who made a big offer to people that were fishing their own gear. Those men were drawn away from the packer with whom they contracted. But the thing did not last. Shipping live lobsters would be all right if there was a certain market provided and boats running so that a man could depend upon his lobsters being cared for. It costs a lot to put up gear and a man might get a big price to-day and perhaps the buyer would never come back any more.

Q. Then I understand you to favour the co-operative plan of packing?—A. That is what we did this year.

Q. Is yours the only co-operative cannery in your neighbourhood?—A. Yes. I think myself the co-operative system is all right. I don't think it will interfere with me or with any other man.

Q. Would you favour establishing a fish hatchery?—A. Yes, I believe it is all right. There are good means as far as water and ground are concerned to have it. I think if you put the season as late as the 15th of July it would be all right.

Q. Do you think that is the general feeling of the fishermen in your neighbourhood?—A. Yes, sir, I think so. It will give the men that have got farms a chance to put in their crops, and then get out their boats and do their fishing.

Q. Is there anything else you would like to say?—A. Nothing more than about us getting 15 men to sign for a license. It should be sufficient if there are five or six men that want to live and work and have got boys who don't want to quit the country to look for work. If a man has to run around to the packers and others to get names in order to try and keep his family together, I don't think it is fair.

Q. Do you think the number of men necessary for a co-operative license should be reduced?—A. I think a man that has got a family and the means to put up fish right, so that there is no waste and the buyer is satisfied with the packing, should be allowed to pack his own fish.

Q. Then you think that any man who shows his ability to put up good fish should be licensed?—A. Any man who puts up his fish right and is trying to keep his family together and not let them go out on the world, has a right to pack without going to 15 or 20 people to get them to sign. I don't think there is any need of that. We are paying the government a tax and living in a civilized country and a man should have what he earns.

Witness discharged.

H. B. S. BIRCH, fisherman, Port Hill, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing?—A. Last year was my first year lobster fishing.

Q. And are you still fishing this year?—A. Yes.

Q. Did you ever can at all?—A. No, I have had no experience canning.

Q. Are you fishing in the bay or outside?—A. In the bay.

Q. Are you a farmer living in that neighbourhood?—A. Yes, I farm.

Q. At what season of the year do you begin to fish?—A. I ran one line, I think on the 26th April. The first lobsters I sold May 15th.

Q. What particular canner do you do business with?—A. Last season I sold to Mr. Wright. He has a cannery right on our shore there. This year I sold to Mr. Theodore Scott.

Q. Are you fishing your own boats and gear?—A. My own boats and gear.

Q. What arrangement did you make with the canner, what did you receive?—A. There was a sort of strike on in the beginning.

Q. That is this year?—A. Yes. The packers seemed to combine in some sort of way, or there was a report that we were to be offered only \$2.50 per hundred weight.

9-10 EDWARD VII., A. 1910

We fish by the hundredweight. Mr. Scott offered \$3 and a rise so I went with him. I might say that the combine, or whatever there was to it, did not last. It broke up and they were all paying high prices.

Q. Prices went up generally?—A. All around the bay, they all went up.

Q. There is no fisherman's union in your neighbourhood?—A. There is no fisherman's union any more than just there: We came under arrangement that we could not fish for \$2.50; it would be better to put our gear ashore.

Q. You have not had much experience in fishing?—A. Not very much.

Q. You cannot tell us anything about the present condition of the fishery compared with what it was in the beginning?—A. No more than that I live just on the shore and have heard them speak about what it has been.

Q. How would you consider the fishery to-day?—A. The fishing in Malpeque bay is better than it ever was.

Q. You think the bay is better than it ever was?—A. Yes, sure. That is I cannot swear positively to the dates now, but before I was married some 22 or 23 years ago, Mr. Bond had a factory there and all their gear was outside. It was thought an absurd thing to put a trap in the bay to get lobsters, but they finally began to put some traps in the bay and they got some fish. The year before last, and last year, there was good fishing in the bay. This year it was not so good owing to the season being so late.

Q. What made the season late this year?—A. I think it was the ice conditions.

Q. The ice hanging on the coast?—A. Outside.

Q. Has the amount of fishing done in the bay increased greatly from the time you speak of?—A. There are many factories on the shores now and all fish in the bay and are maintained from the bay, whereas this factory I speak of was on Fish Island and the fishing was done outside.

Q. Is the amount of gear fished in the bay much greater than it was formerly?—A. Of course it is increasing and the fishing the year before last was the greatest I think in the history of the bay. This year if we were fishing now there would never be greater fishing in the history of the bay. I have reason to state that. I had a line left out with 30 traps. Some of those had the hinges broken and some six or seven I had to leave, but I had as many as 18 and 20 lobsters.

Q. What sort of fish were they?—A. Good large fish. I fish in deep water myself.

Q. What do you call deep water in the bay?—A. Anywhere from 18 to 30 feet. It is only in the channel that you get very deep water in the bay.

Q. Do you confine your fishing to the channel or do you fish off the shore?—A. This year I only ran one line in to the shore. My other four were in the channel.

Q. At what time of the season do you expect to make your best lobster fishing generally?—A. The last of June to the 1st of July. I have the fishing book right here and can give you the figures of what we have done. The first I landed on the 15th of May was 97 pounds. I had not all my gear out then. On the 17th May, 94 pounds; 18th, 98 pounds; 19th, 108 pounds; 20th, 64 pounds; and 22nd, 122 pounds. Now on June 7th, which would be a Monday, I had 165 pounds; June 9th, 99 pounds; June 10th, 71 pounds; June 11th, 108 pounds, making in that week 443 pounds. Now June 14th there is 57 pounds; June 16th, 64 pounds. I suppose windy weather prevented me from fishing the other two days. I only fished from June 14th to June 16th in that week and the catch was 121 pounds. I began again June 21st, 165 pounds; June 23rd, 178 pounds; June 25th, 141 pounds; June 26th, 103 pounds, making in that week 487 pounds, only living wages. Now here is June 28th, 200 pounds; June 29th, 183 pounds; July 2nd, 207 pounds; July 3rd, 127 pounds, making in that week 717 pounds. Now on July 5th, 222 pounds; July 6th, 103 pounds; July 7th, 145 pounds; July 8th, 144 pounds; July 9th, 155 pounds, showing you the increase in the latter part of the season.

Q. Did you find a large proportion of berried lobsters?—A. This year all to my memory is 3. Last year was my first year's fishing. I was talking to the old fishermen and they told me it was a marvel in the history of fishing to find so many berried lobsters in the bay.

SESSIONAL PAPER No. 22a

Q. What proportion did you find last year?—A. I could not tell you. We threw over an awful lot because I don't believe the fishermen should land berried lobsters; he is not a fisherman if he does land them. A robber that wants to rogue may, but the fishermen won't land berried lobsters because it is not in his interest to do so. When he does land one he does not know that he is doing it. This year I only remember of catching three in my traps. I threw them away as I drew them out of the traps. I don't think any fisherman would land berried lobsters, that is with the berries on.

Q. What proportion of the lobsters taken where you fish are under the 8 inch limit?—A. You cannot get that information very accurately from me because I fish in deep water. I saw what lobsters I fished myself and saw them on the outside and I thought they were the same lobsters; I could not see very much difference.

Q. What would be the average run of your lobsters, how many would they run to the hundred pounds?—A. I could not answer that, I never counted them. We always sell by the hundredweight and we just throw them in and they are weighed.

Q. Was there ever any objection made by the canners to receiving anything that was brought him?—A. Well, not from me.

Q. They take whatever you bring them?—A. I always brought them good lobsters. If there are little ones I don't bother putting them in because I don't think it is worth while, I don't think a man gains by taking them.

Q. I think if the fishermen were all like you we would not have any necessity for holding three inquiries. You think that the regulations for the protection of berried and under-sized lobsters are observed?—A. No, I don't think that at all. I think there are some people that don't regard the law, although it should be to their own interest to do so, if they intend to follow the industry. Certainly accidents will happen. I remember two or three times coming in and finding berried lobsters in my barrow load and throwing them over.

Q. In handling a large number of lobsters such a thing as that might happen?—A. No man who intends to fish lobsters will take a berried lobster.

Q. What do you think of the proposition to do away with the size limit and slightly shorten the season in compensation for it?—A. If we shorten the season in Malpeque bay you had better give us compensation for our stuff, because the first of the season is very little good to us. It is the latter part of the season when we do anything at all and that is very little this year.

Q. If the lobsters winter in the bay, how is it you do not do well in the beginning of the season?—A. They do not winter in the bay.

Q. You think they come in from outside?—A. Certainly they do. You may get a few, there are exceptions to all rules. It can be experimented on by setting traps during the winter, that is the only way I know of to prove it. There has been some evidence touching on this matter by persons who have set out a few traps.

Q. Through the ice?—A. Yes, they got very fair fish and then they got nothing. They evidently fished out a few that were in the grass.

Q. You would not expect the lobsters to be very active in the winter?—A. I don't know where they go. Of course they do not trap in the winter. It is a very strange thing, they would trap a certain number and they would not get any more. How is that? They get a certain number first and they are very fair and then not any more. It seems as though they exhaust them. I don't think they are in the bay like other fish, but that they make for deep water in winter.

Q. Have you any changes to suggest in the regulations?—A. As far as I can find out from the different fishermen, talking socially, the conditions vary very much. Now out here on the south side they seem to want a different season altogether from what we want. Malpeque Bay should have a different season entirely from what we call the north side, those fishing outside. One reason is because of the ice conditions, we are handicapped at the spring of the year, we are always late. There are always two or

9-10 EDWARD VII., A. 1910

three weeks in the date of starting in the early spring when our season opens that we may run lines and sometimes lose them.

Q. That is outside, not inside?—A. Yes, sir, inside, the ice comes right in. You must consider that we have a very small harbour and the current is very great, and when an east wind sets in with the tide, the ice comes right in and grounds and takes our lines and traps and it speaks ruin to us.

Q. What is the latest date at which you have known ice to come into the bay?—A. I could not give it to you. This year it has been later than I have known it for some few years.

Q. When did the ice leave this year?—A. I could not state that. I know we could not fish this year until later. The 15th of May was when I landed the first lobsters, there were others landing lobsters before that.

Q. I understand you to say you think you should have a longer season in Malpeque Bay on account of the ice?—A. In my opinion we would rather lose two days in the beginning than one in the end, that is not letting the season go too long. There is no use in forcing the thing. If we could get five days more in the end I would be willing to give ten days at the beginning, say if we go to the 15th of July in the bay and started on the 1st or 2nd of May. Swap two for one, that is what I suggest, and I think any fisherman who is fishing there will find that is a just plan to adopt. The fishing outside differs very much from the inside. Our shores run from Tignish down to that bay and possibly some may be prejudiced against us and want to close up. I mean those that fish on the outside, and they think the vicinities spread around the bay should be destroyed and their interests served. But we want to be considered. We don't want too much but just fair play.

Q. Is there anything else you want to say?—A. Nothing further than that. Last year we did fairly well. This year of course the season is late. What you take off from the beginning from us and from our season in the bay will not hurt us. It would, I might say, on the outside. You understand in the case of the fishermen on the outside coast it would hurt them because they get good fishing at that time. On what we call the north shore, the fishermen get good fishing. At those dates I have suggested you might perhaps interfere with them. They get good fishing when we cannot get anything as later we get a few. I might suggest this in regard to granting licenses. I think that is a delicate matter to deal with just now. To my way of thinking the canners are doing fairly well. They have not organized very rapidly or very strongly yet, and it is all right to leave the matter open to grant fishermen who combine—15 or 18 who are ready to run a good decent lobster factory—a license.

Q. Then you approve of the policy of granting co-operative licenses?—A. I would approve of this being left open. I think there is nothing like having lobster factories inspected and the best product that can possibly be put on the market put there. I don't think it is right to have men canning lobsters who are not capable or do not understand it, and therefore I think that the packers who have been packing and have not as yet seriously combined against the fishermen, the department should hold a check against them for fear they would.

Q. That check could always be held?—A. Later on if the packers do combine against the fishermen it would be open to the department to grant fishermen licenses. By doing too much of it there might be more factories than what would be necessary or would be required. At the present time everything is running very harmoniously, only there seems to be a little difficulty in arranging the fishing season to suit the different localities in our province. The fishing seems to differ so much.

Q. Do you not think that having different seasons and different size limits in sections that are close together is sure to lead to abuse?—A. Well, I don't know. Do you mean a loss?

Q. I mean an abuse of the fishery. Do you think that as far as possible we should have one size limit and one season for fishing?—A. No, I do not. I disapprove of having one season around a province because it is impossible.

SESSIONAL PAPER No. 22a

Q. As far as possible; it is not possible everywhere. It seems difficult to multiply the seasons and the limits?—A. Well, it may, but I will tell you: I think there are two or three suggestions I might make. I think a boat should be limited to a certain number of traps, and I think there should be a license to the lobster fishermen the same as in other instances. Every licensed man that takes out a license to fish on the outside ground should fish there, and a man that takes out a license to fish in the bay should fish there. A man should only fish where his license indicates. For instance, I would suggest that a single boat be limited to 100 traps and a double boat to not more than 300 or 350 traps. Of course that is only a suggestion. However a man that takes a license to fish outside should go outside and fish.

Q. He should not be allowed to fish inside?—A. His license would grant him the right to fish outside. I think we require a different season in the bay altogether. I would propose you should take off part of the season as I have suggested if you are going to take off any.

Q. Out of these suggestions something may come?—A. Yes. As far as I can say in regard to our packers they have treated us very fair.

Witness discharged.

EDWARD CROPLEY, called and sworn:—

By the Commissioner:

Q. Are you a fisherman or canner?—A. Fisherman and canner.

Q. You have heard the evidence given by the other gentlemen; do you differ with it in any respect or is there anything special you have to say?—A. No, not very much.

Q. What section of the coast do you come from?—A. Between West Point and Cape Egmont.

Q. I understand you wish to say something about the season?—A. Yes, about the season. I would say commence 15th July up to the last of September.

Q. All the evidence we have had on that subject has been from fishermen from Egmont Bay. Is there any one here from the coast farther east?—A. Yes, there are some.

Q. How would that season suit them?—A. I think it would suit them all right. I think some would be in favour of it.

Q. What is your reason for suggesting that change in the season?—A. We can commence on the 26th May, but we do not get our traps out, we don't begin fishing until the 1st of June, and then there are just two weeks in June that we do anything. Then it is a dead letter until the 15th of July; the fishing does not pay expenses.

Q. Do the fish move during the interval, or what is the trouble?—A. The fish are shelling.

Q. Will they not trap when they are shelling?—A. No. They generally shell about the 15th of July. Then they get hungry for bait and move into deep water and we have to shift our traps into deep water after them. I commence again on the 15th of July to fish.

Q. Is that the only matter you desire to speak upon or have you anything further to say beyond the evidence that has been given?—A. Yes.

Q. Do you think the present system of licensing canneries is fair or would you suggest any change in connection with it?—A. I think it is fair.

Q. Do you think there are canneries enough under license?—A. I think there are canneries enough.

Q. Do you think the price received from the canners is a fair one?—A. Yes.

Q. You are satisfied with it?—A. Yes.

Q. Well unless there is anything special you desire to add?—A. We get the best fishing outside that there is in the season.

9-10 EDWARD VII., A. 1910

Q. And are the lobsters improving in quality now from this time out?—A. Yes, they are large fish. We had 900 last Friday and made three cases.

Q. As to size, what would those fish average?—A. They would average 11 and some up to 12 inches. I have known them 13 and 14 inches, some very large fish.

Witness discharged.

PETER MCISAAC, fisherman, Brae Shore, called and sworn:—

By the Commissioner:

Q. Are you speaking as a fisherman or canner?—A. I am a canner and fisherman.

Q. What number of boats do you fish?—A. Three.

Q. Do you own the gear and outfit?—A. Yes, sir.

Q. What particular part of the inquiry do you wish to express an opinion about, are you one of those that favour fishing in the fall?—A. Yes, sir.

Q. For what reason?—A. I think our season is wrong. I think we are doing an injustice to the industry. We are taking spawn lobsters and taking lobsters when they are not in a fit condition to handle and we cannot control the fishery. They turn to work and wipe off these spawn lobsters in June.

Q. Do you think that practice is general?—A. Yes. I am sure that is done at my own place and we get the majority of our spawn lobsters in June.

Q. What do you think about the trap; do you think it would be wise to insist upon larger space between the slats?—A. I don't think so. The reason why I built my traps so narrow is this: The lobster will shove its claw between the trap and hang there, and the fisherman will go to work and take him out and break off the claw and leave him there. Of course the lobster is not much good to him without a claw.

Q. Do you not think we would save a lot of under-sized lobsters by increasing the space between the slats?—A. I think not. I think from an inch to an inch and a quarter would be all right. We would save the lobster's claw and anything that would go through that space would be let go. The closer the slats are, the more lobsters they will save in the traps, but I think the lobsters will go through an inch or an inch and a quarter.

Q. What size lobster will go through an inch opening?—A. That is a pretty hard thing to decide. It will be a pretty small lobster that will go through an inch.

Q. Do you agree with most of the evidence that has already been given?—A. I agree with the most of it.

Q. Has any evidence been given that you take objection to?—A. None at all. I would like to have the season changed from the 15th, and if they give us a shorter season I would be satisfied sooner than to have it—

Q. You would rather begin on the 15th of July?—A. Supposing they give us that I would sooner have a shorter season than have it the way it is now, because it is not a paying business at present. We have got to feed the crowd, we have to maintain them and there is nothing in it.

Q. Are there any fishermen from the neighbourhood of Cape Traverse?—A. I think there are people here. There are people that have made report that they would like to have the season from the Cape taken off at the last ten days. The Cape will run this way. There is a bight from West Cape right out to West Point. We fish right in here (illustrating). In this bight we don't catch fish at the last of the season. They may get out here from Cape Egmont where the line from New Brunswick and Prince Edward Island is very narrow. They may get fishing earlier than us where the line is narrow between New Brunswick and Prince Edward Island, but you go down and take a great circle in 15 or 16 miles out of Cape Egmont and in this bight we get the season where it is very late. Last year my biggest catch was on the 20th July. This year we have no catch yet.

SESSIONAL PAPER No. 22a

Q. How is your catch?—A. It is very slack.

Q. Is it improving now?—A. It is a little, we cannot say we are improving. For the last fortnight the fish are about the same, 400 or 500.

Q. The principal thing you want placed on record is your suggestion as to the length of the season?—A. I don't calculate to run my factory before the 1st of July next year whether the season is changed or not. I went down to the shore this year \$300 in debt and I don't expect to make it. The taking of spawn lobsters we cannot control, because the fishermen will give them three or four slaps and knock the spawn off.

Q. Some people say it is hard to get the spawn off?—A. It is not hard at all. I fish myself and control a factory. Still they take them in. I told Mr. Matheson to overhaul the cooler the other day but he never saw one spawn lobster there. We have not seen one in 15 or 16 days. We are the people that are destroying the lobster industry ourselves. We are packing soft shelled fish that are not in condition for human use and have hurt the sale.

Q. Do not those lobsters go to pieces in the boiler?—A. Unless you boil them very carefully. You must give them a certain boiling. It is suggested that an inspector should inspect the canneries. I don't think it is necessary. The man that does put up bad goods cannot sell them. The canner should be the inspector himself.

Q. Do the buyers send anybody around to inspect the canned product here?—A. Some firms do. Mr. Tidmarsh does. Unfortunately I am not selling to him this year. With regard to inspecting canneries it is not very much a man that does not put up good goods can sell. The fish are inspected after they leave us.

Witness discharged.

FRANK MACDONALD, fisherman, Richmond Bay, called and sworn:—

By the Commissioner:

Q. What is the special matter you wish to lay before the Commission?—A. On general questions such as the season.

Q. What do you think about the season?—A. There are a good many advocate a change in the season in other parts that would not suit our locality.

Q. In Richmond Bay?—A. Yes.

Q. Has there been any question about changing the season there?—A. There has been some talk about taking the last part of the summer. I think, as far as my knowledge goes, the season as it is suits us very well.

Q. That is beginning 26th April and closing on the 10th July?—A. Yes.

Q. You fish entirely in the bay?—A. Yes, sir.

Q. What is your opinion about the bay fishery as compared with the outside fishery, is it any more destructive in one place than another?—A. No, I don't think so.

Q. Do you get a large proportion of berried lobsters?—A. Not very many. This year I don't suppose I got over half a dozen berried lobsters in the bay.

Q. And what proportion would be undersized lobsters?—A. This year they were very small stock.

Q. How many would be below the 8-inch limit?—A. Probably ten per cent.

Q. Were the lobsters measured?—A. I have seen them measured on the boat.

Q. Have you any idea how the measurement turned out?—A. I did not inquire.

Q. What is the best period of the fishing season where you fish?—A. The last part of the season. About the last part of June and the first part of July we find about the best.

Q. When do you put out your traps; as soon as the season opens?—A. We run our gear probably about a fortnight before we land any fish.

Q. It runs into May then?—A. Yes, into May.

9-10 EDWARD VII., A. 1910

Q. Can you tell when the lobsters are moving in, does there seem to be a migration inwards?—A. I think the lobsters we fish are more the product of the bay itself.

Q. Do you think they winter in the bay?—A. I think so.

Q. Have you ever known of their being caught through the ice?—A. I have heard of cases of taking them up occasionally in seines or mud diggers.

Q. And finding lobsters?—A. Yes.

Q. Well, unless there is anything special you wish to say I have no more questions to ask?—A. Did I understand it right that the outside fishermen have a tendency to advocate a shortening of the season at the end of it?

Q. Some of the outside fishermen have said they would not object to a shortening of the season in exchange for doing away with the size limit altogether. A general expression of opinion is that the size limit, if strictly enforced, would shut up the canneries. It is a difficult regulation to enforce and it has been thought—I do not say the suggestion will be carried out—that the best thing to do would be to abolish the size limit and in return for that shorten the season somewhat?—A. If they shorten the season at Richmond Bay, the last end of the season, it will cut us off entirely. That is the best part of our season, because the lobsters in the bay shell late and after they shell we probably only get two weeks of fishing when they come to the traps again.

Q. What would you think of regulating the space between the slats in the traps?—A. Well, it might be a benefit.

Q. Are the fishermen not beginning to put the slats too close together?—A. I do not think a fisherman who has had any experience will put the laths too close together. My experience is they do not fish as well if they are too close. They slime over quickly and the fish do not see the bait as well, and it is harder to fish them.

Q. What would you fix the limit of space at, say in the three lower slats?—A. I would say not less than an inch anyway. I put mine at about an inch or slightly over that. That is from my own experience, I find it better.

Q. Do you not think by having a space of at least an inch and a quarter a larger proportion of the undersized lobsters would escape?—A. Well, yes.

Q. It must be wrong, must it not, to kill off the small lobsters?—A. It is, but the trap at the end, as a general thing, has heads that are knit with quite a large mesh and a large number of the small lobsters work through anyway.

Q. Fishing in shoal water it is sure to hold, there is not much attempt to get through?—A. That is true.

Q. Fishing in 10 or 12 fathoms of water I can understand?—A. Yes.

Q. Is there anything else you would like to say?—A. I would advocate protecting the spawn lobsters and imposing a high fine on people for taking them.

Q. Would you put the responsibility for taking them on the fishermen or on the packer?—A. I would put it on both parties. I suppose there is an odd one may escape notice, but where the fishermen deliberately brings spawn lobsters in he is acting against his own interest and the interest of everybody else connected with the industry.

Q. What do you think is the best way to reach the fisherman and persuade, or compel him to observe the regulations, especially with regard to the taking of spawn lobsters?—A. The only way to get at a man who takes a spawn lobster is by force. The man that does not know enough to throw back a spawn lobster into the water, it is no use talking to him.

Q. Some people tell us there is an increasing disposition on the part of the fishermen to be careful about the berried lobsters; do you think they are beginning to see the necessity for their preservation?—A. I think so, anybody that looks into the matter in a proper light.

Q. They have not done so in the past but we are told they are beginning to appreciate the fact that they must save the berried lobsters?—A. They are.

Q. It has been proposed to send somebody around who would explain the necessity of interesting the fishermen if they could be got together at different points. A. I think the majority of the fishermen understand the necessity of throwing back the berried lobsters all right but they deliberately go against that understanding.

SESSIONAL PAPER No. 22a

Q. Up to the present year the canner does not seem to have had any objection to receiving them?—A. Not at all, they never object because the spawn lobster is a good lobster for canning.

Q. Was the regulation against accepting berried lobsters put in force this year pretty generally? In some places we have heard that it was and at other places that it was not?—A. In Richmond Bay the fact is now that they are getting pretty careful about them.

Q. How many canneries are here in Richmond Bay?—A. I think about 10 or 12.

Q. What would be their average pack?—A. I could not tell you that.

Q. Are most of the canneries of any considerable size?—A. Yes, the majority of them are fairly large canneries fitted up in good shape.

Q. Would the pack run on the average about 500 cases?—A. I should think it would be over that.

Witness discharged.

P. C. GALLANT, fisherman and canner, Summerside, called and sworn:—

By the Commissioner:

Q. What is your occupation?—A. I am a fisherman and canner as well.

Q. Where is your cannery situated?—A. Right in Summerside.

Q. Where do you get your fish?—A. I get my fish right outside of the harbour. Before it was in mid-straits. Now in the spring I fish off Sea Cow Head.

Q. Do you bring your lobsters up here and can them? A. Yes, sir.

Q. How long have you been canning here?—A. I have been canning here for the last four years.

Q. And are you the only canner here?—A. Yes, sir.

Q. You would be in a position to tell us something about the season; what is your opinion about the present season, how does it suit you?—A. It suits me well enough, but if there was to be any change made in the season I would suggest to have it later on, that is for the protection of the industry.

Q. That is what we are interested in primarily, although, of course, we see the necessity for protecting the fishermen too; the fishermen must get enough out of it for a living. Would a season from the 15th of July to the end of September suit you?—A. It would suit me all right.

Q. The majority of the people in Egmont bay seem to approve of that season?—A. Yes, it would give a chance to the lobsters to cast their shell. If they would fall in line with that I would be perfectly willing. There is no doubt there is a tremendous lot of lobsters with the berries on taken previous to the 15th of July.

Q. You see the necessity for preserving those lobsters?—A. Yes.

Q. Have you had any conversation with the fishermen below you about it?—A. Yes.

Q. How do you think the majority of fishermen to the eastward of you would regard that proposition?—A. I am not so sure about the fishermen at Cape Traverse, but down to there I am pretty sure the fishermen would agree to a season on the 15th of July. You see the lobsters then will have all cast their shell and will be getting better every day. Take from the 1st of August down, the fish are as good as in the spring, and it is very seldom you will come across a lobster that has eggs on after that date. This spring they were very numerous, much more so than I have ever seen them.

Q. What do you think about the question of the traps; do you think we will gain anything by insisting upon having the openings in the traps farther apart?—A. Yes, I always maintained that if they built their traps with not less than an inch of space between each of the slats they would get just as many fish. I have only canned here

9-10 EDWARD VII., A. 1910

for four years, but I had my factory at Sea Cow Head previous to that. Now I have a gasoline engine, that is why I moved my plant. When I built my traps I put the space an inch apart. I built a four and a half to five inch hoop and I got large fish. People wonder where I get the large fish. Well, other people don't want them, but I do.

Q. Do you do any business in selling live lobsters?—A. Yes, selling them cooked. My business is chiefly the canning of lobsters but if anybody come to the factory for a feed I never turn them down. I sell during the season probably what would make five cases of lobsters.

Q. And that supplies the local demand?—A. There is another fellow that fishes gear. He does not can any, but sells them in the shell. There is a demand for an odd one comes to me and of course I never turn them down.

Q. What would you say about the effect of hatcheries?—A. I believe in hatcheries but I don't know whether it is any good to spend money on them and then allow the fishermen to catch the small lobsters. If the fishermen build their traps with only half an inch space between the slats they will catch all the small fish, but if the slats are an inch apart those lobsters have got a chance to work their way out. I believe in hatcheries all right but not in spending money on them and then allowing the fishermen to take lobsters that are only four inches in size. I would like to fall in line with the rest in regard to the season. If there is going to be any change in the season I would like to have it fixed so that it will suit the fishermen as well as the packer, because I have had experience in fishing, I have followed fishing.

Q. Do you think the fish winter in the Straits or go into deeper water?—A. I know when we set traps in the spring here we catch lobsters, I don't know about the winters.

Q. What is the earliest time you remember putting your traps out?—A. Previous to the season we have now, we used to set out traps as soon as the ice was gone. We would not get as good fishing as we would about the first of June when there would be fairly good fishing but we would always get some lobsters when we put the traps out. I depend upon lobsters for a living and I would like to see the best means of improvement used in order to keep the fishery regulated in the best way.

Q. What number of cases do you pack?—A. I put up somewhere about 200 cases last year, but I don't know that I will put up that number this year. This season will be a short one.

Q. Has the market improved since the spring, has there been any advance in the price of lobsters?—A. Yes.

Q. Is the price going up?—A. Yes. Speaking about a change of season I was advocating one from the 10th of July down and it was thought it would be too late for our markets.

Q. Was that season suggested before?—A. I made a suggestion but could not get them to fall in line. Mr. Matheson, Charlottetown, thought it would be well, but my friends thought it was too late for the market. I claimed if we put up the right goods we can sell them at any time.

Witness discharged.

E. H. WRIGHT, packer, Port Hill, called and sworn:—

By the Commissioner:

Q. I do not wish to take up your time unnecessarily? Is there any special subject you wish to bring forward?—A. What I desire to say in regard to the season is this: I pack in Richmond bay——

Q. What part of the bay?—A. Near Port Hill, on the Grand river side. I just wish to say that the season as it is suits the bay, I think, all right.

SESSIONAL PAPER No. 22a

Q. How long have you been canning in the bay?—A. I have been there two years.

Q. Was lobster canning established in the bay about the same time as it was on the other side of the coast, or was it a later idea to can in the bay?—A. I could hardly answer that question, but they have been canning there a number of years.

Q. Has the number of canneries there increased at all in recent years?—A. Very much so. Last year there were several factories.

Q. Did they move their factories from elsewhere?—A. Yes, some of them were——

Q. From the outside?—A. There were one or two factories on the south side.

Q. Those were factories that were located on the south side of the Island and established at Richmond bay?—A. Yes, and crowded us out there very much. And then there were several new factories started.

Q. Now, what is your own opinion with regard to fishing in the bay? We have heard a good deal of evidence on both sides concerning that matter; do you think the fishing in the bay is any more destructive than that outside?—A. I must say that in conversation with the packers on the south side, they all catch about the same kind of fish. Sometimes there, the schools are larger than others.

Q. The lobsters come in different runs sometimes?—A. Yes, sir, it seems that way.

Q. On the whole, within your experience, is the lobster fishery decreasing?—A. Well this year it is a very poor year.

Q. But still you have had poor years before, even in former times you had poor years as well as good ones?—A. Yes, that is right. As far as fishing in the bay is concerned, in the shallow parts, we do but very little.

Q. Would that be due to the fact that the fish had not gone into the bay?—A. It does look like that. This spring the ice was very heavy and the lobsters came in very late.

Q. I do not think there is any proposition to alter the date very seriously on the north shore of the Island?—A. On the north side their fishing is about over on the 1st of July.

Q. The best of their fishing?—A. The best of their fishing is over.

Q. It would not be a serious thing to them to lose a few days?—A. If they wish to fish they can, but they generally bring in their gear.

Q. There are very few that fish up to the close of the season?—A. Very few of them.

Q. But in the bay they do; they hang out because that is the very best time for them?—A. That is just about the time we get the fish.

Witness discharged.

LEMUEL SUDSBURY, fisherman, Cape Traverse, called and sworn:—

The Witness.—I would like to see the spawn lobsters protected.

By the Commissioner:

Q. Are you a fisherman or canner?—A. A fisherman. It was 30 years ago this spring when I started fishing.

Q. In your estimation what is the condition of the fishery to-day compared to what it was 30 years ago?—A. There is considerable.

Q. There is a great falling off?—A. To my mind there is. Thirty years ago you could catch 105,000 lobsters, to-day they are not going to make 20,000 at Cape Traverse.

Q. How is it as to size?—A. The size in Cape Traverse this year is fine.

Q. How would the size compare with the years when you first began to fish?—A. There is not a great deal of difference.

Q. Then it is the quantity that has fallen off rather than the size?—A. Yes, the quantity. In Cape Traverse they have some remarkably fine lobsters.

9-10 EDWARD VII., A. 1910

Q. How is the fishing there this season?—A. I have only been fishing a couple of weeks this summer.

Q. Was that because the fishing was too poor?—A. Yes.

Q. How is it now?—A. Not too bad.

Q. What is the best time for the fishing up there?—A. After the lobsters have shelled.

Q. As a Cape Traverse man how would you approve of a season from the 15th of July to the end of September?—A. As a fisherman I would not say anything about that. There is, however, something I would like to say on that point. When fishing down at Cape Traverse ten to twelve years ago, I used to catch 42,000 lobsters in the early spring fishing. They thought they would like a change down there and they would get the after-fishing. They had a meeting in Ludlow Hall, which was well represented and they got it. With the present system they are not satisfied now, and in my opinion if you were to ask them what they would like they would want to go back to the early season again.

Q. The same as on the north side?—A. Yes, sir. I have talked to them considerably about it. What I would like to say as a fisherman is, that the fishermen should be on the same basis as the packer and have an equal chance with him. I would like to see them get a license to can if they wanted to. The reason I have for holding that view is that I caught 26,550 lobsters last summer but I only got \$1 a hundred for them, amounting to \$265 or thereabouts.

Q. How many cases would that represent?—A. I don't know. I am going to say something about that. The next man got 16,000 and some hundred odd lobsters—I think 300 and something. He packed 69 cases and sold them and he made \$700 and some odd clear whereas I only received \$265.

Q. There appears to be something wrong there?—A. Yes; I buy the packers' gear every year from him and give it back to him as a present. That is what it amounts to.

Q. You are not fishing with your own gear?—A. No. As regards spawn lobsters they are all taken ashore.

Q. Was there any difference made this year in that regard?—A. No, there was not. The berries were all washed off.

Q. Is it usual to do that?—A. Yes, sir. You take hold of the claws of the lobster like that (illustrating by a gesture) and three or four slaps would knock the berries off.

Q. At any time?—A. I don't know that they do it at the beginning of the spring. Anyhow the berried lobsters are all brought ashore.

Q. Should there not be a change in the season so as to avoid taking those lobsters until the spawn season is over?—A. Quite true. I don't know that I would object very much to that, because after the spawning and shelling season you get great quantities of fish and they are as full as they can be. The lobsters all this week are just as full as at any other time this summer.

Q. It is undoubtedly the case that by changing the season you would save the berried lobsters?—A. I don't see any berried lobsters after they have shelled.

Q. You may find an odd one, but no great run?—A. As to what has been spoken about here in regard to limiting fishing to a certain distance from the shore. The inshore fishing at Traverse this year is the best fishing.

Q. In what depth of water?—A. Four or five or six fathoms of water, very close in.

Q. That is comparatively deep water, but the reason it has been suggested making a limit is, because in one fathom of water they are getting too many small lobsters?—A. The lobsters they get are small. I have fished on the north side for 15 years.

Q. They are getting smaller there?—A. They are getting smaller and they are not protected. Here the packer would have nothing to do with such small lobsters, he won't take them. Up there they take any lobster. What I want is for the fishermen to be placed on some basis that they can get a license to pack lobsters when they want to.

SESSIONAL PAPER No. 22a

Q. Is it not possible for a certain number of you fishermen to co-operate and run a factory?—A. Where I fish I don't think I could get enough fishermen. I consider our government is not doing right in this matter. There are seven factories at Cape Traverse and a Conservative can go up and get a license. They are all Conservatives that have got them. Being a Liberal I wanted a license and could not get it. I repeat that I would like to see the spawn lobsters protected.

Q. How far off does the boat from the hatchery come to collect the spawn?—A. We sent them on the train every morning. They did not do that this year. There were restrictions last year. There was \$100 fine for spawn lobsters if you were found in possession of them; but they did not find any.

Witness discharged.

Commission adjourned.

CHARLOTTETOWN, August 3, 1909.

JAMES TAYLOR, fisherman, Nine Mile Creek, St. Peter's Island, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing?—A. About twenty years I guess.

Q. Have you always fished for lobsters or do you do any other fishing?—A. We used long ago to fish codfish, but they left us and we don't do any of that fishing now. We fish a lot of herring in the spring and get all our own bait pretty much now.

Q. Do you fish off shore?—A. Yes, ten miles off St. Peter's Island.

Q. In what depth of water?—A. Eight and nine fathoms.

Q. Do you fish your own boat and gear?—A. Yes, sir.

Q. When you begin fishing you begin off shore?—A. Yes, sir.

Q. Do you always fish in the same depth of water, do you continue out there or do you move in?—A. Ever since I commenced to fish lobsters I have fished off that 8 fathom bank. You see the bottom is rock bottom.

Q. Are there a large number of fishermen engaged in lobster fishing?—A. Yes, quite a lot. We used to can our own lobsters until this year and then we sold to our nephews, Taylor Bros. They are not in to-day, they are busy at the hay.

Q. You say you fish throughout the season in the same depth of water?—A. Yes, sir.

Q. How is the annual catch now compared with what it was when you began to fish?—A. It is not so good, or near so good, but one would have to look at it this way: There is so much more gear than what there was then.

Q. You think the quantity of gear has greatly increased?—A. Yes, terribly.

Q. Has the number of boats increased?—A. The number of boats and traps.

Q. Has the number of canneries increased as well?—A. No, not at our place.

Q. Do I understand each packer is fishing a larger amount of gear, directly or indirectly?—A. Oh, yes.

Q. What style of traps do you use?—A. They call it the patent trap, the four-headed one.

Q. What is the advantage of the patent trap over the old-fashioned one?—A. It is better for Monday's fishing.

9-10 EDWARD VII., A. 1910

Q. That is to say it lets fewer fish escape?—A. Yes.

Q. Do you yourself fish an increased amount of gear compared with what you did when you began?—A. Yes.

Q. How many traps do you fish to a boat?—A. About 300 off and on.

Q. That is for a two handed boat?—A. Two handed boat.

Q. Beyond what you have stated, what is the advantage of the present patent trap over the trap formerly fished, do you think it holds more fish?—A. Well, yes, it is just for long fishing. If you get stormy weather and cannot get to your gear one day it appears to be better, there is more fish in the trap.

Q. Do you leave less space between the slats of your traps than you used to?—A. No, just about the same.

Q. What is the distance?—A. About an inch and a quarter. I should say that is about what it is.

Q. An inch and a quarter opening ought to allow a good many small fish to escape?—A. Yes.

Q. What is your experience with regard to the size of the fish taken; what proportion of the fish do you think would be under the legal limit of 8 inches?—A. This last two years there have been a good deal.

Q. A good many small fish?—A. A good many small fish, there would be one-third.

Q. That is to say, one-third of the total catch would be below 8 inches?—A. Yes.

Q. As to the berried lobsters, what percentage of female lobsters would you find?—A. Well some years there are more than others. Some years there would be one-third.

Q. I suppose at certain times in the season there are more than at others?—A. I think there would be one-third this year.

Q. That is a very large proportion. You see one-half the lobsters must be male, and there are only a certain number of female lobsters that bear eggs extruded?—A. Through last year there were very few of them, whatever was the cause of it. This year there were more, considerably more.

Q. Do you think the proportion would be as large as one-third?—A. There might not be. Perhaps we had better not put it at that.

Q. At all events you find a good many?—A. Yes, quite a number.

Q. What has been the practice with regard to these lobsters up to the present, have they all been taken to the factory?—A. All taken to the factory since the hatchery commenced.

Q. You are fishing in the neighbourhood of the hatchery?—A. Yes.

Q. They take your eggs?—A. Yes.

Q. Prior to the establishment of the hatchery what was done with the berried lobsters?—A. When we began? Some years ago when first I commenced to fish they compelled me to chuck them away.

Q. Was that order carried out?—A. I guess it was not very well. The eggs were taken off.

Q. The practice of stripping the eggs off the female lobsters was in force then as long ago as that?—A. Yes.

A. And I suppose it has continued ever since more or less?—A. Yes.

Q. Have the packers made any objection to receiving undersized and berried lobsters?—A. Yes. I think Taylor Bros. did this year any way.

Q. That is berried lobsters?—A. Small lobsters, you know. The berried lobsters were taken for the hatchery.

Q. What would you call small lobsters?—A. A lobster 5 and 6 inches.

Q. That would be small?—A. Very small, that is for us out there.

Q. On what arrangement do the fishermen generally fish on your part of the coast; those that fish with gear and boats belonging to the factory, how are they paid?—A. They are paid by the hundred, I think; \$1 this year and everything found.

Q. Are they boarded too at that rate?—A. I could not tell you.

SESSIONAL PAPER No. 22a

Q. And those who supply their own gear, how are they paid?—A. \$2.50 this year.

Q. What proportion of fishermen in your neighbourhood use their own gear, about one-half?—A. Just about half.

Q. How is the price received from the canner fixed, who establishes it?—A. That is arranged before we start.

Q. Is the price a satisfactory one?—A. Well, it is this year.

Q. It must have been more satisfactory last year, was it not higher then?—A. Yes, but canned goods were higher in price.

Q. Then you think the drop in the price paid to the fishermen this year was only in proportion to the drop in the market?—A. That is the way they put it.

Q. You think the fishermen are receiving fair return for lobsters?—A. Well, I think so.

Q. Is there any combination do you think on the part of the canners to establish the price, or is there competition among them?—A. I don't think so, not out our way. We did not can this year you know and we did not inquire into anything.

Q. What is the open season of fishing with you?—A. April 26th to July 10th.

Q. Do you fish the entire season?—A. No, sir.

Q. What part of the season do you omit?—A. We stopped this year on the 23rd June.

Q. Why did you stop as early as that?—A. The supply of lobsters went down.

Q. Is that your experience every year, is there a slackening off towards the end of the season?—A. Oh, certainly.

Q. Would it affect you, or the fishermen fishing in your neighbourhood, very seriously if the season were somewhat shortened?—A. No, that is what I was going to try to explain to you; I think a man should be allowed to put his gear out as soon as he could and not take any lobsters after the last of June.

Q. Why was the regulation fixing an opening date ever established?—A. I don't know. In some places we know they could not get out. In the case of outside people, like here at St. Peter's Island, the ice would break up quicker and they would get their boats out and get ahead of the other people.

Q. What serious objection was there to that?—A. They made a kick about it.

Q. You are one of those that could get out early?—A. I could get out early. To be sure there is this in it, you could get your gear out more early.

Q. If one man is more active in getting out his gear than another do you think that should debar him from being allowed to fish?—A. I don't think so.

Q. I understand you to say prior to the establishment of a lobster hatchery here, very few berried lobsters were saved?—A. Very few of them were saved.

Q. Except in that time long ago the regulations have never been very strictly enforced?—A. No.

Q. Did you ever hear of anybody being fined for any breach of the lobster fishery law?—A. I have not.

Q. What do you think is the spawning season of the lobster?—A. The latter part of July.

Q. Do you think they have not commenced to spawn before then?—A. Well, there will be some.

Q. What time do you get most of the eggs for the hatchery?—A. I guess in May. You see there are more lobsters caught in May.

Q. What is the best period of your fishing?—A. May and along the first of June to the middle of June.

Q. Is it your opinion that the lobsters come into shoal water to spawn?—A. Yes, sir.

Q. And do you think more of them are caught as the season advances in shoal water than off shore?—A. No, sir. When it comes to that time of the year the lobsters don't seem to trap. The lobster seems to be there but he won't trap.

9-10 EDWARD VII., A. 1910

Q. Is that before he casts his shell?—A. They are commencing to spawn. They are getting a little sick then I suppose and getting ready to shell.

Q. Do you think there is any time in the season when the lobster is not fit for food?—A. I think not, only when they are soft, after they have shelled, and just before it. Just about the time they are shelling or commencing to shell I do not think they would be right.

Q. Are the lobsters canned during that season or do they generally throw those lobsters away?—A. Well, not now.

Q. What is the smallest size at which you have ever seen a female lobster with eggs outside?—A. I should say about 8 inches—8 or 9 inches.

Q. And the majority of them are about what size?—A. Nine and 10 inches.

Q. The berried lobsters are generally good full lobsters, are they not?—A. Yes.

Q. Could you give me the average size of the lobsters you catch; do you get many large ones now?—A. Oh, yes; quite a lot.

Q. What would you call the largest?—A. You catch some weighing 10 pounds; not many, you know.

Q. Would that go through an ordinary hoop?—A. Oh, yes; it is wonderful where they will go.

Q. What would be your suggestion; do you recognize the fact that the lobster fishery is failing?—A. Oh, well, it may be a little; but there is such a quantity of gear, I don't see that it can fall terribly much.

Q. Have you seen much change during the last five years?—A. No; none at all.

Q. Not as much as previous to that?—A. No.

Q. When did the greater part of the decrease in the supply of lobsters take place, do you think?—A. I guess the biggest drop would be about twenty years ago.

Q. What would you attribute it to then, overfishing as long ago as that?—A. Well, then they used to fish till the 5th August.

Q. The 20th August, I think?—A. Yes, I believe they did. You see they would put out then whatever they could, and fished up to that time.

Q. You think the greater part of the harm was done then?—A. Yes, I think so.

Q. Do you think the fishermen are becoming more careful as to the regulations?—A. I think so. I think they see now that they have to try and protect the fish themselves as well as anybody else.

Q. What do you think is the best way to reach the fishermen in order to make them generally understand that the regulations are for their own good and should be observed?—A. Well, the only thing is to put the law in force, and anybody that breaks it make them suffer for it.

Q. Do you think that the regulations as they stand to-day could be put into force; is it an easy matter to keep the run at that size limit?—A. I think so.

Q. The general experience is, and most of the evidence we have goes to show, that it would be very difficult to enforce that regulation; it would need a man at every cannery at least?—A. Of course, there would be some difficulty.

Q. But the regulation regarding the preservation of the berried lobster should be rigidly enforced, should it not, at places where there is no hatchery?—A. Yes, sir.

Q. Are you in favour of establishing hatcheries?—A. I don't know that they are doing much good.

Q. The hatchery here has not been long enough in operation to let you judge of its effects?—A. No.

Q. Have you heard that the fishermen see schools of small lobsters?—A. Yes; there have been quite a lot of small lobsters seen, you know.

Q. It has been suggested by some of those who gave evidence last winter before the Parliamentary Committee that it would be a good idea to license the boats for

SESSIONAL PAPER No. 22a

the fishermen; that if the fishermen were so licensed they would feel themselves in a sense to be fishery officers, and would not only observe the law themselves, but see that others did so?—A. So they would.

Q. Do you think the license system would have any such effect in the case of fishermen?—A. We are willing about St. Peter's island to stop after June—just adjourn and not take any after that.

Q. A number of propositions have been made by those interested in the industry, and one is to stop fishing altogether for a term of years; what do you think of that?—A. That would put the fish out of the market altogether. By stopping you would save a terrible lot of berried lobsters, and you could put the spawn in a place where it would be safe. I think that the spawn taken from the hatchery should be taken and put at low tide on a rocky bottom, not spilled out in the straits, where there are large quantities of fish to destroy it.

Q. You mean that is what should be done with the young fish?—A. Yes.

Q. You would not advocate putting them out in deep water?—A. No, because fish will devour them up before they get to the bottom, to their hiding places. They should be put on a rock bottom.

Q. Is it on the rocky bottom the lobster generally goes to spawn?—A. Yes.

Q. Another change suggested is that we should do away with the size limit, strictly enforce the law about berried lobsters and shorten the season to June. Would that affect the fishermen in your neighbourhood?—A. That would be all right; we would all agree to that.

Q. In addition to that, it is proposed to insist upon a regular distance between the slats, especially the three lower ones, of nothing less than an inch and a quarter?—A. Pretty nearly all the boats at Rice Creek and Nine Mile Point, along there, fish when we do, to the last of June.

Q. Are they nearly all bona fide fishermen?—A. There are farmers among them.

Q. Do you think the present system of limiting the number of canneries is a right one?—A. I think that would be right for a spell.

Q. In the case of fishermen, to the number of between 15 and 30, they will issue a license to can?—A. I should say that ought to be all right.

Q. Do you think there is any reason why a man who can show his ability to can, who is competent and has the means to do it, should be refused a license?—A. I don't think so.

Q. What restriction would you impose?—A. I do not know, I cannot say about that.

Q. Do you think it is wise to allow the holder of a canning license to fish all the gear he likes, or would you limit the amount of gear fished by any canner? we limit the number of canneries but we do not limit the amount of gear; what would be your own view on that matter?—A. Well I suppose a man ought to be allowed to fish all the gear he could in a day. Generally they never put out any more than they can haul every day.

Q. We hear of people fishing 400 and 450 traps. A. They won't have very far to go to do that. You see we have got to go ten miles and 300 traps is all two men can handle in a boat.

Q. What do you think about limiting the amount of gear; you said a while ago you thought there was too much gear fished?—A. That is what is the trouble I think. I don't see that the lobsters are very much scarcer but it is owing to the quantity of gear fished.

Q. The run of lobsters would not be so large would it?—A. No, not so large.

Q. Is there any place in your neighbourhood having facilities for carrying on the live lobster trade?—A. No, sir.

Q. Which do you think is the most profitable one for the fisherman, the canning

9-10 EDWARD VII., A. 1910

or the live lobster trade?—A. I have had no experience with the live lobster trade, I cannot say anything about that.

Q. Is there any chance in your neighbourhood do you think for the establishment of pounds? A great many people prefer these to hatcheries for hatching out lobsters. We want a place with a free flow of the tide, a narrow outlet which can be barred and a considerable area inside with fairly deep water where the lobsters could be penned in. Perhaps the lobsters could be bought from the fishermen, placed in these pounds and held there. A. I suppose you would not want a rough place for that?

Q. You do not want a rough place, it must be sheltered. A. Our place will not do for that. The south side of the Island is all dry when the tide falls and on the north side when it comes to a breeze of wind it is pretty rough.

Q. It has been alleged that in some instances, fishermen have suffered injury by the failure of those holding canning licenses to operate their factories although a sufficient supply of lobsters was available; has that occurred in your neighbourhood?—A. Yes.

Q. Have you any knowledge of fishermen having had their catch of lobsters refused by the canner?—A. No.

Q. Is there anything else you would like to state of your own account?—A. No, except about the season, it would be a big help I think.

Q. Do you think if we insisted upon a space between the slats of the traps of an inch and a quarter at least, it would be satisfactory?—A. An inch and a quarter?—A. big lobster could go out of that.

Q. If we insisted upon all traps being built with a space of an inch and a quarter between the slats do you think we could do away with the size limit?—A. Yes. A big lobster will go out of that space.

Q. Would you favour reducing the size limit to 7 inches?—A. I would not care about saying anything about that.

Q. Do you know anything about fall fishing; is it the case that it takes a larger percentage of lobsters in the fall to fill a pound can than in May and June?—A. It would very late in the season, but late in the fall, along the last of September, the lobsters are just as full as they are at any time.

Q. Would it be possible to fish in the straits in September?—A. Oh, yes.

Q. There seems to be a feeling among the fishermen farther west of here that they might begin later and fish later and in that way avoid taking any berried lobsters at all. Some on the other hand say September is too rough a month. A. You would not get so many hauls, but it would pay. The lobsters will trap fearfully after they get their new shell, I suppose they are hungry.

By Mr. Warburton, M.P.:

Q. Are not some of the bays on this Island natural breeding grounds?—A. I don't think they come into our bay for that purpose.

Q. I do not think there are any such bays where you are?—A. No.

Q. I mean some of the bays on the Island?—A. They go inshore to rocky bottom to spawn; I know that. They are not like another fish that will make for eel grass and green seaweed.

By the Commissioner:

Q. You have the same conditions on your side of the Island that they have on the north side?—A. Yes, pretty much the same.

Q. Do the lobsters go into the eel grass in your bay?—A. No, they do not go up into the bay, they crawl on to the rocky bottom.

By Mr. Warburton, M.P.:

Q. I do not think you have any such bays as those referred to?—A. No.

Q. Malpeque bay is a natural breeding ground?—A. Yes, and Egmont bay.

SESSIONAL PAPER No. 22a

Q. Are there any bays on the south side which it would be advisable for the government to close to fishing season and let remain as breeding grounds?—A. Not that I know of.

Witness discharged.

THOMAS PINEAU, fisherman, Rustico, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing?—A. Eleven years.

Q. Do you fish your own gear?—A. Yes, sir.

Q. What number of traps do you fish?—A. About 300.

Q. When do you first set out your traps?—A. About the last of spring, about the 5th of May. Our rule used to be the 20th of April, but oftentimes the ice bothered us and we cannot set our traps until May.

Q. One year with the other, during the time you have been fishing, what would you say was your average time to begin?—A. I think we begin on the 20th of April oftener than any other time.

Q. When you began to fish first was there any rule as to the time you could start?—A. Yes.

Q. You had always a fixed opening?—A. Not since I have been there. There was some years before that.

Q. In olden times there used to be no date for beginning in the spring?—A. I think they should begin as early as they can, but the 20th of April is early enough for us.

Q. It has been suggested by Professor Prince, who is our chief authority, that the season should open on the 1st of January in the whole inner gulf and then in various places they should begin when they can.—A. I would say for Rustico that I think the 20th April would be early enough. Some seasons we have two months' fishing only; we have got to commence so much later on account of the ice which bars us off.

Q. Would it not even things up if you could begin in March or April?—A. That is too cold for our shore there.

Q. What depth of water do you begin to fish in?—A. About 11 fathoms.

Q. How far off shore will that take you?—A. Two miles and a half.

Q. At Rustico do you fish entirely off shore or do you fish any inshore?—A. Yes, we fish about half the season in 10, 11 or 12 fathoms, the balance of the season we fish farther in.

Q. You come into what depth of water?—A. We come into five fathoms and sometimes very close to the shore.

Q. You do not come inside the bays, you remain on the outer shore?—A. Yes, sir.

Q. Is there any bay fishing near you at Rustico?—A. There is Malpeque Bay.

Q. They fish right inside the bay there?—A. Yes, sir.

Q. Have you ever fished there?—A. Not for lobsters, I have fished for oysters.

Q. When you first begin to fish outside, what sort of lobsters do you get?—A. We get the bigger lobsters outside.

Q. You fish there about half the season?—A. Yes.

Q. Then you move in?—A. Yes.

Q. And do you find a smaller run of lobsters inside?—A. On towards the last of the season the lobsters are smaller than at the first of the season.

Q. When do you find the largest proportion of female lobsters with eggs?—A. I would say it would be about the last of June or the first of July.

9-10 EDWARD VII., A. 1910

Q. What proportion of berried lobsters do you get in your total catch, do you think?—A. We get very few. I don't think that I got out of 11,000 pounds any more than 100 pounds of berried lobsters.

Q. And what proportion of the fish you get would be below the legal limit?—A. That is more than I can tell.

Q. Would there be a considerable proportion?—A. I could not exactly say. We do not generally measure them.

Q. Is there a very large proportion under 8 inches?—A. I would think there would be a good many—a quarter anyway.

Q. To whom do you deliver your lobsters?—A. Before this year we delivered to the Portland Packing Company, and to Mr. Pineau also. This year we formed a company of our own that packed their own lobsters.

Q. Are you a member of one of these co-operative associations?—A. Yes.

Q. How many are engaged in it?—A. There are 39 fishermen.

Q. How has the season turned out?—A. We have made an average of 10,000 lobsters to each boat, a little better. That is for the double boats, and the single boats about 5,000, hardly that.

Q. Have you been at it long enough to find out whether there is more money in fishing than in canning?—A. Well, we were fishing and canning.

Q. Still, if you co-operated in the canning, you were interested in it. Have you sold your pack?—A. Yes, we have sold our pack. This present year we made 65 cents a hundred pounds clear of the stock we have on hand more than the packers would give us; 65 cents for each and every hundred clear of the stock.

Q. What has been the practice in your neighbourhood with regard to the berried lobsters? You have no hatchery near you; has everything gone to the cannery that you caught?—A. Oh, no. Sometimes we chunked the small lobsters overboard. There are some that are cleaned outside.

Q. Is it to your knowledge that the packers have ever refused to receive anything you brought to them, or do they take everything you bring?—A. Yes; you can always sell more lobsters than we catch.

Q. What is the smallest lobster with berries on that you have ever seen?—A. I don't think I have seen any with berries under 9 inches.

Q. The majority of them would run from 9 to 11 inches, I suppose?—A. Yes. You asked me a question whether the packers ever refuse anything. They refused to take lobsters in when they were full up, when they could not put them up.

Q. Has that happened frequently?—A. No.

Q. That happened because the packers had more than they could handle?—A. It only happened three or four times. The packers would not take the lobsters then, because they could not put them up.

Q. Will the lobsters run as large now as when you first began to fish?—A. I think they do.

Q. How do the fishermen fish in your neighbourhood; do they own their boats and gear?—A. They mostly own their own gear. I think there is only 10 or 15 per cent that fish with the packer's gear.

Q. What would you think of the proposition to require all fishermen to register and pay a license?—A. I think they have enough to pay now.

Q. How is the price arranged between the canner and the fisherman; are you obliged to take whatever is offered, or is there any competition?—A. It was so last season. As far as I understood, we could not get any more from one man than from another. The whole packing business was arranged so as to pack so much and no more. I could not get any more from one packer than I could from another.

Q. Was that this year?—A. This past year.

Q. Do you mean 1909?—A. Call it 1908. I could not get any more from one packer than from another; they had all the same price.

SESSIONAL PAPER No. 22a

Q. What about this present summer? We have heard from some places that that arrangement was broken up, and that the price rose as the season advanced; was that not so with you?—A. Not as far as I know.

Q. How does the price now paid for lobsters compare with that paid when you first began to fish? First of all, do you think the fishermen are becoming more careful about observing the law?—A. Yes.

Q. In what way?—A. They are not destroying any small lobsters.

Q. Do you think they are more careful to put the berried lobsters back in the water?—A. Yes.

Q. And you think they are careful of the small lobster also?—A. I think they are pretty careful of almost everything.

Q. Is that because they are beginning to understand the importance of preserving the fishery, or because the packer is getting more strict?—A. The packer is more strict, and the fishermen are understanding the question.

Q. Do you think anything would be gained by getting somebody to meet the fishermen and explain matters to them, because the average fisherman seems to think the regulations are there to bother him?—A. I think they understand the law pretty well.

Q. Do you find more spawn lobsters inshore than off shore when you first begin to fish?—A. When I first begin to fish outside it is early in the season, and the lobsters have not spawned then. I fish in about 10 and 11 fathoms of water, and I don't take any spawn lobsters at all. At the latter part of the season, in about 4, 5 and 6 fathoms, I find some spawn lobsters, but I do not get a great many at any place. I think it is the season that does it. I think when the season comes for them to spawn they spawn.

Q. Do you think they come inshore to spawn?—A. I think they come inshore. As the water is warmer they come closer to the shore.

Q. Is there any time when the lobster is not fit for food?—A. I cannot tell you, but some of the sealers have told me that when they carry the berries the meat is not so good as when they do not. I don't know anything about it. I just heard that from the sealers.

Q. What do you think about the present regulations with regard to size limit, berried lobsters and so forth; do you think if the law were strictly enforced as it stands it would put the canner or the fishermen out of business?—A. Yes. I don't think that Rustico can go under the limit because the fishermen have nothing else to do at that particular time and they need all the lobsters they can get. They have got a pretty hard time as it is.

Q. What are most of the fishermen in your neighbourhood, are they regular fishermen?—A. Yes, they have got nothing else but the fishing.

Q. When the lobster fishing is over what do they take up?—A. Cod and mackerel fishing.

Q. Then the bulk of them are genuine fishermen?—A. Genuine fishermen, they have nothing else to do at all.

Q. In a great many places you find the lobster fishermen are farmers and labourers?—A. That is not the case at Rustico. I don't think one per cent are farming and fishing.

Q. A number of propositions have been made with the idea of improving the fishery. Some people have proposed to shut down altogether for a number of years as the simplest way out of the difficulty.—A. Rustico could not do that at all. The people would have to leave there altogether.

Q. The Lobster Commission of 1898 recommended the closing down of the lobster fishery in sections for a term of years.—A. If we were to do that at Rustico we would have to leave altogether. We cannot do that.

Q. Others have suggested that we should do away with the size limit, increase the

9-10 EDWARD VII., A. 1910

width between the slats and somewhat shorten the season, always protecting the berried lobsters; would that affect you?—A. We could not do that very well either because we would get a smaller number and we are catching few as it is.

Q. As a rule do you fish close up to the end of the season, to the berried lobster season?—A. Yes.

Q. Have you ever kept a record of the number of fishing days in a season?—A. Yes, sir.

Q. How many days do you fish one season with the other?—A. There are some seasons we had as few as 37 hauls. I think the most we had was 68 hauls.

Q. That must have been a fine season?—A. Yes, I think one year I had that many.

Q. It seems to be pretty well understood that something must be done in the interest of the preservation of the fishery. It is bad to go on as we are, not enforcing the regulations as they exist. If these regulations are not suitable we must get others that will be; what would be your idea?—A. You talk about establishing pounds for the lobster to spawn in. I think that would just suit us. There is a great place there where the lobsters do spawn. It is just in a bend of the Island. There are harbours on both sides not very far distant, three and four miles.

Q. We want a sort of a large pond with a narrow outlet.—A. There is a channel off Rustico right alongside the canneries. It is just made like that and the schooners don't use it.

Q. What depth of water is there?—A. There is at each end about 6 feet, and at very low tide 5 feet.

Q. What is the bottom like?—A. The bottom is sand and the edges are straight up and down and the lobsters make holes in it to go into. The middle of that is about 20 feet.

Q. Have you ever noticed whether the lobsters winter in these bays or not?—A. There are some that winter. We caught some.

Q. Fishing through the ice you have caught lobsters?—A. It does not freeze very much, there is so much current, and we have caught some lobsters.

Q. Do these lobsters appear to be heavy or are they as lively as in summer?—A. They are not lively.

Q. Is the practice of stripping or washing off the eggs from the berried lobster in force on your shore?—A. It has been done.

Q. Have the canners ever refused to receive anything that was brought to them?—A. Yes, they objected to receiving berried lobsters.

Q. Now as to the method of licensing canneries. You know the practice of the department is to restrict the number of licenses except in the case of groups of fishermen acting on the co-operative plan as in your own case; do you think that policy should be continued, or do you think the number of canning licenses should be restricted?—A. I think there have been some that have been canning lobsters that would make more money at something else.

Q. Do you think that the number of licenses issued to a firm or individual should be limited? In some places we find an immense number of licenses issued in one name, I do not mean here particularly, but at other places along the coast?—A. I don't believe in that. That won't give another person who wants a license a chance.

Q. Do you think we could limit the amount of gear fished by a cannery?—A. No, because there will be sometimes more fishermen will want to fish than at others. A good year there will be more fishermen want to go in, and if it is a bad year, there will be less.

Q. Is there not a great increase in the amount of gear fished?—A. There is some increase.

Q. Compared with when you began?—A. Yes.

Q. Has the amount of gear not doubled practically since you began?—A. Oh, no, nothing like doubled. I think there has been an increase of about one-fifth in the

SESSIONAL PAPER No. 22a

amount of gear. It has doubled with some, but with others the amount of gear has hardly increased at all.

Q. Do you think the number of hatcheries should be increased?—A. I believe that by these pounds you would save money so that you could place the lobsters in them. That would be far better than hatcheries, because I understand that in the case of the hatchery they take the berries off and the mother lobster is spoiled. Well, the meat of the mother is no good. If you put the mother lobsters into a pound it would be better.

Q. Is it, to your knowledge, that any fishermen has lost his catch of lobsters from the canners having refused to accept them?—A. No, but the order is sometimes not to catch them.

Q. Not to bring any more than they were able to handle?—A. Yes, sir.

Q. Do you know anything about shipping lobsters alive to market; have you had any experience in that branch of the industry?—A. No, simply what I have read in the papers. I understand you get more for the lobsters when you fish them alive.

Do you think that selling live lobsters for shipment will yield better returns to the fisherman than selling them to the canner?—A. As far as I understand.

Q. You have not the facilities in your neighbourhood for carrying on the live lobster trade?—A. No.

Q. Do you think there is anything in the statement made that the Island lobster is not as hardy as the Atlantic lobster; it has been stated the former will not stand transshipment?—A. I don't believe that; I believe they are all the same kind of fish. I think we want the live lobster trade. The fishermen want all that they can get, otherwise they will not have anything.

Q. Have you any idea of the price paid for live lobsters?—A. No, I could not tell you.

Q. Are there any other fishermen in your neighbourhood who are likely to apply for co-operative licenses?—A. I don't think so because we have one and we have taken in anybody that wants to go in.

Q. The statement has been made authoritatively that a strict enforcement of the 8-inch size limit, together with the assistance of hatcheries and pounds, would protect the lobster industry; what do you think about that?—A. I think we cannot do without all the lobsters we can catch.

Q. Do you think it is right to take undersized lobsters that have not reached the age at which they can renew themselves, that have not reached maturity?—A. I don't know whether it is right to can them, but the amount is all required because people have nothing else to live on other than that.

Q. What is your best fishing time?—A. At the first of the season we get most of the lobsters, but there is not so much flesh according to the weight of the shell as there is later. I think as soon as we can begin, 20th April, is the time when we get the most caught.

Q. Do you think that the present season extending to the 10th July suits you best?—A. Yes.

Q. Beginning on the 26th April?—A. The 20th of April would be better.

Q. Do you think a shortening of the fishing season would cripple you?—A. Yes.

Q. Even if allowed to take undersized lobsters?—A. You understand when there is a late spring with us we have an awfully short season when we cannot set our traps until the 20th of May because the ice would be off the shore. If you had to stop on the 1st July you would have no time at all.

Q. It would not be possible, you think, to carry on fall fishing where you are located?—A. I don't think it would be suitable, because we fish for other fish, mackerel and cod.

By Mr. Warburton, M.P.:

Q. You have once or twice spoken of a very short season; is it not the fact that when you had a late season you had a very good catch?—A. The biggest fish we had we caught in the middle of May.

9-10 EDWARD VII., A. 1910

Q. That was two years ago?—A. Yes.

Q. Do you not always get a big catch in a late season?—A. Not always.

Q. Two years ago you got the very biggest you ever had?—A. That was a late season.

By the Commissioner:

Q. When the fish are held back by the ice they seem to come in afterwards with a rush?—A. Yes.

By Mr. Warburton, M.P.:

Q. Up where you are, you said you found very few spawn lobsters, and further you stated that a hatchery would be a very good thing; would there be any use in establishing a hatchery for such a small proportion of spawn lobsters?—A. There are a great many boats fishing.

Q. That is a place I have been urging the department not to establish a hatchery, where there are no spawn lobsters?—A. I do not take any more than 100 pounds.

Q. You have been talking about the factories up in Rustico; would it be advisable to have every factory built up to a certain standard, certain means of keeping them clean, and other improvements so as to have a good working factory?—A. Yes, that is right. I believe that is the case now in Rustico.

Q. We used to have factories around this Island that did not cost more than \$200 or \$300, and were not much good; would it be in the interest of the industry to have good factories that cost a considerable amount of money to put up?—A. To have them kept clean? I think they are kept pretty good in Rustico now.

Q. I mean would it be advisable to have good factories and the best appliances?—A. You would not need to require too much money to build them on the co-operative plan. The poor fishermen could not build a very expensive factory, but I believe they ought to be kept clean.

By the Commissioner:

Q. What kind of a cracking table would you have?—A. The cracking and packing table and the pans are all of zinc.

Q. In some places they are using enamelled ware tables, some have got marble?—A. I don't think it would suit the fishermen, they are so expensive.

Mr. Warburton, M.P.—Not so expensive as the fishermen think.

The Witness.—Of course if they would not be very expensive.

By the Commissioner:

Q. In view of the character of some of the canneries do you not think the product should be inspected?—A. Yes, and kept clean.

Q. Other products are inspected, why not canned lobsters?—A. I believe they ought to be inspected at the expense of the government, but I don't think the fishermen can pay officers to inspect all these canneries, because they have got little enough to keep themselves with paying for a license.

Q. Do you not think the industry should pay for its own protection?—A. No, because I don't think they are able.

By Mr. Warburton, M.P.

Q. But aside from that would you think the canneries ought to be inspected?—A. I think they ought to be inspected and kept in order, but not at the expense of the packer or the fisherman, because that would close us down.

Q. But if the government undertook the inspection do you think it ought to be done?—A. Yes, sir.

Witness discharged.

SESSIONAL PAPER No. 22a

STATEMENT filed by Mr. Pineau, North Rustico, showing catches of lobsters from 1899 to 1909 inclusively.

Thomas Pineau and Andrew Doucette, lobsters to:

1899—Pineau Bros.	9,976 lbs. at \$2 25
1900—Thos. Pineau, Moses Gauthier.	10,077 “ 2 50
1901—Thos. Pineau, Moses Gauthier.	10,457 “ 3 00
1902—Thos. Pineau, Moses Gauthier.	14,869 “ 2 60
1903—Thos. Pineau, Henry Gauthier.	14,487 “ 3 25
1904—Thos. Pineau, Henry Gauthier.	16,971 “ 3 50
1905—Thos. Pineau, Moses Gallant.	16,218 “ 3 50
1906—Moses Gallant.	12,336 “ 3 50
1907—Thos. Pineau, Moses Gauthier.	19,126 “ 4 50
1908—Thos. Pineau, Moses Peters.	16,126 “ 4 00
1909—Thos. Pineau, Fillie Pineau.	11,272 “ 2 90

WILLIAM A. MACDONALD, fisherman, Grand Tracadie harbour, called and sworn:—

By the Commissioner:

Q. Do you confine yourself entirely to the lobster fishery?—A. I generally farm when the fishery is over.

Q. You do not engage in any other fishing?—A. Not the last three or four years.

Q. How long have you been fishing?—A. It is about sixteen years since I fished first. I have not always been fishing all the time since.

Q. Do you own your own gear?—A. No.

Q. The outfit belongs to the cannery, what cannery?—A. S. C. Clark, Blooming Point.

Q. What number of boats are fished from that factory?—A. There were 13 this year.

Q. Were they mostly independent fishermen, or what were they?—A. They fished his gear except one boat that had their own.

Q. At what rate were they paid?—A. About \$1.50 and board themselves. That was the general price I think.

Q. How many pounds of lobsters did you catch?—A. I don't think I caught quite 8,000. This was a slack season.

Q. What caused that, was the fishery late in beginning?—A. No.

Q. The ice did not remain late in your part of the island?—A. The season was not so very late this spring, but the lobsters seemed slack some way about the 7th or 8th of May.

Q. When did you put out your gear?—A. I don't think we ran our lines before May. Of course the season opened on 26th April but we could not get out just then.

Q. Were other fishermen out before you got out?—A. No, I think we all went out the same day.

Q. In what depth of water did you fish?—A. I was not out any farther than 10 fathoms with my outside gear. Then later on in the season we moved in our gear to two and a half and three and a half fathoms.

Q. You fished half the season outside and the other half inside?—A. Yes, just about.

Q. What number of traps did you fish?—A. I fished about 325 or 330.

Q. That is in a double handed boat?—A. Yes, two men to the boat.

Q. How did you find the fish when you first began?—A. I found it something better than I did at any time of the season, except when I moved some of my gear inside. Then perhaps for the first while, or the first few days, I found it pretty good fishing.

9-10 EDWARD VII., A. 1910

Q. How is it one season with the other, would you expect the best of your fishing when you first begin?—A. As a general thing. Some years we have good fishing about the time the season closes. But last July there was good fishing coming on.

Q. I suppose the fishing is that way, it seems to come in spurts?—A. Yes, sometimes they slacken off and sometimes we have them good.

Q. What has been the practice, within your recollection, as to the observation of the law, has the regulation regarding the taking of undersized or berried lobsters been observed at all?—A. I don't think it has been observed very much.

Q. The canner as a rule took everything you brought?—A. The canner did not want us to take them in. He told the fishermen not to take them in, but I guess the way it was when one fisherman would let them go another fisherman would take them in, and I guess as a general thing they all took them.

Q. Do you think the fishermen are in the habit of not selling to a canner who is stricter in the observance of the regulations than others?—A. I never heard it so.

Q. Some cannery have complained that they have to take whatever lobsters are brought to them, otherwise they would lose their fishermen?—A. I never heard anything about that.

Q. Were the packers any more careful this year about the berried lobster regulation?—A. Well they did say more about it. Our packer had a notice in the factory saying that the fishermen would be deprived of ten pounds of fish for every spawn lobster they took. Whether he got any spawn lobsters or not it was never put in force.

Q. Have the regulations ever been enforced?—A. Not that I know of.

Q. Did you ever hear of anybody being fined?—A. No.

Q. Has the practice of stripping the berries off the female lobsters ever been carried out by the fishermen in your locality?—A. Well I think it has sometimes.

Q. There would not seem to be any need of that if the canner takes all the lobsters that are brought to him?—A. The cannery did not want to take the spawn lobsters.

Q. Is it an easy matter to strip the berried lobsters?—A. I don't think it is hard. I have done it myself to tell the truth.

Q. I have done it also but found it pretty hard, the berries do not come off very easily you know.—A. There is a trick in doing everything.

Q. What proportion of the lobsters in your catch will be berried lobsters, one year with the other?—A. This year we had a smaller pack than usual and there was but a very small proportion.

Q. Would you venture to say what percentage there was of berried lobsters?—A. I feel quite sure I did not have a hundred pounds of spawn lobsters this season, I feel quite sure.

Q. Are they generally a good sized lobster?—A. Yes, the lobster is large.

Q. What would you say was the smallest lobster you ever saw with berries?—A. I don't think I ever saw any under eight inches.

Q. Within the last year of your fishing do you find much change in the condition of the lobster fishery, is it as good as when you began?—A. I fished last year and the year before, and they were the two best seasons I ever had.

Q. That is to say with regard to quantity?—A. Yes.

Q. Was the run as good as when you began fishing?—A. Yes, I think they were.

Q. What proportion of the lobsters you take would be under the eight inch limit?—A. Take from the beginning to the end of the season, I would say there would be two-thirds under the eight inch limit.

Q. That could not have been a very large run of lobsters?—A. When we move our gear inside we get all small lobsters.

Q. Do you get smaller lobsters in shoal water?—A. Yes, in June and July.

Q. Would you run that generally as a rule do you think?—A. Of course you would.

Q. Would you expect to get a smaller run in the latter half of the season than

SESSIONAL PAPER No. 22a

in the earlier half?—A. We always do. Of course sometimes we move on to sand bottom and as a general thing you get smaller lobsters than on rock. In rocky gullies we generally get larger lobsters inside or out.

Q. Have you any idea as to the kind of bottom the lobster likes to spawn on?—A. I don't think the female lobsters like to spawn on rock.

Q. The female lobster does not deposit her spawn, she carries it under her tail and it is hatched out there?—A. Of course that is something I could not give very much opinion on, because I don't know very much about it.

Q. Do you think the present trap is more destructive to small lobsters than the old fashioned trap, the double ender?—A. Of course the trap we use now holds the lobsters better. When the slats are left some distance apart, I don't think it would be any more destructive than the others.

Q. What distance apart are the slats in your traps?—A. I don't think they would be more than three-quarters of an inch at the outside.

Q. Do you think it is desirable to have the slats as narrow as that; do you not think it would be wiser to keep them a little farther apart and in that way allow the small lobsters a chance to get out?—A. If you lost the small lobsters on the north side you would lose them all, and you might as well shut down.

Q. What lobsters do you throw out?—A. We don't throw out any.

Q. Do you bring lobsters into the factory down to three or four inches?—A. We don't get them that small. If we got little things like that we would throw them out. As a general rule, I don't think we would take them any smaller than five or five and a half inches and the like of that.

Q. Have you any idea what number of lobsters it would take to make a hundred pounds in weight?—A. I cannot tell.

Q. Or how much they run to the pound can?—A. I cannot tell you how many lobsters it takes to a hundredweight. It would take a lot.

Q. What would you think of the proposal to license the fishermen?—A. I don't know that it would do much good.

Q. Do you think it would have any effect in making the fishermen more careful?—A. I don't see any effect it would have, any more than that one fisherman would see that another would have a license. I don't see either that it would have any effect in making them regard the regulations; it would be putting them that much out of pocket.

Q. What do you think of limiting the amount of gear; do you think there is any object in restricting the number of canneries, as is done at present, as long as the amount of gear is not limited?—A. I think it would be a very good thing to limit the amount of gear. If you limit the number of traps of course they could make it up in boats; they could put on more boats and it would be about the same thing. If you did anything you would have to limit the number of boats. There would be no use to limit the number of traps because they could put on more boats.

Q. Under the license system you could do that; would that be one object in adopting a license system?—A. In adopting a license system would you license just as many traps to a factory?

Q. License the fishermen and limit the number of traps fished by a boat. That is for you to say; do you think the amount of gear ought to be limited?—A. I think it should.

Q. Is there too much gear fished now?—A. I say it is a mistake for some factories to fill up on gear and perhaps other factories have a small amount, because if you fill up a large amount of gear on a limited space, it stands to reason the fishermen cannot get as many lobsters.

Q. Would you limit the amount of gear allowed to a packer?—A. Yes, I believe it would be a good thing, I think it would.

Q. What do you think of the co-operative system of canning; should the department encourage the fishermen to club together and do their own canning?—A. Yes, I believe that is a good thing.

9-10 EDWARD VII., A. 1910

Q. You fish off shore?—A. I fish off shore.

Q. Do you know anything about inside fishing in bays and lagoons?—A. They don't do any lobster fishing in there, but I know that in our bay lots of lobsters go in in the summer. Some years before they began to pack lobsters the bay used to be literally full of lobsters, but they do not come in as much as they used to.

Q. Is there any fishing in that bay?—A. No, sir, they don't fish any lobsters.

Q. Is that because it is no use fishing?—A. I don't think it would pay, but I suppose there has been a larger quantity of lobsters come in that bay the last few years than before that.

Q. And they are not disturbed there?—A. Not disturbed.

Q. Do you think the lobsters go in there to breed?—A. It seems to me it would be a natural breeding ground for them, but as a general thing in that bay you don't get very large lobsters now I think. But after the season is over I think there are larger lobsters go in there.

Q. What sized hoop do you put in your trap?—A. I would say about five inches.

Q. Is that the general run?—A. That is the general run. Some might think it better to use a little smaller and some a little larger. It is just the fancy of the fisherman.

Q. What would you think was the best way to get at the fishermen to explain to him the necessity for observing the law, making him understand that the regulations which should be enforced are for the benefit of the fishery and the people?—A. Well, as you spoke before of sending a lecturer around, I think it would be a good idea to explain thoroughly to the fishermen what is needed.

Q. What is your opinion about pounds and hatcheries?—A. I think unless there are some erected on the north side it would be impossible to save the small lobsters.

Q. Why?—A. They would be destroyed; they would be taken.

Q. But supposing they were taken and brought to a hatchery or pound?—A. That is what I mean. Under the present conditions, I think, you cannot save them, unless pounds or hatcheries are erected.

Q. Do you think it is not possible to follow the matter up and strictly enforce the law in regard to berried lobsters?—A. I think it would be a very hard matter.

Q. How about undersized lobsters?—A. I think if you limit the size on the north side, where I fish, you would put everybody out of fishing.

Q. Have the fishermen not realized the necessity for saving the spawn lobsters?—A. Yes.

Q. Cannot they see that they cannot go on destroying the berries without disastrous results?—A. They seem to, all right, but at the same time one fisherman is a kind of suspicious of the other, and if he throws a berried lobster away he will think another one will come along and pick it up.

Q. Have you had any experience at all in the live lobster trade?—A. No, sir, I have not.

Q. Which do you think would be the most profitable to the fisherman, the canning industry or the live lobster trade where facilities existed for it?—A. Well of course we cannot ship all sized lobsters alive. If the limit was high I don't think it would pay as the lobsters are too small.

Q. Then in any case there are no facilities where you are located, on the north side of the island?—A. No, sir.

Q. Would it be a difficult thing for the canner to detect the berried lobsters when they are brought in?—A. In some cases I guess it would be very difficult.

Q. Where a large number of lobsters are being delivered very rapidly would it be a difficult matter?—A. Oh, yes, it would be a difficult matter.

Q. Would it be a difficult thing for the fisherman to detect berried lobsters when he takes them out of the trap?—A. For the packers it is almost impossible to detect them before they are boiled. It would be too late when they are in the boiler. The

SESSIONAL PAPER No. 22a

fishermen have the best opportunity. Of course they might take some spawn lobsters in no matter how careful they might be. They have the best chance to detect the spawn lobsters, a better chance than the packer.

Q. Did you tell me whether there are any facilities in your neighbourhood for the establishment of pounds?—A. Tracadie bay is a large place, but I don't understand much about a pound.

Q. A certain depth of water, several acres in extent, is required and there must be a free flow of the tide in and out and not too much fresh water.—A. Our bay is of salt water and there is lots of tide and deep water.

Q. What depth is there?—A. In pretty much all the bay there must be four or five fathoms of water.

Q. Could we find a narrow place where the lobsters could be barred in; we want, if possible, a place with a narrow mouth?—A. As you go in the harbour there is a narrow channel with shoals on both sides, and when you get up a certain distance it opens out.

Q. Is that used for purposes of navigation?—A. The boats go up and down.

Q. What would you think of shutting down the fishery completely for a term of years —A. Well, I think, there would be a lot of objection to that.

Q. What would be the trouble?—A. Well, the way it is people want to get all they can out of it.

Q. Could the fishermen turn their attention to anything else, are there not other fisheries they could devote themselves to?—A. There are, but there are some fishermen not as well equipped for those as for the lobsters.

Q. What would you think of closing down by sections of the coast?—A. Well, if you saw fit to close down it might be better, but still I don't think it would protect the fish in closing down.

Q. But do you not think that if the fishery were closed down the lobsters would recuperate?—A. If the fishery were closed down for a certain number of years it stands to reason they would, the spawn lobsters would have a chance to spawn.

Q. A couple of years would make a great difference in the size of the lobsters?—A. Yes.

Q. What would you think of the other proposition to do away with the size limit and in return for that somewhat shorten the season?—A. I think the season is short enough. I don't think you could use a size limit for us because we get a very short season here sometimes.

Q. It is proposed to shorten the season and do away with the size limit; we would expect to do one or the other. If we are to shorten the season we would expect to do away with the size limit and make some return in that way?—A. I don't think there would be any use in establishing a size limit.

Q. Is it not possible to enforce it you think?—A. I don't think so. I think it would put the industry completely out of business here.

Q. Do you think we could get along if we insisted on a certain width between the slats in the traps, save the berried lobsters and shorten the season by ten days?—A. Take ten days off the the last of the season?

Q. Certainly, not off the first.—A. As a general thing we have 1 to 15 days off at first. Some years ago we did not catch any lobsters until May 22 or 23. That year we only had, I think, 35 hauls.

Q. What would you think would be the best way out of the difficulty?—A. It is a very hard thing to tell. I don't think you could limit the size, whatever you do about the season, and the fishermen think the season is short enough already. We have a lot of rough weather on the north side. On the south side it is different because, as a general rule, they get a longer season than we do with the same opening and closing.

9-10 EDWARD VII., A. 1910

Q. Have you any suggestion to offer?—A. No, I don't think of anything except protect the spawn lobsters.

Q. Do you think that would be sufficient if you allow the undersized lobsters to be destroyed; will simply taking care of the spawn lobsters meet the case, do you think it is possible to continue destroying the young?—A. It would not be any good to establish a size limit of less than 8 inches and protect the spawn lobsters, and if you make that size limit it certainly puts everything out of business. Of course, if you do not take it this year you would take it next year smaller than 8 inches, 6, for instance.

Q. Would you favour reducing the size limit to 6 inches?—A. I would not favour any size limit at all.

Q. Then you want to do away with the size limit and allow the season to remain as it is?—A. I would not like to see it any shorter.

Q. What do you think about the price paid for lobsters; are the fishermen getting a fair price for their catch?—A. I believe they could get more.

Q. How is the price fixed or arranged?—A. I don't know very much about how it is arranged.

Q. Well, in your own case do you make the best bargain you can with the packer? Is it a matter of bargain, can you get more in one place than you can in another; is there any competition in the matter?—A. In some cases there is competition.

Q. You do not think there is any combination to keep the price within a certain limit?—A. Well, I don't know; I would not state that positively at all. I think they take great care not to pay too much to the fishermen.

Q. Do you think the fishermen generally would get more out of the industry if they were allowed to can?—A. I think they would.

Q. What do you think about the matter of licensing; should any man who could show his competency to can be allowed to do so?—A. Of course too many establishments would not be good. I don't think it would be a good idea to let every one pack, but I think it would be a good thing to limit the number of licenses to each man. One man should not have more licenses than another. I don't think one man should have three or four licenses, and perhaps some one else not be able to get any.

Q. Do you think there ought to be any inspection at the cannery?—A. Yes, I think they ought to be very particular about putting up the goods because, lobsters have got to be a luxury and a great industry in this Island, and I think they should put them up in the best possible way.

Q. And you think that would be best accomplished by having a rigid inspection?—A. Yes, I think it would.

Q. Ought there to be a standard factory or cannery and should a canner be compelled to have standard fittings?—A. Well, perhaps. For instance, fishermen might go into canning on the co-operative plan, and it might not be possible for them to fit up their factory quite as well as people who have been in the business a long time. If they could put up their fish clean so as to stand the inspection I don't think it would be right to compel them to have all the appliances.

Q. Such as marble floors and electric lights?—A. No, I would not think so, as long as they would put up the lobster in good condition.

Q. Do you think the present staff of fishery officers would be competent to carry out that inspection?—A. I don't see why they should not be. They have been looking pretty well into the industry now.

Q. Are you aware of any fishermen having lost his catch of lobsters at any time by the canner refusing to accept them?—A. No.

Q. I suppose it might happen when a glut occurred?—A. They would not refuse the lobsters even in a glut. I have seen it happen that perhaps on Saturday afternoon the canner would tell the fishermen not to take any more than so many lobsters so as to get through with them by Sunday morning, and you would not put out all your traps.

SESSIONAL PAPER No. 22a

Q. There has been no attempt to squeeze the fishermen by refusing to take his catch of lobsters?—A. No.

Q. Do you think there is any reason why the size limit should be smaller in one district than in another?—A. Yes, I think there is. For instance, on the south side they get larger lobsters than we do on the north side. It would not be fair that there should be the same size limit.

Q. Why do they get larger lobsters there; were the lobsters always larger when the fishery was in its infancy?—A. When the fishery started they were larger I believe.

Q. Is it because they have fished more on the north side than on the south?—A. They fished just as much over there; I don't know what is the reason.

Q. Do you think it is in the interest of the lobster fishery generally that lobsters should be taken before they have reached the age of reproduction? You do not find female lobsters under 8 inches; should any lobsters be taken under that size; do you think the fishery can possibly survive if we continue to deplete it by taking fish that are immature?—A. It is a pretty hard question to answer.

Q. Is there any doubt about it?—A. Of course if you destroy the spawn lobsters—

Q. Do you think more lobsters are required in the fall to fill a pound can than in May and June?—A. That is in September?

Q. I don't suppose you could fish much later than that.—A. No. Of course I have not had any experience, but I don't think it would.

Q. Do you think the lobster fishery should be confined to a certain depth of water, that we should prohibit fishing in too shoal water?—A. I don't see that it makes any difference. I think we should be able to take lobsters wherever we catch them as long as we follow regulations.

Q. What is the best fishing period with you?—A. Sometimes we get a good school in July, other years we don't. You are sure of better fishing at the first part than at any other time.

Q. Is there any statement you would like to make of your own accord?—A. I don't think of anything.

Q. You do not care to say what regulations you think should be enforced?—A. I would think if there were hatcheries erected or pounds. Of course we have none on the north side, and it is very hard to take care of spawn lobsters unless you have something of that kind.

Q. You think the best way of saving the eggs would be to buy the spawn lobsters from the fishermen and take the spawn to the hatchery?—A. Yes, I think it would be the best way.

Q. It would certainly be one way?—A. That is one in my estimation. There might be other and better ways.

Witness discharged.

MICHAEL FEEHAN, canner, Mount Stewart, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in canning lobsters?—A. About twenty-five years, I think since 1882.

Q. What number of boats do you employ at your cannery?—A. When we first started I think it was four or five.

Q. Give us the history of your canning experience in your own words?—A. We have had them more sometimes and sometimes less. We have had as many as eight. That was about the most that we ever had. For these last years we have only fished seven.

Q. Do you furnish your own gear and boats entirely?—A. Yes, sir, everything.

9-10 EDWARD VII., A. 1910

Q. Are there a large number of boats fishing in your neighbourhood; is there any other licensed cannery near you?—A. Yes, Mr. Clark fishes on both sides of us.

Q. How many canneries do you control, only the one?—A. Only the one.

Q. What number of hands do you employ in the cannery, men and girls?—A. Twenty-four I think we had this year.

Q. You have closed down for this year; what has been your pack?—A. 350 cases.

Q. What was it last year?—A. We had a straight run I think of 784.

Q. The two previous years, 1907 and 1908, were good years?—A. Yes. Of course we had more gear this year. The fishermen clamoured for more gear and we gave it to them. Still we did not have as good a pack as last year.

Q. How was 1907?—A. That was a good year, but not as good as last year.

Q. And the years before that?—A. 1906 was fair.

Q. What did you put up when you first began to pack?—A. The first year we packed 480 cases with four boats. We packed until the 20th of August.

Q. There was no limit then, you began when you pleased?—A. We cannot get out at the proper time. Some years it is the 18th or 19th of May. I have seen it as late as the 22nd of May before we have got any lobsters.

Q. How is that?—A. It is owing to the ice.

Q. How is the condition of things to-day, as to size, abundance and everything else, compared with what it was when you first began packing?—A. Of course if we ran as much gear and as many boats when we first began to pack lobsters we could not handle them at all, because I saw boats coming in built up with laths on the sides covered over with lobsters. That is when we first went into the business.

Q. And when did they begin to decrease?—A. After we were three or four years in the business they commenced to decline and went down quickly. We were years in it that it did not pay. We were six years in succession that we were in debt every season.

Q. You got very little for your lobsters then?—A. The price was not in it.

Q. What was the price then?—A. The price when we went in was only \$4.57, but it got better.

Q. What was the highest price you ever received?—A. The year before last was about the highest I ever knew it to be. It went up to about \$15 and \$15.50 for halves.

Q. They were much more abundant in the early years, and were they of larger size?—A. Yes, we did not take any more than 9 inches when we went at it.

Q. Was the law more strictly enforced in those days than it has been since?—A. I don't remember anything about the law. I remember there was one time Mr. Liddy was the warden and they were pretty strict about the spawn lobsters and small sized lobsters too.

Q. They followed it up for a couple of years did they not?—A. Yes.

Q. And when did you begin to find that the fishery was running down?—A. It is 15 or 16 years ago.

Q. What has been your experience within the last 10 years?—A. They were declining up to 1897, and it seemed to me that in the years 1897 and 1898 lobsters came that never were on this shore before by the look of them. I don't know whether anybody took notice of them as I did but they were not the same shape at all. Nor were they the same shape this year as they were last year and the year before. I said this season when I saw the lobsters that we were going to have a small pack.

Q. Do you think the lobsters approach the shore for the purpose of spawning?—A. No, I don't.

Q. What brings them in?—A. They come in when the weather gets warm because these little ones are lobsters that don't spawn at all and they come in just the same.

Q. The lobsters winter in deep water do they not?—A. They go in the mud in the winter.

Q. And in the spring they come towards the shore?—A. Yes.

Q. During what months do you think the lobsters spawn?—A. I don't think the

SESSIONAL PAPER No. 22a

lobsters have any stated time to spawn at all. They spawn at all times because we have caught them in our first catches.

Q. Do you not notice any difference in the spawn at any time?—A. No.

Q. Do you not find the spawn larger and brighter and of a different colour as the lobster comes nearer the hatching time?—A. I have taken lobsters in our first catches that were just after spawning.

Q. Early in May?—A. Yes, in our very first catches.

Q. Then you find them later again in the season?—A. Yes, all through the season, they have no certain time.

Q. You think we can run a hatchery in October as well as in June?—A. Yes, if people are fishing.

Q. Do you think the female lobsters spawn every year?—A. Well, I don't know as to that.

Q. What is the smallest size at which you have seen a female lobster with eggs?—A. I have seen them as small as six inches. I saw a case of that this season. Of course a lobster like that came in by mistake because we were not taking them that small.

Q. What would be the average size of the berried lobster?—A. We have seen them all the way from that size.

Q. Have you see many spawn lobsters below 8 inches?—A. Not very many because they were not bringing them in this year.

Q. Yes, but when you did bring them in?—A. I have seen a good many, that would be about the first of July. I don't know if that lobster ever grows any bigger. Those lobsters used to be little hard-shelled fellows with black shells on them.

Q. What percentage of the lobsters in your neighbourhood bear eggs?—A. They would be much about the same percentage as a previous witness said. I could hardly say. This year our fishermen told us they threw as many as 36 in a haul.

Q. Is the practice of stripping or washing the eggs off the berried lobster followed by the fishermen in your neighbourhood?—A. I think it is to a certain extent.

Q. Do you think it would be possible to get the fishermen to return to the water all the berried lobsters they take?—A. The only way to do would be to pay the fishermen for them, I suppose, and have a hatchery. I would say Tracadie bay would be a convenient place for one, and have some person to carry the lobsters from the factories. First of all let the fishermen take care of them and keep them in the water.

Q. Would the canners be prepared to pay an increased fee with a view of raising a fund for the purchase of the spawn lobsters from the fishermen; do you not think the industry should pay for its own protection?—A. Yes, that is right.

Q. Would it be right to increase the fee paid by the canner so as to cover the cost of buying these lobsters and running a hatchery?—A. I for one would be satisfied to do that.

Q. Has it been your practice in the past to make any objection to receiving berried and undersized lobsters when they were brought to you by the fishermen or did you take everything that came?—A. We used to because there was nothing about it until this year. Of course I have seen them boiled and packed.

Q. How comes it that you have not packed them this year but that you did in other years?—A. The guardian told us.

Q. The law was always the same was it not?—A. Well of course I never heard very much about it.

Q. If the law were strictly enforced with regard to undersized and berried lobsters how would it affect you?—A. It would shut us down, put us out of business.

Q. Is there any illegal packing going on in your neighbourhood, are lobsters caught after the close of the season?—A. No, sir, I think none. They cannot do it there very much.

Q. Do you live in the neighbourhood of any bay or shoal water where the lobsters could be taken inshore?—A. There is no fishing in bays or harbours where we are.

9-10 EDWARD VII., A. 1910

Q. Would there be any chance in your neighbourhood of establishing pounds?—

A. No, Tracadie would be the only place. There would have to be some person to convey those lobsters.

Q. They would have to be bought from the fishermen, taken to the pound, and fed while there?—A. They would have to be fed?

Q. Yes. Furthermore they must not be crowded or they will destroy each other?—A. Then it would have to be a pretty large place.

Q. Can you give me any idea of the number of lobsters it takes to fill a case or a pound can?—A. It would depend. Of course we take them just as they come. There are lobsters that we pack that it would take a dozen any way to fill a pound can. I don't know but what it would take fifteen. They bring them to us and of course we buy them by weight. What are we going to do?

Q. What size do you pack?—A. Whatever stays in the trap.

Q. What size would that be?—A. That would be 5 inches.

Q. Can you do anything with a lobster as small as that profitably?—A. The small fish pack better than the large ones. I put that down to the thinness of the shell as the large lobster has a very thick shell.

Q. Then the small lobster is the most profitable?—A. The small lobster is the most profitable.

Q. What do you think of the practice of destroying the small lobsters?—A. Well it is not right, the fish have not reached maturity to begin with. It is not right, but still if you stay in the business and don't take them you know what that means; it will put you out. The packing of spawn lobsters is another thing that is not right.

Q. Do you think there is any difference in the meat of the spawn lobster?—A. The meat is not so solid. If you boil and can a mother lobster, and boil and can a he lobster, and open the two at the same time it is quite easy to tell which is the best lobster.

Q. As a rule the female lobsters are full of meat?—A. Yes, full of meat but it would be spongy and something like the meat of the lobster when it is shelling.

Q. What do you think about the present system of licensing canneries?—A. Well on our shore there is a big lot of gear fished. It is fished from 14 fathoms into I suppose 6 or 7 feet of water.

Q. Do you think the principle of limiting the number of canneries is right, is there any reason why a man who shows himself competent to pack should not be given a license?—A. Let him go into the business and try it. If he fails he has got to put up with it.

Q. Do you think it would be right to require that man to can up to a certain standard?—A. Yes, well I believe it is. Still it is my belief if they let every person that wishes to, go and can it will put an end to the business.

Q. And then we could shut down altogether for a term of years?—A. You won't have to do that, it will shut down itself.

Q. Then the fishery will recover?—A. Then we will all get out of it for a while and come back again.

Q. It has been proposed to shut down the fishery for a number of years; what do you think of that?—A. I suppose there would be some packers that would consider they would have to be compensated for the gear they have, because the gear will wear away the same as if it was used. If the packers shut down for two years the gear they had would be of no account, they would have to build their gear all over again.

Q. I do not suppose it would be proposed to shut down without giving due warning?—A. That would be a help to us.

Q. What change would you make in the present regulations with a view of protecting the fishery for the future?—A. Well on our shore there are some seasons we hardly ever get out before the 10th of May. Sometimes it is as late as the 18th, 20th and 21st before we get lobsters; I have seen that two or three years in succession.

SESSIONAL PAPER No. 22a

That part of the north side of Prince Edward Island, I think, is fairly well protected for the season it has. Because you see some years we only get about a month and a half to fish. The year before last, although it was a good year, was only about a month and a half. There were 33 hauls.

Q. I want to know what is your suggestion for the improvement of the fishery?—

A. I suppose the only thing I could say would be to shorten the time, cut off July.

Q. You would cut off July?—A. That would be the only way to help it in that direction.

Q. Do you not realize that something must be done to preserve the fishery?—A. Of course.

Q. What is the best thing to do?—A. To restrict us to a size limit of 8 inches would shut us down.

Q. Do you think it would be possible to enforce the regulation?—A. If you did enforce it it would put us out of the business and the fishermen could not fish.

Q. Supposing we tried to enforce it?—A. We would only last about a week and then there would be nobody in the business.

Q. It would drive everybody out of the business?—A. Yes, drive everybody out.

Q. What would you say to the suggestion made by some people to do away with the size limit, but allow a sufficient opening between the slats of the trap to let the small lobsters escape?—A. I think that would shut down the canneries, but we have fished when we had that opening in the laths; I think it was an inch and a quarter.

Q. What is it now?—A. I would say about three-quarters of an inch; I believe that is the size now. If we did not use these parlour traps but only the two headed traps we used to use, we would not get any lobsters at all.

Q. Then I understand you to say your idea of the matter is that we could shorten the season?—A. Well, it is the only thing that can be done.

Q. And introduce hatcheries and pounds?—A. I believe myself it would not be impossible to put a hatchery in Tracadie bay. I believe if lobsters were put in the bay they would find their own grounds and spawn in there.

Q. Have you any knowledge of the live lobster trade?—A. No, sir. I consider it would be of no account in our district.

Q. You are too far away from the market and the facilities do not exist for shipping live lobsters?—A. No.

Q. Where it can be done do you think it is more profitable to the fishermen than selling to the canners?—A. Yes, if they could get the lobsters of the right size it would, I should think, double their profits.

Q. Do you think more lobsters would be required to fill a pound can in August and September than in May and June?—A. I don't know anything about August and September fish because we never pack in those months.

Q. Is it the case that canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen?—A. Not with me.

Q. Who fixes the price paid to the fishermen for the lobsters?—A. The fishermen come to me and want to know what they are going to get, and of course then it would be my —

Q. Then you fix the price?—A. Yes.

Q. Do you think there is any understanding among the canners generally not to pay more than a certain figure?—A. No, not our way.

Q. Every man pays what suits him?—A. Any man that comes to me might say what such a one was paying, but I hire him myself. This year I paid \$1.50 and found my fishermen in everything. Last year I paid them \$2 and found them everything.

Q. The difference is caused by the lower market?—A. Yes, sir. This year when the fishermen came to me I said: 'I cannot make you an offer. I would be ashamed to name what I can offer. If you like to go and fish you can.'

Q. Do you think the fishermen are satisfied with the arrangement made?—A.

9-10 EDWARD VII., A. 1910

Some of them were not. Of course if there was a rise in the market I have made it a point to give the fishermen the benefit.

Q. If the market drops you would expect the fishermen to do the same thing with you?—A. That seems to be a little harder, but it is only reasonable that they would.

Q. What is the best period of the fishery with you?—A. When we get the most? In May, when we first start.

Q. What would you think of limiting the amount of gear fished by each canner?—A. Well, that would be all right. Of course there are some fishermen if you put them on a limited amount of gear they might not go fishing. A good strong man wants as many traps as he thinks he can haul.

Q. What would you think of limiting the amount of gear fished by a canner? In some places, it is claimed, the large canners monopolize too much ground. They employ a large number of boats of their own and crowd the others out; is there anything in that?—A. There may be something in their putting out a lot of gear; I believe there is.

Q. Do you think it would be wise to limit the amount of gear as well as the number of canneries?—A. That might be all right, too. I always like to see the fishermen do something when they are at it, and I never wish to put too much gear on the ground. As that is the reason why I cut off some of the gear to give the men who were on the ground a chance.

Q. You are not disturbed by outsiders in your neighbourhood; you have the ground pretty well to yourself?—A. We had five or six other boats this year.

Q. Do you think the product of the cannery should be subject to inspection?—A. Yes, that is right.

Q. Do you think the existing staff would be competent to carry out that inspection, that is, the present fishery wardens, overseers and inspectors?—A. Yes.

Q. What would you think about giving a canning license to an alien?—A. I don't know what to say about that. If they were interested people that lived in the Dominion I would say it was all right.

Q. Are there any co-operative canneries in your neighbourhood?—A. There was one started this year.

Q. The gentleman who was examined was interested in that?—A. No, another one. You could not call it a co-operative gear because he got some of the gear himself. It would not be co-operative because he got up the gear for three boats himself.

Q. Who did?—A. This Mr. Beckett.

Q. He was not a fisherman?—A. No.

Q. That is a trouble that is likely to occur with that sort of thing is it not?—A. Yes. I don't think he ever saw a lobster in a trap.

Q. Is it the case that fishermen in your neighbourhood have ever lost their catch of lobsters by the canners refusing to accept them?—A. Not down our way. East of us at St. Peter's they got more than they could handle the other day.

Q. That was due to an overflow of lobsters?—A. Yes.

Q. That was not done with the intention of punishing the fishermen?—A. No, not at all.

Q. Some fishermen have complained that the canners with a view of punishing them have refused to purchase their lobsters?—A. I never heard tell of anything like that. There was a boat came to me with lobsters and I was short of cans so I could not take the man's fish, I had not a can to put them in. So he went on down to Mr. Clark and packed them there. I think the fishermen went to work and packed them in the night.

Q. Would the fishermen have any other market for their lobsters if the canneries were closed?—A. They could not on the north side of the island.

Q. Should the shipment of live lobsters be favoured in preference to the canning of lobsters?—A. It would be more of a paying business if the facilities existed where it could be done. I have seen along the Nova Scotia shore little steamers going along

SESSIONAL PAPER No. 22a

and I have seen them putting the crates on board. Little steamers fetch them to Halifax where the lobsters are put into crates which are sunk between the wharfs.

Q. Is there anything else you would like to speak upon?—A. There has been a great deal of talk last year about illegal fishing at the west end of the island. They say they fished at the west end up to the time the snow flew. I don't see any use of protecting the industry if you let them fish when the snow flies. There have been hundreds of cases packed after the close of the season. There was one man told me here this spring that all his fishermen fished straight along, away down at the west end, and if that thing is continued what is the good of protecting the industry at all? It is no use of protecting the industry at one end and letting it go at the other. Illegal fishing has been done at the east end too, but not very much.

Q. Is there anything more you would like to say?—A. I would like to see a hatchery on the north side of the Island. I would be in favour of helping it by trying to get spawn lobsters to the hatchery and having the fishermen take care of those lobsters; carry them in their boats, put them in salt water and bring them ashore without hurting them and having them put there. I would favour that even supposing we paid a little extra on our license.

Witness discharged.

J. W. MACDONALD, fisherman, Grand Tracadie, called and sworn:—

By the Commissioner:

Q. Are you a canner?—A. I have canned lobsters, but not for five or six years.

Q. What are you doing now?—A. I have fished lobsters for the last few seasons.

Q. Do you fish on the outside shore?—A. Yes, out to sea.

Q. How long have you been engaged in fishing lobsters?—A. I fished lobsters for the last two seasons and I first fished 25 years ago.

Q. Was there much canning then?—A. Not so much as there is at present.

Q. There were not so many canneries?—A. No, sir.

Q. What number of traps do you fish now?—A. I fished last year 275. This year I did not fish so many. I only fished for the local market here, the large lobsters.

Q. In what depth of water do you fish?—A. The first season I fished in about 13 fathoms, and then moved in to about 9 fathoms.

Q. How long did you remain out in the deep water?—A. From the month of May to the 5th of June.

Q. When do you begin fishing generally?—A. It all depends on how long the ice remains. Just as soon as the ice moves we get out our gear. Some years we don't get started until the last of April or the middle of May.

Q. One year with another would it be the middle of May generally?—A. Pretty much.

Q. What is your experience with the lobsters, do you get your best run when you first begin?—A. In the month of May.

Q. You furnish lobsters to the local market; do you supply them alive?—A. Boiled.

Q. And ship them in here?—A. Yes.

Q. How small do you send the lobsters to market, you don't want small lobsters for that trade?—A. No, we could not sell anything under 8 or 9 inches, but we catch them smaller than that. I have fished mostly in deep water this year and they did not run as small as last year.

Q. Do you sell small lobsters to the canner?—A. No, sir, shipped everything in. The really small ones I let go.

Q. Do you sell your lobsters by retail or send them to some person in the city?—A. I send them to some persons and they retail them.

9-10 EDWARD VII., A. 1910

What is the market worth?—A. The price runs from eight to ten cents a pound, twelve cents a pound sometimes.

Q. How would your lobsters run in weight?—A. They would average probably two to the pound; some a little over and some under.

Q. Do you get many large lobsters now?—A. Yes, the largest lobster I ever got was last year.

Q. What did he weigh?—A. $12\frac{1}{2}$ pounds.

Q. Was he caught in the trap?—A. No, sir, he got foul. I saw two others caught on a trawl. One weighed 11, and the other $9\frac{1}{2}$.

Q. What do you mean by a trawl?—A. A cod trawl.

Q. Was that in deep water?—A. About 13 fathoms.

Q. You fish in deep water for about half the season?—A. Half the season.

Q. And then you move in?—A. And then I move in.

Q. Does the run of lobsters seem to have passed then?—A. Yes, there is better fishing inside.

Q. And you follow the lobsters in?—A. Yes, sir.

Q. You expect to get as good a run of lobsters on the inside as on the outside shore?—A. No, we do not.

Q. What percentage of lobsters you catch would bear eggs?—A. Last year I did not get a hundred pounds out of my catch of 16,000 pounds.

Q. Then the percentage of lobsters bearing eggs is very small?—A. Very small.

Q. It would be naturally small because half the lobsters must be male?—A. They are.

Q. And all the female lobsters do not bear eggs and have them extruded?—A. It appears not.

Q. Then you do not catch them all?—A. No.

Q. So that in any case the percentage is small?—A. Yes.

Q. Some fishermen told us that his catch is 75 per cent but I cannot imagine that possible?—A. I do not understand that.

Q. Are there many others fishing like you for the local market?—A. No, I was the only one from our place this year.

Q. And you say this is the first time you tried it?—A. The first time I tried it.

Q. How do you send your lobsters in to the market?—A. Ship them in by train.

Q. There are no cold storage cars I suppose and no railway system?—A. No, sir.

Q. What would be your opinion about the live lobster trade if it could be carried on, is it the most profitable to the fishermen?—A. I believe it really would be, but as a matter of fact our lobsters would not warrant the live lobster trade here to any extent because I do not think as a rule they are large enough; I don't think we could do anything here in the month of May. In the month of June I don't think we would have a quarter of them marketable, that is suitable for the Boston market.

Q. What percentage of the lobsters taken here, or where you fish, would be below the 8-inch limit?—A. In the month of June more than half of them; in the month of May more than one-quarter of them would be below the limit.

Q. How would it be in July?—A. July would be about the same as June.

Q. Do you think it is safe to say that the later you fish the smaller the run of lobsters would be?—A. June and July seem to me to be about the same. That is on sandy bottom; on rocky bottom we get larger lobsters here. Our bottom is sandy and I think we get smaller lobsters.

Q. You think you get larger lobsters on a harder bottom?—A. That is what people who have fished on a rocky bottom tell me.

Q. What do you think about the traps in use, do you think it would be reasonable to insist on a greater width between the slats?—A. It naturally would for protection. I dare say it would to a certain extent.

Q. You realize the fact that it is necessary to do something in the way of protection in view of the fact that the industry is run down?—A. Yes.

SESSIONAL PAPER No. 22a

Q. What other means would you, as a practical fisherman, suggest for the better protection of the fishery?—A. There has been a good deal of evidence on that subject to-day. Of course you could have protection but the business would be really put out of existence if you had more protection than there is at present. The lobster business is a great business on this island now. There is pretty nearly a million dollars worth of fish sold on this island, principally from the result of lobster fishing, and it would be a great loss to the island if the industry were extinguished.

Q. At the same time it is an industry that requires protection, we have got to look to its future?—A. That is right.

Q. The great trouble with most of the fishermen is that they look only to the moment and not to the future?—A. That is right. I believe if there were hatcheries and pounds it would help to some extent.

Q. But the experience of everybody is that these things alone will not keep up the fishery if immature fish are destroyed. Of course they all help it. What would you think of the propositions already advanced? Among all the propositions the most feasible seems to be—I do not say it is the right one to adopt, and there is a difference of opinion about it—to do away with the size limit because of the impossibility, almost, of its enforcement, to insist on a little more space between the slats of the trap and shorten the season to the 1st of July.—A. That would be too many restrictions, I think, for the industry here. Of course it would be all right enough for purposes of protection.

Q. On the other hand, what will happen if you are allowed to take small lobsters which you are not supposed to do at present?—A. You cannot take them if you open the slats of your trap wider.

Q. A certain proportion of them will escape?—A. I would think, as far as I have anything to say, that a few days shorter either way would be better than having a restriction on the size.

Q. You would allow the lobster to be canned down to what size?—A. Simply as they are now, 5 or 6 inches. We don't get any under that size. In any case a 5-inch lobster is a pretty small one.

Q. Do you think that even with a shorter season and with hatcheries and pounds we could continue to catch 5 and 6-inch lobsters with impunity?—A. It does not seem to make any difference for the last 15 or 16 years. I did not fish for several years until last year. I cannot see that there was much difference in the size of the lobsters 15 years ago from what there is today on our north shore.

Q. In that case there is no use attempting to protect them by a size limit?—A. That is the catch was more. Of course that was only for last year. I could not say that the lobsters were any larger 15 years ago where I fished than they were last year, and I think I caught as many small ones. I did not catch as many lobsters 15 years ago. I only fished 8,000 lobsters 15 years ago, and I caught nearly 16,000 last year.

Q. With the same amount of gear?—A. I had twenty-five more traps last year.

Q. And did you have the same kind of traps?—A. I had what we call the parlour trap last year and the two headed trap, the old trap.

Q. Do you think the practice of stripping the eggs off the female lobsters by the fishermen is followed here?—A. I think it is.

Q. I don't see why the fishermen should do that because up to this year there was no refusal on the part of the canners to take berried lobsters?—A. Last year there was to a certain extent.

Q. What would happen if the canners refused to take berried lobsters, would the eggs be brushed off outside?—A. I have no doubt. I think some fishermen would be quite satisfied and be honest enough to let the spawn lobsters go, but when they found other fishermen fished them they would say: 'What is the use of our doing it'?

Q. Do you think there is any use in licensing the fishermen?—A. I don't know that it would help the matter much. Would it?

Q. Some people think that if we gave the fisherman a license and put a slip of

9-10 EDWARD VII., A. 1910

paper in his pocket it would help him to be more honest?—A. I think you will want to have the good will of the fisherman as well as the good paper.

Q. The idea is that if the fisherman has gone through the form of taking out a license and carries it, he will become a sort of fishery officer on a small scale; he will observe the law himself and see that others do it?—A. You might get some honest enough to do that but as a rule I do not think you could. I would not have much faith in it for my part.

Q. What do you think of the present system of licensing canners, do you think the department are wise in restricting the number of licenses granted?—A. Well, I would say that in some localities where there are two or three factories in conjunction with one another and a certain amount of gear on the ground, there was no great necessity for another factory going in there, unless there was any other trouble arising. In some cases where there is probably no factory within five or ten miles——

Q. You would increase the number?—A. I would certainly say there should be a factory there if it is required.

Q. Is there any reason why any man who shows his ability to carry on the industry successfully should be refused a license?—A. I would not think so.

Q. What do you think of the method of encouraging co-operative canning amongst the fishermen?—A. I think it is a very good method.

Q. Would you advocate the furtherance of that system?—A. Yes.

Q. Do you think the product of the canneries should be inspected?—A. Yes, I would be in favour of that.

Q. All food products to-day are being inspected and canned lobsters seem to be the only one that is exempt.—A. Yes, I would favour that.

Q. What do you think would be the best way to get the fishermen to observe the law; how could that be done?—A. Some of these methods suggested by the other fishermen I think would be very good. One is to pay them so much for their berried fish and have them taken to a hatchery or pound.

Q. Do you think that is the only way of protecting the berried lobsters?—A. That would be one way. That was mentioned here and I think it would be a very good way.

Q. You think it is useless to expect to have the berried lobster returned to the water where she is caught?—A. I think so.

Q. Is there anything you yourself would like to suggest?—A. No, sir, only I would wish to see those hatcheries and pounds established for the benefit of the fishery; I think it would protect the fishery. Of course as regards the size limit it is a pretty hard matter to shut the business down on this island. It is an equally hard matter to see it going to destruction.

Q. You think that if the present law were strictly enforced, keeping the limit at eight inches and putting the berried lobsters back in the water, the canneries would have to shut down?—A. There is no question about that at all.

Witness discharged.

ALLAN MACDONALD, fisherman, Rice Point, called and sworn:—

By the Commissioner:

Q. How many years have you been fishing?—A. Seventeen altogether.

Q. Have you fished right along?—A. About five years of that I did not fish. I mean that I did not fish continuously for 17 years.

Q. Do you do any other fishing or do you confine yourself to fishing lobsters?—A. Confine myself to lobster fishing principally. I fish some herrings for bait in the early spring.

Q. Do you get all the bait you want for the lobster industry on the spot or have you to import herring?—A. We buy some from the fishing vessels sometimes.

SESSIONAL PAPER No. 22a

Q. Where do they get their herring?—A. At the Magdalens.

Q. You fish in the straits?—A. Yes, sir.

Q. In what part, to the east of Cape Traverse?—A. I fish west of St. Peter's island about three miles.

Q. Between that and Tryon?—A. Yes, sir.

Q. In what depth of water do you fish?—A. Seven, eight and nine fathoms.

Q. What number of traps do you fish?—A. My mate and I fish 300 traps, some years 350.

Q. What arrangement have you with the canner in your neighbourhood? How do you come to terms with him?—A. He simply gives me an offer for my fish.

Q. If you don't like it you don't take it?—A. That settles it.

Q. Do you think there is any competition in the matter; if one canner does not give you enough can you go to another?—A. Last year, that is 1909, they all seemed to have a set price.

Q. When is the fishing season with you?—A. This year from 26th April to 10th July.

Q. Which is the best part of it?—A. The first, the month of May is the best part of the fishery.

Q. Do you move in or do you fish always on the same ground throughout the season?—A. Pretty much; sometimes we move a few traps in close to the shore at the latter part of the season.

Q. Do you fish out until you meet the traps from the other shore?—A. No, sir.

Q. Farther up the straits they overlap in many places?—A. I suppose they do.

Q. But not down here?—A. No.

Q. Is there such a thing as a fishermen's union in your neighbourhood?—A. No, sir.

Q. Is there a large number of fishermen engaged in fishing in your locality?—A. There is a good few.

Q. How many canneries are there down there?—A. There are 5.

Q. To whom do you sell your catch?—A. The Portland Packing Co.

Q. Have you always dealt with them?—A. Very much. Well, for the last 15 years.

Q. They have a large cannery in that neighbourhood?—A. Yes, they have.

Q. How many boats fish for them?—A. About 12 this year.

Q. Do they own the boats?—A. Not all.

Q. Some men are independent fishermen and sell their catch to the factory?—A. Most of them are independent fishermen?

Q. Fishing their own gear and selling their catch to the company?—A. Exactly.

Q. Are you aware what price is paid generally?—A. Last year \$2.50 per 100 pounds.

Q. To the independent fishermen?—A. Yes, sir.

Q. And this year?—A. It is this year I mean. Last year it was \$3.50.

Q. There has been a drop of \$1?—A. Yes, sir.

Q. How are the fishermen generally paid?—A. \$3.50 by hundred count last year and this year they took it by hundred weight.

Q. What will the hundred weight of lobsters represent in count?—A. Well, according to the size—we lose considerably by weight.

Q. You prefer to sell by count?—A. Yes, sir.

Q. Have you any idea how many lobsters by count it takes to fill a case?—A. Well, sir, I have not. I never packed them.

Q. Have you any idea how many green lobsters it takes to fill a case?—A. No, sir, I never packed them.

Q. You told me you made your best fishing during the month of May?—A. Yes, sir.

Q. What run of lobsters would you have during the month of May as to size?—A. An average I should say of 7 or 8 inches.

9-10 EDWARD VII., A. 1910

Q. And later in the season how will the average be kept up?—A. It will fall to an average of 7 inches. The lobsters are larger, fished earlier. There are certain pieces of ground that hold larger fish than others. I have seen two boats fishing within a mile or less than a mile of each other and have different looking fish altogether. Some have got large fish, other have small fish. But the fish on our side of the coast are much larger than on the north side.

Q. The month of May is the best fishing season?—A. Yes, sir.

Q. Would you venture to say that later in the season and in shoaler water you get a smaller run of fish than you do in May?—A. Yes, we do, in shoaler water. Well, in shoaler water we do, pretty much in June.

Q. When you are speaking of the average what size do you mean?—A. I mean 9 inches. I saw them that size close into the shore last June. Some years it seldom happens.

Q. How is the average size of the fish to-day compared with what it was when you began fishing; has it diminished?—A. Yes, sir, it has diminished.

Q. Considerably?—A. For the last two years it has diminished considerably.

Q. Is it the general practice of the fishermen in your neighbourhood to remain on the same ground all season, or do they move in nearer shore?—A. It is the general practice to remain on the ground.

Q. There is none of the fishing very deep there?—A. No, sir.

Q. Has the number of traps increased considerably in your neighbourhood since you first began; is there more fishing?—A. Yes, sir, the number of traps has increased.

Q. Has the number of canneries increased?—A. The number of canneries has increased also.

Q. And in what proportion have the traps increased, have they doubled?—A. They have doubled in 23 years, more than doubled.

Q. Do you fish the same trap now that you began fishing with 23 years ago?—A. The same style of trap only a smaller size.

Q. What trap do you fish now, the patent trap or the old fashioned double ender?—A. The old fashioned double ender.

Q. Only not the same sized trap?—A. A smaller sized trap and not so long, a lighter trap.

Q. Is the space between the slats now different from what it was formerly?—A. Pretty much the same.

Q. What space do you allow?—A. About an inch.

Q. Do you make your own traps?—A. Yes.

Q. Have you made the hoop in the end any smaller?—A. There were some years they tried it smaller but it does not seem to be any better. I would say about four and a half inches in diameter.

Q. Has the mesh always remained about the same?—A. Pretty much about the same.

Q. Do you think many lobsters escape from the mesh?—A. If the mesh is very large they do.

Q. What is the mesh generally made, extension measure?—A. I would say about three inches extended.

Q. Some fishermen have told us that they are making that mesh larger and it will allow a great many small fish to escape?—A. It does not take a very large mesh extended to go three inches. I am only just going by my own judgment. I have knitted the hoops of a certain gauge for years.

Q. Have the regulations ever been enforced in your neighbourhood?—A. Well, not along my coast that I know of.

Q. Do you supply berried lobsters to the hatchery?—A. They go into the factory.

Q. And they are stripped there for the hatchery?—A. Yes.

Q. Have you ever seen them stripped?—A. No, sir, I never witnessed the stripping.

Q. Did you ever see a berried lobster stripped outside?—A. No, sir.

SESSIONAL PAPER No. 22a

Q. Is it done at all?—A. I think not.

Q. I suppose when the hatchery was established there was no object in doing it, they brought everything ashore?—A. Yes, so far as I know.

Q. Did you expect the canner to take all you brought to him?—A. Yes, sir.

Q. Regardless of whether the lobsters were undersized or berried?—A. Yes, sir.

Q. What is your experience with respect to the fishery, do you think the decrease is still going on?—A. I don't think it is for the last few years, it is about holding its own.

Q. Is there any particular part of the season when you find more berried lobsters than at another time?—A. Well, I don't think there is.

Q. How many berried lobsters do you find out of every hundred lobsters?—A. The number is very small, I don't think there would be more than 5 or 6 or 8 lobsters out of a hundred.

Q. How do the spawn lobsters run, are they generally a good size?—A. Generally 7 or 8-inch lobsters, I should say.

Q. Have you ever remarked as to the size of the smallest lobster you have seen bearing eggs?—A. Seven inches I should say.

Q. There are not very many of that size?—A. A few. But there are not many of either class.

Q. Would you expect to find more spawn lobsters inshore than when you first began fishing off shore; does the number increase as the season advances?—A. I have never taken any notice.

Q. Do you think there is any part of the season when lobsters are unfit for food, when they should not be canned?—A. Yes, sir, the latter part of July.

Q. Now with regard to the matter of licensing canneries, do you think the present policy of the department in restricting the number of licenses is a wise and correct one?—A. Well, I don't know. I should think the number of licenses should not be restricted.

Q. You think that any man that shows his ability to pack should be given a license?—A. I think so. That is my opinion.

Q. You would need to have some rule governing a man's fitness; it would not do to give a license to anybody that imagined he could pack; what guarantee would you require from the fisherman that he was able to can properly?—A. I don't know.

Q. Do you think yourself there ought to be some standard of fitness required for a cannery?—A. Certainly there should be.

Q. We would like to get at the best way to do that; we are seeking your opinion and it is from gentlemen like you that we expect to get suggestions; should an applicant for a canning license be obliged to pack a certain number of cases—show his ability to put up at least 100 cases we will say?—A. That would be a very good idea.

Q. What would you think about limiting the amount of gear fished under a license; we are restricting the number of licenses, but we do not restrict the amount of gear?—A. I think the gear should not be limited.

Q. Do you think that any canner should be allowed to fish all the gear he could?—A. In my opinion he should.

Q. Do you not think that is apt to militate in favour of the large and against the small canner, that the latter is apt to be crowded out?—A. The small canner will get there when the large ones will not.

Q. What do you think about fixing the opening date of the season?—A. I would say the 20th April.

Q. Instead of the 26th?—A. Yes, sir.

Q. Why would you set any date at all?—A. Well, men risk a good deal going out in the ice.

Q. Is not that their own lookout?—A. It is.

Q. We are supposed to look at this from the point of view of the lobster entirely; why should you fix a date for opening at all; has not the date been fixed at the instance of those who do not want to lose their gear?—A. Yes, sir.

9-10 EDWARD VII., A. 1910

Q. Rather than in the interest of the lobster? Nature has provided a time for commencing to fish, and if any man is willing to start out earlier than his neighbour let the other man look out. That is the way I would regard the matter myself. How long has the hatchery in this vicinity been in operation?—A. About three years.

Q. Has it been running sufficiently long to give any opportunity of judging whether it is doing any good?—A. Not as yet. We pick up some small lobsters some times, very small ones.

Q. And you think they come from the hatchery?—A. Yes. These small lobsters drop out of the trap.

Q. Do you think the number of hatcheries should be increased?—A. I think so.

Q. Is there any opportunity in your neighbourhood for establishing pounds? A good many people think the pound is superior to the hatchery?—A. There is Nine Mile Creek, but it is too large to be dammed.

Q. Is it used by vessels going in and out?—A. It was at one time, but the channel is filled up now.

Q. What depth of water is there inside?—A. There is none at low tide at present.

Q. We must have at least a couple of fathoms?—A. It is all mudded up. There have been small schooners going in and they had to dredge it out, but for the last 12 or 15 years nothing has been done and it has filled in again.

Q. What do you think would be the effect of a strict enforcement of the present size regulation; if you were confined absolutely to 8-inch lobsters and had to return all the berried lobsters to the water what would happen?—A. We would give up the business.

Q. It would put you out of business; would it put the canner out, too?—A. Yes, sir.

Q. It has been suggested by different people that the best way to overcome the present difficulty would be to shut down for a term of years all over; what would you think of that?—A. It would cause a lot of young men to leave the country I think.

Q. Therefore you think that proposition is out of the question?—A. I think so.

Q. The Lobster Commission that came around in 1898 reported in favour of closing down by sections; what would you think of the proposition?—A. I would not think anything of that.

Q. It has been suggested again as another alternative that we should do away with the size limit, enforce the berried lobster regulation—where it is possible to establish hatcheries or pounds to do so, but in any case insist upon the berried lobsters going back in the water—and shorten the season by a few days; how would that suit you? Would that be the most reasonable way out of the difficulty?—A. I would not mind the season being shortened ten days.

Q. How would that affect your neighbourhood?—A. We would like if we can start when we wish, or have the season from the 20th April to the last of June.

Q. What do you think of the practice of having different size limits and different seasons in adjoining districts?—A. I don't see what the reason is.

Q. Professor Prince, who is supposed to be the best authority in the country on the matter, has always been in favour of opening the season on the 1st of January and limiting it some time about the 1st July and making that a universal season all over the gulf?—A. I don't see why it would not suit other parts of the island as well as along where I live.

Q. Do you think there are any steps that could be taken to induce the fishermen to be careful in their observance of the regulations, especially with regard to the berried lobsters; they should surely realize that they cannot expect to continue the fishery and destroy the parents with their offspring?—A. It is a pretty hard thing to get at.

Q. How would you get at it?—A. Enforce the law.

Q. How would you enforce the law; who would you enforce it on, the canner or the fisherman?—A. I think the berried lobsters should be all caught up and the berries taken off them and have pounds to put the lobsters in.

SESSIONAL PAPER No. 22a

Q. Do you think if the fishermen were licensed they would be more apt to obey the law and feel that they were more responsible?—A. I don't think it would be any good.

Q. Do you think that the product of the cannery should be inspected?—A. Yes, sir.

Q. Do you think there would be any advantage in sending somebody around during the winter, or whatever season was most acceptable, to meet the fishermen and explain to them the necessities of the case and induce them to promise to observe the law; would there be any good in doing that?—A. There might be in some cases.

Q. Not in all?—A. Some of them would forget about it.

Q. Do you know anything about shipping lobsters to the market alive or frozen?—A. I have read about that but we have not got the facilities here for doing it.

Q. Do you think where it can be done it should be encouraged?—A. Yes, sir.

Q. Do you think the fisherman could get a better price for his lobsters by selling them for shipment alive than he would from the canner?—A. I certainly think so.

Q. Is it to your knowledge that any fisherman has lost his catch of lobsters by the canner refusing to accept them?—A. No, sir, not to my knowledge.

Q. Do you think there is any combination on the part of the packers to keep down the price paid the fisherman?—A. Oh, I don't know. I have heard it stated there was a combination.

Q. Do you think the fisherman would make more money if he were allowed to can for himself?—A. Yes, sir, I think so.

Q. Do you know anything about the fishing season to the westward of you, beyond Cape Traverse?—A. Their season is later than ours.

Q. A good many fishermen have suggested a change in the season. They say they would save all the spawn lobsters and would have better fishing if they began on the 15th of July and ended the last of September. You fish close to where those men fish do you not?—A. I wonder at them packing fish at that time of the year, the last of July.

Q. You would not recommend packing then?—A. No, sir, I would not.

Q. When could you begin, how soon do the fish commence to get all right after shelling?—A. They tell me—of course I never fished in that part of the season—that in September they are good.

Q. Do you think it takes more lobsters to fill a pound can in the fall than in the spring?—A. I don't know, I have not had any experience in that. I have heard them say the lobsters pack better towards the last of September than at any other time in the year. I have heard a lot of fishermen say so around the coast.

Q. Do you think there is anything in the proposition to restrict the fishing to a certain depth of water, not allowing the traps to fish in water that is too shoal?—A. I don't think it makes any difference where they are caught so long as you catch them in the spring.

Q. The idea is that by fishing in very shoal water the fishermen get a very unfair proportion of small fish?—A. It seems strange the size of the fish all around this island.

Q. Do you not think that is due largely to the extent of the fishing in certain places?—A. In Malpeque I have seen very small lobsters. I have seen them that size (illustrating by a gesture).

Q. How long would that be?—A. Four and a half to five inches.

Q. Is there any statement you would like to make yourself?—A. I think not.

Witness discharged.

SIMON PINEAU, canner, North Rustico, called and sworn:—

By the Commissioner:

Q. Is your cannery at the outside shore?—A. Well, it is inside the harbour.

Q. How long have you been engaged in canning?—A. Seventeen years.

Q. Do you operate more than one cannery?—A. No.

Q. Have you always operated in the same place?—A. Always in the same place.

Q. Are there many other canneries in your neighbourhood?—A. There are three others now. There is the Portland Packing Co., Peters and this co-operative cannery.

Q. What number of boats do you employ?—A. When I started at first I ran 4. I run sometimes 8 and as high as 17.

Q. How many have you now?—A. I think 9 this year.

Q. Do you supply entirely your own boats and gear or do you buy?—A. Two boats we supply with gear.

Q. The other boats are owned by the fishermen?—A. They own their own gear.

Q. And sell their catch to you?—A. Yes, sir.

Q. On what lay?—A. So much a hundred pounds.

Q. What was the price this year?—A. If it makes no difference I would just as soon not be asked that.

Q. Was the price lower this year than last?—A. Lower.

Q. That was due to the fall in the market I suppose?—A. The fall in the market. We gauged the price of lobsters in the spring by the market.

Q. Who fixes the price? Does the canner do that himself, or is it matter of arrangement between him and his fishermen?—A. Well, sometimes the canners arrange it and some times the fishermen among themselves. They arrange the price themselves for their own side, and we have got to arrange a price for our own side.

Q. In the final outcome it is a compromise from that?—A. Just so. If we had to pay the price they wanted last spring we would have been in a hole badly.

Q. Where do your boats fish?—A. They fish from Rustico west along the shore.

Q. How far do they go out?—A. I would say they fish as far as 13 fathoms of water.

Q. How far off shore?—A. In the vicinity of two and a half miles.

Q. There are none of your boats fishing inside in the harbour?—A. Not in the bay.

Q. What is their practice with regard to the fishery; the fishermen put out their traps when?—A. Whenever we can get a chance clear of the ice. Of course up to last year there was a season commencing the 20th of April. If the ice was away before that we could put out our traps.

Q. This season fishing commenced on the 26th April?—A. 26th April.

Q. When there was no limit did you go out earlier?—A. We did not make a practice to go out quite so early, but we got more chance this last few years and we go out earlier.

Q. How does the present opening date, April 26th, meet your case?—A. I don't approve of it at all.

Q. Who fixed that date?—A. As I understand it was fixed by Act of Parliament here in our local legislature.

Q. There must have been some opinion behind that date or it could not have been carried?—A. The fishermen and packers in general were not consulted. I spoke to some of the members in Charlottetown and I said: 'Leave things alone. Everything is all right as far as we are concerned.'

Q. Do you fish all through the season in the same depth of water?—A. No, sir.

Q. Your fishermen move in?—A. Move in, yes.

Q. About the middle of the season?—A. Well, yes, they commence to move in about that time, the 1st of June.

SESSIONAL PAPER No. 22a

Q. Do the fishermen move in when the run of lobsters has passed them?—A. The lobsters move inshore into shoal water.

Q. And they simply move in to follow the lobsters?—A. Follow the lobsters.

Q. What is your experience with regard to the nature of the fishery? When is the best period of your fishing?—A. From the time we start in, say to about the 25th of May, it is the height of our fishery.

Q. What percentage of fish will you take in that part of the season; would it be half your catch?—A. Almost. I am talking from memory now.

Q. And do you get a better run of fish during that time than later in the season?—A. Yes, we get a better run of fish.

Q. Will the lobsters be as full of meat?—A. No.

Q. Will 100 fish then give uniformly as large a return as 100 fish later in the season?—A. No, the month of June is when we find the lobsters turn out better.

Q. Have you come to any conclusion yourself as to the percentage of breeding lobsters you find in the catch?—A. Well, I would say they would be between two and three per cent.

Q. Is it greater at one time than at another?—A. I think along about the 1st of June.

Q. That is about the time they are coming in?—A. Yes, there are more berried lobsters.

Q. What is the average size of the berried lobster?—A. Well, I would say somewhere about 9 and 10 inches. They are mostly all about 8 inches any way.

Q. Some gentlemen have told us they saw berried lobsters 6 inches long?—A. To the best of my memory I never saw them.

Q. Where count has been kept it has been found that there is one seven-inch lobster in about 100,000; there are very few even under eight inches?—A. No.

Q. Of lobsters eight and a half inches there begin to be more. Would you say that it requires an increased amount of gear to-day to make up your pack?—A. Yes.

Q. That is compared with what you could have fished in the beginning of the fishery?—A. Yes.

Q. To what do you attribute the falling away?—A. The only way I can account for it is because the lobsters are fished out.

Q. Have the regulations ever been observed, do you think, with regard to berried and undersized lobsters?—A. Well of course the berried lobster regulation was enforced last year, we respected the law last year. Before that I don't know that it had very much effect.

Q. Do you think that since you have tried to respect the law the fishermen have practised rubbing off the berries outside?—A. I am under the impression that they do, that is my impression.

Q. You recognize the fact, of course, that it must be wrong to destroy the breeding fish, to take fish that are undersized and have not reached the age at which they can reproduce themselves? What is your solution of the difficulty, what regulation should be adopted to put a stop to the practice?—A. It is a hard matter. The only thing that I see in order to preserve those berried lobsters would be to give the fishermen some inducement to save them.

Q. How would you save them?—A. The only means that I see is by saving the lobster; by having a hatchery somewhere and depositing the spawn.

Q. Saving the eggs in that way by hatching them out?—A. Yes.

Q. Various propositions have been made with a view of saving the fishery; to do away with fishing altogether for a term of years, to fish only in sections of the coast, to do away with the size limit, save the berried lobster and somewhat shorten the season; which of these propositions do you think the most feasible?—A. To bring back the industry to a good footing?

Q. Yes.—A. The only proposition I would make would be to close down universally for a term of years.

9-10 EDWARD VII., A. 1910

Q. That would be the clearest, shortest and very best way would it not?—A. Yes.

Q. But there is an immense amount of capital involved, what would become of the gear and what would the fishermen do?—A. There is the question.

Q. We have to think of the fisherman too?—A. Yes. Of course the only way we could bring the fishery back quickly to a good footing, in my opinion, would be to close down. Still it would be a hard thing, looking at it from the standpoint of the fishermen.

Q. What would you think of the third proposition to do away with the size limit, because it seems always impossible to enforce it?—A. It would mean the closing down of every factory, at least in our section, if you enforced it.

Q. What would you think of the alternative proposition; doing away with the size limit, protecting the berried lobster in one way or the other, and shortening the season by ten days; do you think that would be the most reasonable of the several propositions and the easiest on the industry?—A. The way that I look at it would be to establish hatcheries in different parts of the island and shorten the season by ten days.

Q. Do you think the fishery could still be carried on successfully if we shortened the season? Some people say: 'If you shorten the season it will run us out altogether.'—A. I don't think so, because the way I look at it, that is the time of the season the lobster casts its shell and the lobster then is not fit for human food.

Q. Is it not the case that a great many people do not fish for the last ten days of the season?—A. In some cases we don't. We follow the business ourselves to the very last day and the lobsters we get in July are mostly soft shelled.

Q. Then shortening the season would not put you out?—A. It would not put me out.

Q. And you would expect in a few years to reap the benefit by an improved catch?—A. Yes.

Q. What do you think of the proposition to license the fishermen?—A. I believe that is all right enough. I believe any one packing lobsters ought to pay a license.

Q. But in this case it is not the packer but the fishermen it is proposed to license; do you think it would make any difference in the fisherman's desire to observe the law if he had a license?—A. I think it would make some difference.

Q. A certain proportion of the fishermen would be protected by it?—A. Yes.

Q. Do you think the majority of the fishermen are satisfied with the price paid them?—A. Well in some cases they would not be satisfied even if they got more. I know that.

Q. Have the fishermen got all there was in it?—A. Yes.

Q. Do you think there is any time of the fishery when the lobsters are not fit for food?—A. I think so. I believe in the month of July when they cast their shell.

Q. Were you here all morning?—A. I was here part of the morning.

Q. You heard the evidence given; how does it tally with most of your views?—A. I heard a couple of witnesses. There are some views that don't tally very well with mine.

Q. On what point would you differ from some of the other witnesses?—A. I believe that canneries should be of a certain type of building, equipped in a certain way to cost a certain amount of money, that the thing might be done decent and respectable.

Q. That is you would have a standard?—A. Yes, and I believe in having the goods inspected too and put up by competent hands.

Q. How would you establish that standard cannery, what would you begin by doing? You would have to say that a canner should can at least a certain quantity of lobsters?—A. Of course I would not take it that way, because the failure of fishing in one year might make some difference, but I would say the canner ought to be worth a certain amount of money, and that no one could pack lobsters unless their factory was up to the standard.

Q. They should have a certain capital to go into the business with?—A. Yes.

SESSIONAL PAPER No. 22a

Q. If they could do that would you give a license to any man who showed his ability to conform to the requirements—A. Yes.

Q. Do you think that the canner could stand an increased fee to pay for the berried lobsters to be purchased from the fishermen?—A. Well, of course—

Q. Outsiders, you know, claim that if you have got to protect the lobster fishery and spend money on it, the industry should pay for its own protection. The fee at present is an insignificant one.—A. Of course it does not amount to very much. It would be of interest to the packer.

Q. A good many packers have said that they were willing for their part to pay an increased fee with a view of having that money spent in the purchase of lobsters for breeding purposes.—A. If all the canners would volunteer and pay the cost I guess that would be all right enough.

Q. The license fee would be fixed perhaps at 5 or 10 cents instead of 2 cents. They would not have to pay it?—A. But I mean if they would distribute the lobsters, if they would give you the berried lobsters and not use them for canning. The way I look at it, if the department would pay the price for the berried lobsters it would be an inducement to the packer as well as to the fisherman to have those lobsters distributed to the hatchery.

Q. Could not the average canner be trusted to do that?—A. Yes, there are plenty that could be trusted but there are some that probably could not be—

Q. There would be some as bad as the fishermen?—A. That is the way I look at it.

Q. Do you know anything about the live lobster trade?—A. No.

Q. It could not be carried on where you are?—A. No, the facilities do not exist.

Q. Where the facilities do exist do you think that trade might be encouraged?—A. I do not think so. Our transportation facilities are not just what they ought to be.

Q. I do not mean here. Take the coast of Nova Scotia where the larger part of the lobsters are being exported. Where that is the case do you think it would be better to encourage that branch of the industry and shut down on the canning?—A. I think so because they have got the facilities there that we have not got here.

Q. Do you think the live lobster trade brings a larger return to the fisherman than selling to the canner?—A. I think so. I was always under the impression they could make more money out of it.

Q. What do you think about the practice of giving licenses to aliens?—A. I am under the impression that is not right.

Q. At all events you think no new licenses should be given to aliens?—A. Sure.

Q. Of course the people from the United States are really the pioneers in the business over the greater part of the coast. They began it first, and they employ Canadian labour and their traps are made in Canada, the only thing they have in it is their capital. You think that in future where an alien and a Canadian are applicants for a canning license, the Canadian should have the preference?—A. The Canadian should have the preference.

Q. Is it to your knowledge that there is any combination on the part of the packers to keep the price down?—A. No, sir, not to injure the fishermen. The packers, like other people, sometimes sit down and make the price as far as the market is concerned, but not to injure the fishermen or to take any advantage whatever.

Q. Have you had any experience of hatcheries at all?—A. No, sir.

Q. There are none in your neighbourhood?—A. No, sir.

Q. But you would favour the establishment of hatcheries?—A. Yes, sure.

Q. Is there anything else you would like to state?—A. The only thing I would like to state is this: In the spring of the year there ought to be no time fixed. I heard it stated a while ago that Professor Prince was in favour of commencing the 1st of January. I think that would be a very good move, from the very fact that a man could begin to fish when conditions permitted. It would depend altogether upon the ice. If the ice was off by the 15th of April, a man could set his gear if he wanted to.

9-10 EDWARD VII., A. 1910

I think there ought to be no limit in the spring of the year. We cannot begin now before April. I would be strongly in favour of cutting off ten days in July for the sake of the protection to the industry. I also strongly advocate establishing as many hatcheries as possible on the island.

Witness discharged.

GEORGE S. LARTER, canner, Cove Head, called and sworn:—

By the Commissioner:

Q. Are you speaking as a canner or a fisherman?—A. As a canner.

Q. Where is your cannery situated?—A. At Cove Head on the north side, between five and six miles from Rustico.

Q. Is it on the outside coast?—A. Yes, on the outside coast.

Q. You heard the evidence given by the previous witnesses?—A. Yes, sir.

Q. Does it meet your views fairly?—A. Well, pretty much.

Q. What number of boats do you fish?—A. Twenty boats.

Q. How many of them do you own and how many are hired?—A. There are 12 that find their own gear and as to the balance we find it.

Q. Have you pretty much the same arrangement as the other canners?—A. Yes, pretty much the same.

Q. This year the price is a little less than last year?—A. Yes, it was less than last year.

Q. How do you fix that price?—A. We hire the fishermen in the winter time and they mostly fix the price themselves.

Q. Are you obliged to give them what they ask?—A. Just whatever they ask they are to get.

Q. Is it to your knowledge that there is any combination among the packers?—A. Not a bit. I think the canner gives more than he should.

Q. In what depth of water do your fishermen fish?—A. All the way from 14 fathoms into a fathom.

Q. They begin I suppose by fishing outside in the early spring?—A. Fourteen, 12, 9 and 7 fathoms according as——

Q. When do they get out as a rule?—A. Whenever the ice goes.

Q. One year with the other what would you say?—A. I have run lines on the north side on the 30th of April.

Q. And caught fish?—A. And caught fish. The ice came in once and went away again.

Q. Did you lose your gear then?—A. Not a trap, it did not come in far enough for that.

Q. What is your opinion as to the time for opening the season?—A. The earlier we could get at it the better, just according as the ice allows.

Q. Have you any idea how it come to pass that an opening date was fixed?—A. None at all.

Q. How long do you fish in deep water?—A. To the middle of June.

Q. And then what happens?—A. Then the fishermen start shifting in their gear.

Q. Into shoal water?—A. Into shoaler water.

Q. What is the difference in the quality of fish you get in deeper water in the earlier part of the spring, compared with what you get late in the season?—A. You get the lobsters smaller, later on in the season. According as you shift in your gear you get smaller lobsters.

Q. Do you think it is fair to say that the shoaler the water the smaller the fish?—A. The smaller the fish.

Q. What proportion of the fish you take would be below the size limit of 8 inches?—A. There would be a lot.

SESSIONAL PAPER No. 22a

Q. What percentage of the fish you take throughout the season would be egg-bearing lobsters?—A. Oh, well, I would think there would be about—I could hardly tell you. There is a big lot this year. It varies one year with another.

Q. It varies with different years?—A. Yes.

Q. How are the female lobsters as a rule, are they good sized lobsters?—A. Good sized lobsters all the way from 7 to 10 inches.

Q. You would place the limit as low as 7?—A. Yes.

Q. What has been the practice in the past with regard to the regulations; have they been observed at all?—A. No. Well, some years ago they were followed up pretty strict. You could not take anything less than a 9-inch lobster.

Q. Were they able to follow up that regulation strictly?—A. Yes, sir.

Q. Were people fined and punished, do you remember, for the violation of the regulation in those days?—A. Yes.

Q. Has anybody ever been fined since?—A. No.

Q. What would happen if the canner refused to accept the berried and small lobsters?—A. The fishermen would not fish.

Q. And would the canner shut down?—A. He would have to shut down.

Q. Do you think it is possible to enforce the size limit regulation?—A. I think so, by having some hatcheries built.

Q. But the hatcheries would not have anything to do with the enforcement of the size limit?—A. They should look after it.

Q. Do you think it should be done?—A. It could be done. Fine every fisherman who violates the law and forces the packer to take those lobsters.

Q. Do you think the industry could be kept going if you did that?—A. It could. I did endeavour this summer to take no spawn lobsters and when the fishermen came in, the wash-boards of the boats were painted with spawn.

Q. What did you do?—A. I would have to take the lobsters because there was no spawn on them; the spawn was all washed off.

Q. You say these regulations are difficult to enforce; with your knowledge of fishermen how do you think you could induce them to obey the law?—A. They are a pretty hard crowd to get at. I don't know how you would get at them.

Q. You have heard the evidence given by the other witnesses. We want to protect the lobsters, the female lobster especially; what suggestion could you offer to bring about that result?—A. Make the packer take the name of every fisherman that lands a spawn lobster when he delivers them, and then let him give in his name and have him fined.

Q. You would put the law in force rigidly?—A. For the fishermen do as they will, that is about the size of it. The packers take the lobsters when they ought not to take them and when they cannot handle them.

Q. You think if you refused to take spawn lobsters from the fishermen, they would go to other packers who would take them?—A. Yes.

Q. Have you known that to be done?—A. I have not, but I know they do it.

Q. Various propositions have been made, including one to shut down altogether for a certain number of years?—A. You might just as well build a lot more poor houses.

Q. Another proposition is to shut down by sections?—A. That does not make any difference. The fishermen would have his gear there with no buoys on it, and would go around with his anchor and pick it up. It would not make a bit of difference.

Q. A further proposition is to do away with the size limit?—A. I would make them not take any less than 5 inches or pass a law for the fisherman not to fish in any less than two or three fathoms of water.

Q. You would keep them out in deeper water?—A. In deeper water. Then the packer saves his gear.

Q. Do you think we could protect a larger number of smaller lobsters by increas-

9-10 EDWARD VII., A. 1910

ing the space between the slats of the trap?—A. No, you could not. The only way to protect the small lobster is not to allow the fisherman to fish in shoaler water than two or three fathoms. You follow them in when the tide goes out and you can see their traps on the shore.

Q. There is where the damage is done?—A. There is where it is. The packer loses the gear, but where the man finds his own gear he will keep them out in deep water.

Q. The man who furnished his own gear would be careful where he put it?—A. Well, I have a man out there who never shifted his gear at all. He has good fishing, although it was slack for a few days, and lost no gear.

Q. Do you think you could stand a shortening of the season?—A. I don't believe it. The only way to protect the fishery is not to allow the fishermen to fish in anything under two or three fathoms of water.

Q. That is your sovereign remedy?—A. There are certain times, between the 15th and 20th July, when the lobsters are sick and commence to shell, although you get soft shell lobsters in June. This year there have been more spawn lobsters in May.

Q. How would knocking off the last ten days of the season affect you; would it put you out of business?—A. It would if it were like this year. We lost about ten hauls on account of the harbour. The fishermen could not get out when the Rustico boats were out. There is a harbour to get out of and when the boats would get out the tide would follow, and they would be lying outside with the lobsters dying in them.

Q. Do you do any fishing in the harbour?—A. No.

Q. What do you think of inshore fishing?—A. It would do in some places.

Q. Do you think there is a notable proportion of small fish taken inshore?—A. Down in the Magdalen Islands there are big lobsters. I have been down to Labrador and Anticosti.

Q. Have you fished in Anticosti?—A. The first time the short season came in I was working for John A. Matheson.

Q. Where had he a cannery?—A. In Campbellton and Big Miminigash.

Q. He had none in Anticosti?—A. He went down in a schooner with Captain Bill Larkin, and put out some traps there and remained a couple of days.

Q. What sort of lobsters did you get at Anticosti?—A. They were fair sized but when we got down to Washeecootai they averaged one to a can. But those lobsters would not trap. We used to leave the doors open to see if we could get them.

Q. You would not get those lobsters in your traps here?—A. No. We would get an odd big one on the hooks coming up.

Q. Do you think a considerable proportion of large lobsters are left outside because they will not trap?—A. Yes.

Q. What is the size of your hoop?—A. All the way from three to four inches.

Q. You coincide with most of the evidence given by the other gentlemen?—A. Yes. Of course on the south side the fishing is different from what it is on the north side.

Q. You have fished on the south side?—A. Yes.

Q. In what part?—A. I was one summer at Hanbury's factory in Canoe Cove, near St. Peter's island and I worked another summer at Livingstone.

Q. How do you find the fishing in one place compared with another?—A. They are larger.

Q. The fish on the south shore are larger?—A. Yes, they average three to a can.

Q. And what would the average be now on the north shore?—A. About $4\frac{1}{2}$ and $4\frac{1}{2}$ pounds.

Q. Is that the number of pounds of green lobsters to a can?—A. That is what it takes to make a pound.

Q. And how many lobsters would it take to make 100 pounds with you?—A. Sometimes we take 250 and 300 according to the season. You may strike a May month

SESSIONAL PAPER No. 22a

when the lobsters are full. You may strike another May when the lobsters are empty, nothing in them.

Q. What is your experience in regard to the berried lobsters? I have heard it said to-day that the berried lobsters do not turn out as well when you come to can them. Most of our witnesses say the berried lobster is the best lobster they get?—A. They are full and hard to get out of the shell.

Q. No doubt that is why a great many persons object to throwing them away. A great many witnesses have said, they are the best lobsters they get?—A. If you get a 4-inch lobster it is full. A lobster has got to be full before it shells. It has got to be full so as to burst the shell in order to get out.

Q. As a rule four and five inch lobsters turn out very good meat?—A. They turn out pretty good meat and they look better than the large sized fish.

Q. And they give more cans to the hundred?—A. That is to the hundred pounds. I was talking to John A. Matheson at the factory, and he was telling me they turned out seven cases out of 1,000 pounds on the south side.

Q. Is there anything more you would like to state?—A. I would like to see a law passed not to allow the fishermen to fish in anything less than from two to three fathoms of water.

Q. Would that be easy of accomplishment?—A. Yes.

Q. You would need boats afloat to have that carried out?—A. Every man that furnishes his own gear marks his own buoys and puts his own name on it. I would pick them up right along and put a stiff fine on them. There is no use cutting a man's gear away.

Witness discharged.

LETTER FROM COMPTON & COMPANY.

Mr. WARBURTON, M.P., handed in the following communication from B. Compton & Co.:—

BELLE RIVER, P. E. ISLAND, August 2nd, 1909.

MESSRS. WARBURTON & PROWSE,
Charlottetown, P.E.I.

DEAR SIR,—We received your invitation of the 28th ulto. to attend meeting *re* lobster industry and as we cannot conveniently attend we are writing the following statements hoping that this will be satisfactory, and giving our word of honour for the truth of what we have to say.

We are a company of seven men under the name of B. Compton & Co. Each of us runs a boat with the help of a hired man.

We jointly own all fishing gear, boats and plant, and share equally expenses and profits.

We have been in the lobster business during the past twelve years and some of our older members have been engaged in the industry, with the exception of a few lapses, ever since it began here.

We catch most of our lobsters 5 to 7 miles off shore on a 12 fathom bank lying just across the 20 fathom mud channel. Balance caught along shore 2 to 4 fathoms.

We have read much of the evidence taken before the Marine and Fisheries Committee during its session of this year and notice that conditions as described by witnesses from other sections vary much in some respects from what we find them here.

The most notable instance was that relating to the particular part of the season when the greatest percentage of spawn lobsters were found. Most witnesses testified that spawn lobsters were found in much greater numbers during latter part of June and 1st of July, whereas we catch most spawn fish during ten days in the latter part of May or earlier in an early season.

9-10 EDWARD VII., A. 1910

During this while we found as high as 20 berried lobsters in a boat's catch of 300. They then became scarcer until hardly noticeable or from 1 to 5 in the boat load towards the end of the season.

Another point in exception was that we did not find the traps near shore in 2 to 4 fathoms to take more spawn than those in deep water even at the last of the season.

We always thought here that the spawning and casting of shells was done down in the mud channels where we never set traps excepting as an experiment. I might remark here that one witness from N.S. testified that lobsters there had no use for mud and we tried single traps here in the deepest mud we could find (22 fathoms) and caught 2 to 7 lobsters in each of 3 traps set. But under these conditions the traps stuck so fast in mud and seaweed and the depth of tide flowing against the buoy lines made the hauling of traps there so impracticable that we did not pursue it.

We very rarely see a soft shelled lobster (never at all from the 12 fathom grounds) and the quality of the meat holds good right to the last though in quantity it does fall off somewhat in proportion to weight of shell.

As a rule it requires 200 lbs. (of all sizes) in shell to furnish meat for a 48 lb. case, the lowest being 190 lbs. in early spring to 210 lbs. in July.

We find small lobsters to give a larger proportion of meat per weight in shell than large ones.

The only defective meat we find is that of the few old crustaceans which have ceased to cast their shells and are barnacled.

We do not feel alarmed about the extinction of the lobster supply as one-half the lobsters left each season are females which must produce at some time during the year as they seem to all carry spawn inside if not out on the tail, and the berries on very few of these would represent a season's catch for a cannery and for the standing supply leaving the entire balance to account for the ravages of other fish upon them. But, if the department must enforce laws to preserve the industry, the one main point, in our opinion, is to devise some means of inducing the fishermen to liberate all spawn lobsters on the grounds or rather near the fishing grounds, in deep water where they would have a good chance of hatching before being again taken.

We are quite sure here that our fishing grounds are not the places where our supply comes from as they come in shoals several times during the season, nearly always from the west or up the straits, and are known to each fisherman as the 'new shoal' as they move across the lines (or trawls) in turn at the rate of half to one mile per day.

Some of the shoal remaining around each trawl and daily becoming scarcer as they are caught off the grounds. These trawls then do only poor fishing until another shoal arrives.

One puzzling feature is that whereas a few years ago we caught large lobsters in deep water and small reddish ones in shallow water we now have reversed conditions and the lobsters coming inshore are dark bluish ones as large as were caught here when the business began years ago, and the bank or deep water lobsters have now dwindled in size though they do about the same in numbers.

We think that the department would save much expense and further trouble, while losing little, if any, benefit to the lobster industry, if they *wiped the size limit regulations off the books* as the sizes vary so much in so many different sections that it would be very difficult to fix any set of laws which would approach giving all-round satisfaction.

In our own case we do not waste time in taking the few very small lobsters out of the traps but leave them to escape, which they do before next day.

As we pack our own lobsters they would be of small benefit if taken to the factory so we 'let them grow.'

We would call a 5-inch lobster 'small' and our lowest average measured $8\frac{1}{2}$ inches for the boat load.

We believe that nearly all grounds are fished to their full *paying* capacity and

SESSIONAL PAPER No. 22a

that whereas there may be a profit in a certain location for one firm there would not be satisfactory returns for either if another firm started there too. So we would favour leaving the license system as it stands, giving new licenses to fishermen *already in the business* in order to protect them from unjust pressure by packers.

We do not think that a law restricting the number of traps used could or should be enforced, as the law could be easily evaded in getting out the traps and in counting them afterwards, and besides some boats can and do use 300 to 500 traps through the advantage of hauling them out of shallow water and close to shore, *for the same or less lobsters* than another boat will catch with 200 or 250 traps by going several miles to sea and having to contend with greater difficulties in depth of water, tide, distance, &c. Each boat runs all the traps that time and energy will allow and a law bearing on the number of traps might not affect the deep water man while it would cut the other's profits off entirely.

As the department is aware, the law bearing on spawn lobsters is easily evaded by washing the spawn off out at sea so that an officer *could not distinguish* one so treated from another which had just finished hatching.

So the only way left is for the government to buy (at the regular price) the spawn lobsters caught and have them liberated if not taken to a hatchery. These lobsters should not be taken ashore in any case, but as the fishermen could not be depended upon for the number they had caught and liberated we can only think of one remedy left, viz.:—to engage one of the fishermen or packers at low wages and place him on oath to receive and pay for all berried lobsters landed in *good condition*, then to take them out to sea and liberate them in a safe depth of water.

A lobster heavily dropped into a boat and left under the sun for several hours would stand a poor chance of surviving afterwards, so these berried lobsters would need careful handling.

As a matter of fact, the writer has liberated a great many of the spawn lobsters caught and it seems quite easy to let them go when one begins the practice, but an occasional one will escape notice and come ashore with the rest as they are always 'back up' in the trap, and are taken out in great haste there being always competition between the boats to 'get thro first.'

Allowance should be made in the law for two spawn lobsters to a boatload on account of the difficulty of detecting them at all.

Trusting that our evidence may prove of some value in framing satisfactory laws for the future.

We are,

Yours truly,

B. COMPTON, & CO.

P.S.—One of the greatest menaces to the lobster business here is the increasing crab pest. Thirty years ago the fishermen were glad to see a crab which they would put on as lobster bait, but of late years they are swarming the grounds in millions and are a great nuisance in the traps cleaning the bait off daily and coming in such great numbers as to almost block the trap solid inside and many hanging on the outside.

Lobsters and crabs are enemies and are never found together in plentiful numbers. Taken fish to fish the lobster is easily master, but when outnumbered 100 to 1, as they quite often are, the lobster does not seem eager to get into a trap where he will be found buried under a seething mass of his enemies.

In the season when crabs are most numerous, and on the part of the fishing ground where found most plentiful, the lobster is almost nil, then again, when the lobsters increase the crabs give way.

Yours,

B. C. & CO.

9-10 EDWARD VII., A. 1910

NEWTON McLEOD, canner, Park Corner, called and sworn:—

By the Commissioner:

Q. Where do you carry on canning?—A. Park Corner on the north side of the Island handy to New London Harbour.

Q. Do you control more than one cannery?—A. No, sir.

Q. What is the capacity of your cannery; how much did you pack this year?—A. I have only packed something less than 400 cases this year.

Q. What is the best pack you ever made?—A. Some years we packed 2,400 cases. That is a good many years ago.

Q. How long ago?—A. Twenty-six years ago.

Q. How long have you been in the business?—A. Twenty-eight or thirty years.

Q. When you made that big pack how did your gear compare with the amount you used to-day?—A. We had not as much gear to a man, but we used to haul twice a day then.

Q. The traps used to fill up and you had to empty them?—A. Yes, haul twice.

Q. Was the average catch very much better, was there a longer run of lobsters then?—A. Yes, I think in those days there was. For the last eight or ten years I don't think there has been much change in size.

Q. When did the great decrease take place, it does not seem to have been a matter of recent years?—A. No, not of recent years. I can remember when you caught them with a gaff along the shore, along the rocks. There seemed to be plenty and if you had a codfish head they would come in around.

Q. When did you first notice the decrease?—A. Some years we would do even better than in former years.

Q. But still there has been a great decrease?—A. Since those days.

Q. When did you first notice the decrease was beginning?—A. I don't know that I could say, it was gradual I suppose.

Q. Within the last five or ten years you say you have not noticed any?—A. Not so much decrease. This year is an off season. There was an off season three or four years ago, and then the next year was a very good one.

Q. Had you not off seasons in the years when you took so many lobsters?—A. Oh, yes, we had some seasons when we would not do near as well.

Q. How many boats do you employ?—A. Well, we had about twelve this summer.

Q. Were they all your own boats?—A. No, there were eight of them ours.

Q. In what depth of water do your boats begin fishing?—A. In the spring at different depths. They go down to about twelve or thirteen fathoms.

Q. How far off shore would that be?—A. Two miles and a half probably.

Q. Do you lose much gear?—A. Yes, sir, some years we lose a good deal of gear.

Q. Is that due to the ice or rough weather?—A. Rough weather.

Q. Rough weather washing them ashore?—A. Yes, sir, and breaking them up.

Q. In twelve fathoms would you lose much gear?—A. Not so much. Sometimes we would lose them at that depth in a very heavy storm. As the season advances the fishermen move their gear in.

Q. They do that with a view of following the lobsters?—A. Yes, sir, following them ashore.

Q. The first run of lobsters has passed in and they follow them in?—A. Yes, sir. This year the outside boats did not do as well as usual.

Q. Do the lobsters pass, do you think, before you get your traps out?—A. I don't know I am sure. I am not a fisherman of course.

Q. But still you know what goes on among the fishermen?—A. Yes, sir.

Q. When did the ice leave your shore this spring; up towards the north end the ice held on very late.—A. We commenced packing the 10th of May this year and the ice was away about that time. We put the gear out some days before that.

SESSIONAL PAPER No. 22a

Q. How long does it ordinarily take a fisherman to get out his gear?—A. About four fine days.

Q. He will put out about 300 traps?—A. About 300 traps. Sometimes they put out a couple of hundred on a fine day when they get everything ready.

Q. Where do you get your bait?—A. We buy some in the vicinity, catch it off our own place, and some we buy that is caught in Richmond Bay.

Q. The bait is all taken about the Island?—A. Yes, sir, what we have taken.

Q. Beginning with the open season when do you expect to make your best catch of fish?—A. Well generally in May we consider is the best month, although I remember one year we did not catch any until the 3rd of June. That was the year we caught our best catch. That year we fished up to the 20th August.

Q. What delayed you that spring?—A. The ice.

Q. Have you ever noticed when the ice remains late on the shore, that the lobsters seem to come in with a rush afterwards?—A. We always find better fishing, although this year it was different.

Q. Are the fish you catch early in the spring better than those caught in the latter end of the season?—A. Yes, sir. The fish are smaller towards the end of the season.

Q. Do you think it would be fair to say that in shoal water and late in the season, you will get a smaller run of fish generally?—A. I think so. There is a bigger percentage of small fish.

Q. In shoal water late in the season?—A. Yes.

Q. Would you be in favour of limiting the depth of water in which fishing should be allowed?—A. Fishing in deeper water, I believe, would be to the advantage of the packers, because otherwise they get the gear so close in, that storms come and destroy it.

Q. Yes, but we are looking at it from the point of view of the lobster, not from the packer's standpoint?—A. The fishermen will go anywhere if they are not prevented.

Q. What percentage of the lobsters you catch are female lobsters bearing eggs?—A. They are not large. I watched our own men particularly this summer; in fact I happen to be fishery warden, but among our own men we could not find many.

Q. You set a good example?—A. We try to, but sometimes it is almost impossible. The fishermen will put them in the boat and you would not notice them until after they were boiled.

Q. Where is it easiest to detect these female lobsters; as they are taken out the trap or as they come into the cannery?—A. Well, I don't know. The way we take them, the fishermen put them into the boats and then they come to the landing and there they are thrown by handfuls into a barrow.

Q. And if the catch is a good one it is pretty difficult to find the female lobsters with berries?—A. Pretty difficult to find them because they take them up by large barrow loads.

Q. Is it not easier for the fishermen to detect the berried lobsters when he is taking them out of the trap?—A. That is easier.

Q. Inside, despite all precautions, a certain number will slip through?—A. Yes. I used to think myself I had not one, and after they were boiled we would notice a spawn lobster.

Q. Is there any particular part of the season when you would expect to catch a larger run of spawning lobsters?—A. I don't know I am sure, although I think the last of the season is the time when you get more spawn lobsters. Still I heard a gentleman say to-day he thought there were more in the spring of the year.

Q. What would be the best way of getting at the fishermen to induce them to protect the berried lobsters?—A. My opinion is the only way would be to give the fishermen something more for the spawn lobsters than they are getting from the packers. Then they would be interested in saving them.

Q. And what would you do with them?—A. That is the question. There ought to be a hatchery or some place to put them in.

9-10 EDWARD VII., A. 1910

Q. Do you think they should be brought in and liberated close in shore?—A. The trouble would be the inside traps would catch them again.

Q. You think they would work off again and get into the traps and you would be paying for the same lobster over and over again?—A. Yes, I think there would be a possibility of that.

Q. Is there any opportunity on your part of the coast to establish pounds?—A. I would think there would be. New London is the handiest to us.

Q. Would the harbour there be one that it is possible to bar off?—A. There are beautiful rivers and a big bay.

Q. We do not want fresh water rivers?—A. The rivers flow in.

Q. Could such a place be barred off without interfering with navigation?—A. Yes, sir, I think so.

Q. A great many people advocate depositing the female lobster in a pound and holding her there until the open season is over. They think that system is preferable even to a hatchery?—A. I think that myself.

Q. Because unless the eggs are very carefully stripped from the female lobster and handled immediately, the percentage of loss is very great in taking the eggs to the hatchery?—A. Yes, sir. There are creeks off these rivers where the tide flows right in from the sea, where there is no navigation.

Q. The main consideration is to get a sufficiently large area, because the lobsters must not be crowded and they have to be fed?—A. There is a large area.

Q. And the mouth should be narrow to permit of the area being barred off?—A. Above Clifton bridge or Stanley bridge there are large basins of water.

Q. Do the majority of the fishermen on the north shore of the island own their own gear?—A. No, I think the canners own the gear in most of the cases. There are some that own their own gear of course.

Q. Do you think it would be possible or wise to limit the amount of gear to be fished by a canner?—A. Well, I believe there is too much gear.

Q. How would you prevent the fishing of so much gear?—A. I know on our boats that is one difficulty in saving the spawn lobsters. Our men say: 'There is no use my saving them, the next one will catch them.' The traps are all together.

Q. You think there is too much gear?—A. Too much gear.

Q. Is there much overlapping?—A. Yes, a good deal.

Q. And fights between the fishermen?—A. Yes.

Q. What is your idea of the opening season?—A. I should think the opening season should be the 1st of May.

Q. Is that what you would want?—A. I think that would suit us as a general thing. Of course we have caught lobsters in April.

Q. What is the object of fixing an open season?—A. The ice fixes that for us.

Q. Does not nature provide a natural opening season?—A. I think it would be necessary to make a date. There would be some fellows that would set traps in the middle of March if there was open water. Anyhow I always think the 1st of May or the 26th of April not a bad time.

Q. Do you think the fishery is being exhausted, that the fishing is being over-done?—A. I think it has been over-fished.

Q. You think the decline in the fishery is the result of over-fishing?—A. Yes, I think so.

Q. What would be your proposition by way of ameliorating the condition of affairs? We have various schemes before us. Some people have suggested closing down for a term of years everywhere. The last witness we had said he would be in favour of that and he thought it was the best way out of the difficulty?—A. That would be a kind of harsh remedy. That would thrust a good many of us out in the cold.

Q. That should not be done of course without giving a certain amount of warning?

SESSIONAL PAPER No. 22a

—A. I don't know what benefit you would get. In a few years hence you would start again and flood the market.

Q. I suppose that when a fresh start was made it would be with more careful regulations. Another suggestion made by the Lobster Commission of 1898 was that the fishery should close down by sections; what would you think of that?—A. Well, I guess all hands would flock to the sections that were not closed down.

Q. Again, another proposition is that we should do away with the size limit but protect the berried lobster always?—A. Well, my opinion is it is almost impossible to carry on business and have a size limit here.

Do you think it is not possible to enforce the size limit regulation except at considerable cost?—A. I am afraid it is not.

Q. It has been also proposed to do away with the size limit, establish a width of opening between the lower slats of the trap to provide a way of escape for the very small lobsters, and shorten the season by ten days, at the same time establishing hatcheries or, where it is possible, have pounds in which to put the berried lobster; do you think that would be a reasonable way out of the difficulty?—A. I think so. That is the only way I can see out of the difficulty.

Q. Some people say: 'You must not shorten the season, it will put us out of business.' Is that your idea?—A. No. I think the two months of May and June would give the lobsters a good deal more protection. The July fish I find are very small.

Q. The idea is that the greatest amount of damage is done at the back end of the season. You do not think that would unnecessarily cripple the business?—A. I don't think it.

Witness discharged.

J. D. JUDSON, canner, Alexandra, Lot 49, called and sworn:—

By the Commissioner:

How long have you been engaged in lobster packing, how many canneries do you control and where are they situated?—A. I have been in the lobster packing about 15 years. I control three factories with a license at Governor's Island and Point Prim.

Q. How many boats do you employ?—A. About 20.

Q. And what number of hands, afloat and ashore?—A. About 50.

Q. Do you keep up your pack by the aid of increased gear and closer fishing?—A. Not for the last four or five years.

Q. Are you fishing a larger number of traps than you formerly fished?—A. They pack from six to seven cases a thousand by count. A boatload measured this year averaged nearly ten inches. We fish about 5,000 traps.

Q. Is it your opinion that the supply of lobsters is being kept up by packing fish that formerly would have been rejected as well as using an increased amount of gear?—A. There are enough gear and factories now, and fish are not quite so plentiful but just as large.

Q. Do the fishermen own the boats and gear or do you supply the outfit?—A. I own all the gear and boats and supply the outfit.

Q. At what size is the lobster fully matured?—A. I have one getting dressed now, caught this season, which is 32 inches long. The claw is 6 inches wide and 11 inches long; it is matured and about 8 years old. Lobsters taken here average about one pound the season through.

Q. What percentage of the lobsters taken in your traps bear eggs and at what period of the season are they most numerous?—A. In May.

9-10 EDWARD VII., A. 1910

Q. Has it been your practice to make an examination at the factory so as to detect if there are berried lobsters among those delivered?—A. I have delivered more berried lobsters to Charlottetown hatchery than any other packer ever since it was started.

Q. If the present size limit were strictly enforced what effect would it have upon the canners?—A. I think it would close a great many. I don't fish with close gear. The trap has a two and a half inch mouth and the laths are one and a quarter inches apart.

Q. Is it true, as stated, that no packer could continue in business and observe the size limit?—A. In some parts of the island the lobsters are larger than others. Some feeding grounds are better than others.

Q. Is the practice of stripping or washing off the eggs from the berried lobsters, followed by the fishermen?—A. We have men hired to take the eggs off right. The eggs should go to the hatchery as soon as they are removed.

Q. If the canners refused to accept the berried lobsters would the fishermen not return them to the water?—A. The packer would have to pay for them and he could not afford it.

Q. Are the regulations enforced in regard to the size limit of 8 inches and the taking of berried lobsters?—A. Most of our berried lobsters are larger than 8 inches. An 8-inch limit would be too large for some parts of the Island.

Q. What suggestion would you make for the better regulation or protection of the lobster fishery?—A. I approve of the season starting from the 26th of April or the last of May and closing the last of July. We should have more hatcheries, and be careful to get the spawn or berried lobsters in quick so that they will not perish, because they are very tender and want good care quickly. There are enough factories and gear now. To save the berries and increase the hatcheries is the best way to preserve the lobster fishery.

Witness discharged.

Commission adjourned.

CHARLOTTETOWN, August 4th, 1909.

The Commission met pursuant to notice but no witnesses offering themselves for examination, an adjournment was made to following day at Georgetown.

GEORGETOWN, August 5, 1909.

J. W. MACFEE, canner, Georgetown, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing?—A. For thirty-three years.

Q. How many canneries do you run?—A. I am interested in three.

Q. Where are they situated?—A. One at Panmure Island, one at Dolton Island, and one at Launching Point.

Q. What number of boats do you employ?—A. About forty-five.

Q. Are they mostly manned by two men?—A. Mostly.

SESSIONAL PAPER No. 22a

Q. What number of hands, men and women, do you employ in your canneries?—

A. That is, working inside?

Q. Inside?—A. In the three I suppose we have about thirty men and the same number of girls.

Q. What was your pack in the three canneries this year?—A. Somewhere in the vicinity of 1,100 cases in the three factories.

Q. And last year?—A. Last year we had over 1,500.

Q. And the year before?—A. I do not just remember, maybe 1,200 or 1,400.

Q. Last year and the year before seem to have been good years around the Island generally?—A. Yes, especially last year.

Q. What was the largest number of cases you have ever put up in those three canneries?—A. About 1,800 cases I think. That would be I suppose about four years ago.

Q. When was canning first begun here?—A. I cannot answer that question.

Q. Were there other factories canning here before you began?—A. Yes.

Q. Had they been long in operation do you think?—A. I think so, eight or ten years.

Q. Over the greater part of the coast, thirty and thirty-three years ago seems to have been the time of the commencement of the canning industry?—A. Yes. There were very few factories when we came here first.

Q. Are you fishing a greater amount of boats and gear now than when you began?—A. Yes.

Q. Do you consider that it takes a larger amount of gear to-day to keep up your pack than it did thirty years ago?—A. Yes. In 1890, I packed 1,175 cases with 1,500 traps in one factory.

Q. What is the total number of traps you fish to-day, how do they run per boat?—A. 275 to a double boat and about 175 to a single boat, that is the general run.

Q. According to the number of hands?—A. Some fish 300 or 400 traps I guess.

Q. What is the practice here as to fishing in the early part of the season, do you fish farther off shore?—A. Yes, sir.

Q. In what depth of water?—A. Some fishermen claim they fish in about twelve fathoms.

Q. How far off shore would that be generally?—A. I would say from looking at them from two to three miles.

Q. And do the fishermen remain fishing in the same water all season?—A. Not all the season.

Q. About when do they move in?—A. Some begin to move in I think about the 10th of June.

Q. One season with the other when do you begin to pack?—A. About the first days of May generally. Of course up to last year the time for running the lines was 20th April, but it used to take pretty nearly that week to get the traps out.

Q. Are you much exposed to bad weather conditions here, is the loss of traps and gear great?—A. There was considerable this year.

Q. When had you storms this year?—A. The latter part of the season. I do not just remember the days when the most damage was done.

Q. They seem to have had a bad storm early in May on some parts of the coast?—A. That did not interfere with us so much as on the north side.

Q. Do you notice any difference in the lobsters in the early season when you first begin packing as compared with the latter part of the season?—A. Yes, we get the larger lobsters in the early part of the season.

Q. Would it be fair to say that as the season advances and you fish in shoaler water, the average run of lobsters decreases?—A. Yes, it certainly does.

Q. What is the best season of your fishing?—A. The best season of our fishing is May up to about the middle of June.

9-10 EDWARD VII., A. 1910

Q. Have the regulations ever been strictly enforced here?—A. No, sir, not as regards size limit or even as to berried lobsters.

Q. Of course since the hatchery has been established here the berried lobsters are stripped and the eggs delivered to the hatchery from all your canneries?—A. From all our canneries.

Q. When was the hatchery opened?—A. This year. This is the first year of its operation.

Q. So that the hatchery has not been in operation long enough for you to form any estimate of the good work done by it?—A. No, sir.

Q. Still you believe in hatcheries?—A. Yes.

Q. Do you think their number ought to be increased where the facilities are offered?—A. I should think so where the facilities are offered.

Q. Have the canners made any scruple about accepting undersized and berried lobsters in the past?—A. Not any up till last year.

Q. Is it the case that they have been compelled more or less to receive these lobsters for fear of losing their fishermen?—A. Yes.

Q. What would happen if the size limit regulation were strictly enforced?—A. We would have to go right out of business; we would have to close down.

Q. What percentage of your lobsters do you consider are under the legal limit of 8 inches?—A. That is taking the whole season?

Q. Yes?—A. I would say about 60 per cent.

Q. As much as 60 per cent? What would you say is the percentage of berried lobsters taken throughout the season?—A. Not more than 10 per cent I would think.

Q. Are berried lobsters more numerous at any particular part of the season than at another?—A. They seemed to be a little more numerous in June this year. Some years we find them very early.

Q. What do you think brings the lobster inshore?—A. It must be the temperature of the water or something of that kind, or following the bait they want to live on. Some claim it is the berried lobster which comes in, but they all come in large and small.

Q. What is your idea as to the best means to be taken in order to protect the berried lobster; there is no question I suppose about the necessity of saving this lobster?—A. No, I don't think there is any question of that.

Q. Here of course you have the hatchery to which the eggs are taken, and I suppose it is the best means available. Where there are no hatcheries what do you think can be done?—A. If you had pounds to put them in, the same as they have at some places it would be the next best thing.

Q. They have pounds in the state of Maine and there is one in Cape Breton?—A. I think that would be the better way if we could only do it.

Q. Do you think there is any way of getting at the fishermen and inducing them to return these lobsters to the water?—A. I think so if the fishermen were paid for them.

Q. How would it do to send some one around to address the fishermen and explain matters to them; do you think that would have an advantageous effect?—A. I think so.

Q. Do you think the fishermen are already appreciating the fact that they must not destroy these lobsters?—A. A great number of them.

Q. We are told in a great many places that there is a great change of feeling among the fishermen in that regard?—A. Among a great number of them. I am sorry to say I had quite a little trouble with a good many even to get them to keep the spawn lobsters separate to go to the hatchery.

Q. It is generally admitted that there is a great decrease, perhaps not in the quantity, but in the size of the lobsters; do you think the decrease is as great of recent years as it was some years ago?—A. No, sir.

SESSIONAL PAPER No. 22a

Q. When did the first appreciable decrease occur?—A. During the year that we had those extensions—I do not just remember the years—those extensions granted up to the 20th of August I think. A couple of years after that we could hardly get any.

Q. Do you think those extensions of time did harm?—A. They certainly did.

Q. What is your opinion with regard to the condition of the fishery during the last five or ten years?—A. The last five years? I can only speak for myself, but my average has decreased, that is the average lobsters per can would amount to here with me at present——

Q. What is your average per pound can?—A. My average per pound can would be about 4½ pounds I think, from that to 5.

Q. Four and a half pounds of green lobsters?—A. Yes, something like that I am afraid.

Q. It takes that amount to fill a pound tin?—A. To fill a pound tin.

Q. What is the arrangement generally made with your fishermen; is the gear your own?—A. At two factories it is all our own. At one factory it is simply owned by what they call independent fishermen, fishermen who own their own gear.

Q. And sell to you by weight or by count?—A. By weight.

Q. How does the price paid this year to the fishermen compare with former years?—A. It is a little lower this year than it was last year.

Q. That was due to the market conditions, was it?—A. Yes, to the market conditions, although the price compares favourably with what it was five years ago.

Q. What do you think of the present method of issuing licenses; do you think the number should be restricted?—A. I think so.

Q. Are there any co-operative licenses in this neighbourhood?—A. None whatever.

Q. You know that the policy of the department at present is to encourage the fishermen to group together and take out a license to can in the name of one of their number; you have nothing of that kind here?—A. Nothing of that kind here.

Q. What do you think of that policy?—A. I suppose the policy would be all right providing they had a proper man to can their goods.

Q. Do you think there is any real reason why any man who shows his competency to can should not be granted a license?—A. I do in this way: If every man is granted a license the factories will increase and, consequently, the number of traps fished and the number of fishermen will increase. That is about the only reason I have.

Q. Do you think it is possible to establish a standard cannery?—A. They are establishing standards for everything else, all other kinds of canneries, and I do not see why it should not be done in the case of lobster canneries.

Q. How would you begin to do that, what would be the first consideration?—A. That is something I have not thought over.

Q. To establish a standard would fall harder on the small operator, would it not?—A. I don't know that it would. I think it would be a benefit to the small operator, because under a system of that kind all goods would be inspected and they would all go into the market on the same basis, the same quality.

Q. But if the department decided to issue a license to every one, as we say, competent to pack, there would have to be some standard fixed, it would not do to give every Tom Dick and Harry a license?—A. No.

Q. What would you put as a limit on the number of cases to be packed?—A. It might be 300 or 400 perhaps.

Q. Do you think the number of boats attached to any cannery should be limited?—A. I think so. I think both the number of boats and the number of traps fished should be limited.

Q. What do you think of the proposition to license the fishermen?—A. I think it would be a very good idea.

Q. Do you think it is a regulation that could be easily enforced?—A. It might not be very easily enforced.

9-10 EDWARD VII., A. 1910

Q. I suppose the fishermen who took out a license would in most cases be careful to see that others without a license could not fish?—A. I think they would.

Q. Especially if there was a slight fee imposed?—A. I think they would.

Q. To what do you attribute the changed conditions of the fishery from those which existed at the beginning?—A. To over-fishing

Q. Various suggestions have been made at different times to the department, and last year to the newly constituted Committee on Marine and Fisheries of the House of Commons, as to the best means of remedying the present—I will not say failure—but the poor condition of the fishery as compared with the early days. Among other things it has been suggested that there should be a universal closing down for a term of years; what would you think of that?—A. I would not think it would be advisable.

Q. Do you think the fishery has really reached that stage of exhaustion that such a severe measure is necessary?—A. I do not think so.

Q. Would you venture to say that the condition of exhaustion has stopped?—A. I think so.

Q. You think there has been no decrease during the last——?—A. Not during the last five or six years.

Q. The Lobster Commission of 1898 recommended to the department a closing down of the fishery by sections; that certain sections be cut off from fishing for a term of years, and others allowed to continue, and that that plan should be applied to successive sections of the coast?—A. Well that, I suppose, would necessitate us all going around to the one place and keep going around on wheels.

Q. You think the fishermen would be inclined to do that too?—A. I think so.

Q. Another suggestion is that we should do away with the size limit altogether, always protecting the berried lobster by some means or other, and shorten the season say to the 1st of July?—A. I would be in favour of that.

Q. Do you think the size limit regulation is one that could be very easily enforced?—A. It could not be enforced in my opinion.

Q. Would it be possible to slightly increase the opening between the slats of the trap, to insist upon a regular standard trap with a certain width between the slats? In some places we find a space of only half an inch between them.—A. I can only speak from experience. Some few years ago—I forget what year it was—we were compelled to open the bottom laths of our trap, three laths to an inch I think. During that year we found that the small lobsters got in just as easy or we got as many of them; they went in and did not come out. Of course I think there could be a standard trap.

Q. What should constitute a standard trap from your experience?—A. I should say the old two-headed trap with three bows and laths. I am, personally, not in favour of the trap they call the parlour trap. I know some of the fishermen are but I am not.

Q. The parlour trap has come into very general use?—A. It is coming into very general use. Some fishermen claim that they are a lot better, but my opinion is that they are not. I had two fishermen this year fishing nearly all parlour traps and they did not get any more lobsters than other fishermen with the other trap. They did get a greater percentage of little things about that length (illustrating by a gesture).

Q. Well the idea of the fishermen, as explained to us, is that the new trap holds the fish, that they get more fish. On Monday, or whenever they have not been able to get out in stormy weather, they find the lobsters are still in the trap, whereas in the old trap the lobsters could go backwards and forwards.—A. That may possibly be, but the only experience I can give you is that two of my best fishermen fished nearly all parlour traps this year, and at the end of the season they were not by any means ahead of some of those who fished the old two-header.

Q. Do you think we ought to go back to the old fashioned trap, would you go that far?—A. I think so.

Q. Do you think the new trap is more destructive than the old one?—A. I do.

SESSIONAL PAPER No. 22a

Q. Have you any idea whether facilities exist in this neighbourhood for establishing pounds?—A. I do not know.

Q. We want a considerable area of salt water, with sufficient depth, and the possibility of barring the place in?—A. I don't know of any situation here that would be favourable for that purpose. There are some pounds but the inlets are very narrow and shallow and full of marsh mud. There are some other persons here that may know of more favourable conditions.

Q. Do you think there is any evil attendant upon the practice of fishing in too shoal water?—A. I do.

Q. What would you limit the depth of water to?—A. Well the depth of water has already been limited by order in council to two fathoms, but it is not enforced. In some places two fathoms possibly might be a little too shallow, in other places a little too deep. Of course that is a matter for the fishermen, they know more about that than I do.

Q. It has been recommended by Professor Prince, who is the principal adviser of the department, that we should have a universal close season for the whole Atlantic coast from the 1st, the 15th or the 10th of July as the case may be, to the 1st of January, when the open season would begin; what would you think of that idea?—A. I don't think it would suit this locality.

Q. It does not mean that you can fish at all in the early months of the year but fish when you can?—A. I understand.

Q. You do not think it would suit this locality?—A. No.

Q. What would you think of allowing fall fishing? In some localities it is claimed that owing to the delay in commencing to fish, caused by ice in the spring, they should be allowed to fish in the fall.—A. That would be having two fishing seasons, one in the spring and one in the fall.

Q. In some places they ask for only the one season, beginning say 15th or 20th of July, and extending till the end of September?—A. I cannot speak of that. I have had no personal experience of what the fall fishing might be.

Q. Do you think that the product of the lobster cannery should be inspected in the same way as other food products are?—A. I think it would be a benefit. You see our goods go to England but I do not know if they go as Canadian goods, the same as butter and cheese, under inspection.

Q. Do you think the existing staff of fishery officers would be competent to carry out that inspection?—A. I think so.

Q. What do you think of the practice of issuing canning licenses to aliens, or is the question too near home for you to answer?—A. No, it is not that sir, I am not an alien. I suppose they have a right to invest their capital in the lobster business, they have been in it for a number of years.

Q. They were the pioneers of the industry in this country were they not?—A. Yes, practically.

Q. And it is only the capital invested that is foreign?—A. That is all.

Q. The labour is entirely native and the material supplied is purchased in this country?—A. Yes, the material and everything. Even their foremen and managers reside here.

Q. Are you aware of complaints made by fishermen that the price paid to them for lobsters by the canner is not satisfactory?—A. I have heard it said.

Q. Do you think there is any general combination on the part of the packers to keep down the price?—A. Not at all, sir.

Q. Is there any competition in the matter?—A. Too much so.

Q. Are you aware of fishermen having lost their catch of lobsters by the canner refusing to take them?—A. Not to my knowledge. There have been no cases in this locality whatever.

Q. It has also been alleged that in some cases fishermen have suffered injury by the failure of canners to operate their factories, although a sufficient supply of lobsters

9-10 EDWARD VII., A. 1910

was available. Has any instance of that nature occurred here to your knowledge?—
A. Not here, sir.

Q. If the canneries were closed down what market would the fishermen find for their lobsters?—A. Not any.

Q. Has any attempt ever been made here to develop or encourage the live lobster trade?—A. Not just around here. There has been from the Island though.

Q. I suppose the necessary facilities for carrying on that trade do not exist here?—A. We cannot possibly do it.

Q. Do you think there is anything inherent in the native lobster that prevents it from being as fit and suitable for the live lobster trade as the Atlantic lobster?—

A. Yes, sir, I do. I attribute it to the thinness of the shell in the first place, and furthermore our lobsters have not the vitality of the Atlantic lobster.

Q. Have you any idea of the comparative value of the two industries; do you think that where the two can exist, the live lobster trade is the more profitable one to the fisherman than selling his lobsters to the cannery?—A. That is something I am not familiar with.

Q. In connection with the matter of limiting the amount of gear, what is your reason for thinking there should be a limit?—A. My reason for that is I think there are entirely too many traps fished. I don't see that there is very much use in limiting the number of licenses or the length of the season and allowing fishermen to put out all the traps they like, or canneries and factories.

Q. Would you limit the number of boats or the amount of gear per boat?—A. I suppose if you allowed so many traps to a factory. I think it would be hardly fair to limit the number of boats because there are a good many cases where there are two men in a boat, and others where there is only one man, and it would make it necessary I suppose——

Q. It would be very simple limiting the amount of gear to a factory fishing its own gear, but what would you do in the case of an independent fisherman who is not connected with any factory, but sells his fish where he can?—A. That would be rather a hard question to deal with unless it can be done by licensing the fishermen.

Q. You think that under licensed fishing it could be controlled?—A. If you compel the factories to take lobsters from no more than a certain number of traps.

Q. Is there much fishing done out of season here?—A. Not in this locality of late years, this last few years.

Q. But there has been illegal fishing here?—A. Yes, there has been, but I think this last few years the law has been well observed.

Q. Is it the practice to abandon gear in the water here?—A. Yes, to some extent.

Q. Do you think that has any effect?—A. I think it has. I think it is ruinous to the business, not only to the lobster, but all other kinds of fish.

Q. What do you think of the recent method of stamping the cases, is it effective?—I suppose it is in some ways but don't think it would be very hard for any person that wanted to get stamps to pack out of the season, to get them. They have been getting them heretofore and I suppose they could get them again. Of course I am only speaking of this locality; I don't think there has been any illegal work going on for the last few years.

Q. What do you think about the practice of fishing in the inner bays and lagoons and harbours?—A. It is a very bad practice.

Q. Would you prohibit it?—A. I don't think it could possibly be done in the harbours here. It might be in some places, but in bays and harbours like we have here it could not be prohibited. The bay here is too large.

Q. Is there much fishing done in the bay?—A. The latter end of the season there is a great deal.

Q. Would limiting the fishing to a certain depth of water affect that to a certain extent?—A. I think it would. Yes.

SESSIONAL PAPER No. 22a

Q. Do you think that limiting the depth of water would cover the injury done by fishing in lagoons and too shallow places?—A. Where they fish on the sand banks in five and six feet of water, where a boat cannot float over, it would, but on this coast—

Q. Are hoop nets used here at all?—A. No, sir.

Q. Or trawls, what we call fishing with cod heads?—A. No, sir. I have tried the hoop nets but they were never successful.

Witness discharged.

Mr. T. W. MACDONALD.—About putting the lobster spawn into hatcheries, the present system of distributing the spawn, I would like to know whether the hatchery system at present in force, goes far enough with the treatment of the lobster for the protection of the industry.

THE COMMISSIONER.—What is the system now pursued?

Mr. T. W. MACDONALD.—I understand the spawn is taken away outside and distributed in the open sea. It is, of course, let go at a very early stage when it is really very small fish. I would just like to ask a question whether that system is considered a satisfactory one for the protection of the industry?

The COMMISSIONER.—Usually, as you know, the female lobster goes into shallow warm water to develop her eggs and when the eggs are ripe she packs off into deep water to liberate the young. It was for that reason the practice was adopted of liberating the young lobsters outside.

Mr. MACFEE.—I understand the department have made a lot of inquiries into that business themselves. I understand they have been measuring the lobsters around the factories and finding out the localities, as far as possible, in which they were caught.

The COMMISSIONER.—There is a good deal connected with the life history of the lobster that is not known. There is more unknown than is known.

Mr. MACFEE.—Where they are getting the smallest lobsters they thought was the place where the lobster would feed and grow. That is what I understand they are taking measurements for. I don't know anything about the hatching of lobsters.

The COMMISSIONER.—The reason why the young lobsters are liberated in deep water is because it is always held that the female lobster herself liberates her young there and not in shoal water. Do you think they take the best means possible of protecting the eggs?

Mr. MACFEE.—Oh, I think so.

The COMMISSIONER.—Would it be possible to convey the lobsters alive to the hatchery to be stripped there?

Mr. MACFEE.—Not from as far away as our boat goes, I do not think, unless they had a tank boat or something suitable to bring the lobsters in. Then it would be possible but not with the gasoline boat we are running now.

Mr. T. W. MACDONALD.—I just wanted to find out whether Mr. MacFee agreed with the opinion that the young lobsters should be liberated in deep water.

Mr. MACFEE.—My own opinion, until I talked with the Commander, was that it would be better if they were liberated in some place outside.

The COMMISSIONER.—Are the young lobsters fairly distributed along the shore?

Mr. MACFEE.—I don't know anything about that.

The COMMISSIONER.—There are complaints in some places that the eggs are collected in certain areas but the young lobsters are not liberated there.

Mr. MACFEE.—I might say that the manager of the hatchery told me in the spring that he was going to liberate the young lobster fry where he received the spawn in proportion as he received it. In other words if he got a million eggs from up west

9-10 EDWARD VII., A. 1910

he would deliver the same number of fry, if he got two millions of eggs he would deliver that number of fry.

The COMMISSIONER.—If the young lobsters are held in tanks and jars they devour each other at an awful rate.

Mr. W. W. JENKINS.—How long after the lobster is hatched out should he remain in the large receptacle in the hatchery; is there a certain length of time for that or is the boss of the hatchery supposed to use his own judgment?

The COMMISSIONER.—I think the manager uses his own judgment about that. I think when he finds they are strong and active and are fit to look after themselves, his instructions are to liberate them; you cannot keep the young lobsters too long in the limited space in the tanks. There are other canners present. Mr. Cogswell would you have any evidence to offer, do you coincide with the evidence given by Mr. MacFee in whole or in part?

Mr. COGSWELL.—You spoke about getting lobsters in the bay and in the rivers. I think lobsters should be allowed to be caught there.

The COMMISSIONER.—There are many places where there are narrow inlets, shoals and bays, inside which the lobsters seem to precipitate themselves, and it has been stated that in such natural pounds as these the lobster should be protected. That is all.

Mr. MACFEE.—I stated it would be impossible to prohibit fishing in a bay like this.

Mr. COGSWELL.—There are as many spawn lobsters taken outside as there are in the bay.

Mr. MACFEE.—Oh, yes, just as many. What I have reference to is these small rivers. They should be debarred from fishing at the heads of these rivers.

The COMMISSIONER.—Perhaps it would be better, Mr. Cogswell, if you gave us your evidence on that point?

Mr. COGSWELL.—That is all I have to say.

Messrs. T. W. Macdonald, A. J. Macdonald, W. W. Jenkins, Aaron C. Cogswell, William Easton and James Manuel, packers, being collectively asked if they concurred in the evidence given by Mr. MacFee replied in the affirmative.

Mr. MANUEL called and examined:—

By the Commissioner:

Q. What do you think should be the opening season?—A. My opinion is altogether different from that stated. My opinion is that it would be better if it was the 1st of May rather than the 20th April.

Q. What is your reason for fixing the opening on the 1st of May?—A. Well we very seldom get lobsters before the 1st of May. There is an odd year that we do but it is a very odd one; the weather conditions are against us. Some years the ice is in. It was only a couple of years ago that the fishermen's union went around with a petition and asked to have the date of opening changed. I think they had two petitions, one for the 26th April and the other for the 1st of May.

Q. Which petition carried, the one asking for the 26th April?—A. They had the 26th April first but they found the ice was not gone by that time, and then they had it the 1st of May.

The COMMISSIONER.—What is your opinion, Mr. MacDonald, when do you want the season to open.

Mr. T. W. MACDONALD.—From our point of view I would say the 26th of April or 1st May. That is taking it all round. But in one or two factories we would

SESSIONAL PAPER No. 22a

gain by being open a little before that, a little before the rest. We generally get a large part of our pack in the last days of April and one or two days in May. There is one point I would like to ask Mr. MacFee about. There is an opinion among a section of the fishermen that they should be allowed to put out their traps or their rope——

The COMMISSIONER.—Run their lines?

Mr. T. W. MACDONALD.—Run their lines at whatever season they see fit but we should not be allowed to pack fish at the factories before the opening of the season. I do not know what the opinion of the packers is upon the subject but a number of fishermen have spoken to me in favour of it.

Mr. MACFEE.—Do those fishermen own their own traps?

Mr. T. W. MACDONALD.—Some of them do.

Mr. MACFEE.—My opinion is—we have had something to do with it in past years and I don't think it would suit at all. It would, I believe, end in a rebellion amongst fishermen.

The COMMISSIONER.—Mr. Manuel, what do you think about the opening of the season?

Mr. MANUEL.—Well personally I would say the 20th of April.

The COMMISSIONER.—What do you think, Mr. Cogswell?

Mr. COGSWELL.—I think 20th of April.

Mr. W. W. JENKINS.—I am in favour of from 26th April to the 1st of May. I think all the lobsters here can be caught between the 26th of April or 1st of May and the 1st day of July. That would be my own opinion.

The COMMISSIONER.—Do you wish to say anything about the closing of the season?

Mr. MACFEE.—I think it is merely necessary to close 1st July.

The COMMISSIONER.—I understand the packers here would do away with the size limit, fix a standard of trap, close the season 1st July, protect the berried lobsters by means of hatcheries or pounds or putting them back in the water, and have a limitation of the traps.

Mr. MANUEL.—That is regulate the traps as they are already made?

The COMMISSIONER.—For the future. You would take a certain time I suppose to wear out the present traps?

Mr. MANUEL.—If they continued to lose traps as they did this year it would not take them very long.

The COMMISSIONER.—What would you estimate the life of a trap to be?

Mr. MANUEL.—Four years.

The COMMISSIONER.—Three years seems to be the life of a trap in most places.

JAMES MACMILLAN, canner, Georgetown, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the industry?—A. Since I first went into the business about 32 years ago.

Q. What number of canneries will you speak for?—A. Only one cannery. I am foreman of D. C. Morrison's factory.

Q. Where is that situated?—A. At Launching Point.

Q. What number of boats do you run?—A. We ran about 15 boats this year.

Q. Are they all using their own gear; do the boats belong to the factory?—A. All the gear belongs to D. C. Morrison. We have a lot of parlour traps.

9-10 EDWARD VII., A. 1910

Q. You have no independent boats?—A. No independent boats at all. All our gear is owned by Mr. Morrison.

Q. How are your fishermen paid, by weight?—A. They are all paid by weight.

Q. What has been the average price paid in this neighbourhood by weight this year?—A. Well the average price is about \$1.30.

Q. What is it to these men fishing their own gear?—A. We have not got any of them.

Q. You heard the evidence of Mr. MacFee?—A. Yes.

Q. Do you approve of it in a general way?—A. Yes, I approve of it.

Q. Is there any particular point you wish to more fully explain?—A. I don't think it. I agree with Mr. Jenkins that the season should be from the 1st of May.

Q. You think the season should open on the 1st of May?—A. The 1st of May until the 1st of July and cut off those last ten days. I think it would be a good improvement to the lobsters because there are a lot of bad fish coming in at that time that are not fit to can.

Q. Do you think there is any part of the season when the lobsters are not fit for food?—A. They are not fit for food in the last ten days' fishing; they are not fit to can.

Q. What have you to say about the regulations with regard to undersized and berried lobsters, have they ever been enforced?—A. They have not been enforced.

Q. What is your opinion as to a strict enforcement of those regulations; what would happen if they were strictly enforced?—A. I think the factories would have to close down if they were strictly enforced. Of course saving the spawn is a thing that we have been doing for the last three or four years. We have been liberating the spawn lobsters before we got a hatchery.

Q. You would not allow the fishermen to bring them in?—A. We would not allow the fishermen to take them in, we made the fishermen throw them overboard when we could catch them. Of course we could not always do that.

Q. Do you think the practice of brushing off the berries from the spawn lobsters has been followed here to any extent?—A. I think they have been doing that previous to the time they brought them in.

Q. Is it a difficult thing to detect a lobster that has had the eggs brushed off?—A. I could tell, but the most of men could not.

Q. Would it require a very close scrutiny?—A. The spawn is spread and if you are used to handling lobsters you will see when they are closed in when they have not got any spawn. When the spawn has been washed off you will notice the lobster where it has spread, and if it had not any spawn it would be closed in.

Q. But where a large number of lobsters are brought in rapidly to a factory would it not be a difficult thing to distinguish them?—A. It would be difficult to distinguish. The fishermen who pick them out of the traps one by one have a chance to detect them.

Q. The fishermen taking lobsters from the traps are in a better position to cull them?—A. Oh yes, we could not cull them.

Q. Not in the cannery?—A. We could not cull them there very well because the lobsters are dumped in.

Q. If the canneries generally refused positively to accept berried lobsters, what would occur?—A. Of course we do refuse at present to accept them.

Q. And they all go to the hatchery for the eggs to be stripped off?—A. Yes.

Q. But before that was done do you think the canner was scrupulous about the matter and refused to accept the berried lobsters? In some places they had told us it would simply mean the eggs would be brushed off outside; do you think that is the case?—A. Yes, they have done that. I have known them to do it. Of course we cannot say anything about that because as long as we don't see them doing it we have to take the lobsters from them.

Q. What sort of a lobster is the average berried lobster?—A. Generally a good

SESSIONAL PAPER No. 22a

sized lobster from 8 to 9 and 10 inches and so on. That is about the average size of the spawn lobster.

Q. How are the berried lobsters as to meat and fulness?—A. They are well filled.

Q. And do they turn out well?—A. Yes.

Q. They make good meat?—A. Yes, they make good meat.

Q. Some people have told us that berried lobsters do not make good meat, that the meat is soft and spongy.—A. That is at the last of the season when the shell commences to soften.

Q. The witnesses referred to alluded to that characteristic in connection with all berried lobsters?—A. No.

Q. The majority of the evidence given so far goes to show that the berried lobster is generally of good size?—A. Yes, a very good size.

Q. That these lobsters are well filled and make good meat?—A. That is right.

Q. But still exception has been taken to that by some packers.—A. That would be later on when the lobsters are getting soft-shelled.

Q. What is the smallest female lobster you ever saw with eggs attached?—A. I don't just remember but they are a pretty good size. They generally go to about 8 inches I think. I do not know that I ever saw any smaller than about 8 inches. I notice they are a pretty good size when they have got the spawn on them.

Q. Do you think it would be possible to get the fishermen to return to the water all the berried lobsters they take in their traps for moral reasons?—A. I don't think they would. I think it would be almost impossible to get them to do that.

Q. Do you think it would be possible to get the fishermen to bring the berried lobsters and pay them for them, and then have these lobsters returned to the water close in shore?—A. Yes I should think they would do that.

Q. Because we could not take their word for it, the lobsters would have to be received by somebody and then returned to the water.—A. Yes, I should think they would do that, I should think they ought to.

Q. Do you think a very large proportion of them would be taken in the traps over again if they were liberated?—A. We made a law among ourselves that fishermen were to liberate the lobsters with spawn, that we would not take such lobsters from them, and that there would be a fine imposed on those who brought them in. Then they commenced squealing and saying it was no use, that if they chucked them overboard somebody else would catch them and take them in. I don't know if that was the case or not, I cannot say anything as to that.

Q. What do you think of the proposition to license the fishermen?—A. I could hardly say anything about that. That is for the fishermen to——

Q. To only allow the fishery to be carried on by licensed fishermen?—A. I could not say very much in regard to that.

Q. Are the majority of the fishermen about this part of the coast bona fide fishermen who catch other fish as well as lobsters?—A. Well there are a good many farmers fish, more than half of them are farmers who fish and they don't do very much other fishing. A good many of them just fish for their own use, codfish and other fish. They all fish herring.

Q. Where do you catch your herring?—A. Right off the factories, we set the nets right in the bay.

Q. What do you think about the matter of traps; is the present wheeler or parlour trap unnecessarily destructive in your opinion?—A. Well of course it catches smaller lobsters than the other one and when there is two days' fishing it holds all the lobsters in. I don't think that we are getting any smaller lobsters this year than we used to get.

Q. Than when you used the old fashioned trap?—A. The lobsters all season were smaller. All our parlour traps are pretty well off the three mile limit. We have got no fellows that fish inshore much.

9-10 EDWARD VII., A. 1910

Q. Do you think it would be possible to establish a standard trap and insist on a regulation limit between the slats; do you think it should be done?—A. Well I don't know. There used to be a time when the space was an inch at the bottom lath. We used to get pretty small lobsters then as we do now. I don't think it made a great deal of difference. I don't think it would be worth while changing these traps, because they do not last long enough.

Q. What is the width at present between your slats?—A. They are pretty close down now but the sill is about three quarters of an inch. If the lath is put down on the sill I think it would be all right. If that were done and the lath nailed across it would not catch the lobsters too small but they could get away. A small lobster can get out through a pretty small space if it has the opportunity.

Q. What sized lobster would get out through an inch opening?—A. Well a 7 inch lobster could get out through that.

Q. Do you think the lobsters make any effort to scramble clear of the trap when it is coming up, or are they more likely to grab on to something until they get to the surface?—A. I think they do get out very often, some of the fishermen say they do anyway.

Q. Do you think there is any good reason for having a smaller size limit and different close season in some places than in others?—A. I don't know of any reason other than fishing them out, thinning them out in the fall of the year. Fishing lobsters in the fall of the year would thin the lobsters out more than we have done in the place where we are.

Q. Do you think the lobsters when the fishery first commenced were pretty much of a uniform size all over?—A. Oh, yes, they were when I went there first.

Q. Do you believe there is a smaller family of lobsters on some coasts than on others?—A. The lobsters of course are getting smaller here. Every year they are a little smaller than they were. Of course they are packed a lot smaller than when I went into the business 32 years ago.

Q. But originally do you not think they were pretty much of a uniform size everywhere?—A. They were, but they were getting smaller every year according as they commenced to get caught.

Q. Do you think the decrease has stopped and that conditions are remaining about the same; some people claim there has been no appreciable decrease for the last five or ten years?—A. I think we got just about as many spawn lobsters this year as we did last, only we had less boats. We had two less boats and we did not have quite as good fishing.

Q. But even in the good years there were always seasons when the fishery failed?—A. Sure, lots of them. There was a time when the fish would break right away to nothing and then come up with a will and you could not get them out of your way. That is not so many years ago, about ten.

Q. What is your proposition as to the best regulations for the fishery, what would you suggest or advise?—A. I think the suggestion made by Mr. MacFee, Mr. Jenkins and Mr. MacDonald, who all own factories, would be all right. That is to have the fishing season from the 1st of May up to the 1st of July; that would be restriction enough. If there had always been that restriction I think the lobsters would never have depreciated, they would always have held about their own. By that season you are taking ten days off the worst time for the lobsters. Of course in the first part of the season it does not hurt the lobsters any to catch them early. If you catch them early you won't catch them late, that is the idea. If you catch them in May you are not going to catch so many in June and the other months, because when they are caught they are caught.

Q. How many pounds weight of green lobsters does it take to fill a pound can in your case?—A. Well it takes about four and a half pounds to the can. Of course they vary you know. You cannot always——

SESSIONAL PAPER No. 22a

Q. At different times in the season, in May for example, they will run larger?—

A. They don't pan out sometimes in May as good as they do later on.

Q. Are they as full in May as they are later on in the season?—A. They are fuller in May but still they do not make as good an average.

Q. What do you think about the present license system; do you think there are canneries enough and that the present method of restricting the number of licenses is one to be continued?—A. Well I think there are enough in a way. There is not very much room to get any more, not without they pile them on top of each other.

Q. A great many people claim they can see no good reason for restricting the number of licenses, that one man has as much right to a license as another?—A. Well I can hardly say anything on that question. I would not want to say anything about that.

Q. What do you think of the policy of the department in encouraging fishermen to co-operate in canning?—A. I cannot say very much in that matter I think.

Q. I think you told me you agreed with the evidence given by Mr. MacFee in a general way?—A. I would agree with everything Mr. MacFee said.

Q. What would you think of the proposition to inspect the product of the lobster canneries?—A. Yes, I would agree with inspecting them, to have them all inspected.

Q. Do you think a special staff would be required to do that work properly or could it be entrusted to the existing staff of fishery officers?—A. We are expected to look after that ourselves, the head man of the staff is supposed to look out for it, but you cannot keep the thing right under control because there are lots of people that are careless about chucking things around and other matters and it causes a good deal of trouble for the packer on several occasions.

Q. Do you think it would be possible to insist upon a standard cannery—that a cannery should be operated in a certain way and that rough spruce tables should not be used and so forth?—A. We use zinc on our own tables. Every table is covered with zinc that I use.

Q. Do you think that such equipment should be insisted in all cases?—A. Yes, every factory should have it. No factory should be without it. Lobster is not fit to pack on a table that is not properly covered.

Q. Could you tell us anything about the live lobster industry? Have you had any experience of it?—A. They do not do much in this part of the country, but I have been in New Brunswick and other places where they do ship them alive.

Q. What part of New Brunswick, Charlotte county?—A. All through Charlotte county and up the Bay of Fundy.

Q. Which do you consider the most profitable to the fishermen, selling live lobsters for export or selling them to the cannery?—A. Of course the cannery would be the most profitable because they get ready money. Sometimes in the live lobster trade they lost their money. They get a good price sometimes and then afterwards they get next thing to nothing.

Q. The facilities do not exist here for carrying on that branch of the lobster industry?—A. No. In New Brunswick they can the small lobsters and ship the big ones. It would not pay here.

It has been suggested that an advisory board should be continued for the maritime provinces, somewhat in the same way as the fishery boards in the old country; what would you think of that?—A. I should judge that would be all right.

Q. Is there any fishing out of season done to any extent?—A. Well, the inspectors I think are pretty well after that. They follow it up pretty close in the cutters and I guess those inclined to do it are pretty scared now. We have never done any fishing or packing out of season. There are no packers here that have done any work like that.

Q. Where is most of the fish canned that is taken out of season?—A. Well, to tell you the honest truth, I don't know where they do anything of that kind.

Q. Do you think the illegal lobsters are canned in the licensed cannery?—A. I

9-10 EDWARD VII., A. 1910

have not been around here when they have been fishing out of season; I have been away in other parts.

Q. What do you think of the practice of abandoning gear in the water?—A. Leaving gear out?

Q. Every year there is a considerable amount of old gear left in the water?—A. I guess that is no dream.

Q. Does that do harm?—A. I don't suppose it does very much good. It does a good deal of harm to the packers when it is left out; it takes a great deal of money out of them.

Q. Have they no way of holding their fishermen responsible?—A. I don't think they have any claim they could make on them. I suppose if the fishermen were worth any money they could make them pay for them.

Q. What do you think of the present method of labelling the cases?—A. The way we do now?

Q. Yes. Do you think it serves its purpose as a bar to the sale of illegally canned lobsters?—A. Of course it saves them from packing them after the season; they cannot ship them.

Q. They manage to get over it some way or other, do they not?—A. The only way they can do it is to hold them over until they can ship them. I don't know how they manage that.

Q. What do you think about shoal water fishing?—A. Of course they lose a lot of gear by putting traps in the shoal water. You may have fishermen fishing with dorys who cannot go out in deep water and would have to fish inshore.

Q. Do you think any limit should be put upon the depth of water at which the fishery is conducted?—A. I don't think it would make much difference in regard to the lobsters whether they fished in shoal or deep water.

Q. We find fishermen fishing down to a fathom of water, and the general opinion seems to be that in that depth of water they are getting a small run of fish, which is destructive to the fishery—A. It is in a season of the year when the fish are coming in.

Q. Shoal water fishing is always done at the back end of the season?—A. The inside fisherman catches them at that time of the season when the fish are coming in. In the spring of the year they go away off and that is where they get their best fishing.

Witness discharged.

HENRY GOTELL, fisherman, Georgetown, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. About ten years.

Q. Do you do any other fishing?—A. I do, yes.

Q. What other fishing?—A. Herring, cod and mackerel fishing and so on, all other fish.

Q. So that when the lobster fishery closes with you you simply take up another branch?—A. There is no other branch to take here in the same way as lobsters. You go down to Souris or some other place.

Q. Do you move down there?—A. Some years, yes.

Q. Have you always fished for lobsters in this place?—A. Yes, I never fished lobsters anywhere else.

Q. You have only fished for ten years for lobsters?—A. I have been fishing for ten years, probably twelve.

Q. Do you own your own boats and gear?—A. Yes.

Q. What number of traps do you fish?—A. 250.

Q. You do not fish alone?—A. I fish with one of the boys.

SESSIONAL PAPER No. 22a

Q. When do you begin to fish generally?—A. As early as we can. We used to get our gear out by the 20th. Last year the ice came in and we did not get out until the 26th. The fishermen in the spring want to get out their gear as early as they can.

Q. In what depth of water do you begin to fish?—A. We generally start in the spring in about eight fathoms where I fish.

Q. How far off shore would that be?—A. That would be about half a mile.

Q. Right off the mouth of the harbour?—A. Right off Panmure Reef, the north side of the reef.

Q. Do you fish in the same water all the season?—A. Pretty much. Of course later in the season we shift our lines in, probably one end in three fathoms and the other end at six or seven fathoms. We shift our lines to a different position you see.

Q. What are the conditions of the fishery at those two seasons; what sort of fish do you get when you first begin fishing?—A. Fairly good lobsters in the spring.

Q. When you fleet your traps in do you get the same run of fish that you did in the spring?—A. Well, where we fish there is not a great deal of difference.

Q. Do you think the later caught fish, as a rule, are smaller than those you get at the beginning of the season?—A. There are a few more small ones later.

Q. What percentage of the lobsters you catch are below the legal size limit of eight inches?—A. Quite a few of them.

Q. Would you venture to say how many out of every one hundred?—A. I would venture to say that nearly one half are under eight inches.

Q. At both times of the season?—A. Yes.

Q. In the early spring and later in the season?—A. Yes, sir.

Q. What percentage of lobsters will you get bearing eggs outside?—A. I could not tell you exactly. Last year I marked them down, I had forty-seven.

Q. That was all you caught throughout the season?—A. Yes, I put them in a pound and just kept count of them.

Q. What was the total weight of the fish you caught?—A. Near about 8,000 pounds last year I think, somewhere there.

Q. You say you put the eggs bearing lobsters in pounds?—A. I put them into pounds where there was salt water.

Q. Do you know what happened to them?—A. They went out on their business and went about the bay somewhere and we saw no more of them afterwards.

Q. You did not attempt to hold them?—A. No, sir, they went off. The water was purer there and they could swim about.

Q. Would there be any chance in that place to pen them in?—A. They had the whole bay inside that they could get into and go around.

Q. Has it always been your practice to do that?—A. No, last year was the first year I did it.

Q. Before last year was it the practice that all the lobsters went to the factory?—A. Everything went to the factory with me.

Q. Big and little, berried and unberried lobsters?—A. Yes.

Q. And as far as you were concerned were the regulations ever enforced?—A. Not to my knowledge, not here.

Q. What would have occurred if the packer you sold to had refused to take the berried lobsters?—A. I would have had to chuck them away, I could not do anything else with them I suppose.

Q. Do you think that would be the case generally with the fishermen?—A. I suppose the fishermen, like everybody else, would try and smuggle a few of them. There would be some go to the factory in spite of all you did to watch them.

Q. That might happen by accident?—A. I think it would be in the interest of the fishermen to chuck the spawn lobsters away.

Q. Do you think many fishermen did so?—A. I could only speak for myself. I suppose there would be some of them would take them in.

Q. Do you think the practice of brushing off the eggs was ever followed?—A. I

9-10 EDWARD VII., A. 1910

never saw it until this year; I could not tell you whether there would be anything of the kind done. I suppose there are certain ways of getting the eggs off.

Q. You never tried it yourself?—A. I saw it this summer at the factory.

Q. It is easily done?—A. Oh, yes, quite simple.

Q. The eggs come off easily?—A. Oh, yes, quite easily.

Q. When the eggs are ripe I suppose they come off more easily than when you first catch the lobsters?—A. They come off the fish easier.

Q. Did you fish as much gear in the beginning as you do now?—A. When we started here the first year I fished I had only 75 traps.

Q. Did you catch as many lobsters with those 75 traps as you did now with an increased number?—A. Yes, just as many.

Q. Is it your opinion that the fishery has failed?—A. It has failed of course.

Q. What do you blame for the failure?—A. I believe the lobsters are getting caught up and they are getting destroyed. The little fish and the spawn fish are getting caught, and so on.

Q. Do you think that decrease is still going on?—A. Well, it is in certain parts of the island I suppose.

Q. How is it in your part?—A. I think it all right enough.

Q. Because you have the hatchery here?—A. Yes, that will be a help to us anyway.

Q. How does the price paid for lobsters now compare with that paid when you began fishing?—A. We are getting more for lobsters than when I started fishing, than they did in former years when we started first.

Q. The lobster is worth a great deal more now?—A. I suppose they are, they must be.

Q. What did you get at first when you began?—A. I remember when we fished here for 40 cents a hundred.

Q. And you had a large run of fish?—A. Yes, a lot better.

Q. Did you get as large this year as last?—A. No, sir, we did not.

Q. How did that come about?—A. They were scarce this year. I guess none of the fishermen got as many this year as they did last.

Q. But I mean about price, did you get the same price as last year?—A. No, sir, we did not.

Q. What did you get this year?—A. Well, to tell you the truth I don't really know. I suppose it would be \$2.50 but I have not got it yet.

Q. You have not squared up yet?—A. No.

Q. Do you think the fishermen gets fair value for his catch?—A. That is hard for me to answer. I suppose they get all the packers can afford to pay but I don't see where they get the value of the fish all the same.

Q. How is the price established?—A. Just by the sale of the fish when they are canned I suppose. It goes a good deal by that. Whatever the packer gets for his fish they pay the fishermen accordingly.

Q. Is there any competition in the matter; is one canner likely to give you more than another, or is the price fixed among them all?—A. I don't think we have any packers here that pay any more. There may be an odd fisherman that will get more, that may make a trifle more.

Q. Do you think the price to the fishermen is fixed among the canners?—A. I think it is.

Q. You think they arrange among themselves the price to be paid?—A. I think so, sir.

Q. Did you ever know a canner refusing to accept undersized or berried lobsters?—A. Well, there was a good while ago they did limit the catch but I was not fishing then.

Mr. MANUEL.—I would like to ask the witness if the price paid the fishermen for lobsters was fixed among the canners?

SESSIONAL PAPER No. 22a

By the Commissioner:

Q. What do you think, is there a fixed price established by the packers?—A. To the fishermen?

Q. Yes?—A. I understand so. Yes, I believe it is right.

Mr. MANUEL.—Is it so.

The WITNESS.—Yes, I would say so.

By the Commissioner:

Q. Do you think there is any arrangement made before the opening of the season? It is claimed by the fishermen in some places that the packers put their heads together and establish a price and that the fishermen have to accept it?—A. Well, I would not say that. I could not answer that. That might be done too, of course I could not say.

Q. Do you think you are getting your fair share of the profit from the industry?—A. I am getting the same thing as the other men.

Q. And you are satisfied with what you are getting?—A. Yes, sir, I am.

Q. What would you think was the best way of inducing the fishermen to observe the law, especially with regard to berried lobsters; what would be the best way to go to work?—A. To save up all the spawn fish I suppose and take them to the hatchery or to the factory where you fish and have a certain man——

Q. In some places it is not possible to establish hatcheries. There are localities where it cannot be done. What would be a good way of inducing the fishermen to carry out the law?—A. The only way I suppose would be if you had a boat to call at our factory to take the spawn fish.

Q. What I mean is, you believe it is wrong to take berried lobsters?—A. Yes.

Q. But it is done?—A. Yes.

Q. How could we induce the fishermen to stop taking these lobsters at places where there are not hatcheries?—A. I suppose the only thing to do to them would be——

Q. Would you compel every lobster fisherman to take out a license?—A. And not to catch lobsters unless he had a license?

Q. Yes.—A. I don't know whether that would help them or not. It might. At those factories where they have no place for the spawn I think that would be a good move.

Q. Do you think anything would be gained by getting the fishermen together at different points and explaining to them the wrong done by destroying the berried lobsters; do you think it would make any impression on the fishermen?—A. I think it would.

Q. The Department of Agriculture sends around lecturers to explain the advantage of a rotation of crops, improved methods of butter making and of stock breeding, &c.; do you think the same thing should be done in the case of the fishermen?—A. I should think it would.

Q. Is it the practice of the fishermen to avoid dealing with a canner who is known to be scrupulous on the point of berried and undersized lobsters, and go to cannery who are less scrupulous?—A. I don't know that we have any of that here.

Q. Do you think it will be possible to arrange to buy the berried lobsters from the fishermen and have them returned to the water inshore, where we could be certain of the fact that that would be done?—A. I would not approve of that because there are a lot of these lobsters by the time you get them to the factory that are hardly able to look out for themselves. Some of them might be almost dead and if you chucked them away they would not live.

Q. Is there any period of the fishery when the berried lobsters are more numerous than at an other time?—A. In the month of May.

Q. Have you ever tried holding a berried lobster in your trap to see how she casts her spawn?—A. I never did, sir.

9-10 EDWARD VII., A. 1910

Q. What would happen do you think if the fishing of lobsters were stopped entirely for a term of years?—A. I suppose it would give the lobsters a chance to improve and increase in number.

Q. What would become of the fishermen in the meantime?—A. They would only have to try something else.

Q. What else would they try?—A. They would have to make a living. The fishermen would have to go cod or herring fishing in the spring. The fishermen are not catching these lobsters you know; the majority of them are caught by farmers.

Q. You think it is not the actual fishermen?—A. No, it is not.

Q. We have been told in a great many places, that if such a suggestion were enforced as closing down altogether, it would mean driving a great many people out of the country?—A. It would too.

Q. What do you think of the present method of issuing licenses; do you think the restriction of canning licenses, as the thing is managed at present, is satisfactory to the fishermen?—A. I would say it is. Yes.

Q. Have you canneries enough in this neighbourhood do you think?—A. Yes. I think we have right here.

Q. Do you think we should limit the amount of gear put into the water?—A. That is another consideration.

Q. We limit the number of canneries but we do not limit the amount of gear.—A. Well, I don't know how that would work around here. We have men that fish 400 traps, one man.

Q. That must be done in very shoal water?—A. No, he fishes in 7 or 8 fathoms. There are some more that fish 200. So it would not suit them very well.

Q. You think it would be difficult to do that?—A. I think it would be difficult to limit the number of traps. There are lots of people have their own traps you know.

Q. What do you think would happen if we lived strictly up to the size limit and did not allow you to bring any lobsters to shore under 8 inches?—A. It just means they might just as well close the shops right down. There is no man that would fish then, they would not put a trap out.

Q. What sort of traps do you fish, the new traps?—A. I have 15 this year.

Q. How do you find them compared with the other traps?—A. They are better than the other traps, because if you cannot get at the trap for two or three days they will hold everything that comes in. After two days the lobsters work out of the other traps, that is the two headers. In the average fishing you will get as many in the old trap as in the new, they are no better.

Q. Do you think that by regulating the space between the slats in the bottom of the trap a larger percentage of small lobsters would escape?—A. There would not be anything in that.

Q. You think it would not allow a fairer proportion of small lobsters to escape?—A. No, sir.

Q. Why?—A. I don't see how they could get out. The minute you haul your trap up, the minute it leaves the bottom, all the fish that is in the trap goes down to the head and they lie there until you get the trap out of the water. The lobsters have no chance unless it is a very small one that will go out.

Q. How small a lobster do you hold in your trap?—A. Five inches.

Q. Do you think there is any use in canning a five-inch lobster?—A. Well, there is not much meat in them for a fact, but still they have got to can them if they are to make a living.

Q. How large a lobster would get out through an inch opening?—A. A 7-inch lobster would squeeze out when the trap is on the bottom.

Q. What do you think about shortening the season by taking ten days off at the end with a view of protecting the lobsters?—A. It would be better if you gave them ten days in the spring, at the beginning.

Q. When would you favour beginning in the spring?—A. Any time from the 20th

SESSIONAL PAPER No. 22a

April, we cannot get our lines out much before that. Some years we can, where we fish.

Q. How long does it take you to put out your full amount of gear?—A. About two days and a half, that is in fair weather.

Mr. T. W. MACDONALD.—In an average spring how long does it take you to put out your gear?

THE WITNESS.—Sometimes it takes us ten days. In stormy weather it will take us a week and we do not get at one trap.

By the Commissioner:

Q. How many fishing days do you count on having during the season?—A. I could not really tell you. There are some summers we lose more time than others.

Q. Could you venture to tell me one year with the other how many days you really fish?—A. We lose 10 or 12 hauls some years.

Q. Have you had any experience with the live lobsters industry, have you ever shipped live lobsters to market?—A. No, I never did.

Q. Has any one ever shipped live lobsters from here?—A. Not to my knowledge.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. Well, they might, it is hard for me to say. Some years they would do better I suppose. That is, fishermen never join together to put lobsters up themselves without hiring help. If they did they would make more.

Q. What do you think of the present policy of the department in encouraging fishermen to group themselves together to engage in canning and issuing what they call a co-operative license?—A. You might get a group of fishermen here and you might not. I would not have much to say about that.

Q. Do you think the average fisherman would do better by fishing and selling his lobsters for export alive than going into the canning business?—A. Yes, I would say so.

Q. Have you ever lost your catch of lobsters owing to the canner refusing to accept them?—A. No, sir, I never did.

Q. You never bring the canner enough lobsters?—A. I cannot get enough. They are too glad to get them.

Q. Do you think it is in the interest of the lobster fishery generally, that fish should be taken before they have reached the age at which they can reproduce themselves?—A. It depends on the size of the lobster.

Q. Take the case of the female lobster; you say you seldom see a female lobster under 8 inches with berries?—A. You may see them down to 7. I have never measured them but I have seen them that size.

Q. Not a great many?—A. Not a great many.

Q. Do you think we can ever expect the fishery to continue in a healthy state if we keep on killing off the young?—A. Well, I don't see how we can go on without stopping when they are catching a certain size.

Q. If the fishermen go on catching the lobsters before they reach a certain size what must the end be?—A. We must stop, that is all.

Q. Do you know anything about fall fishing; do you know if it requires the same number of lobsters to fill a pound can in the fall than it does in May and June?—A. I never fished in the fall and could not say.

Q. Do you think there is much illegal fishing done in this neighbourhood, that is after the close of the season?—A. There is in certain parts of it. Take the gulf shore.

Q. What becomes of these lobsters; how are they handled, who buys them?—A. They ship them off. Somebody buys them I suppose.

Q. Are these lobsters canned in the existing canneries?—A. No.

Q. They are canned in the bush and at different places?—A. No answer.

Q. When do you make your best fishing?—A. In the month of May from the 20th April—well from the 26th April.

9-10 EDWARD VII., A. 1910

Q. You do not begin fishing until the 26th April; it must take some time to get your gear out?—A. Well, a couple of days. I think we packed two days in April one year that I can remember, two or three days.

Q. I do not know that there is much else that I can get from you; is there anything further you would like to say?—A. In regard to this hatchery down here I believe the young fish are let out when they are too small.

Q. What would you think about it?—A. I will just tell you that: I think the fish cannot look after themselves, they are not big enough.

Q. In the natural condition when the young lobsters are hatched out by the mother how does she look after them?—A. Of course I could not say anything about that because I never saw them. But I was saying here this year that I did not believe it would be any use to put them out where they do put them, out in the gulf tide. You bait a trap out there by putting a herring on and a few hours afterwards you would see nothing. The perch will devour it and all the other fish. I believe these small fish should be left in the bays where the mother fish goes to spawn.

Q. Do you think the mother fish goes into the bays to spawn?—A. That is the place they go.

Q. In that case we should not catch lobsters in the bays should we?—A. They don't go into the bay, they go into shoal water.

Q. You think they go into shoal water to spawn?—A. Yes, into shoal water to spawn, that is sure.

Q. Do you think there ought to be any limit put on the depth of water fished in?—A. No, you could not place any limit here because we all fish in shoal water. It is all shoal water.

Q. You do not fish inside three fathoms?—A. Yes, we fish inside two fathoms. Of course we shift some lines at one end. On a clear day you may see the trap on the bottom.

Q. Have you fished in the harbour?—A. I have.

Q. Do you fish regularly in the harbour?—A. No, I fish outside, but I have fished in the harbour.

Q. What class of fish do you get in the harbour?—A. Just as good as you get outside—the same lobster.

Q. You think the young lobster should be held longer in the hatchery?—A. Yes.

Q. And that they should be liberated inshore?—A. In stiller water. They should be left in the bay where the water is still and they are able to look after themselves. Put them in the gulf and some never see the bottom. They are all devoured before they get there. Where a lobster will go down there, even if your eyesight was real good, you could not tell what it was, whether it was the form of a lobster or anything else. I know I could not without using glasses.

Q. The young lobsters are pretty small?—A. Yes, they are very small.

Q. Is that the only thing you have to say?—A. It is the only thing that would be any benefit to the fishing industry when they get them there. It would not be much trouble for the young lobsters to be kept there in shoal water until they got a little bigger to look after themselves.

Q. Of course the reason why the young lobsters are put outside is because it is generally held that the female lobster goes out there before she hatches?—A. Well, sir, that is a mistake.

Q. The female lobster goes out to hatch out her young.—A. That is a mistake.

Q. You think so?—A. I am sure of it. The best fishing we have is from this time out for anybody fishing in shoal water. Those fish would not go out and come in a second time.

Witness discharged.

SESSIONAL PAPER No. 22a

ERNEST GRIFFIN, fisherman, called and sworn:—

By the Commissioner:

Q. You heard the evidence of the previous witness, do you agree with it in the main?—A. Parts of it are all right.

Q. How long have you been engaged in lobster fishing?—A. Eleven summers I think.

Q. Do you do any other fishing?—A. Very little, some herring fishing in the spring.

Q. You don't fish for mackerel or cod?—A. No, sir.

Q. You own your own boat and gear?—A. Yes, sir.

Q. How many traps do you fish?—A. Well, this year I had 220. I had only 150 a few years ago.

Q. What is your practice with regard to fishing; when do you begin?—A. Oh, well, this year it was about the 1st of May before I got started. Some years it is earlier.

Q. One year with the other when do you begin?—A. I have seen us started 20th of April when it was all clear.

Q. It depends altogether upon the spring I suppose?—A. Yes, sir, on the spring.

Q. In what depth of water do you begin to fish generally?—A. I fish in 8 and 9 and as high as 12 fathoms, and a lot shoaler.

Q. Do you always fish in the same neighbourhood?—A. No, sir.

Q. You move about?—A. Yes, sir.

Q. What kind of bottom do you prefer to fish on?—A. Well, rocky bottom mostly.

Q. At that depth it is pretty much rocky bottom all along?—A. Yes, sir. There are spots of it that is not.

Q. I suppose the reefs with sand and mud between them?—A. Yes, sir.

Q. How long do you fish out in that depth of water?—A. Well, till the 15th or 20th of June some years. Some years not that long.

Q. How do you decide your movement, what makes you change?—A. Once the water commences to get warm we move inshore.

Q. You follow the lobsters in?—A. Yes, sir.

Q. What depth do you fish in then?—A. A fathom and a half and two fathoms.

Q. That is to say you begin at that and run out?—A. From that to two and three fathoms of water.

Q. How do you set your lines off shore, parallel with the shore?—A. Parallel with the shore generally.

Q. And what is the difference in the run of fish you get in the two places, outside and inside?—A. I don't see much difference this summer. In the spring early there are a few larger ones than at other times.

Q. What is the size of the hoop in your trap now?—A. That is the ring where they go into the hoop?

Q. Yes.—A. Some about 5 inches, some 6 and some smaller, $3\frac{1}{2}$ inches.

Q. Do you think there are many as large as 5 and 6 inches?—A. There are some that I have made that size.

Q. Do you find any difference in the catch?—A. Very little.

Q. Do you think a larger number of lobsters escape from the trap with the large ring?—A. Well, they will with the two headed traps.

Q. What percentage of your entire catch of lobsters would be under the legal limit?—A. I can hardly say, quite a lot of them.

Q. Would there be one-half?—A. No, there would not be one-half. Well, I don't know but what there would.

9-10 EDWARD VII., A. 1910

Q. Do you find a larger percentage of small lobsters in the spring than later in the season?—A. Well, the most of the small ones I think are caught in June, all along in June.

What percentage of the lobsters you catch are female lobsters with the berries extruded?—A. I suppose there would be 5 or 6 in a hundred sometimes.

Q. And what sort of fish are they generally?—A. A good size. Well, some of them would be 6 and 7 and 8 inches, I think.

Q. Did you ever see a berried lobster 6 inches in size do you think?—A. Yes I have.

Q. Most of them are above 8 inches?—A. No, the most of them are 8 and 9.

Q. What has been your practice in the past? We understand that this year you have been taking your berried lobsters to the factory where the berries were stripped, but what was your practice previously with regard to these lobsters?—A. We generally used to take them to the factory, but last year we chucked them overboard.

Q. Why did you do that last year?—A. Well, we considered it was spoiling the fishing taking them.

Q. If there were only 6 or 8 per cent of the catch berried lobsters it would be a simple matter and not cause you much loss to throw them overboard?—A. No.

Q. As to the undersized lobsters has it been the practice to can them?—A. Yes, sir.

Q. Have you ever known lobsters to be refused by the canner because they were undersized, no matter how small they were?—A. No, I never have.

Q. Do you think it would be a difficult thing to enforce the size limit regulation?—A. I think it would.

Q. What effect would it have upon you as a fisherman?—A. I would not be able to fish at all.

Q. Would it put you out of business?—A. It would.

Q. Are you of the opinion that the industry is failing, that it is not as good now as when you began to fish?—A. Well, I don't see much difference in it.

Q. Still you told us you caught a larger quantity of fish years ago with a much smaller number of traps?—A. Yes, but I think there are as many caught as there used to be only there is more gear to catch them.

Q. Do you think the average size of the fish is as great as it used to be?—A. Well, since I started——

Q. Do you not think the fish are smaller?—A. I don't think they are much smaller than when I started first, but years ago they were larger.

Q. Various propositions have been advanced for the protection of the fishery. One is that we should close down altogether for a number of years and in the meantime it is supposed the lobsters would recuperate and grow larger; they grow pretty rapidly?—A. Yes, sure.

Q. What would you think of that?—A. I would not think it would work.

Q. How do you think it would affect you individually?—A. I would have to go somewhere else.

Q. There is nothing else you could turn your attention to on the spot by which you could make the same amount of money?—A. No, sir.

Q. Are you satisfied with the price you obtain for your lobsters?—A. Oh well, it is not too bad.

Q. How many do you sell in a season?—A. I sell by weight.

Q. What do you receive in your case where you are using your own gear?—A. Different years there is a different price.

Q. What was the price this year?—A. I got \$2.50 this year.

Q. Last year it was a little more?—A. Yes, sir.

Q. Do you understand that the decrease in price was caused by a drop in the market?—A. Yes, sir.

SESSIONAL PAPER No. 22a

Q. And you think that the reduced price this year was a natural consequence of that?—A. Yes, I do.

Q. Have you any feeling that you are not treated fairly in the matter, that there is any combination on the part of the canner to keep the price down?—A. I don't think so.

Q. Is there any fishermen's union here?—A. Not right here.

Q. Is there one in the neighbourhood?—A. Well, down at Launching.

Q. What do you think of the proposition to compel all lobster fishermen to take out a license? Of course the fee would not be excessive but something nominal. The proposition means that we would have to register the fishermen?—A. I guess that will be all right.

Q. Do you think those who knew themselves to be registered fishermen would be more careful about observing the regulations?—A. I don't think it would make any difference.

Q. Are you satisfied with the present method of licensing canneries; you know the number is restricted and the only new licenses granted are to co-operative associations of fishermen?—A. Well, I don't know that it makes a great deal of difference. They can get fishing stands. Lots of them have fishing stands here and there and smack the lobsters to the factory; they only pack in one place.

Q. What do you think of that practice; there have been complaints about having stands at a distance from the cannery?—A. Oh, I don't know.

Q. Do you think there is any sufficient reason why any man who shows his ability to pack, has the necessary capital, and understands the work, should not get a license?—A. No, I don't think so.

Q. Do you think that the policy of the department in encouraging the fishermen to group themselves together and take out a co-operative license is a good one?—A. I would not prefer it myself.

Q. In your opinion, would the average fisherman make more money if allowed to pack on his own account than he does at present?—A. Well, I think he would.

Q. If licenses were issued generally would it be possible to establish a standard of fitness in canning?—A. I don't know as it would.

Q. What do you think about limiting the amount of gear fished?—A. I think that would be all right.

Q. What would be the best way to do it?—A. Cut down the number of traps to a boat.

Q. And not allow them to fish any more than a certain number of traps?—A. That is what I would think.

Mr. T. W. MACDONALD.—What number of traps would you consider fair?

The WITNESS.—To a single boat I would say 175.

By the Commissioner:

Q. And a double boat?—A. About 250. I think that would be plenty. I know if all hands had just that many they would catch as many lobsters.

Q. Is there much crowding on the fishing grounds?—A. Yes, lots, too much.

Q. Is there much overlapping and running across each other?—A. There is in places quite a lot. Some places it is all right though.

Q. Is the custom of stripping or washing off the eggs from the female lobster practised here, or was it practised before the hatchery was established?—A. I could not say.

Q. You never saw it done?—A. No, I did not.

Q. Is it to your knowledge that any fisherman has ever lost his catch of lobsters through the packer refusing to accept them?—A. No, not that I know of.

Q. What is your idea of hatcheries; do you think they do good work?—A. I guess they do all right, I don't know much about them myself.

9-10 EDWARD VII., A. 1910

Q. Have you ever fished on the south side of the Island?—A. No, sir, never.

Q. Some fishermen down there claim they are benefited by the hatchery at Caribou?—A. Yes, sir, they say so.

Q. You have never felt that benefit here, the good influence of the hatchery does not extend so far?—A. No, sir.

Q. Do you know anything about the live lobster trade?—A. No, sir.

Q. Do you think there would be anything gained by insisting upon a regular and greater width between the slats of the trap?—A. No, I don't think it will make much difference.

Q. Do you not think a larger proportion of small lobsters would escape if that were done?—A. No, I don't think it would, because as long as the bait is in they will stay in it. Once the trap is disturbed they go to the end.

Q. And they do not escape?—A. They do not escape.

Q. Do you know if there is any place in this locality where a pound could be established?—A. I suppose there could be lots of places. There is a pound at Panmure Island.

Q. What is the bottom?—A. It is a kind of dirty bottom although it might be all right.

Q. What do you mean by that, soft mud?—A. Soft, dirty mud.

Q. Is there eel grass there?—A. I don't know that there is eel grass.

Q. What depth of water is there?—A. I guess there is but little at low tide.

Q. What do you think of the proposition to do away with the size limit and restrict the season by taking off ten days, or taking off a certain time, in July?—A. Ten days would be all right, but it would be hardly worth while commencing to fish, because it is a very short season by the time you get your traps out.

Q. Do you think it would have the effect of improving the fishery; would you save a considerable proportion of lobsters by cutting off those ten days?—A. I guess there is not many caught anyway in July.

Q. We would not save very much if there are not many caught; the question is would we save enough to make up for not enforcing the size limit?—A. I would think so. What time would the season open, the same as usual?

Q. What time do you think the season should open?—A. I say from the 20th or 26th April. Some springs it does not suit but very seldom.

Q. How would it affect you to open the 1st January?—A. I would sooner have a certain day to fish.

Q. What is the advantage of a certain day?—A. It gives everybody the same chance in starting. Some would put out their lines a month ahead of others if the opening date were the 1st of January.

Q. What is the best time in your fishing?—A. The months of April and May, from the time we start up in April. Some years you won't land any at all; other years you will.

Q. There is no desire to have fall fishing here, is there?—A. Well, I don't hear very much about it, I don't think so.

Witness discharged.

GEORGE GRAHAM, canner, Gaspereaux, called and sworn:—

By the Commissioner:

Q. Are you engaged in canning?—A. Yes, sir.

Q. You run a cannery?—A. Yes, sir.

Q. Is the cannery at Gaspereaux?—A. Yes, sir.

Q. How long have you been engaged in lobster packing?—A. 16 years.

Q. What number of boats do you employ?—A. We have 16 this year.

Q. Are they all fishing your gear?—A. Yes, sir, pretty much. There may be one or two that do not.

SESSIONAL PAPER No. 22a

Q. Are the fishermen fishing by weight or by count?—A. By count. On the coast from Emerald Island to Beach Point it is all count.

Q. What number of hands do you employ in the cannery?—A. About 12 I suppose at one part of the season.

Q. Are the boats mostly double, two men in a boat?—A. Double and single.

Q. What number of cases did you pack this year?—A. 350.

Q. You have the same season that they have here, from the 26th April to the 10th July?—A. That is right.

Q. Do you pack from the opening to the close of the season?—A. We caught lobsters on the 6th of May this year.

Q. And did you keep on fishing up to the last day of the season?—A. Yes, sir, up to the last day.

Q. Where are the traps placed in your neighbourhood in the opening part of the season?—A. They are placed from the shore to five miles off.

Q. In what depth of water?—A. It would be anywhere from 2 fathoms to 12.

Q. Do the fishermen all fish through the season in the same depth of water?—A. In the same depth.

Q. Once they set their traps they remain there?—A. Yes, they move very little.

Q. And what is the difference between the catch outside and that inside?—A. Some of the men that fish right against the shore have just as good lobsters as those five miles outside.

Q. Do they begin to fish as early?—A. Just as early. The lobsters won't be so good in shore right early. They won't strike the shore so early as outside.

Q. So the far off fishermen get the lobsters a little earlier?—A. A little earlier, perhaps a week or three or four days.

Q. And you think when the outside fishermen begin to catch lobsters you will likely get them inside within about a week?—A. Yes, sir.

Q. What class of lobsters do you get to-day compared with those you had when you first began canning?—A. I would say they would go about double to the can then.

Q. What will they go to to the can now with you?—A. They went 11½ to the pound can this year.

Q. What proportion of these lobsters will be below the legal size limit?—A. It would be pretty hard to tell, a large proportion.

Q. What do you call a large lobster down where you are?—A. 9 and 10 inches.

Q. Do you still get some of the old fashioned large lobsters?—A. Oh, we get some of them. They have went two lobsters to the can. Two years ago they went nine to the can. and this year 11½.

Q. Has that decrease in size been gradual?—A. Not gradual, no. There is a new style of trap started down there that we attribute it to. What we call the four headed trap.

Q. Is that is what is called the wheeler trap?—A. We call it the parlour trap. It has four heads.

Q. And what do you attribute the decrease in the general run of lobsters to?—A. Well, we have attributed it to the trap.

Q. You do not attribute it to over-fishing?—A. Well, the fishery is no more over-fished than it formerly was.

Q. Is there no more gear fished in your waters than there used to be?—A. Oh, there may be a little more.

Q. Are you not fishing more gear now than when you began to operate?—A. Oh yes.

Q. And is it by the increased amount of gear you fish that you keep up your pack?—A. That is what we have to do, keep increasing our gear to keep our pack up.

Q. What is the average number of traps fished per boat?—A. Anywhere from a single fleet, 225 up to 300.

9-10 EDWARD VII., A. 1910

Q. What proportion of the lobsters you take would be egg-bearing lobsters?—A. I would think about two per cent.

Q. You are beyond the reach of a hatchery, they do not send down to you for eggs do they?—A. Yes they do.

Q. And I suppose this season you have sent your eggs there?—A. Yes, sir.

Q. What has been the practice in regard to berried lobsters up to this season?—A. Oh well, they were taken.

Q. Did you ever make any attempt to refuse taking them from the fishermen?—A. Oh well, there was very little attempt made.

Q. What do you think would have happened if you had refused to take them?—A. Well, one packer would take them and another would not.

Q. Had the fishermen adopted the practice of brushing the eggs off the female lobster down there?—A. Well, the packer never refused to take them at all and——

Q. Consequently the fisherman did not need to do it?—A. They did not have to.

Q. What is the smallest sized lobster you have seen carrying eggs?—A. I don't think below 8 inches.

Q. Where they have been counted there would only be about one in a hundred thousand as small as seven inches?—A. Yes, sir.

Q. But as a rule they are good sized lobsters?—A. Nine and ten-inch lobsters.

Q. Are the berried lobsters as good for canning purposes as the female without eggs or the male lobster?—A. We don't know of anything to the contrary.

Q. They are generally full of meat and good lobsters?—A. Yes, sir.

Q. You have not noticed whether the meat of the berried lobster is softer and more spongy or anything of that kind?—No, sir.

Q. We never heard it was until yesterday in Charlottetown, when some people made that claim. Are you within reach of the lobsters from the hatchery at Caribou, are you among those that have experienced benefit from that hatchery?—A. I don't think so.

Q. Some fishermen on the south shore of the Island, above you, claim they have derived benefit from that hatchery, that they see schools of small lobsters?—A. There are a lot of small lobsters this last few years but whether it is due to the hatchery or not I cannot say.

Q. You are inclined to say the catch of small lobsters is due to the trap?—A. It is the trap we blame.

Q. What would happen to you if the law were rigidly enforced as to the size limit and so forth?—A. It would close our factory.

Q. What do you think is the best way of getting the fishermen to observe the regulations and save the berried lobsters; some people propose to license them?—A. There would be no difficulty now that there is a hatchery here.

Q. All the eggs go to the hatchery now?—A. Every fisherman takes an interest in it and the packers also.

Q. Do the fishermen receive anything extra for the berried lobsters at all?—A. They just get paid for them.

Q. How does the present season suit you down at Gaspereaux in regard to the opening and closing?—A. We think the season is about as good as it could be made.

Q. The opening date, 26th April, suits you very well?—A. Fine.

Q. Are you much bothered with ice in the early spring in your neighbourhood?—A. We are sometimes.

Q. The ice is not gone before that date, one season with the other?—A. Very seldom here.

Q. A number of propositions have been made by those interested in the business for the better protection and building up of the fishery. It seems to be generally admitted that the fishery has run down and some people propose knocking off fishing absolutely for a term of years.—A. That would be a bad thing.

Q. That would be a pretty severe measure would it?—A. Yes.

SESSIONAL PAPER No. 22a

Q. The Lobster Commission of 1898 proposed a partial closing down of the fishery, a closing down by sections.—A. It would be pretty hard to regulate that satisfactorily.

Q. Still another proposition is to do away with the size limit entirely and shorten the season a little. The berried lobsters must be saved, and, after the eggs are taken to a hatchery, placed in pounds, where that is possible, or returned by the fishermen to the water.—A. That would be the best thing to do if anything has to be done.

Q. If anything has to be done you think that is the best measure to adopt?—A. That is the best measure.

Q. How would it affect you to close the season on the last of July?—A. It would protect the industry of course.

Q. Do you think enough would be gained by doing that to compensate for taking immature lobsters?—A. It is pretty hard to tell.

Q. Then as to the matter of the trap; complaints have been made to the department that the parlour trap is unnecessarily destructive?—A. Probably it is.

Q. What is your opinion of it?—A. I would like to see the trap stopped by all means.

Q. What trap would you suggest in its place?—A. Nothing but the old two-headed trap we used to use.

Q. What do you think is the limit of space that should be established between the slats; we find in some places that the slats are only half an inch apart; that seems to be very close?—A. They should be opened up to three-quarters or an inch.

Q. Is the practice of leaving gear in the water followed down on your coast at all? We are told there is a great deal of gear left in the water, that the fishermen do not take it up when the season closes, but leave it there?—A. Not much good gear. There was a good bit this year because there was a stormy season and a lot of it was destroyed.

Q. I do not mean gear that is accidentally lost, but valueless gear which is abandoned instead of being brought ashore?—A. Well, there is some every year I suppose.

Q. Do you think leaving this gear in the water does not do any harm?—A. It does not do any harm.

Q. How soon does that gear go to pieces?—A. A storm will smash it up and it is destroyed very quickly.

Q. Does the worm known as the borer damage your traps very much?—A. If they are left in the water they will.

Q. Now as to the matter of licensing canneries, what do you think of the present system? For some years back the department has refused to grant new licenses, has it not?—A. Yes, sir.

Q. Except where a number of fishermen have grouped together and applied for a co-operative license; do you think the number of canneries should be limited, that there are canneries enough?—A. I would rather not answer that question.

Q. Do you think there is any reason why any man who shows his ability to pack should be refused a canning license?—A. It would be treating every man fairly.

Q. In your opinion should what is called co-operative canning be encouraged?—A. I daresay it would be all right.

Q. What was the season when you first began canning?—A. We had no season then; we could run our lines when we liked in the spring.

Q. And you fished up to when?—A. Up to the 15th of July I think.

Q. What do you think about fixing a date in the spring; in your opinion, is it a wise thing to do?—A. It is a good thing.

Q. From the point of view of the lobster is it a good thing? Does it in any way affect the lobster?—A. Not the lobster, but it saves a lot of gear.

Q. What do you think of the proposition to license the fishermen?—A. I would allow every man that wanted to fish to do so.

9-10 EDWARD VII., A. 1910

Q. If he fishes in an illegal way what would you do with him?—A. There is not much illegal fishing on our coast.

Q. Is there any fishing after the season?—A. It is very small I think.

Q. Was it greater at any time than it is now?—A. Yes, sir.

Q. Have you any idea how the lobsters that are caught after the season closes are marketed?—A. No, sir, I have not.

Q. What do you think of the present system of labelling the cases; is it entirely adequate? The idea was that it would prohibit the sale of illegally packed lobsters, but it does not seem to have had that effect?—A. There can be fraud used I suppose.

Q. Is there any other way of labelling the cases, or anything that can be done, that will stop illegal packing?—A. Well, I don't know of any.

Q. What is the best period of the fishery on your coast?—A. In May.

Q. Has there ever been any attempt in your locality to ship live lobsters to market?—A. No.

Q. There are no facilities for establishing that trade?—A. No, sir.

Q. Do you think the price paid to the fishermen at present gives them a fair share of the business?—A. Yes, sir.

Q. Have you heard the fishermen complain they were not getting enough for their lobsters?—A. I would rather they would answer for themselves.

Q. Do you think the existing penalties, if they were enforced, are sufficient to deter packers from violating the regulations?—A. Yes, sir.

Q. To your knowledge has a penalty ever been inflicted of recent years for violating those regulations?—A. Not on our coast.

Q. According to the evidence here some people would prefer to open the fishery on the 1st of May and others on the 20th April. What is your idea as to the best date for this part of the Island?—A. If there is going to be any change at all it would be better to have the 1st of May, but it is satisfactory the way it is.

Q. In some places fall fishing has been asked for; what do you think would be the effect of that?—A. It would have a very bad effect. I would not like to see it at all.

Q. Do you think it would be wise or possible in issuing a license to a cannery to fix a limit to the amount of gear that should be fished?—A. It will be pretty hard to regulate. Some of the canneries are very large establishments.

Q. To your knowledge is there any arrangement or any combine on the part of the canners to keep the price down?—A. Not to my knowledge.

Q. The price is governed by the state of the market?—A. By the market.

Q. Do you think it would be wise to have the product of the canneries inspected?—A. I don't think it would be any use. Everybody tries to pack the best article they can.

Q. You think they do?—A. I think they do.

Q. Are there not some canners where the article put up is not what it might be?—A. Well, it is their loss, they cannot sell.

Q. Do you think we ought to establish any standard for canneries, that we should insist upon the tables for instance, being of a certain style?—A. I think pretty much every canner has everything as clean as possible, the tables and so on.

Q. How are the tables covered in the canneries?—A. The most of them are covered with zinc I think.

Q. You think they should be covered with something?—A. Yes, sir.

Q. Is it the case, as alleged, that fishermen have lost their catch of lobsters by the canner refusing to accept them?—A. Not on our coast.

Q. It has also been alleged that in some cases fishermen have suffered loss by the failure to operate the canneries although a sufficient supply of lobsters was available; has such a thing ever occurred here?—A. No, sir.

Q. It is further alleged that in some places the canners have associated together

SESSIONAL PAPER No. 22a

and shut down, and in that way left the fishermen out in the cold; such a thing has never occurred here?—A. No, sir.

Q. Are most of the men engaged in the lobster fishery professional fishermen, or are they farmers who fish only for lobsters?—A. Well, they are both but they are all good fishermen.

Q. We find in a great many places that those in the fishery are not regular fishermen, that they fish for lobsters only and when the season is over go back to the land?—A. Well, a lot of them are that way, they just fish during the lobster season.

Q. Would you recommend an increase in the number of hatcheries?—A. Yes, sir, I would.

Q. Are there any facilities in your neighbourhood for the establishment of pounds?—A. I don't think it.

Q. What do you think about inshore fishing in the heads of bays and in lagoons and shallow water generally; do you think there ought to be any limit to the depth of water in which traps are set?—A. No, I do not think so.

Q. You do not think that inshore fishing is more injurious than outshore fishing?—A. No, sir.

Q. Do you not get a larger proportion of berried lobsters inshore than you do in deeper water?—A. They might at the last of the season in the harbours, but still the hatchery now takes those lobsters.

Q. But I am alluding to places where there are no hatcheries, they cannot have hatcheries everywhere?—A. We generally find a lot of egg-bearing lobsters at the first of the season.

Q. Do you notice a difference in the eggs as the season advances?—A. Yes, sir.

Q. Have you ever experimented by holding berried lobsters to see what happened to them?—A. No, sir.

Q. In some places they have held them in crates or in the traps?—A. We can see the eggs getting ripe and coming on.

Q. Is it an easy matter for the fishermen when taking them out of the trap to make a selection between the egg-bearing lobsters and the others?—A. Yes, sir.

Q. Is it an easier matter to do that in the boats than at the factory?—A. Yes, sir, that is the place where they should be separated.

Q. Would you like to state anything of your own accord?—A. No, sir.

Witness discharged.

WILLIAM D. GRAHAM, fisherman, Gaspereaux, called and sworn:—

By the Commissioner:

Q. Do you fish off Gaspereaux?—A. Yes, sir.

Q. How far off shore?—A. Well, this year I fished a long way off, I suppose possibly eight miles off the shore.

Q. In what depth of water?—A. From eleven to thirteen fathoms.

Q. When did you begin to fish out there?—A. About the 1st of May.

Q. What number of traps do you fish?—A. 290.

Q. I suppose fishing at that distance you are not alone, you have somebody with you?—A. Yes.

Q. Are you fishing your own gear?—A. No, sir, the gear belongs to Charles Graham & Co.

Q. How were you fishing, by count?—A. Yes, sir.

Q. At what rate per hundred?—A. Ordinarily the price was 75 cents for outside fishermen per hundred. The conditions under which I fished were a little different to that.

9-10 EDWARD VII., A. 1910

Q. Was that a lower price than you had last year?—A. Considerably.

Q. What did you get last year?—A. I got \$1.15.

Q. On the same terms?—A. No, not exactly the same terms.

Q. Were you fishing their gear?—A. Yes, sir, for the same firm.

Q. Did you fish the whole season through at that distance from the shore?—A. Yes, sir.

Q. Right on from beginning to the close?—A. From where I put my gear the 1st of May I moved out farther.

Q. Instead of coming in you went out?—A. Yes, sir.

Q. And how did the fishing hold on that ground?—A. It held very well.

Q. What is the nature of the bottom where you fished?—A. Where I had my fishing gear was rocky bottom.

Q. I suppose you always prefer to fish on that kind of bottom?—A. Yes, sir.

Q. In that depth of water you would not be liable to any loss of traps from storm?—A. No, sir.

Q. I suppose, all other things being equal, the loss of traps is greater in shoal water than in deep water?—A. Yes, by a great percentage.

Q. Is there any fishermen's union where you come from?—A. No, sir.

Q. Are there many fishermen fishing on that spot?—A. Oh, yes, but none out as far as I was.

Q. How many boats are there?—A. There are two factories there together and between thirty and thirty-two boats.

Q. But nobody fishes out where you are far off shore?—A. No, sir.

Q. Have you fished there long?—A. No, sir, that is the first season I fished at that distance.

Q. How did you find the fishery out there compared with that closer in?—A. Well, I generally do better than any one along there, but of course there was no other gear there but my own.

Q. You had the whole place to yourself; was the fishing constant all through the season, was your average about the same?—A. Well, the average went down some, but the lobsters were better out there the last of the fishing than inside.

Q. You had bigger fish?—A. Bigger fish and more of them.

Q. What percentage of fish did you take out there below the eight inch limit?—A. Well, I could hardly say, but I know the factory tried my lobsters, packed them alone, and they took from nine to ten to fill a can.

Q. The factory kept your lobsters separate?—A. They have tried them separate at different times.

Q. Was that to find out how your lobsters ran as compared with the others?—A. Yes, sir.

Q. I suppose this year you brought in all the berried lobsters and the berries were taken for the hatchery?—A. Yes, sir.

Q. Up to this year what was the practice?—A. Well, the practice was to can them, but for the last three or four years I made a practice of throwing them away myself. I let them go out of the trap.

Q. You believed it was the right thing to do?—A. Well, I believe in protecting them. I believe the hatchery is the best way all right enough.

Q. But you believe in saving the berried lobster anyway?—A. I believe in saving her when the berries are taken off.

Q. Do you think it takes a larger number of traps now to give you as good average fishing as when you began first to catch lobsters?—A. Oh, yes.

Q. There is no doubt about that?—A. No doubt at all.

Q. In that respect fishing has failed?—A. It has failed. I don't think it has failed in the number of lobsters. There is a terrible lot more gear to catch them, but a man in order to make the same amount of money has to have more gear to make a living.

SESSIONAL PAPER No. 22a

Q. Although he may get the same weight he catches a much greater number of fish?—A. Oh, certainly, yes, sir.

Q. What do you think of the proposition to require the fishermen to take out a license and to register, do you think it would have any beneficial effect or not?—A. What benefit would there be in taking out a license?

Q. The idea of those who propose the thing is that those fishermen taking out a license would feel more or less guardians or protectors of the law, that they would be more likely to obey the law themselves and inform on others who did not; do you think it would have any such effect?—A. If that was the intention I would think it was a very good one.

Q. How do you think it would work out in practice?—A. I don't know.

Q. Do you think if the fisherman had a printed slip in his pocket giving him the right to fish lobsters it would make very much difference in his behaviour?—A. It would with possibly a majority of them.

Q. There would be that much gain then?—A. Yes, sir.

Q. How does the price paid for lobsters to-day compare with what you got when you first began to fish?—A. Prices are higher than when I commenced to fish.

Q. Much higher?—A. Well, when I commenced to fish first, that is 16 or 17 years ago, lobsters were 50 cents a hundred.

Q. By count?—A. By count and people found themselves. Now it is customary for the packers to find the gear. At 75 cents a hundred they find and board you and everything else.

Q. Is there any competition in the matter or are you obliged to take the price offered you?—A. Well, we were obliged to take it this year.

Q. Last year had you more option in the matter than this year?—A. Last year we could make our own price.

Q. There was a great demand for the lobsters then?—A. Well, I guess possibly there was. This year the packers would not give us any price, we could not get a price until we were done fishing and then we had to take what they offered.

Q. The price was not fixed at the beginning of the season?—A. Not fixed along our shore anyway.

Q. Do you think the price you obtained bore a fair ratio to the value of the product ultimately; do you think you got enough for your lobsters?—A. I don't think I got enough for them but I think possibly the packers paid all they could under their present system of operating factories. I don't think they operate the factories right at all. I think the fishermen should get more if they were operated right.

Q. Do you think the fishermen would make more money if they were allowed to can for themselves?—A. I don't know. The packers that are fishermen are making more money.

Q. What about the fishermen that are packers?—A. The fishermen that are packers and the packers that are fishermen; of course they are spending more time at it.

Q. Talking about that matter. What do you think of the present system of licensing canneries? There are no new licenses issued unless it is to what is called a co-operative association where a number of fishermen unite and form a partnership for canning purposes. The department at present is disposed to encourage that style of thing; what would be your suggestion with regard to the matter of licensing canneries?—A. Well, I could hardly say.

Q. Do you think that every man who shows his ability to conduct the canning business properly should be given a license?—A. Well, I think so in a way, if they had a mind to do so. I don't know that it would be good for themselves altogether.

Q. I suppose it may in some cases?—A. That is for every one, for every fisherman to have a license? It would not do.

Q. You do not think it would do to issue licenses to can to people indiscriminately?—A. No, sir, I do not.

9-10 EDWARD VII., A. 1910

Q. You think we would have the right to exact some standard; the canning you know must be done in a certain way?—A. Yes, sir.

Q. Do you think that every man who applied for a license should be granted one provided he demonstrated that he was able to can properly?—A. I think so, and if he failed it would be his own loss.

Q. Is there any particular season of the year when you see more spawn lobsters than at another?—A. Yes, sir. In deep water where I fish, all the spawn lobsters are caught in the first of the season. I get none at all in the last of it.

Q. What would you take that to mean, that the spawn lobsters had passed inshore and inside of you?—A. I would think so because they were catching them inside at that time.

Q. Do you think it is safe to hold that the female lobster goes inshore to spawn?—A. Well, I would suppose by that that they did.

Q. Would you expect to get a better average run of fish in deep water than in shoal?—A. Yes, sir.

Q. What style of trap do you use?—A. Well, it is the parlour trap.

Q. Some people claim that trap is unfairly destructive, that it catches too large a proportion of small lobsters and holds everything that goes into it?—A. Yes, sir, it does so.

Q. Do you think yourself that it is a more killing trap, that it is unfairly destructive?—A. Well, I would say that the parlour trap is all right of itself if the slats were far enough apart to let the small lobsters out.

Q. How far apart would you put the slats?—A. I would say if you start in with a space of about seven-eighths of an inch apart round and round the trap—not merely one lath at the bottom, I don't believe in that. That is very easily changed. I would like to see the space seven-eighths of an inch apart round and round the trap.

Q. What sized lobster would that allow to escape do you think?—A. Well, some years ago we had a law here for a space of one and a quarter inches and that was supposed to let out anything under 9 inches. I suppose seven-eighths of an inch would possibly let out between 5 and 6 inch lobsters.

Q. You understand these things pretty well; do you think it would be possible to enforce the regulation?—A. I think it would.

Q. I mean the regulation regarding the size?—A. The size limit?

Q. Yes, as it stands at present, could it be enforced?—A. Without opening the traps at all?

Q. Regardless altogether of traps. The law requires you not to take any lobster under 8 inches in size; is that an easy law to enforce?—A. I don't think so. It could not be enforced and allow the fishermen to fish and the packers to operate, not in this part of the country.

Q. What do you think of the proposition to do away with the size limit, fix a standard for traps, and knock off fishing on the 1st July?—A. I think if the size limit was done away with and slats opened enough to let small fish out, that would save all bother with the size limit.

Q. Without shortening the season at all, would it cripple you to cut off the season on the 1st of July?—A. No, sir, it would not. There is nothing caught after the 1st of July. A man might make wages, but that is all.

Q. The idea of doing that would be that in a very short time the fishing would improve?—A. Certainly.

Q. And you would make up for any loss you sustained?—A. Certainly. That is true enough; that is what we want.

Q. You think such a regulation would have the effect?—A. Yes.

Q. To your knowledge have the canners in your neighbourhood ever objected to receiving berried or undersized lobsters?—A. No, sir.

Q. Has it been the practice on the part of the fishermen in your neighbourhood to

SESSIONAL PAPER No. 22a

avoid dealing with a canner who is known to be careful in this matter?—A. No, sir, there has been nothing of the kind carried on here.

Q. Has any fisherman, so far as you know, ever lost his catch of lobsters by the canner refusing to accept them?—A. No, sir.

Q. What do you think of the proposition to close down entirely for a while?—A. I think it would be a pretty severe blow to this Island. We would have to make a shift then.

Q. Within your experience has there been much decrease in the fishery within the last five or ten years? Do you think the diminution is steadily going on? Some people claim that it has reached bottom and it is not getting any worse the last few years, that the damage was done in the earlier years when you fished a longer season and had many extensions allowed?—A. I believe there are more fish caught here year after year; that is my opinion. Of course there is more gear to catch them.

Q. Then you believe there is a greater number of fish to-day?—A. And more cases of lobsters packed, that is what I would think.

Q. Do you know anything about the live lobster trade?—A. No, sir. As far as more cases being packed, I believe this year there was a smaller pack. You take the last five or six years, I believe——

Q. How is your individual catch compared with last year?—A. Mine was better compared to last year by a good lot.

Q. Was that experience general?—A. No, sir, it was not.

Q. Do you know anything about the matter of placing lobsters in pounds? A good many people recommend saving the berried lobsters by placing them in pounds where they can be kept until they hatch out their berries and liberating them at the close of the season. Is there any place in your neighbourhood suitable for the establishment of a pound?—A. No, sir, I don't think so. We have a narrow inlet and deep water, but I think the smaller fish would destroy the spawn.

Q. What kind of fish do you mean?—A. Perch, smelts and small codfish. I think the spawn should be put in deep water.

Q. You think the young lobsters should be delivered in deep water?—A. I think so.

Q. Why do you think that?—A. When there is less small fish they float for a certain time. That is what they claim anyway, and we know for a fact that they do float.

Q. And it is the only period in their lives when they prefer to go ahead rather than go backwards?—A. That is true enough. I think the deeper the water the fewer fish there are to prey on the young lobsters, and for that reason they stand a better chance of coming to maturity.

Q. How are the young fish distributed at present?—A. All right I think. I saw a man putting them out this year, and as far as my opinion goes he did it all right.

Q. Do you think the lobster in these waters is as hardy as the lobster anywhere else? Some people have stated that the island lobster will not stand transporting as well as the Atlantic lobster?—A. I cannot say as to that at all.

Q. Would it take more lobsters to fill a pound can in the fall than in May or June?—A. I do not know, but I do not think it would.

Q. Do you think lobster fishing, as a general rule, should be kept farther out from the shore?—A. Well, I don't think so.

Q. I suppose you hope to be left alone off shore?—A. Well, people fish where they like I think.

Q. Your best fishing month is in May?—A. Yes, from the middle of May to the middle of June. That is this year.

Q. Do you know enough about the matter to express any opinion as to whether there is more money for the fisherman in the live lobster trade than in selling lobsters to the cannery?—A. No, sir, I do not know.

Q. I do not know that there is anything more I want to ask you particularly

9-10 EDWARD VII., A. 1910

about. Is there anything else you have in mind that I have forgotten?—A. No, sir, I don't think so. I think there ought to be a change somewhere.

Q. Well, what change do you suggest? What we are here to try and find out if possible, is what is the best thing to be done?—A. My opinion is to open up all the slats in the traps and let the small lobsters out and allow a man to fish whatever style of trap he pleases.

Q. As long as he leaves a little distance between the slats of the trap?—A. Leave a little distance between the slats in the trap and enforce that law. There is no use in having a law unless it is enforced.

Q. Take the size limit law, it has never been enforced, and it seems difficult to enforce it?—A. I believe if the slats were open enough and we had inspectors here who were given the right to go around a few days before the lines were run and smash every trap that was built below the limit, it would be all right. I believe the lobsters taken are too small and we want protection for that. That would be my way of starting. We have to measure lobsters and throw them away, but if the slats of our traps are open enough they will go away and we don't know anything at all about them.

Mr. T. W. MACDONALD.—May I ask a question? I understand Mr. Graham to say that he thinks the spawn lobster comes inshore to spawn.

The WITNESS.—Yes, I think that.

Mr. T. W. MACDONALD.—You also stated that you thought the young lobsters should be distributed in deep water?

The WITNESS.—Sure enough.

Mr. T. W. MACDONALD.—That makes out that the spawn lobster when it comes in to spawn does not come to the right place because according to your argument they should spawn in the deep water instead of inshore. The natural instinct of the lobster apparently does not agree with the way the young lobsters are distributed. That is the way your story appears to me.

The WITNESS.—It is pretty hard for the spawn lobster to know where the perch live. It may be the natural place to spawn inside. The fact remains that at the spring of the year I caught all my spawn lobsters in deep water and at the last of the season the fishermen caught them in shoal water. As for spawning I don't know where they spawn. Possibly they are spawning there now and we get them there again.

Mr. T. W. MACDONALD.—We are catching spawn lobsters with the ripe spawn on them right in the harbour.

The WITNESS.—Right in the harbour, they are there now.

Mr. T. W. MACDONALD.—And we were of the opinion they spawned in there. It is an opinion open to discussion and it is one point we would like to have cleared up if possible.

The WITNESS.—Certainly.

Mr. T. W. MACDONALD.—Some people claim the female lobster spawns in deep water and some that she spawns in shoal water. The practice of the department is based on the theory that the fish go inshore until the spawn is ripe and then they go outside to spawn. The department is basing its action in regard to the hatcheries on that theory.

The WITNESS.—Certainly.

Mr. T. W. MACDONALD.—We want to find out if possible, and verify that theory or prove it to be false, one or the other.

SESSIONAL PAPER No. 22a

The WITNESS.—I think the spawn lobsters go inside to spawn.

Mr. T. W. MACDONALD.—Do you not think the small lobsters inshore in the sheltered waters, would really have a better chance to live than out in the deep water? We find just as many perch on the outside fishing ground in warm weather as we do inside. We cannot keep the bait in the traps, that is what the fishermen tell us. Do you find it that way?

The WITNESS.—I do not. The perch may be just as plentiful out there, it is a very hard thing to say. In deep water you would not see them, of course. I believe the lobsters come inside to spawn and if the hatchery carries the young lobsters out to deep water they really stand a better chance of saving them. The lobster has a certain place to spawn and perhaps she wants warm water for it. Still I believe the young should be put into deep water for more reasons than one. If they were put into shoal water it would not do, they would be killed.

Witness discharged.

WILLIAM MACKENZIE, fisherman, Gaspereaux, called and sworn:—

The WITNESS.—Just about the spawn lobster. I know something about the spawn lobster and the way she spawns. When I was that high (illustrating by a gesture) I carried them from the shore at spawning time, from under the rocks, without a boat at all. They had come in there to spawn under the rocks on the shore but the tide fell and left them there dry for three hours and the spawn dropping off them. That was not in very deep water.

By the Commissioner:

Q. How often have you noticed that?—A. Well, I have grown up on the shore where the factories are, I have lived there all my lifetime.

Q. Where is that?—A. Gaspereaux.

Q. And your opinion is that the lobsters spawn inshore?—A. Yes, sir, they spawn inshore. They like to come there to spawn. I suppose they will go anywhere at spawning time, but that is their home to spawn, inshore.

Q. What part of the season do they come in the greatest abundance?—A. They will not strike the shore until the weather gets pretty fine, some time in June I think.

Q. Would you expect to get a larger proportion of spawn lobsters inshore?—A. You will get more inside in spawning time than you will out.

Q. If that is the case do you think it is wise to allow them to be caught inshore; we have to protect the spawn lobster some way or the other?—A. How to protect the spawn lobster, that is the mystery.

Q. It is a mystery.—A. It is a mystery, sir. I am going to tell you that early in the spring, as early as you can get gear out you get them. Is it any more trouble or any more destructive to catch them away out than in? You get them coming in. They are heading for the shore from the time the weather gets warm and according as they go through all the gear the fishermen will catch them at different times. Everything shows you that. As early as the ice goes away you catch them with the spawn on and I have caught them in the fall, as full as you like, with spawn on them yet, ready to spawn. When there is spawn on them they are bound to spawn.

Q. You have seen some of them in the fall and you think therefore that they spawn all through the season?—A. That is what I mean. If you commenced to fish again and fished until the snow flies in the fall you will get full spawn lobsters and as many as in the first fishing in the spring.

9-10 EDWARD VII., A. 1910

Q. Do you think the eggs hatch out in the cold water at that season?—A. I could not tell you whether they hatch outside or not, but I know that in the first gear they set outside, the outside gear, they will catch spawn lobsters but the inside gear will catch the most.

Q. The experts tell us that the lobsters that have not hatched their spawn at the time the water begins to get cold, retain that spawn until the next season. We would not expect any fish like the lobster to hatch out her spawn when the water was getting colder; she will require warm water to do that. Your theory does not coincide with that?—A. I could not answer that. I have said I have caught them late in the fall with the spawn full on the tail. It is not for me to know whether that spawn stays on them until next spring or not. That is a thing I do not know.

Q. Are you still fishing lobsters?—A. Yes, I fished them this year.

Q. How long have you been fishing?—A. I think thirty-three years.

Q. Have you fished steadily right along?—A. I did until some eight or ten years ago.

Q. What is the condition of the fishery to-day compared with what it was when you began to fish?—A. I need not tell you that in the first part we could catch with half the gear more than the factory could put up. But that was when we fished with the old open trap. Now they are reducing it down to a fine business.

Q. What do you think has led to this decrease, what has been the cause of it?—A. The lobsters have got smaller all the way through.

Q. Are the lobsters growing smaller, do they not grow big now at all?—A. I suppose they would grow as big if there were no traps catching them.

Q. Do you not think it is reasonable to say that the cause of the diminution in the average size of the lobster has been the overfishing?—A. Well, sir, I think myself these tight traps have got a little to do with it.

Q. You think they catch an unfair proportion of very small lobsters?—A. Well, they hold the small fish that would get clear in bigger traps. To live up to the size limit you would have to throw out half of your catch to-day, and to-morrow throw out more than that and keep throwing them out every day.

Q. Do you think that by enlarging the space between the slats the small fish will go out; some fishermen tell us they will not?—A. I have an idea: If you put six lobsters in a trap and there are three large ones and three small ones, the big ones will put out the small ones, either that or kill them. I think that because I have got small ones killed in the trap lots of times. We know the small ones will not stay where there are many big ones; they have got to get out if there is room for them to get out. I know that.

Q. Do you think that the regulations as regards undersized and spawn lobsters have ever been observed within your recollection?—A. No, they have not. Of course I have fished under the nine inch law when they had to chuck out lobsters under nine inches.

Q. Was that law enforced at that time?—A. I don't know. But that is what we had to do, we had to chuck out everything under 9 inches.

Q. You have to chuck out everything under 8 inches now, but is it done?—A. It is not done.

Q. Was it done when the regulation was 9 inches?—A. Under the firm I fished for at that time it was pretty nearly done. It was that closely done that you could give two 9-inch lobsters for a larger one if you liked.

Q. They counted two for one?—A. Two for one. If the firm would do that it would be two for one.

Q. Do you ever remember anybody ever being fined or punished in those days for breaking the law?—A. I think there was some trouble too if I recollect but I don't remember the whole business.

Q. Have you ever known anybody to be fined lately?—A. Not lately.

SESSIONAL PAPER No. 22a

Q. That is as to the size limit?—A. Yes, sir.

Q. What was the practice in those old times with regard to the berried lobster?—

A. Take everything you could get big enough.

Q. So it is safe to say that regulation has never been very strictly enforced?—A. Never very strictly wherever I have fished.

Q. What is your proposition as to the best means of sustaining the fishery? You heard the evidence of the other witnesses and there is no use in going into the matter at great length. First explain what you would do with regard to shutting down altogether, or shutting down in sections, or doing away with the size limit and shortening the season.—A. Shutting down is a kind of business that would be hard for people that have got an awful lot of gear on hand and everything of that kind. I would try something better than that. I think if you do away with the parlour traps and make the fishermen use the old fashioned traps they had before, it would be a better business.

Q. How would it affect you if we took ten days off the end of the season?—A. It would suit me all right and as far as I know it would suit the packers.

Q. And what do you think about the date for opening the season?—A. About the opening of the season there is a great difference in the years. Last year we asked for five days off ours and we got it. I think taking it all through it would suit very well for us.

Q. You think the present date, 26th April, would suit?—A. I think it would. If there was any change at all take a little more off. It is poor then for the fishermen, it is bad on gear and it is bad for the packers.

Q. What would you think of a season from the 1st of May to the 1st of July?—A. Just two months. It might suit sometimes. Well, I don't know. I am a fisherman and sometimes in July we never made much and I don't think that the packers made much. The lobsters at that time are getting soft shelled and are not very good. Of course I have nothing to say on that, but I know enough to know that they did not make very much after that, neither the fishermen or the packers. As to the spawn lobster, as I said before, I have been in the business and understand that pretty well. About the spawning time I always said, and say yet, that the department nor anybody else can decide the time when the lobsters spawn because I have caught them in the spring when there was any amount of ice—you would have to let go your gear to keep clear of ice—and I have caught them in the fall as late as a boat could get out, and there is spawn on them at all times of the year.

Q. There is no doubt about that.—A. And for spawning time that is a thing I cannot tell.

Q. Where they have hatcheries they find out by experience?—A. I believe in hatcheries. Take the spawn off the spawn lobsters whenever you get them and you save them. The hatchery is all right enough. Clear of that I don't know what you would do about the spawning season. I do know that when a little boy I was on the shore you could fill a cart with spawn lobsters. You could fill a cart at any time with a fork alone when the tide would drop and leave the spawn lobsters there full of spawn ready to come off. You will find these little lobsters, just as you see them in the hatchery, when you are digging clams for lobster bait in the eel grass. They are little things just as you see in the hatcheries. That is where the lobsters spawn and that is where there are no perch or anything else to eat the spawn. I do not think they want deep water at all, because there are times when they have the spawn on them they are fighting to get ashore. There is one question you did not ask me and that is about the license business. I think it is important and I want to have something to say about it. If we are not dealt with rightly and properly we can hold the license to fall back upon. If we are not dealt with properly we can do better by means of the license. If that is shut off from us we have no protection at all, the factory can do as they like with us.

9-10 EDWARD VII., A. 1910

Q. Do I understand from you that any man ought to get a license?—A. A corporation of fishermen, if they operate a factory can do better. I do not want that loophole shut off because if that is done there is no remedy at all for us. I want that loophole left for the fishermen, so that if not rightly dealt with they can do better. That is what I want.

Q. You would like the fishermen to club together and get a license for themselves?—A. To club together and get a license. I don't want that shut off.

Witness discharged.

WILLIAM LAMONT, canner, Cape Bear, Murray Harbour, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster business?—A. Off and on 30 years; 13 years down here at Murray Harbour.

Q. Previous to that where were you carrying on business?—A. At Bell river.

Q. Are there many other canneries licensed in your neighbourhood?—A. Well, there is Prowse & Sons' and my own, and E. M. Jordan's, a couple of miles ahead, and all along the shore where there is any room. Not so many factories, but we allow there is a great deal too much gear. It has got crowded every year.

Q. What number of boats do you employ?—A. I only employ from 7 to 9 boats each year simply because we have not got room, and for that reason it does not pay to put out more boats.

Q. That is to say you are crowded out?—A. Crowded out.

Q. Where do your boats fish?—A. Off Cape Bear east.

Q. How far off shore?—A. This year and the last year or two we are getting some of them out into deep water right on the reef. The first years we used to fish quite close in, from half a mile to a mile.

Q. What would be the depth of water?—A. They used to fish in from 3 to 5 and 6 fathoms of water.

Q. And now what is the depth of water fished in?—A. Now we have some of them out in 10 and 12 fathoms.

Q. You fish right off Cape Bear or in the direction of Pictou island?—A. Right off Cape Bear reef and that extends off to Pictou island.

Q. Are those boats mostly manned by two men?—A. Yes, always manned by two men. There is a strong current on that reef and it is very hard for one man to manage.

Q. Are gasoline engines being adopted more and more on the boats?—A. There are some. One of my men had one this year, but it is not a great success.

Q. Did he not do any better than the men without a gasoline engine?—A. No, he did not do so well.

Q. What number of people do you employ in the cannery?—A. We have about 12 hands inside.

Q. Men and women?—A. From 12 to 14.

Q. What was your pack this year?—A. My pack this year was somewhere about 250 cases.

Q. What was your pack last year and the year before?—A. Last year that same amount of gear packed about 400 cases. The year before about 350.

Q. What was the best pack you ever made?—A. You mean the average to the boat?

Q. What will you average, 50 or 60 cases?—A. Yes, from 50 to 60 cases. That was our general average up to this year. This year our boats get the average number of lobsters, but they were small.

SESSIONAL PAPER No. 22a

Q. How do you pay for your lobsters, by weight or count?—A. By count. The packers all buy by count and the usual thing is in Rome to do as Rome does. The fishermen think it pays them better.

Q. You find it difficult to get the fishermen on any other lay?—A. Yes. We had no reason to complain very much until this year. For the last five years up to this year our lobsters improved in size and in quantity. Thirteen years ago when I packed the first lobsters at this place we had to close down about the middle of June, the 14th of June. We had not enough to pay, the bait gave totally out. Then it came on. About six or seven years we fished up to about the 20th to 28th of June, and we thought that was marvellous. The last three years we have been doing better in July than in May. The last two years we fished up to the 10th July. The lobsters were smaller, but we got a good number of fish. I think two years ago, or a year ago last spring, we struck a school, or rather a school of big fish struck us. About the last day of June or the 1st of July each boat caught from 500 to 600 to a haul. They were uniform in size and dark, like a good school of deep water fish. When the fish get scarcer at the close of the season we get small speckled ones. But these were small black ones, say 5 or 6-inch lobsters, and my opinion is they were from a hatchery. They were very uniform in size and they packed well; they were full. This year we did not get them, it was an off year with fishing. We had a continuation of northeast heavy winds that appeared to keep the fish in deep water.

Q. You own the gear used by these boats?—A. All the gear except that one man owns his own gear this year.

Q. What is your idea about this matter of spawning, do you think the lobsters come to shore for the purpose of spawning?—A. Well, I think any fish comes to shore for the purpose of spawning. That is my opinion, as far as I have seen. As to the spawning season the lobsters do not appear to have any regular time to spawn. Some springs we get hardly any spawn lobsters; other years we get a good few. We get them sometimes in the spring and sometimes in the last of the season, and so on. They appear to differ every year. The only remedy I have got to suggest in regard to spawn fish is that they should not be caught. I was always opposed to catching them, but when the fisherman wants to can everything he catches we cannot very well afford not to.

Q. You have to treat your fishermen the same as other people treat them?—A. Yes.

Q. Otherwise you would not have them at all?—A. No.

Q. As to the spawning habits of the lobster there is a great difference of opinion even among experts. Some of them claim the lobster spawns twice a year, others that she spawns only every two years, and others again that she only spawns once a year. The general opinion is that if the spawning season has passed and a lobster has not hatched out her eggs, she retains them until next year; the eggs will not hatch out in cold water?—A. It is not at all likely. They appear at the last of the season to go into shoal water, the large ripe lobsters. I have noticed them in different years. Even this year we got fine large lobsters right in two or three fathoms of water.

Q. The temperature is always higher in that shoal water?—A. All our fishermen but one were inclined to move their traps in. For my part I regard it as risky. I would always prefer fishing in deep water for I think it is a protection to fish and to the packer and fishermen as well.

Q. Do you think that inshore fishing could be controlled by any regulation? In many places they have suggested to us that a regulation ought to be enacted compelling people to fish in a certain depth of water and prohibiting fishing where the water is too shallow?—A. Well, unless the department can do it the packers cannot. The fisherman is cock of the walk; when he gets his gear he does pretty much as he pleases.

Q. About the opening of the season, what do you think of that?—A. I am personally satisfied as it is. There is only one year that we ever did anything worth while in April. That was about 9 years ago, and we commenced to pack I think about the

9-10 EDWARD VII., A. 1910

24th of April. As a rule, we seldom do anything before the 1st of May, and it is quite a risk then. Of course opening on the 26th April is very good. I think if the weather is fine then it just gives the men time enough to put their gear into the water and be ready for operations by the 1st of May. That gives us two months.

Q. You have heard the various propositions that have been suggested to the department as the readiest way to bring the fishery back to its former standing; which of them do you find the most reasonable?—A. I believe if the small fish were protected it might go a little against the fishermen or packers here for a year, but lobsters grow very fast.

Q. How would you go to work to protect the small fish?—A. I think the trap has a great deal to do with it. I was always opposed to parlour traps, but this year I had to allow some of them in or I would not get the fishermen to fish because everybody else had them. Certainly the man with the old-fashioned trap could not fish alongside the man with the parlour trap, because the latter would get all the lobsters and hold them. The parlour trap holds everything that comes in it. I had the two kinds this year side by side, and they gave me the chance of judging as to their respective merits. I allow that we had 50 per cent more small lobsters of 5 inches out of the wheeler traps than out of the other. These small lobsters are practically no good for anything, it is a waste of fish. They would be bigger lobsters by and by if allowed to grow for a few years. Now they make their traps that small you can hardly get your little finger between the laths. When I used to get traps made first the rule I had was to have a wide enough space for the fishermen to put the pole of his hatchet between the laths. It was at least fully an inch or a little better.

Q. They used to use a lath then as a gauge, did they not?—A. Yes, sometimes.

Q. Then you think a good many small lobsters could be saved by altering the style of trap?—A. Most undoubtedly, because the little lobsters can go in and out, and when the big ones come in they drive the little ones out.

Q. What do you think of the regulation fixing the size of the lobster at 8 inches; if it were strictly enforced could you get along at all?—A. Well, it would suit us very well if we could get fishermen.

Q. Do you think you would get enough fish over the 8-inch limit to keep you going?—A. We might if we could get the men to fish. The difficulty would be to get fishermen because they would be afraid of it. Another thing, it would be a very difficult law to live up to. The great difficulty is to enforce these laws.

Q. They have never been enforced?—A. Never properly enforced, and it is very hard to enforce them. It would take an army of men, a man posted at every factory, to do it.

Q. What would you think of the proposition to do away with the size limit altogether, but fix some standard of trap with a reasonable opening?—A. I think that would be the easiest way, the only practicable way.

Q. And then in addition cut off the fishery at the 1st of July?—A. I don't know that that would make very much difference. I don't think anybody would lose very much by it. Of course we fish for a little while, about a week or so, but as Mr. MacKenzie said there does not seem to be much money in it for the fishermen or packer. There is only one thing with us: We sometimes have material on hand that we have got to use up. The fishermen do fairly well some years in July and some years they do not, but if they did not do it this year they would next year, and the fish would be improving.

Q. Would you be in favour of increasing the number of hatcheries?—A. I would. I have great faith in hatcheries.

Q. Then I understand you to say that you would agree to let the season open as it does; do away with the size limit, fix a standard of trap that would not be so killing and shut off fishing after the 1st of July?—A. Yes.

Q. You think that proposition would be quite reasonable?—A. I think it would.

Q. And you think it would be the means of pulling up the fishery in a few years?

SESSIONAL PAPER No. 22a

—A. Yes, it would. Then as to illegal fishing, the law ought to be strictly enforced. There is not so much of it done now, but the great difficulty is, it is not done by packers and regular fishermen, but very often by farmers, and well to do farmers, and the packers suffer by it. Sometimes their gear is taken and used.

Q. Is there much of this illegal fishing after the season is closed?—A. Not very much now because I think it is hard to market the product. There is another thing in regard to the matter of licenses that was spoken of. Licensing factories does not appear to me to serve the end it was intended to serve because there is no limit to the number of traps. Now, I think that is one of the greatest evils to-day. There are too many traps, too much gear used, and the ground is over-crowded. I think I am within the mark, and I will leave it to any fisherman here—and there are lots here who will bear me out—one-third of the traps now in the water do not fish; they are foul of each other. Supposing Smith and Jones set their traps here. They are crowded for room and Smith gets foul of Jones to-day. To-morrow or the day after they get clear, and Jones gets foul of his next neighbour. Stormy weather sets in and two or three trawls may be left there a whole week at least. The fishermen may get tired and disgusted and leave the gear there. That is a thing that happens very often.

Mr. MACKENZIE.—There is fully more fishermen and more gear than there ought to be. A little less gear and a little less fishermen I think would be better.

The WITNESS.—We do not catch all the lobsters, I agree, and if there were a less number of traps it would be less labour for the fisherman and he would get as many lobsters; there would be far more room and less loss, expense and risk to the packer. There are factories running 10,000 and 15,000 traps. Well, now, that would run 3, 4 or 5 ordinary factories, do you see. So there is where the law has failed. What has been aimed at? As far as the license is concerned I am a packer and I believe anybody has got as good a right to a license as another man if there is room. But it is not to protect any man that this license is issued or any packer at all; it is to protect the industry. I suppose the fishermen understand that as well as anybody else. In my opinion, the license is to protect the fishery, to put a limit on the number of traps, and it is no matter who has a license. I think these two things are of importance: To make a standard trap that will save the small fish and then limit the number of traps. The department can tell what the number of traps is. They know the number of canneries now, and they know the total number of traps and it would be an easy matter to deal with. Supposing they cut off one-third of these traps or more, and then have a limit to the traps. If a factory wished to have less it would be their own affair, but they should not be allowed to go beyond the limit.

By the Commissioner:

Q. There should be a limit?—A. There is a license and licensed traps are put in the water every year and never seen any more. Of course there is no room for them, they get over-crowded, they get piled up and are left there.

Q. Do these traps ultimately disappear or do they do any harm?—A. I don't suppose it is a very good thing for them to be left on the ground, that is sure.

Q. They would break up and disappear, would they not?—A. I suppose after some time they would.

Q. What is the life of a trap with you?—A. From two to three years. Sometimes they last three or four.

Q. Do you suffer much from the borer?—A. No, we do not.

Q. Is there anything else you wish to say?—A. I do not know that there is anything more. I have advocated limiting the number of traps and in my opinion it is most important. It is clear to anybody there are three or four ends it serves: It serves the fishermen, the packer and the industry in general, and it does away with all

9-10 EDWARD VII., A. 1910

the dissatisfaction in the spring. Of course there is a rush in the spring to get the ground and men take great risks. There would be no trouble about the time of starting if it were not for this. If there was plenty of time people would take their good time to go out and there would be no trouble.

Witness discharged.

SAMUEL HEMPHILL, fisherman, Georgetown, called and sworn:—

By the Commissioner:

Q. Where do you fish?—A. Off Boughton Island.

Q. When do you generally begin your fishing?—A. This year the 26th April.

Q. What number of traps do you fish?—A. I fished 275 this year.

Q. Are you using your own boat and gear?—A. No, sir.

Q. For whom do you fish?—A. A. A. MacDonald Bros.

Q. Then you use their gear?—A. Yes.

Q. In what depth of water do you begin to fish?—A. In about 8 fathoms.

Q. How far off shore does that take you?—A. About three miles.

Q. Do you remain fishing in that depth of water all season?—A. No, sir, we shift in.

Q. About when do you shift in?—A. About the middle of June we commence to come in.

Q. Why do you shift in?—A. The fish keep coming in all the time.

Q. You find they have passed you and you have got to follow them to make a catch?—A. Yes.

Q. What percentage of the fish you take in deep water in the spring are below the size limit of 8 inches?—A. Oh, well, I don't know, I could hardly answer that. It would average from about 7 to 9 inches and there are larger ones than that. That would be about the average.

Q. When you move in do you get as large fish as outside?—A. We get better fish.

Q. In the shoal water?—A. That is if you are on rocky bottom. If you are on clear sand you get smaller ones.

Q. You find you get better fish on rocky bottom than you do on sand, larger fish?—A. Yes, sir.

Q. Now as to the matter of berried lobsters how is it with you?—A. Oh, well, we get them in the spring of the year when we are coming in, from the beginning of the fishery. They slacken down a little as the season gets on. The heft of the lobsters is in April and May. If we shift in we get a quantity of them again.

Q. How many female lobsters do you expect to get per hundred?—A. Out of four hundredweight, or out of 400 lobsters, you get 15 or 20 berried lobsters. Some days there will be more and some days less.

Q. You think you get them about the same average all through the season?—A. No, sir.

Q. When do you get the most of them?—A. They are more plentiful in the spring.

Q. Have you always fished about the same number of traps?—A. No, sir, when we began fishing here we only fished 50 traps.

Q. How long ago is that?—A. It is a long while ago, 30 years or more.

Q. Where did you fish then?—A. Off Burn Point reef.

Q. How did you do with those 50 traps?—A. Very well.

Q. What season did you fish from?—A. All the season round.

Q. There were no regulations at all?—A. For a few years and then we used to knock off along the summer when the fish were spawning and shelling.

SESSIONAL PAPER No. 22a

Q. I think you knocked off in the month of August then?—A. Some time about the last of July or August.

Q. When did you first begin to notice that the fishery was failing?—A. I cannot say it is failing.

Q. Do you think it is as good as it was then?—A. Yes.

Q. Do you think you get as much to-day as you did then with 50 traps?—A. No, sir, but look at the quantity of gear.

Q. Do you think you get lobsters of the same size and weight that you got then?—A. No, they were better lobsters then although we had very small ones then too. But our laths were further apart then. An inch is what we used to have at that time.

Q. Do you ever get the same proportion of large sized lobsters to-day that you did 30 years ago?—A. No, sir.

Q. So they have run down in size?—A. Yes, sir.

Q. What do you attribute that to?—A. I do not know, I expect the larger ones are caught up. The small ones could escape but the large ones could not.

Q. But I suppose if the small ones survived they would become large ones in time, would they not?—A. Yes, sir, if they are let alone.

Q. Has the amount of gear greatly increased within your time?—A. Oh, yes.

Q. What proportion does it bear now to what it was originally?—A. There were when I started fishing just two factories. One factory had only, I think about 200 traps. That was Kennedy's.

Q. Do you remember what number of cases they put up with 300 traps?—A. No, I do not. I think it could be found out pretty easily.

Q. The number of fishermen have increased too?—A. Oh, yes.

Q. And the amount of gear they each fish?—A. Yes, sir.

Q. Would you say to what extent the gear has increased, has it doubled?—A. Oh it has trebled.

Q. More than that even I think?—A. More than that.

Q. Do most of the fishermen in this neighbourhood own their own gear?—A. Most of them fish for firms who own the gear. There are a lot of them that own their own gear.

Q. What are most of the fishermen, are they bona fide fishermen who spend their lives fishing?—A. No, sir, there is a big lot of farmers fishing.

Q. And when the lobster fishery is over they go back to the land?—A. They go farming.

Q. You are a fisherman are you not?—A. I have been at it all my lifetime.

Q. And when the lobster fishing is over you go back to some other branch of the fishery do you?—A. Yes, sir.

Q. What can be done here with other branches of the fishery?—A. There is fishing for cod, haddock and herring.

Q. Is there any mackerel fishing now?—A. Very few, there is hardly any this year.

Q. Is there any spring mackerel?—A. None this year, there were some last year.

Q. What would you think, from your experience as a practical fisherman, would be the best way to observe the law especially with regard to berried lobsters?—A. Well a start has been given here to protection.

Q. That is all right where you have a hatchery but what should be done where there is no hatchery?—A. I don't know. I expect there would be a lot of them hove away, but there would be a lot of them taken.

Q. Do you think the berries would be brushed off the lobsters outside?—A. Likely.

Q. Are the fishermen in your opinion getting any more careful, are they beginning to understand better the necessity for observing the regulations?—A. No, sir. I think to put myself with the rest they are pretty careless.

Q. Are you satisfied with the price you receive for your lobsters?—A. I expect we have got to be. We could take more if we got it.

9-10 EDWARD VII., A. 1910

Q. The price varies I suppose from year to year?—A. According to the price of them abroad.

Q. Do you think there is any combination on the part of those in the business to fix the price?—A. I think it is very likely.

Q. Would you expect the canner to take all the lobsters you brought to him, regardless of whether they were undersized or not?—A. There are a lot of lobsters that are no good to me or the canner, from 8 inches down and the like of that.

Q. But where you are selling lobsters by count I suppose there is a great temptation to count everything?—A. I suppose there is.

Q. You go by weight do you?—A. Yes.

Q. What do you think about the spawning season of the lobsters?—A. Well I think our lobsters come in here on the shore and bed in the eel grass in our bays. They spawn right there and stay there until they are shelled.

Q. Is there any particular time they have to spawn?—A. It is hard to say. I don't think anybody knows how the lobsters spawn because in the spring of the year when we start fishing we get young lobsters on the kelp beds, haul them on our traps right along. When will they spawn? I believe the fish do go into spawn, and the young fish grow right in our bays. Here in the fall of the year you go down about a sandbar, anything a little weedy, and get out just about dark at night and you can see small lobsters all over that place.

Q. It is very difficult to distinguish one marine animal from the other when they are very small?—A. I know these are lobsters. As to dumping the young fish outside where I fish, a barrel of them would be just about 15 minutes' food for the other fish there. You can gaff them from the side of the boat, codfish and everything else.

Q. Near the surface of the water?—A. Right on the surface of the water.

Q. What is the size of the smallest female lobster you ever saw?—A. I have got them 6 inches in size. I would not say exactly six inches but near about.

Q. How do they generally run as to size?—A. They are generally from 8 to 9 and 10 inches.

Q. Generally a good lobster?—A. Yes, we got some very large ones this spring.

Q. Before you had the hatchery established here did the fishermen as a rule wash the eggs off the berried lobsters or bring them in?—A. No, sir, brought them in.

Q. Do you think the cannery have had these lobsters forced on them against their will?—A. Oh well, I don't know. I did not hear any objection. Last season we hove all the spawn lobsters away.

Q. What do you think of the proposition to license fishermen?—A. I think it would be a fine thing.

Q. Why would it be a fine thing?—A. Well if I took out a license to fish I would be entitled to fish where I wanted, I don't see much else it would be for.

Q. You think the license would make you more careful in observing the regulations?—A. Yes, I think it would.

Q. It would lead you to inform on anybody that was fishing in an illegal way?—A. I think it would be right that any fisherman should do that. They have a right to make a living out of the fishing.

Q. Would it be any use in trying to instruct the fishermen on the subject of the observance of the regulations?—A. I think it would be a very good thing.

Q. A competent person would have to be sent; do you think it would have a good effect if the fishermen were more thoroughly instructed as to the necessities of the case; would they do better?—A. Yes, I would like to learn a little more myself.

Q. You have heard the evidence given by the other fishermen; does it tally with your views?—A. There is another little proof I want to give you of lobsters spawning in on the shore. At the Magdalen Islands there is Grand Entry Bay. That bay is 7 miles wide and about two-thirds of it is shoal. At low water you can walk all over it. Well that is honeycombed with lobsters all through and they claim those lobsters come in there and spawn.

SESSIONAL PAPER No. 22a

Q. Yes, they do, and they go out again in the fall.—A. And the lobsters never move after they spawn until they shell. They go down in the mud and stay there. If we have an extension for ten days we go in on the mud. At first we don't get any fish but all at once we get the newly shelled lobsters.

Q. With regard to those extensions, is it the case that when you had them you always came in closer to shore to fish?—A. Yes.

Q. What do you think about those extensions, did they do harm or good?—A. They did harm.

Q. Do you think that once the dates are fixed for fishing they should not be changed?—A. No, sir. We have got long enough now. If we fish to the 10th July we get a long enough time because then the lobsters are soft shelled.

Q. How about the proposition to knock off at the 1st of July and do away with the size limit altogether?—A. That would be the best. Then we would not be troubled with these shelling lobsters at all.

Q. And in that way during those last ten days you would preserve a good many lobsters that would be otherwise lost?—A. Yes.

Witness discharged.

Mr. T. W. MACDONALD.—There is one point I would like to bring up before all the packers go away and that is in regard to gathering spawn—the present system. We think it can be slightly improved on. At least that is my opinion and I would like to have the opinion of some of the other packers. Under the present system, the lobsters are brought to the factory, the spawn is scraped off by the packer, and it has to be kept there.

The COMMISSIONER.—Kept on trays?

Mr. T. W. MACDONALD.—Kept on trays and when the boat comes around from the hatchery, the usual thing is to send a boat after the spawn. They come ashore and take the spawn on the trays away. If it happens to be a stormy day they do not come at all, and in the meantime a good deal of that spawn is destroyed. I understand from the man in charge of the hatchery that spawn not gathered on the day it is taken from the lobster is worthless.

The COMMISSIONER.—Worthless?

Mr. T. W. MACDONALD.—Yes, I thought that if the department would arrange to supply each factory with something in the shape of a car or crate that could be kept anchored off the factory. As the spawn lobsters came in instead of the spawn being scraped right off and left on trays, the lobsters could be placed in the crate and held. If that crate was anchored off the shore far enough it would not be affected by stormy weather, the boat from the hatchery could go right alongside and the man in charge take the berries off the lobsters. Then he could replace the lobsters in the crate. It would save the lobster factory people the necessity of having to go out, especially on a busy day, bringing these lobsters ashore and then taking them off again. It would also, I think, save a great deal of the spawn.

The COMMISSIONER.—How long does it take to remove the spawn from a lobster?

Mr. T. W. MACDONALD.—I suppose a couple of minutes will take the spawn off an average lobster.

The COMMISSIONER.—What is the average number of lobsters that you will have to scrape the spawn off in a cannery per day.

Mr. T. W. MACDONALD.—It is a question I am not quite able to answer. Mr. MacFee would be able to give you more information on that, or the man in charge of the hatcheries here.

The COMMISSIONER.—He is at the hatchery and gets the eggs when they are brought there.

9-10 EDWARD VII., A. 1910

Mr. T. W. MACDONALD.—He goes around and informs the people about it and makes frequent trips to the factories. This is only a suggestion of my own and I would like to have one or two of the other packers express their opinion on the method of gathering the spawn.

The COMMISSIONER.—We will be very glad to take the evidence of any one who wishes to say anything on the subject. It will be reported, along with the rest of the evidence, to the Parliamentary Committee for them to deal with. Mr. MacFee, what do you think about the matter, what is your idea about the system of collecting eggs?

Mr. MACFEE.—As I stated in my evidence I think there have been a great many eggs destroyed in taking them off roughly. I fall in with Mr. Macdonald's views. We may do the best we can and put a man there to take the eggs off the lobster but he may not do it just as we wish, and if we had a crate and had the spawn lobsters placed in that crate they would be there when the boat came from the hatchery.

The COMMISSIONER.—Could you give us any idea of the average number of berried lobsters, per boat we will say, that is brought to the hatchery in a day?

Mr. MACFEE.—I could hardly do that. I did not keep count of that myself this year. Sometimes we get as high as 24 or 25; sometimes we only get 3 or 4, it is according to the size of the catch and the weather.

The COMMISSIONER.—Do you think it would be possible to hold them in a crate?

Mr. MACFEE.—Yes, I don't think there could be any doubt about that.

The COMMISSIONER.—Just the same as we hold lobsters in any other crate?

Mr. MACFEE.—Yes, it would not need to be a very large crate you know, there would be nothing heavy to hold. The only trouble would be in the event of a storm. As Mr. Macdonald said we cannot keep the spawn. Well, during a heavy storm when the boat from the hatchery could not get round, those lobsters could remain in the crate and the hatchery man would have to take off two day's spawn instead of one. As a general rule on the days when the boat cannot get down we cannot get any lobsters.

The Commission adjourned.

SOURIS, August 6th, 1909.

FRANK H. WHITE, Souris, called and sworn:—

By the Commissioner:

Q. How far back does your connection with the lobster industry date?—A. To 1851.

Q. Were there many canneries in operation at that time?—A. The industry was in its infancy. There were about five canneries in a small way only.

Q. Were they operated in this neighbourhood?—A. It is in Nova Scotia I am speaking of. They did not commence on the Island until some years later than that.

Q. What part of Nova Scotia was it?—A. The southern part of Nova Scotia, in Yarmouth County.

Q. Who were those canneries owned by?—A. One was owned by my father. Previous to that my brother had one. There was also the firm of Payzant & Kanaut, Liverpool. The son is packing now at Rockport.

Q. What was the extent of the pack made by those people at that time, was it small?—A. We had to build up a market. We thought we were crowded when we had 500 cases, we did not know what we were going to do with them.

SESSIONAL PAPER No. 22a

Q. Where was the market for lobsters at that time?—A. London and Liverpool. We would ship direct to London if we could, but the facilities for shipping were not as good then as now. We would ship the lobsters direct to Liverpool and place them in the hands of an agent in London.

Q. Was it long before the industry developed into something more considerable?—A. In Nova Scotia it did not develop, neither on this Island for years and years until after the Americans came here. They could compete with us in their own goods; give more for the lobsters than we were giving, pay more wages and then undersell us in the English market.

Q. When did the industry first begin to increase rapidly in volume?—A. About 1870.

Q. And was that increase brought about by the fact that the Americans came here?—A. Yes, the fact that the Americans came here.

Q. What induced them to come in?—A. Because the lobsters were getting short in the state of Maine, not getting short exactly but the prices were getting too high. They were shipping them alive and they could get more for them alive, ten and twelve cents apiece, when the factories would only give them two and three. Then all the live lobsters were shipped away, and the factories had to put up the small ones or close down, which they have done now.

Q. There is no canning in the State of Maine now?—A. No canning in the State of Maine.

Q. It is all a live lobster trade?—A. All live lobsters.

Q. When did you cease your connection with Nova Scotia and become interested in packing on the Island here?—A. I will answer that in a little different way. In the first place I went from Nova Scotia to the State of Maine and I was there four years in charge of one of the largest factories, W. K. Lewis Bros. They are all dead now and the business is all gone out. They had one of the largest establishments in the State of Maine, not for lobsters alone but packed everything and they had factories in different places. I was there four years, and then from there I came to Nova Scotia with the firm that I was working for—they had moved then their business to Nova Scotia. It was one of the first canning establishments in the city of Halifax, and I was general manager of four or five factories there. Then they began to cut down the prices after a while. I wanted to get the same there as I got in the State of Maine so I said, 'Get somebody else,' and I left. I then went down to the Magdalen islands where there was a firm and was there two seasons and made the first cans ever made there.

Q. What firm was that?—A. It was J. W. Jones actually, but the Stayners in Halifax were the agents. However J. W. Jones in the State of Maine was the actual owner.

Q. In what part of the Magdalen Islands did you operate in?—A. A place called Allright. No, I should have said House Harbour.

Q. That is at Allright Harbour. Were there any other canneries then?—A. No, they had never seen a lobster canned. More than that they knew very little about the lobster. They had to kill him before they put him in the pot to boil, they were afraid of him.

Q. What year would that be?—A. That would be in the year 1875 or 1876, I forget now. Yes, I am sure it was 1875, come to think now.

Q. Well, then after that how long before you came to the Island?—A. I was there two seasons and on my way the last season I stopped here at the Island, ostensibly to look up lobster factories for the American people, but the description I gave of them—we did not think of building factories in those days right on the coast such as the north side of the island—and the only place I saw that would be safe to build a factory was down here at the breakwater. But there was an American I was well acquainted with that was ahead of me and engaged in it. Consequently I stayed here, have been here ever since and have had charge of factories.

9-10 EDWARD VII., A. 1910

Q. Coming back to the inception of the business in Nova Scotia, how did you fish your lobsters then, did you trap them?—A. It was different in some localities. At Fort Matoun, Liverpool, they gaffed them.

Q. That was in shoal water along the beach?—A. In shoal water. They turned oil on the water and that made it slick. Then they would throw down a few cod-heads and the lobsters would collect around them and they gaffed them. That is the way they caught them. In other parts of Nova Scotia we had round hoops about two feet ten inches in diameter made out of three irons and the netting was knit almost the same as a dip net. There would be 25 or 30 of these hoop nets to a boat and they would be on a trawl.

Q. That is the first way I remember of catching them on the Gaspé coast. We used to gaff lobsters but it was generally done for sport.—A. It took nearly three times as many gaffed lobsters to make a pound as it did lobsters that were caught on these hoops.

Q. You got a bigger run of lobsters outside?—A. Yes, outside. The cause of that is that lobsters will bleed to death the same as any other fish. After you gaffed them they would bleed to death and the meat did not turn out so well—the lobsters were neither as plump, nor as fresh, nor as heavy after they were cracked. More than that, they would die, and a lobster after he has been dead is not fit to be canned, and anybody who understands the business will not can them.

Q. I have seen them canned and they turn out very badly.—A. That is what I say. The government should appoint a competent inspector, two or three of them in every county, for the purpose of seeing that the factories do not pack this kind of stuff to ship away. It ruins the packing.

Q. When was the trap first introduced?—A. The traps were introduced in the first place in 1851. My father was in the business then, he had just started and he was an American himself and of course he did not believe in a pod auger or that he should use a wooden plough when a steel one would do. He sent to Gloucester to the agent there and imported a lobster trap which is similar to our lobster traps here, or in Nova Scotia, where there are parlour traps made exactly in the same way as in the State of Maine. These traps were made out of oak and were made more especially for fishing off Cape Cod. I was then in the 15th or 16th year of my age and I and the foreman of the factory used to fish that trap. Because we did not get it full the same as the old pot we discarded it. It would only catch 5, or 6 or 7, which is a very good catch now.

Q. What was the space originally left in the laths between the slats?—A. We used to leave about an inch and a half. They are too close together now. If they keep on in ten years from now they will want ten—yes twenty hatcheries—on the island to maintain the supply if they continue to have those traps. That is my own opinion and I am perfectly willing to give my reasons for it too from actual observation.

Q. Well, then you began operations here, about 1880 would it be?—A. About 1878. I was foreman of a factory down here at the breakwater.

Q. There were very few canneries on the Island then?—A. There were very few, and there was only a small pack. In that same year Forest & Co. started, and a concern—I forget the name but I think it was Harris—started at Canoe Cove, on the western part of the Island, and they did quite a large business.

Q. Were they local men or Americans?—A. They were local men but they had copied off the Americans. Forest was a Nova Scotian but he had been a managing man for Burnham & Morrill for years, and came over here to start and did start up at Panmure Island.

Q. On his own account?—A. On his own account and made a fortune. That was the first year, that was in 1875.

Q. What was the condition of the lobster fishery on the island then?—A. The lobsters were very numerous and very large. They were as numerous then as they are now. I contend there are as many lobsters now as there were then in number.

SESSIONAL PAPER No. 22a

Q. But they never reach maturity, they never get very large?—A. Just to give you an idea: When I first began to pack down here I used to buy them by the count, I would not buy them by the pound. The man I was manager for was an American and he was too shrewd for that, so we bought them by the count and paid the fishermen so much apiece for them.

Q. What was the ordinary price paid per hundred?—A. He paid 50 cents, it was that for years and then we bought them by weight and paid the same. At first we bought them by count and they were just as well satisfied and could make very good wages, better than they could by any other fishing. It used to take about one and a half lobsters the first year to make a pound of meat. Now it takes nine or ten to make a pound of meat. That gives you an idea.

Q. When did you first begin to notice the diminution?—A. Every year, year after year. The first year we packed, the average was about one and a half per can, the next year it took about one and three quarters, the next year about two and so on. Finally it got to four and a half and then we had to stop buying them by the piece.

Q. There were no regulations of any kind in force in those early years?—A. There was no limitation at all.

Q. Through what season did you fish?—A. We could not commence here earlier than the 10th, or rather from the first to the 10th of May, and then we could fish as long as the weather would let us. The same in Nova Scotia.

Q. You fished right into the fall?—A. We could fish right up to October. That was the first fishing. Afterwards it was different.

Q. Did you let up at all during the warm weather?—A. No, fished right straight along.

Q. Was there any care then taken of the berried lobster?—A. No.

Q. You canned them all?—A. Certainly.

Q. What was the size limit?—A. The lobsters would be about from 10 to 15 inches. The general average would be about 11 or 12; they would have the most seed.

Q. Within your experience what was the smallest berried lobster you ever noticed?—A. I don't suppose they were over $7\frac{1}{2}$ or 8 inches in length. I have seen them very small.

Q. Statistics show, where they have kept a record, that there is about one berried lobster of 7 inches in a hundred thousand, and very few at 8 inches?—A. I know better than that, I have seen more than that. It not a rare thing.

Q. Do you find the run of lobsters about the same here as in Nova Scotia?—A. Yes, the same here as you do in almost any locality I have been in, in the different localities. When you first commence to fish, the lobsters are larger and keep gradually growing smaller. So they did here on the Island.

Q. And they did everywhere else?—A. Everywhere else. For instance, when I was lobstering here the lobsters were larger than they were off Rollo Bay or Bay Fortune because they had been fishing there for some years previous to that and gaffed them, and the lobsters were not nearly so large as they were right here. Of course we caught them here in traps. That was a new thing then for the Island.

Q. What number of boats were generally attached to a cannery in those days?—A. We would have 10, 12 or 15 boats. We only allowed them 75 traps and now they will let you have 300. That is the difference. We contended that a man could not attend to more than 75 traps, and traps then cost more than they do now.

Q. What is your opinion, as one having a good deal of experience, of the modern trap as compared with the original trap?—A. The modern trap? I presume you mean the parlour trap.

Q. Or the wheeler trap, they have got a number of names for it?—A. I should think Mr. MacCormack could give you a better idea about them than I can. I can only speak of my own actual observation, what I have seen of the trap and what I know about the habits of the lobsters. I think it just like this: If they continue making them the same as they are making them now and do not put the laths farther apart, in ten years time you will want ten hatcheries here to keep up the supply.

9-10 EDWARD VII., A. 1910

Q. As to the habits of the lobster, when you first met him you you met him coming in in the spring?—A. Yes.

Q. I suppose they had to fish in very deep water then?—A. No. In Nova Scotia they would not go out to more than four or five fathoms of water. In that province they did not use traps until after 15 or 20 years, they used to use these hoops. Afterwards they got using traps and they did not care about getting out into more than four or five fathoms of water.

Q. Did the same conditions exist then as to the movements of the lobster, did he migrate shoreward then as he does now?—A. Well, I don't know. They change every year. It amuses me these scienists writing about the habits of the lobster. The habits of a lobster are like the habits of the human race, they vary greatly in different localities.

Q. Still you first met the lobsters in deep water, did you not?—A. Oh, yes, met them in deep water.

Q. And as the season advanced you met them farther inshore?—A. Yes, farther inshore. Well, it is according to the locality. In some places I think they are in shoal water all the time, some warm places. They get out in deep water in cold weather, because it is warmer and as soon as the weather begins to get warmer they will crawl in. They are after bait, they are after something to eat.

Q. What do you think as to the spawning habits of the lobster, what are your observations?—A. They spawn every season of the year, whenever they are ready.

Q. Do you think they will spawn in cold weather?—A. They spawn at all times, and they shed too at all seasons of the year. That has been my own opinion from actual observations for the last half century.

Q. What would you suggest as the best means of protecting and preserving the lobster?—A. The only way I know of is to license the fishermen, and insist on them having their traps made with the laths at least an inch and one-eighth apart, and if they are caught violating that, revoke their license and fine them besides. That is the only thing I think that will do it.

Q. Then as to the season throughout which they should fish?—A. Oh, well, as far as the Island is concerned, speaking from an Island point of view, nature won't allow us to have a very long season anyhow, won't allow us to open very early in the spring, and self preservation makes the fishery close very early in the year on account of the storms. They ought to have at least three months of open season—between two and a half and three months—because the nine months close season to preserve the lobster is long enough.

Q. What do you think about the matter of the size limit?—A. The size limit? You would want to have 19 cutters, 19 gasolene boats and more, to surround this Island if you put a limit on and want to carry it out. I think it is a matter not of utter impossibility but not much probability to be carried out. As long as the fishermen catch them and are allowed to catch them they will bring them to the canners. The latter have got to take them or close their factories. 'If you don't take all you can have none.' That is just about the size of the matter. The canners don't want to take in these illegal lobsters if they can avoid it but they have to take them.

Q. In order to keep their fishermen?—A. In order to keep their fishermen because the canners don't want the small lobsters. When there was a size limit of 9 inches we used to have to fight like fun in regard to it. I came very near getting the proprietor of the factory fined for having short lobsters. I did not want them because it cost me more to get them picked out. The only way I got clear of it, I told the inspector he did not measure them right. Says I: 'It is not so. You must have measured them with a stick or rule and I am going to measure them with a tape.' On the tape there was the figure 9. Says I: 'Get your rule.' He put up his rule. 'Now,' says I, 'come here and show me those lobsters you picked out that were not 9 inches long.' His rule was only 7½ or 8 inches. I took it and laid it down. I said: 'That

SESSIONAL PAPER No. 22a

is the way the lobster is naturally,' and look my tape and it was only 9 inches. But I curled him up and said: 'That is the same lobster, I have not touched it and it measures 9½ inches. What are you going to do about it now'? He went off.

Q. Are there any facilities here for carrying on the live lobster trade?—A. No. In regard to the live lobster industry I don't know anything practically about it any more than that it is growing up amongst the Nova Scotians. I don't think it can be carried to success on this island in any shape or form for several reasons. One reason is that the lobster caught in the Island waters will not keep out of the water so long as the lobsters will in Nova Scotia or in the State of Maine. This I know to be an actual fact from experience. Then again we have not the facilities when the lobsters are caught to carry them alive to a central place to ship. Our government will not allow us to have any automobiles here consequently we have no means of conveying live lobsters quickly from different points to any central point for shipment.

Q. The facilities do not exist for the development of the trade at present?—A. They do not exist and are not likely to exist.

Q. Where they do exist the live lobster trade seems to be superseding the canning?—A. Certainly it will. Take the western part of Nova Scotia. I was for something like 17 years in that locality and connected with factories, and consequently I know pretty nearly about the catch of lobsters. They are only 16 hours from Yarmouth to Boston, and gasoline boats and steamers are plying all around picking up the lobsters and they go on schedule time. Some of the lobsters are not taken out of the traps more than four hours before they are in Yarmouth all ready to ship over to Boston. Sixteen hours afterwards they get there and very few of them are dead. More than that, as I said before, in Nova Scotia the lobster will live longer than our lobster out of the water.

Q. Why should that be so?—A. I think it is on account of the temperature of the water. That is the only reason I can give for it, I cannot think of anything else. I think it is the temperature of the water in the Straits.

Q. You are in favour of the proposition to license the fishermen?—A. Yes. I would not charge them anything for it but simply enough to pay for the paper and stamp or something like that; just make a nominal charge.

Q. What do you think about the system of limiting the number of canneries?—A. That is interfering with the rights of citizens. I believe that will regulate itself, it will eventually be the same as in all other industries. When they find they can conduct business cheaper by merging together the different factories, they will do so.

Q. Do you think that any one showing his competency to pack should be granted a license?—A. Yes. Leave it with the resident inspector or overseer, and carry out measures to protect the industry, to protect the people and also protect the fishermen, because if a man carries on a business and fails it is the fishermen who are going to suffer very materially as they are the principal creditors.

Q. Do you think we should require a cannery to be up to a certain standard?—A. Yes, you may do that just according to the number of boats he was going to employ; not for him to have a barn, but have a proper factory suitable for a cannery so that they can can lobsters clean, and then there should be an inspector as I stated before.

Q. Do you think the product of the cannery should be inspected as in the case of all other food products?—A. I think that is correct.

Q. Do you think the present staff of fishery officers are competent to carry out that inspection?—A. They could not do it, they have as much as they can do at present, and then there are a great many of them know nothing about the article. The inspection should be made by a man that understands the business. From the very moment he opens the can, if he is observant and has had the experience, he can tell whether that lobster was packed out of season or not.

Q. What would you call out of season?—A. During the soft shell season, he can tell whether they were soft shell lobsters.

9-10 EDWARD VII., A. 1910

Q. You said a while ago you would not limit the time of closing?—A. Oh no, I don't remember that.

Q. Well, you said you would let them have a season of three months?—A. Yes, three months.

Q. Would that not put them into the soft shelling time?—A. No, not at all. At North Lake I have commenced in the month of May, the last of May and the first of June, and the lobsters that I packed, buying them by the count, would take six to seven to fill a can. I am speaking of the first year I went there. In the months of July and August it only took about four and a half. Now there is——

Q. The lobster had filled up in the meantime?—A. The lobsters I packed early in June must have shed in February or March.

Q. Do you think it is possible to expect the fishermen to return the berried lobsters to the water from the traps?—A. No.

Q. Has the practice of stripping or washing off the eggs always existed?—A. Yes, I have known that for years.

Q. Have the canners ever made any scruple about accepting berried lobsters?—A. Certainly, we never cared anything about it because it did not amount to much. There was only one place I know where it amounted to a great deal and that was in Liscombe, Nova Scotia, where three-fourths of the lobsters were seed lobsters but there was no regulation then. That was in 1873.

Q. How do you account for the larger proportion of berried lobsters at that point than elsewhere?—A. That was their breeding ground where they went to cast their seed. Into Spanish Bay they would go.

Q. What proportion out of every hundred lobsters bore eggs extruded?—A. Well, in this locality, as I have said, we were getting 7,000 or 8,000 lobsters a day and at least three-fourths of them were seed lobsters. In different localities there was more of them, and they kept up until towards the end of the season—it was November before I left off—at least one-fourth were seed lobsters, we took the trouble to count them.

Q. Where was that?—A. In Liscombe, Nova Scotia. Those lobsters must have spawned in the last of October. The spawn was ripe and ready to drop off. I myself have seen life in the eggs late in the season which shows that they must spawn in the winter.

Q. To what do you attribute the falling off in the size of the lobsters?—A. Well, they are catching them up faster than they grow.

Q. Do you think there is any reason for having different size limits and different seasons in different localities?—A. No, and you cannot carry it out. It is very good to have it, and all that sort of thing, and it is not an impossibility, but, as I say, there is not much probability that it can ever be carried out.

Q. Some people have stated that it takes thirty per cent more lobsters in the fall to fill a pound tin than it does in May and June, is that your experience?—A. Well, on the Island in late years they never packed in the fall at all, they always wound up about the middle of July, but I found the lobsters were better in the months of July and August in some localities than at any other season of the year. Now, on at the westward, such as Canoe Cove, the lobsters begin to shed about the 5th or 10th of July and then at the 1st of September they were not worth catching. Here it is different again.

Q. Is there any difference in the meat of the female lobster when she is carrying her berries outside and that of any other lobsters; some people have said the berried lobster does not make as good meat?—A. It is a little darker if you notice particularly.

Q. It is as firm?—A. It is just as firm, and I always think it is a little darker. The meat of the he lobster is whiter anyway, at all times.

Q. What do you think of the proposition made by some people to close down altogether for a term of years?—A. The people in it would mostly give up the business and go to something else.

SESSIONAL PAPER No. 22a

Q. They would have to?—A. Well, for all time to come. You see the people that are carrying on the business in England probably get their supply from the United States and you may say Canada.

Q. And lobsters are canned nowhere else in the world except the United States and here?—A. Don't they can them on the coast of Scotland?

Q. I do not think so. As far as I know I think all the lobsters come practically from America?—A. They may have stopped there the same as in the State of Maine.

Q. And the fishery they have has got to be a very small affair?—A. I know that.

Q. It was never as large an industry as it was here?—A. But still Aberdeen is the father of the lobster canning. As far as canning in the United States is concerned it comes from them. They brought it here.

Q. The Lobster Commission of 1898 recommended that temporary reserves be established, or in other words that fishing should be shut down on the coast by sections?—A. I don't think that will work at all. Let them continue to pack and all that, and in a very few years Prince Edward Island will be about the only place, in my opinion where lobsters will be packed. Because we cannot carry on the live lobster industry here, and New Brunswick and Nova Scotia will be carrying it on. At Gaspé and the Magdalens they will be probably packing lobsters also.

Q. You think where the live lobster industry can be developed it will drive the canning out?—A. Certainly.

Q. It is a much more profitable one to the fishermen is it not?—A. Certainly it is. I don't know whether it would be on this island.

Q. I mean where the facilities exist?—A. Yes.

Q. Is there anything else you would like to suggest; if so we will be very glad to receive it?—A. I have nothing particular to suggest.

By Mr. Fraser, M.P.:

Q. There is just one point I would like to ask you about and that is the construction of the lobster traps?—A. I think that the laths ought to be placed in all parts of the trap at least an inch and one-eighth apart.

Q. When you were fishing how far apart was the space?—A. Sometimes when we were not in a hurry to make traps we would have them an inch and three-quarters apart, but always an inch and a half wide and that was the measure.

Q. How far are the laths apart under the present construction?—A. Some of them are a great deal less than an inch. Some are made not over three-quarters of an inch apart.

Q. Is there any regulation now?—A. No.

Q. Would you suggest that there should be a regulation for traps?—A. Yes, I mentioned it here before in my evidence, that the fisherman should be licensed and it should be stated on the license how far apart the laths should be, and if he violated any part of that license he should be heavily fined and his license revoked.

Q. What would be the result of building a trap with wider spaces between the laths?—A. Large lobsters get into the trap and there are always some that are larger than others. As soon as the bait begins to get scarce they chase the little ones out.

Q. And there would not be so many of the small ones canned?—A. No. So long as they are caught they will be brought into the factories, and so long as they are brought there they will be used. Another thing: I was told here by the foreman of a factory this season that two men brought in their day's catch of lobsters and it weighed 22 pounds. The weigher of the factory counted them and there were just 74 lobsters, so you can imagine how small they were, and they were caught in parlour traps.

Q. Seventy-four lobsters only weighing 22 pounds?—A. Twenty-two pounds. Remember I am under oath. That is what he told me, the foreman of a factory, and it was corroborated by his weigher, the man that weighed them. They went to work and counted those lobsters and there was just 74. It is very easy to see what the

9-10 EDWARD VII., A. 1910

average size of those lobsters was. There was some that could not have been over $3\frac{1}{2}$ and 4 inches in size. When we were canning down here the first three or four years I canned over 3,000 cases in one season.

By the Commissioner:

Q. With what amount of gear compared with at present?—A. Oh, we did not have near so much, not half. But I contend that they do not require so much gear now, that they would get just as many lobsters with half the gear that they now use, but you cannot make them believe that.

Q. Among the regulations proposed is one limiting the amount of gear to the cannery or to the fishermen.—A. Oh no, I would not interfere with the liberty of the subject in regard to that.

Q. Yes, but the liberty of the subject only goes a certain length if the subject is destroying the industry by over-fishing it with gear. There is very little doubt there is too much gear and too much crowding in some place.—A. That may be but that will regulate itself.

Q. It also appears to us that in some places where there are large canneries that are fishing an unlimited amount of gear, they are crowding out the smaller operators.—A. That will happen in all kinds of business. That can hardly be avoided, it will happen in everything. A large merchant will crowd-out the small one because he can buy cheaper, and afford to sell cheaper, and the number of sales is larger and the amount greater.

Q. Do you think there is any combination on the part of packers to establish a standard price to be paid to the fishermen?—A. No, I do not think there is for the very fact that they could not get them to agree. They tried that in the State of Maine and it fell through. I know this because I was concerned in it. I had to take an active part in it although only the foreman of a factory. We formed at one time a combination and it lasted for about a month and then it broke. That made things ten times worse.

Witness discharged.

CHARLES H. STEARNS, canner, Souris, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster industry?—A. Eighteen years.

Q. Always here at Souris?—A. I always lived here.

Q. How many canneries do you run?—A. I only run two now.

Q. Where are they situated?—One situated at East Point and the other one at Campbell's Cove, about 8 miles from Souris.

Q. How many boats do you run in connection with your factories?—A. I run at East Point 10 dorys, and at Campbell's Cove between 5 and 6—some years 5, some years 6.

Q. Are the boats and gear you employ all your own?—A. Yes.

Q. You hire no boats?—A. I hire no boats.

Q. Are your men paid by weight?—A. Paid by weight.

Q. What is your practice with regard to the fishing season, when do you begin to fish generally?—A. Generally some time in May with us. I have a little list here, Commander Wakeham, dating from 1900. I am going back 9 years and I notice that in 1900 we started May 11; 1901, May 9; 1902, April 30; 1903, April 29; 1904, May 9; 1905, May 8; 1906, May 1; 1907, May 24; 1908, May 7; this year May 11.

Q. Those are the dates when you began to pack?—A. Began to pack.

SESSIONAL PAPER No. 22a

Q. You put out your gear before that?—A. We put the gear out ike to-day and start to catch next day if the weather is suitable. Then I have the catches made in those years too.

Q. Could you leave that statement with us?—A. Yes, certainly. (Statement filed.)

EAST POINT FACTORY.

Q. In what depth of water do the boats fish when they begin the season?—A. Well, we go out 10 and 11 fathoms, from that into 5 in the early part of the season.

Q. What distance off shore will that greater depth of water put you?—A. Off East Point it will go out a mile and a half, I would suppose.

Q. Is it your practice to continue fishing in that depth of water all season or do the fishermen fleet their traps in?—A. As the season advances the fish get in closer to the shore and we draw the traps in to them. This year we got in so close that the last of the season cleaned us up by landing everything for us without trouble.

Q. What percentage of loss did you meet this year?—A. Between the two factories we had 5,000 traps in the water. We had a loss of 1,500 altogether and of course all the rope was gone.

Q. What was the date of that?—A. 8th July.

Q. Just at the close of the season?—A. Just at the close of the season.

Q. If you had a shorter season you would have escaped that?—A. If it had not been for that storm I would have packed 1,000 cases of fish.

Q. What number of hands do you employ in the canneries?—A. From 30 to 35, that is clear of the fishermen.

Q. What is your experience as to the class of fish caught in the opening of the season in the deep water compared with that taken later in shallow water?—A. I think about the same run of fish. It may be a little larger probably in the early part of the season, but I do not see very much difference in my East Point factory, taking the season all through. Up there at those reefs it is all rocky bottom.

Q. Has that always been the case?—A. Always been the case, I don't see very much difference. Of course the fish are smaller now.

Q. What percentage of your fish would be below the legal size limit of 8 inches?—A. I would say 50 per cent of them or probably more.

SESSIONAL PAPER No. 22a

Q. That is to-day?—A. Yes.

Q. How was it when you first began packing?—A. I suppose there would be 35 or 40 per cent of them.

Q. Even then?—A. Even then.

Q. Well, canning had been going on for a good while then?—A. When I first went into the business I did not take very much stock, I did not pay very much attention to that. Now it has got to be such a burning question that we take more notice of those things.

Q. Then as to the female lobster carrying eggs outside, how many per hundred will you see of those?—A. Of course there are some seasons of the year you will not find any with the berries outside. As to the percentage there might be four or five to the hundred probably. I never went in myself personally and counted them.

Q. Is the number greater at one time of the season than at another?—A. Yes. Some time along the latter part of May or the first of June we get more berried lobsters. One year I remember—I forget what year it was—we had a great storm here some time in June and a good many factories closed up but I continued. There was an extension given that season up to the 1st of August, and I remember that from the latter part of July to the 1st of August there were no spawn lobsters showing on the outside at all, and we had better fishing than we had at the early part of the season. My East Point factory packed that year, after the other factories closed up, 200 cases of lobsters.

Q. What was your pack this year?—A. My pack this year was pretty small. Between the two factories we only packed this year 700 cases.

Q. And last year?—A. Between the two factories 1,300 cases.

Q. And the year before?—A. It was also a good year. We packed at East Point over 800 cases. I did not have Campbell's Cove factory myself that year.

Q. What is the best pack you have ever made?—A. Something over 800 cases at East Point.

Q. Have the regulations ever been strictly enforced with regard to size limit and berried lobsters?—A. No.

Q. They have been a dead letter?—A. Been a dead letter. In fact we could not run if the regulations were enforced.

Q. Have the canners ever made any objection to receiving and utilizing berried lobsters?—A. I never did.

Q. What would happen if you did?—A. I don't know what would happen. I suppose the fishermen would kick if we told them to throw those lobsters overboard. I suppose then they would squeal and say: 'We must be paid for them. We cannot keep catching them every day and throwing them overboard.'

Q. Would you fear them leaving you and going to somebody else less scrupulous?—A. I don't know what might happen, I am sure.

Q. Or do you think they would adopt the practice of brushing the berries off the female lobsters; is that practised here?—A. They would do that. I believe that is practised. Of course we get a great many female lobsters without berries outside, the spawn would be inside.

Q. What number of traps do you average per boat?—A. From 250 to 300 at East Point.

Q. Fished by one man?—A. Two men in a dory. We never had as many as 3,000 traps at one time in the water at East Point, about 2,700.

Q. Are there other canneries in your neighbourhood?—A. The canner west of me is Mr. Macleod at North Lake. On the ground that I cover there now there were four canneries at one time and I bought the others out.

Q. That leads to the other question as to the present system of issuing licenses. The policy of the department for some time back has been to limit the number of licenses; do you approve of that?—A. Well, I approve of that, Commander Wakeham, either keeping the number of licenses to a limit, or opening it up and letting every-

9-10 EDWARD VII., A. 1910

body get a license. I don't believe in giving a license occasionally, you may say a political license. That happened with me at Campbell's Cove last year. There was a factory put in at Campbell's Cove and I bought it for \$1,200. There was another factory established this year on the co-operative plan in which 16 or 17 fishermen were interested. They were not fishermen but farmers who sent in the requisition. Some of them never fished lobsters at all. The result was we were both fishing on the same ground. There was a boundary made some years ago between the parties on both sides of us, and the result was there were about 3,300 traps on that little piece of ground whereas last year I had only 1,500 traps and I packed about 470 cases. This year I packed only about 200 cases and the other people 200 or 250.

Q. Then you favour limiting the number of licenses or else making the thing absolutely open?—A. Absolutely open.

Q. So that you will know what you are dealing with?—A. Exactly.

Q. Do you think that at present the supply of lobsters for the canneries is being kept up by fishing an increased amount of gear compared with what you fished at the beginning?—A. Keeping up the supply of lobsters?

Q. Is the supply being kept up by increasing the amount of gear; there is a good deal more gear in the water now than there was 20 years ago?—A. Not with me. Now, for instance, we will take my experience at East Point. As I said before, some years ago there were four factories in that vicinity, whereas now there is only one. I have never had 3,000 traps on all that ground at any one time; I could put out more but I considered 3,000 traps would fish the ground fairly well. I could have put out more—there are no restrictions as to the number of traps that we can put out—but I kept it down to 3,000, a little less. There has been on that same ground as many as—Murphy at East Point used to have five boats there with 1,500 traps, the next factory again would have about the same, I would put out the same and so on. There would be 5,000 traps, probably more, on that ground some years ago.

Q. On the whole Island the amount of gear in the water has gradually increased since the opening of the fishery?—A. The gear at East Point has increased in that way you see, when there were four factories there.

Q. Do you think the amount of gear fished by the cannery should be fixed?—A. I think myself the traps should be limited to the ground. I think it would be a good idea, that a man getting a license should only put so many thousand traps on that ground.

Q. How would you limit it, according to the number of boats?—A. According to the number of boats.

Q. You would have to limit the number of boats too?—A. Have to limit the number of boats.

Q. What is the average number of cases per boat that you pack?—A. In a good season it would take about 80 cases to a dory with two men.

Q. The average, I suppose, is between 50 and 60 cases?—A. The average is between 50 and 60 on the north side.

Q. From your observation as a canner what do you think is the spawning month of the lobster, when do you find the largest number of lobsters with berries on and about to spawn?—A. I think it is in the latter part of May, coming on the 1st of June.

Q. What do you think of the proposition to license the fishermen? It has been proposed that the lobster fishermen should be licensed with a view of somewhat controlling the thing.—A. The lobster fishermen licensed?

Q. That we should compel every man that fishes lobsters to take out a license at a nominal fee.—A. That is supposing he is hired by the canner.

Q. No matter who he is?—A. I don't know how that would work I am sure. I am thinking that the packer would have to pay the cost of his license to satisfy him.

Q. I suppose it would always have to come out of the industry in some shape or other?—A. It would have to come out of the packer I think.

SESSIONAL PAPER No. 22a

Q. The idea seems to be that a fisherman with a license would feel he would be called upon to obey the law and would give information on others who were violating it?—A. That is a point I never heard come up before, of licensing fishermen.

Q. Have you ever remarked as to how small you have seen the female lobster with eggs attached?—A. Well, I don't think I have ever seen them under 7 or 7½ inches.

Q. How do they run generally?—A. Well, the female lobsters with spawn on them run, I think, in ordinary years, to 8 or 9 inches. I suppose so, I never took particular notice of that. I do not think I ever saw eggs on lobsters smaller than 7 or 7½ inches.

Q. The majority of them are a good sized lobster?—A. A fair sized lobster.

Q. What sort of meat do the berried lobsters yield, do they turn out as well as the others?—A. Generally. I never heard to the contrary.

Q. I have heard some canners say that the meat is soft and spongy, that it does not turn out so well?—A. There are certain seasons of the year when none of the lobsters are what you might call good.

Q. That is when they are newly shelled?—A. Yes.

Q. What do you think of the proposition requiring the canners to pay an increased fee, instead of 2 cents a case as at present, and in that way realizing a fund for the purchase of seed lobsters from the fishermen?—A. I think that would be all right if the department would limit the factory to a certain territory or ground, so that a packer would know exactly what he is doing. But now it is an uncertainty. You don't know the moment some fellow is coming in alongside of you. Personally, I would be willing to pay a much larger fee if I were sure of my territory.

Q. Having your territory to yourself?—A. Yes and to help to pay for taking care of the spawn lobsters.

Q. What is your opinion as to the best means to be adopted to preserve the industry? It has been suggested by some people that the best way of effecting the improvement would be to shut down universally for a term of years; what would you think of that?—A. I think that would be a disastrous thing for the industry. It would work bad in several ways. For instance, say I have a plant, a very good plant, worth \$4,000 or \$5,000 or more money. That would naturally all go to destruction inside of two or three years time. Then another thing. The fishermen that are prosecuting the business would leave it and turn their hands to something else, and in two or three years I would not be able to get them into the fishery again. That is another reason. Then you take the lobsters themselves, they have a market and they have got to be a luxury. Now in the space of two or three years the people that are eating them might turn on to something else. Furthermore we would naturally expect after the fishery had been closed for three or four years to get a good catch and there would be a whole quantity of lobsters thrown on the market in one season. That might be disastrous in reference to the price; it might become so unprofitable that packing would not pay. There is that about it. Let the industry go on, but regulate it. That is the best way possible.

Q. The Lobster Commission of 1898 recommended the closing down of the fishery by sections?—A. I don't see how in the world that would work either—closing down by provinces, Nova Scotia, New Brunswick, Prince Edward Island.

Q. Or parts of them?—A. You see that would not work very well either I should think.

Q. Another proposition is to do away with the size limit regulation which has never been enforced, and I suppose you will say would always be very difficult to enforce?—A. Very.

Q. It is proposed to do away with the size limit, protect the berried lobster—by purchasing her from the fishermen and taking her to a hatchery or to a pond or returning her to the water—and somewhat shorten the season; what would you think of that as an alternative?—A. That would be to take everything that comes but not the berried lobsters?

9-10 EDWARD VII., A. 1910

Q. It is quite possible it might also be necessary to fix a standard trap?—A. Yes exactly.

Q. Because it appears that the space between the slats is getting so small now that nothing can get out of the trap?—A. It is very hard for very much to get out as the traps are built now.

Q. In some places they attribute the rapid decrease in the size of the fish to the introduction of the parlour trap; what do you say yourself?—A. I never approved of the parlour trap myself. In fact I was the last packer around here to build them. At East Point I have only been using the parlour trap for three or four years, I think.

Q. Do you think they are unnecessarily destructive?—A. You will find some factories using six headed traps, two parlours.

Q. Then anything that gets in there——A. Generally stays there.

Q. What is the best period of your fishing season?—A. May and June.

Q. That is shown by your statement?—A. You have it right here in my statement. In 1902 I see the catch in June was 78,568; May, 86,731. In 1907 when we started packing on the 24th of May, we got 142,762 in June, and in May only 30,070. We only had a few hauls in May. That year we got the bulk of our fishing in June. In May of the following year we had the bulk of our fishing, 104,174. Last year we had 40,123 in May, and 59,682 in June. We consider that if we get started pretty early in May, and can get one-third, or a little better, of our estimated pack, we feel pretty safe then.

Q. How many fishing days do you average a season, have you ever kept any memorandum?—A. Oh yes, I have got them all marked in my lobster book. I could give you the fishing days.

Q. We find the average as low as 35 days?—A. This year at East Point we never had a whole week that we fished every day. One week we fished 5 days, but we never fished the whole of a week. At East Point I remember in 1902 there were over 14 days that we never put a boat in the water.

Q. As to the matter of the opening of the season, what is your opinion?—A. Well personally I would prefer the 1st of May on the north side of the island.

Q. Do you think it would unduly cripple the industry if we did away with the size limit, and asked you to close down on the 1st of July?—A. I do not think it. Of course in a year like this where we had a stormy season, ten days at the last of the season would have been a help, would have been of great assistance.

Q. What do you think in regard to the granting of extensions of the fishing season, do you think it is wise?—A. I don't think it is a good thing to advertise an extension of 10 or 15 days, but sometimes if we can get a few days privately it is an advantage. The Department one year you know gave us two or three days at the latter part of the season. The season closed on Friday, and they let us run the Saturday and the whole of Monday, or something of that kind. To advertise an extension like that all over the country by it getting into the press is detrimental to the industry. Producers of lobsters may hold back as the price may go up a little. I think if we got two months or two months and a half, and do away with the regulation as to size we would be perfectly satisfied.

Q. Would it be possible or right to establish a standard of fitness for a license to can?—A. That is by a factory regulation?

Q. Insist upon the use of certain appliances in connection with canneries, that the tables should be up to a certain standard, that a certain amount of cleanliness should be observed and so forth?—A. Every packer who has the interest of the industry at heart and wants to keep up the class of goods that he can stand by, will keep his factory perfectly clean and get all the modern appliances that he can.

Q. Do you not think the product of lobster canneries should be subject to inspection, as in the case of other products that are inspected to-day?—A. There is no reason why the lobster business should not be inspected in the same way.

SESSIONAL PAPER No. 22a

Q. Do you think the present staff of fishery officers would be competent to carry on this inspection?—A. I don't think it would require any staff at all in a small province like Prince Edward Island.

Q. There is another question that some people hesitate about answering; would you refuse a canning license to an alien?—A. Well, I don't know I am sure, I think I would feel like it.

Q. You would treat the Yankee as the Yankee treats you?—A. It depends a good deal upon what nationality he was, I think. Some of them would not be fit to can anything, some of them would be all right.

Q. What do you think of the policy of encouraging fishermen to co-operate in canning?—A. Well, it is all right if you have all fishermen, but mixing up farmers and fishermen together, people getting a license by farmers signing the petition—that is a deception on the department. That has happened, as I said before, right here.

Q. Are most of the men who carry on the lobster fishing *bona fide* fishermen?—A. The most of them are.

Q. And they carry on other fishing after the lobster fishery is over?—A. A great number of them do.

Q. A great many of them are farmers, labourers, mechanics and so forth?—A. Some are. They just go to the lobster business for a couple of months and then take up something else, they don't continue in the fisheries after that.

Q. What is the price paid for lobsters in your district?—A. Last year I paid \$1.50 a hundred and found the fishermen in everything, gave them board and boats—they had that free, they were under no expense whatever. This year of course we did not pay as much. The year before last we paid \$1.25. This year we paid from \$1.10 to \$1.15 and \$1.25, according to the arrangement made.

Q. How is the price established?—A. Well, just simply that each packer names his price to his fishermen. There is no association formed to establish a price.

Q. There is no combination?—A. Not at all.

Q. Are you aware of any complaints made by the fishermen that the price paid for lobsters by the canner is not satisfactory to them?—A. Never here, they are perfectly satisfied.

Q. Is it the case, to your knowledge, that fishermen have ever lost their catch of lobsters by the canners refusing to accept them?—A. Never, that I know of.

Q. It has been alleged that in some cases the fishermen have suffered injury by the failure of canners to operate their factories, although a sufficient supply of lobsters was available; has that occurred here?—A. It has never occurred around here.

Q. Did that not lead to the introduction of co-operative licenses?—A. It never happened in Kings County that I ever heard tell of.

Q. If the canneries were closed would the fishermen find any other market for lobsters?—A. I don't see how they could in Prince Edward Island.

Q. There is no chance to carry on the live lobster trade?—A. No, sir, not here.

Q. Which branch of the industry would be the most remunerative to the fishermen and the least calculated to deplete the fishery, the canning or the live lobster industry where it can be carried on all right?—A. I understand they do ship live lobsters, and they can as well. They can the smaller lobsters and ship the largest ones.

Q. But the canning is greatly dying out in those places?—A. Is it?

Q. In the State of Maine it has.—A. At Yarmouth I think they start in January and ship the live lobsters, but can the smaller ones.

Q. There are no live lobsters shipped from here?—A. No, sir.

Q. The facilities do not exist here?—A. No, you could not ship live lobsters very easily here.

Q. Are you in favour of establishing hatcheries?—A. Well, I believe, Commander Wakeham, that the best hatchery is the mother lobster herself, she deposits the spawn. I suppose the hatcheries are a good thing under the circumstances. There has one been established off Charlottetown for a number of years, but I often wonder where

9-10 EDWARD VII., A. 1910

the little lobster gets to. I don't think I ever saw a lobster smaller than $4\frac{1}{2}$ or 5 inches. Where does the little fellow get to?

Q. I suppose he remains off shore?—A. That is a question. It is wonderful where he gets himself to.

Q. In the neighbourhood of the hatcheries they maintain that they get a number of small lobsters two and three inches long, schools of them they say?—A. But don't you think a lot of that spawn is dead by the time it is boated to the hatchery, after it has been rubbed off the mother fish?

Q. A good deal depends upon the way the spawn is taken off. A great many eggs may be destroyed by rough handling and there is no doubt a considerable quantity is lost.—A. There is no doubt about that I think. I was only in a hatchery once when I was in Charlottetown hatchery some years ago for a little while.

Q. There is another way of providing for the berried lobster by the establishment of pounds. Mr. Baker, of Cape Breton, has a pound, and there are pounds in the State of Maine also?—A. You could not have that on the north side of the Island.

Q. Is there any place where you could build pounds?—A. No. You see it may be calm and quiet this evening and before twelve o'clock at night you have a storm which compels you to haul your boats up on the shore. If you had a pound there what would become of it.

Q. You must have a sheltered place, with a free outlet and a good depth of water?—A. It could be done all right on the south side of the island.

Q. The policy contemplated by the regulations is the taking of the large lobsters and permitting the small ones to escape; what kind of a trap is best adapted for that purpose?—A. The ordinary trap with the lower laths a certain distance apart.

Q. What would you fix that distance at?—A. Well, the regulation as it stands now is an inch and a half. That has never been revoked, it still stands. The regulation was made some years ago by the department, but you won't find a trap anywhere with an inch and a half space because it would take a pretty good lobster.

Q. And there would not be many left in?—A. In some places there would not be very many. You might have one end of the trap—

Q. What would you say would be a fair space to leave, and let that space be all over the trap or in the two lower openings?—A. I would have it all over the trap if I was building one. Well, I don't know whether it would be better to put it at about an inch, or an inch and a half may be all right. We did make the traps the year the regulation was in force with the openings an inch and a half apart.

Q. How did you find it affect your fishing?—A. The fishermen would take a bundle of laths out in the boat and split them in two and nail them right up again.

Q. Is there any fishing out of season?—A. Not around here.

Q. Is there much gear abandoned in the water? We find in a good many places that the fishermen have the habit—I suppose with the consent of the packer—of leaving the gear in the water in the fall?—A. Never with the consent of the packer. They never did that with my consent, but I know there is a lot of my gear abandoned in the water sometimes, especially in a year like this when a big storm comes.

Q. As to the method of stamping the cases, do you think it is the best that could be devised and that it prevents fraud?—A. I think it is all right. You see the stamps are in the hands of one man in certain localities and he goes along and stamps the cases. Formerly anybody could get a packet of stamps and stamp cases themselves. He might reserve a whole lot for 'boodling lobsters,' as they call them in the Magdalen islands, he might have 50 or 100 stamps and put them on out of season. That is what they say down there, I don't know whether it is true or not.

Q. Have you ever had any experience with fishing in bays or lagoons; it has been suggested that these interior waters should be shut off from fishing altogether?—A. Like Richmond bay and those places? No, I never had any experience in fishing in bays at all. For instance, there are lagoons on the Magdalen islands which are great places for lobsters. Sometimes they sneak in there. There is also fish in—

SESSIONAL PAPER No. 22a

Q. They do go in there and we break up their traps.—A. There is Egmont bay and Richmond bay.

Q. Egmont bay is different from anything of that kind. It is a wide open bay, you could not dream of shutting that off.—A. Richmond bay is different is it not? Richmond bay, especially where they have so much eel grass growing. That must be a great place for breeding lobsters.

Q. Do you think the female lobster goes in there to spawn?—A. No doubt in the world, it gets in among the rocks and eel grass to spawn.

Witness discharged.

Mr. McLEAN.—Speaking of the opening season, Commander Wakeham, I understand that in taking the opinion of different packers on the south side, you have evidence that they wanted the season back to the 20th of April.

The COMMISSIONER.—In some places they did suggest that but they are not unanimous about it anywhere.

Mr. McLEAN.—Our reason for fixing it at the 26th April, was a compromise. On the north shore side looking back 20 years they had taken no lobsters in April except twice. Therefore so far as the north side was concerned it was considered it was better to have the fishing days cut off in the time that you were not doing anything, rather than at the end of the season. My idea is the 10th of July is fully late enough. The lobsters are not so good then even if you had a season for fishing.

The COMMISSIONER.—Have you noticed any decrease of the lobsters for the last five or ten years; do you think the fishery has reached bottom, and that there is an end to the falling off?

Mr. STEARNS.—We have not noticed any decrease.

The COMMISSIONER.—The great decrease seems to have occurred some years ago and not so much recently.

Mr. STEARNS.—That is right. Before I was in the business at all they used to get more lobsters than they could handle. Of course I have only been in the business for 18 years.

JOHN P. SUTHERLAND, packer, St. Peter's Bay, called and sworn:—

By the Commissioner:

Q. How long have you been in the packing business?—A. 14 years.

Q. Do you operate more than one cannery?—A. One cannery.

Q. How many boats do you employ?—A. Four for the last eight years.

Q. And before that, how many?—A. Before that 5. I was in partnership with my brother, and I sold out eight years ago.

Q. The boats are fished by two men?—A. Yes.

Q. Do you own the boats and gear yourself?—A. Yes.

Q. How many cases have you packed this year?—A. 306.

Q. And last year how many?—A. 380.

Q. And the year before?—A. 235.

Q. What was the best year you ever made?—A. The year before, 380 cases.

Q. You did not do so badly this season?—A. No.

Q. Did you lose much gear this year?—A. I lost practically all my gear. I saved 500 traps out of 1,600.

Q. When did that loss take place?—A. On the 8th of July.

9-10 EDWARD VII., A. 1910

Q. You usually lose some gear every year?—A. Mostly every year. Last year we saved mostly all our gear.

Q. What is the life of a trap; how long will a trap last under ordinary conditions?—A. From two to three years.

Q. What do you value a trap at with the gear belonging to it, trawl, line and everything else?—A. About 75 cents.

Q. Are your boats fishing a larger number of traps now than when you first began operations?—A. Yes.

Q. How many traps do you fish to a boat?—A. 395 this year.

Q. That is to a single boat?—A. To a single boat.

Q. In what depth of water do you usually fish?—A. From 3 fathoms to 13 fathoms.

Q. How far off shore will 13 fathoms put you there?—A. About one mile and three-quarters.

Q. Do many fishermen along the north shore own their own gear?—A. No.

Q. As a rule the gear is owned by the canner?—A. Yes, sir.

Q. What class of men are engaged by you as fishermen, are they men who fish all the year round, or are they farmers who fish for lobsters only?—A. Well, they are farmers' sons.

Q. When the lobster fishing is over do they go on and fish for cod or mackerel?—A. Well, sometimes they do. Some of my lobster men are fishing codfish this summer.

Q. Then they are regular fishermen?—A. Yes.

Q. In some places those fishing for lobsters are nearly all farmers?—A. My fishermen are regular fishermen.

Q. When do you begin to pack generally, about what date?—A. I commenced this year about the 10th of May.

Q. Was that a little late for you?—A. Yes.

Q. Was there much ice off-shore?—A. Yes, the ice delayed us.

Q. When did the ice leave you?—A. About the 8th of May.

Q. And you got your traps out at once?—A. Yes, sir.

Q. How was the run of fish; do you get larger or smaller fish in deep water?—A. There is larger fish in deep water.

Q. How long do you fish in deep water?—A. From about four to five weeks. Then we shift in.

Q. When you shift in do you get a smaller average of fish in the shoaler water?—A. Yes.

Q. What proportion of your fish are under the 8-inch limit?—A. Well, I would say about half.

Q. Has the regulation with regard to the size limit or the taking of berried lobsters ever been observed closely in your district; what has been the practice in that respect among the canners and fishermen, everything that is taken is brought in is it?—A. Everything that is taken, yes.

Q. The fishermen expect you to take everything from them?—A. Well, the fishermen chucked away the spawn lobsters this year.

Q. But before this year what did they do?—A. Last year they chucked them away.

Q. Do you think there is any disposition on the part of the fishermen to be more careful about putting the berried lobster back into the water than there used to be, are they learning the necessity of saving the berried lobster?—A. They are learning, yes.

Q. Do you think that as a class they can be trusted to comply with the regulation?—A. Well, some of them.

Q. If you told the fishermen you would not take berried lobsters, what would happen?—A. Well, I could not tell you, I could not answer you that.

Q. Do you think your fishermen would leave you and would go to some one else who would take them?—A. No, they could not leave.

SESSIONAL PAPER No. 22a

Q. You think they would brush the berries off outside?—A. It is likely they would.

Q. Have you any idea as to how many berried lobsters you would expect to get out of every 100 lobsters caught?—A. Well, on the average for the season I don't think there would be over 300 pounds weight of berried lobsters out of the whole season's catch.

Q. Out of what total number of pounds?—A. I would say out of 60,000.

Q. What sort of lobsters are they generally, are they good sized fish?—A. A very good size, from 7 to 9 inches and over.

Q. Do you think there is any time in the season when the lobster is not fit for food?—A. I would say about the middle of August.

Q. Did you ever pack in the time when you could fish during August?—A. No, sir. Excuse me I did once. I found when I was packing them that the fish were dark.

Q. What style of trap do you fish?—A. I use the five-header.

Q. How long have you been using that trap?—A. Three years, and before that the four-header, and when I first started in the two-header.

Q. That is a double ended trap?—A. Yes.

Q. Why did you make the change?—A. We found that the four-header did better than the two-header and the five-header better than the four-header.

Q. That is the lobsters are less likely to get out of the trap?—A. Yes.

Q. As to the matter of the slats and the distance between them; when you fished the old double-header what space used you to leave between the slats?—A. About three-quarters of an inch.

Q. And what do you leave now?—A. About the same.

Q. Well, do you not think that the traps with the narrower space are catching a good many small lobsters?—A. Yes, they will hold all they will catch.

Q. Do you not think they are taking an unfair number of small lobsters?—A. Yes, I have taken notice there some lobsters coming in that I would be careless of handling, that I would just as soon they would get clear.

Q. Down to what size would you put them?—A. Four inches.

Q. Does it pay you to can a four-inch lobster?—A. They turn out better than the big lobsters.

Q. That is to say they are fuller for their size?—A. Fuller for their size.

Q. And they give you more meat in proportion than the big ones, the shell weighs less?—A. Yes.

Q. Do you not think it must exhaust the fishery very rapidly to destroy the young and immature lobsters?—A. Well, I would think so.

Q. Do you think we could stop the destruction of them by insisting upon a fair space between the slats of the trap?—A. I would think so.

Q. What would you put the space at?—A. I would put it at an inch.

Q. That you think would allow these very small lobsters to escape?—A. Yes, they would escape at an inch.

Q. In point of fact do lobsters come out from the trap very much?—A. Not out of these parlour traps as you call them.

Q. But they did out of the other trap?—A. The two-header?

Q. Yes?—A. Oh, yes, they would crawl right out if the traps were not hauled regularly. In stormy weather they would get out of the traps.

Q. As soon as the bait was gone?—A. Yes.

Q. What do you think of the proposition to require the fishermen to take out a license; do you think that a man with a printed form in his pocket would be more apt to observe the law than one who had not such a thing?—A. Well, I suppose he would. I run a factory and I observe the law.

Q. Well, what is the law?—A. The law is not to pack after the season.

Q. That is the only law, is it?—A. That is all I go by.

Q. But unfortunately the law says you must not pack berried lobsters or any lobsters under 8 inches in size. I don't think that law is observed anywhere. How

9-10 EDWARD VII., A. 1910

many of your lobsters does it take to fill a pound can?—A. In the beginning of the season it takes 255 pounds.

Q. That is to fill a case; it takes 255 pounds of green lobsters?—A. Yes.

Q. And later in the season what would it take?—A. 235 pounds.

Q. Then the lobsters have got fuller?—A. Yes.

Q. Various propositions have been made by different people for remedying the existing condition of the lobster fishery. One recommendation is to shut down absolutely for a term of years; what would you think of that?—A. I would not think much of it.

Q. What effect would it have?—A. It would have no effect. It would never catch up the fishes of the sea, they are getting more numerous. This spring there was a better show than ever I saw on the shore for lobsters.

Q. Do you think any regulations at all are necessary?—A. I cannot say. I find everything all right so far.

Q. And the regulations have never been observed?—A. Well, we go by the regulations, we chuck the berried lobsters away.

Q. You did this year. Is there any illegal fishing done after the close of the season?—A. No, sir, none.

Q. It has also been suggested that we should abolish the size limit but always save the berried lobsters?—A. That is all right.

Q. And close down fishing on the 1st of July; what would you say to that?—A. For my part I would like to have it to the 10th of July, for we always get started very late on the north side. This year we only had nine hauls in May.

Q. How many hauls did you have this season altogether?—A. I could not tell you. I have not got the figures here or I could tell you. But June was good and July wound up with stormy weather, we did not get much fishing.

Q. Do you not find in your experience that a late season is generally a good one?—A. A late season is always the best. The later the ice stays the fishing is always better I think.

Q. What do you think about the present method of issuing licenses to pack? The department's policy is not to issue any new licenses; how should a license be granted in your opinion?—A. For my part where I fish I don't think there is any use for anybody to come in, there is no ground.

Q. There is no room for any more?—A. No room for any more.

Q. What do you think yourself of the policy of the department in encouraging the establishment of what they call co-operative factories; you have heard of them, have you?—A. Yes.

Q. Are there any of them in your neighbourhood?—A. No.

Q. The present policy of the department seems to be where a number of fishermen associate themselves and engage in canning, to give them a license; do you think that ought to be encouraged or not?—A. No.

Q. You do not think they will make more money as packers than as fishermen?—A. They would make more money by finding their own gear.

Q. If the fishermen used their own gear they would make more money?—A. Yes.

Q. There is no opportunity for carrying on a live lobster trade here?—A. I don't think it, I would not like to go that far.

Q. There is no chance here?—A. No.

Q. Is there any place in your neighbourhood where a pound could be established?—A. I would think at St. Peter's harbour.

Q. What we want is a considerable area, with a good depth of water and a free rise and fall of the tide?—A. St. Peter's harbour would be a good place.

Q. A place that could be barred across so as to keep the lobsters in?—A. I don't think it could be very easily remedied at St. Peter's harbour.

Q. What would be the trouble?—A. It is a very rough place, that is in the mouth of the harbour.

SESSIONAL PAPER No. 22a

Q. Anything put there would be carried away you think?—A. Yes.

Q. What do you think about hatcheries?—A. I don't think they would be of much help to the north side.

Q. Why?—A. I think they do the most of their hatching themselves out in the shallow water.

Q. If they are saved?—A. We cannot tell whether they are saved or not.

Q. Do you think the berried lobsters are saved?—A. I think they are. They are saved long enough to crawl into the trap.

Q. What do you think of fishing in bays and lagoons, in these inner harbours; when the lobsters have escaped through the lines of traps on the outer shore and have gone into these inside bays and lagoons, should they be caught or should they be protected?—A. They should be protected.

Q. Do you think that these places are breeding grounds?—A. Yes.

Q. Are there any bays and lagoons of that kind in your neighbourhood?—A. No, sir.

Witness discharged.

JOSEPH MCKINNON, fisherman, Goose River, called and sworn:—

By the Commissioner:

Q. How long have you been fishing?—A. About 15 years.

Q. Have you always fished in the same place?—A. Pretty much all of two seasons.

Q. But always on the north side of the island?—A. Yes.

Q. When do you begin to fish one year with the other?—A. All owing to the seasons.

Q. What guides you in starting out; do you go out as soon as the ice is gone?—A. Particularly the ice. Two years ago it was the 20th of May. We started last year somewhere about the 6th.

Q. Have you ever fished in April?—A. Yes, about four years ago we did.

Q. Did the ice come back on you?—A. Well, not on us, it did come east of us.

Q. How close inshore does that ice come, right on the beach?—A. It piles right up on the beach sometimes.

Q. It does not ground outside?—A. Some will ground probably at four or five fathoms.

Q. In what depth of water do you begin to fish?—A. Generally in six fathoms, inside gear. From that to 12 and 13.

Q. How do you lay your trawls, offshore or parallel with the shore?—A. Before last year we generally set them right across the tide. Last year we set them with the tide.

Q. Is there any fishermens' union in your locality?—A. Not in our section, I don't think.

Q. What number of traps do you fish?—A. About 300 and 350

Q. Do you move your traps or let them stay as you put them out?—A. We move them.

Q. About when do you move them?—A. We start in about the 5th or 10th of June, all owing to the weather. If the weather comes fine about the 5th of June we gradually start to take in a few then.

Q. What has led you to do that?—A. Generally the fish move inshore.

Q. And you follow the fish?—A. We follow the fish.

Q. Do you find you are getting fewer fish outside?—A. Yes, we do.

Q. The schools have passed you?—A. Yes.

Q. Have you tried to remain longer outside to find out whether it was profitable?—A. Yes. we leave from 50 to 100 traps out there until the close of the season.

9-10 EDWARD VII., A. 1910

Q. What is your experience as regards the fish; do you find the same kind of fish outside that you do inside?—A. Yes, pretty much.

Q. There will not be much difference in the character of the fish inside?—A. No, not much difference in size.

Q. How do the lobsters run with you?—A. They run to a fair average.

Q. You know the size limit is fixed at 8 inches; what proportion of the fish you catch would be below that?—A. I don't think there would be very many of them. The way they build the trap now I consider a five inch lobster does not stay in the trap; he can escape through either hoop, the blind hoop or the side hoop.

Q. He can get through the mesh?—A. Get through the mesh.

Q. What size do you leave that mesh?—A. It must be one and three-quarter inches.

Q. Extended?—A. Extended.

Q. Of female lobsters with berries how many do you get in every hundred lobsters?—A. In every eight hundred lobsters you would get about nine.

Q. That would be just a fraction over one per cent?—A. Yes.

Q. Do you find berried lobsters at all times of the season or are they more abundant at a certain period?—A. Generally about the first of the season we find them more abundant.

Q. Have you ever noticed as the season advances that the eggs get riper?—A. I never took notice.

Q. What has been the practice with regard to berried lobsters, what have you done with them?—A. Well, we never were very fussy about them, with 8 or 9 like that we generally threw them away or washed the spawn off some of them.

Q. Or brought them to the canner?—A. Yes, but we would not bring them to the canner with the spawn on them.

Q. Do you think that is the practice generally?—A. I don't know. I could not say what any other man would do.

Q. You are only speaking for yourself?—A. I am only speaking for myself.

Q. Have you ever found the canner raise any objections to receiving berried lobsters?—A. They have often told us to look out and be careful.

Q. Have you ever known a canner refusing to accept undersized lobsters, or objecting to the run of the lobsters as being too small?—A. No, I never did.

Q. They took everything that came to them?—A. Yes.

Q. Have they been more particular this year about saving the berried lobster?—A. Well, they were.

Q. Do you think the fishermen are beginning to see for themselves that if they want to continue and do well at lobster fishing they ought to save the berried lobster?—A. I consider that would be right.

Q. How do you think we can best get at the fishermen and induce them to observe the law?—A. I have no idea unless you chuck the berried lobsters over.

Q. How can we induce the fishermen to chuck them over? You see we want to find out if we can, the best way of preserving the berried lobsters. What is your idea, you must have talked that matter over with the fishermen?—A. I don't think it amounts to very much for a fisherman to hold 8 or 9 spawn lobsters out of 300 or 900. It would be just as well, and better to put them back in the water.

Q. Tell us what you would do?—A. Put a fine on them.

Q. You would need a man in a boat to watch them?—A. Cannot the packer watch them?

Q. And inform on them?—A. Yes.

Q. Supposing the fisherman adopts the practice of brushing the eggs off, is it easy to tell whether that has been done?—A. You can tell, but there is very few of them.

The fishermen would not lose a great deal by saving them?—A. No.

Q. Do you think if somebody were to address the fishermen, as is done with farmers in the case of agricultural topics, we could get them to listen and understand?—A. They certainly would.

SESSIONAL PAPER No. 22a

Q. What do you think of the idea of compelling the fishermen to register and take out a license? It is thought that if they do that they will be more apt to observe the law?—A. I would think, if I understand you right, that the fishermen would not have much control over that fish. If Mr. Sutherland or Mr. Cummings came and hired me to fish for them any season I certainly would do so. Well I would not think I would require to have any license, it would be all left to them.

Q. Some people think that if the fisherman took out a license and understood that if he was caught violating the law he would forfeit that license, he would be more apt to observe the law himself and see that others did so?—A. I would think that that would be all right.

Q. And if that fisherman knew that others were persistently violating the law he would feel it his duty to do so?—A. I would not think that would be very safe for him.

Q. What do you think with regard to fishing in very shoal water; do you think if you fish there you get a smaller run of fish? There are some places where they fish in a fathom of water or less.—A. Yes. In most cases you find just as good lobsters as you do in 12 fathoms.

Q. But will you find any just as good on the average?—A. It is owing to the bottom in the experience I have had. If you get on sand, away out in 12 fathoms you get small lobsters.

Q. You get a better run of lobsters on rocky bottom or on reefs?—A. Yes, sure.

Q. Do the fishermen where you are own their own boats and gear?—A. No, sir, very few of them. There must be two or three in 500 or 600.

Q. Do you think a man who does, stands a better chance of making something out of it?—A. Yes, I certainly do.

Q. Will he be more careful of the gear?—A. He certainly will.

Q. What price do you get for your lobsters, how are you paid?—A. So much a hundred by weight.

Q. Are you satisfied with the price you get?—A. Some years I am, and more years I am not.

Q. One year with the other how does it come out?—A. It comes out very small to the fishermen.

Q. I suppose you understand the price paid to the fishermen must depend somewhat upon the state of the market?—A. Yes.

Q. This year the price was lower than it was last?—A. It was.

Q. Do you think it bears a fair proportion to the price received?—A. I suppose it does.

Q. What do you think is the spawning time of the lobster?—A. Well, sir, you have got me, I cannot tell you that.

Q. You find some with spawn on them all the time you catch lobsters?—A. Yes.

Q. You have never noticed whether the spawn is riper at one time than another?—A. As it advances in the season I think it is riper.

Q. You have never seen the eggs ripe enough to notice the eye of the young lobster shining through?—A. I think it must be after this time they spawn.

Q. Later than this?—A. Yes.

Q. Have you ever remarked what was the smallest sized lobster you ever saw with spawn on her?—A. I think between 6 and 7 inches.

Q. Do you think you have seen them as small as that with berries?—A. Yes.

Q. If the canner refused absolutely to receive berried lobsters what do you think would happen?—A. I think they would be doing all right not to.

Q. Yes, but what do you think would happen?—A. I think they would multiply, would become more plentiful.

Q. Do you think the fishermen would put them back in the water if the canner refused to take them?—A. I certainly would. They would be no good to him to land them.

9-10 EDWARD VII., A. 1910

Q. What do you think of the present method of issuing licenses; do you think there are canneries enough?—A. Well, I don't know. I think if a man thought he could do better by them it is his privilege to do so.

Q. You think that he ought to get a license?—A. Sure.

Q. Do you think it would be wise to require him to show that he was in a position to carry on the canning?—A. It certainly would.

Q. It would not do to let everybody go into the business?—A. No.

Q. And if a man showed he was in good faith and had the means he ought to get a canning license in your opinion?—A. Certainly.

Q. Do you think the amount of gear fished under a canner's license should be limited, or should the canner be allowed to fish all the gear he likes?—A. Well, too much gear is no good, only a certain amount of gear that two men can attend to. I think 300 traps is plenty for any boat.

Q. Do you think it would be wise to insist on a regular space between the lower slats in the trap so as to let the small lobsters escape?—A. I don't think so.

Q. Do you not think the small lobsters would stand a better chance of getting out if that were done?—A. They could get out as far as my experience goes, the way the trap is.

Q. Have you ever known a fisherman to lose his catch of lobsters owing to the refusal of the canner to accept them?—A. No, sir.

Q. What do you think is the best date to fix for opening in the spring, or do you think there should be any opening fixed?—A. I consider for my part the ten days in April are no good for the fishermen on the north shore, because the ice hangs around there till the 5th or 8th of May. I think the fishermen and packers on the north shore ought to get a better chance than the fishermen on the south shore, because there is not a packer or a fisherman on the south side but has got his gear all saved, whereas the fishermen and the packers on the north side have had their gear all stove to b——

Q. Do you think the law with regard to the close season is well observed, or is there any illegal packing done after the close of the season?—A. I don't think so.

Q. What is the best time of your fishing with you?—A. Generally the month of May is the best month, but this year it was a very stormy month. June was ahead of it. Last year May was a finer season.

Q. You never attempted to ship live lobsters?—A. No.

Q. Do you think it could be done here?—A. I have got no idea. I have got nothing else to say. I would like the fishermen and packers not to have any worse chance on the north side than they have at present, and if anything it should be better.

Q. What do you mean by that?—A. If any time is given, to grant them the time. Then not to go to work to widen out the trap more than it is for I consider that things are all right as they are.

Q. And you think there is no fear for the lobster in the future?—A. I don't think so. They seem to be getting plentiful. They were more plentiful this year than they were ten years ago.

Q. Do you really think so?—A. Yes, sir, I am sure of it.

Witness discharged.

HERMAN MCPHEE, fisherman, Clear Spring, called and sworn:—

By the Commissioner:

Q. How far are you from East Point?—A. About 25 miles west from East Point.

Q. How long have you been engaged in lobster fishing?—A. I was one of the first men that ever set a line in our part of the country for lobsters.

Q. How far back would that take us?—A. To 1881, the first year Black Bush Factory was started.

Q. Was that the first factory in your neighbourhood?—A. In our neighbourhood.

SESSIONAL PAPER No. 22a

Q. How many factories are there now in that locality?—A. In our immediate neighbourhood? Hay River is the next place, Gillies factory. From there to East Point there is five or six.

Q. And to the west of you how many are there?—A. As far as St. Peter's, as near as I can judge, there are five or six more.

Q. I suppose factories are to be found at regular intervals all along the shore pretty much?—A. Yes, between three and four miles.

Q. Are you still fishing?—A. Yes. I am sorry to say we had one of the worst seasons we have had for 22 years.

Q. Did you fish your own gear?—A. Yes.

Q. Did you lose the most of it?—A. Not all of it. I saved more than I expected.

Q. What number of traps do you usually fish?—A. I fished 330 this year. I saved more of them than the factory man saved out of 2,000. I don't know why the gales were more lenient to me than to anybody else.

Q. Perhaps you may have been more active in saving your traps?—A. I was more interested in it I think. I saved 270 out of 330.

Q. Do you usually meet with some loss every season?—A. Last year I never lost a trap, it was an exceptional year.

Q. What style of trap are you fishing this year?—A. The four headed trap, and I have a seven headed trap.

Q. That is a pretty complicated business?—A. I went over the limit I think.

Q. Is there a limit to the number of traps?—A. I don't know, but they never had a seven headed trap until I made one myself and it is a good one too.

Q. Where is the advantage in it?—A. There is more room for the lobsters to go in. I had two nets, two on each side.

Q. That is more room for the lobsters to go in and less chance for them to get out?—A. Less chance to get out.

Q. What depth of water do you fish in?—A. From 12 feet of water to 14 fathoms.

Q. How far will 14 fathoms take you off there?—A. About three miles.

Q. What is the nature of the bottom on most of that ground?—A. Rocky ledge on the bottom. In our section there is a rocky ledge bottom. There is a strata of sand in shore.

Q. All the way?—A. All the way.

Q. How many trawl lines does that mean?—A. That would mean about 7 lines. We generally set about 50 traps to a trawl.

Q. How do you set them, parallel with the shore?—A. Parallel with the shore.

Q. Has that always been the custom?—A. Well not always. Some of them set them in and out but it is the more laborious way of setting them. I set that way myself last year for the first time in my life but I would never do it again.

Q. You set out there as soon as the ice is gone and you think there is no more risk from that cause?—A. Yes.

Q. At what part of the season would that be generally?—A. Along about the 26th of April this year. That is foolhardy too on our side. I have seen the time when we could not set until the 19th of May for ice, and then we had as good a fishing season as we have known.

Q. The fact that you start late does not prevent you from making a good season?—A. No, as long as the weather is favourable. All we want is favourable weather on the north side.

Q. Do you remain out in that deep water the whole season?—A. No. After the 1st of June the lobsters naturally move inshore.

Q. Then you bring your outer trawls in?—A. We move in too close for our own good at the last. We keep them in to a fathom and a half of water. We got the best fishing in there this year.

9-10 EDWARD VII., A. 1910

Q. When do you make your best fishing generally?—A. Along about the last or middle of May and then in June, the middle of June. There is generally a slack spell, and about the 20th of June up to the 1st of July they spurt up again inshore in the shallow water.

Q. Is there any difference in the quality of the fish you get in deep water and those you get inshore?—A. Not that we can notice. If anything we get better fish inshore the last of the season. The small lobsters I got in 11 fathoms of water this year they were smaller than I got in 4. The outside fishery was not as good as the inshore this year at the first go off. We attributed that to the bad weather. They don't fish as well on ledgy bottom in rough weather as they do on soft bottom.

Q. What proportion of the fish you catch would be small lobsters under 8 inches?—A. Well under 8 inches I don't think there would be any more than half of them.

Q. One-half of them would be under that size?—A. Under that size.

Q. How small do you take them, down to what size?—A. They take them now as small as they can crawl, and that is small enough.

Q. What distance do you leave between the slats in your traps?—A. About five-eighths of an inch is the outside limit. The cross slats in my gear are five-eighths of an inch thick, the cross slats over the sill, and then I let the lath come down, but some notch the lath to go down lower than that.

Q. Could you tell me the percentage of female lobsters you get with eggs attached to them?—A. We did not get very many this year. We were waiting for a fishery officer to come around, we were warned after the first of the season. I don't know why he was coming there.

Q. Did he show up?—A. We have never seen him yet. I don't know whether the northeasters overtook him.

Q. What was he coming to do?—A. To look out for spawn lobsters. We were to be shot, hanged and quartered if we took any spawn lobsters. We were anxious to see that man come along to see if he could show us what a spawn lobster was. He didn't turn up.

Q. Is there any difficulty in deciding what is a spawn lobster when she has her eggs outside?—A. Some of them can tell and some can't. I guess that is the way it works out. It happened that this year there were not so many spawn lobsters as there used to be. That is something peculiar among them. You would not get half a dozen of what we generally call spawn lobsters in a whole boat load of four or five or six hundred pounds.

Q. Do these lobsters seem to come by runs or schools?—A. Oh, yes, they come by schools. Naturally they come by schools like any other fish.

Q. You spoke of a difference in the spawn lobsters; what distinction do you make between them? There is no difficulty in telling when a spawn lobster has her eggs attached?—A. I don't think the lobster carries the eggs outside.

Q. What is it that she carries outside?—A. She carries what we call a pad outside to protect the spawn.

Q. When does she deposit the spawn?—A. We cannot account for that. Did you ever—I suppose you are experienced about the lobster business?

Q. I know a little about it, not very much.—A. Did you ever see the young spawn rise to the surface after it would be matured?

Q. I have seen them hatched out in the hatchery.—A. Did you ever see any one that saw them rise in the ocean or gulf? I have not seen too many of them either. I happened to come across schools of the spawn lobster to the westward of the Magdalen Islands when in an American vessel. I have been mackerel fishing for a great many years.

Q. The young lobster you know is supposed to furnish food for the mackerel. That fish is supposed to prey on the young lobsters.—A. On the roe that is in them. We used to see the roe that was in them. But this was the natural lobsters rising

SESSIONAL PAPER No. 22a

to the surface. It was a real calm day. I never saw it but once and there was not a man in the vessel who had seen it before or afterwards.

Q. What did it look like?—A. It was the natural lobsters in patches about half an acre in extent. We dipped them up with buckets—we did not know what they were—as red as blood. We dipped them up and we found the natural lobsters about the size of my finger nail right along. Between the northwest part of Bryon Island and Miscou; they were in that deep water. We never saw them anywhere else.

Q. You do not think there is any use in particularly protecting this lobster we call the spawn lobster?—A. I would say it was a very good thing to protect them. It was about the middle of August that I saw this school. I know that some other man—I think this other old gentleman here—came across some, some years after. But the question was the time of the year those lobsters would spawn, the time they would take to mature to that size (illustrating by a gesture). You would have an idea in those hatcheries how long it would take to mature to half an inch long. I have seen hatcheries but I did not see any eggs hatched out.

Q. Have you been into hatcheries?—A. I have been in Wood's Hole and I have seen the hatcheries at Gloucester.

Q. Well the theory about the young lobsters that it is about one-third of an inch in length?—A. That is what it is.

Q. It makes for the inshore waters into open waters and swims about on the surface for six or eight weeks?—A. I dare say. That is just a theory we propounded on board our vessel that they come up to protect themselves from the codfish and all the ground fish.

Q. They are fed upon largely by the surface fish, the mackerel especially?—A. Yes. I see from the evidence given before the Parliamentary Committee that an American scientist makes it evident the female lobster spawns only once in three years.

Q. Some say once in two years but the majority believe she spawns once a year?—A. They have had an experience of 175 years in the States.

Q. An 8-inch lobster is supposed to be in its third year, and a 10-inch lobster in its fourth year.—A. How long would it take a 11-inch lobster to grow?

Q. It is supposed to grow two inches every year.—A. Now some maintain it takes 30 years to grow to a full length.

Q. That is a pretty old lobster I think?—A. They look pretty old some of them too. How is it that when we began first over there catching them in 1881—we have been seeing them around the rocks and ledges since we were born and our grandfathers before us and they were the largest kind in near the shore. Of course our traps were opener then, the width of a lath, and we would catch no small ones. If they went into the trap they would get out again. We got all large ones then.

Q. There used to be a space of an inch and a half between the slats then?—A. An inch and a half.

Q. And a very large hoop?—A. Five-inch hoop.

Q. Those large lobsters have been caught off have they not?—A. They were caught up in a very short while. In a space of six years, I think, they began to get small and they had to close down on the trap. And then they began to get scarce inshore, the large ones. We cannot find any overgrown ones now inshore.

Q. Do you not think some of them still exist?—A. They are very scarce.

Q. Your ring is so small they would never get in now?—A. We have caught a few 11 pounds here last year.

Q. In the trap?—A. Yes, in the trap.

Q. We still hear of some large lobsters being caught, but they are generally caught on the outside, if they get foul of the trap somewhere.—A. Those have been caught inside the trap in about a 4-inch hoop.

Q. Have you yourself caught any large lobsters of recent years?—A. Not extra large. Well, I think I caught one that would run about 8 pounds, but they were nothing to what we caught in the first instance.

9-10 EDWARD VII., A. 1910

Q. Well, since your early days in the fishing I suppose the number of boats and traps has greatly increased?—A. Yes, too much so I think. I think there is too much gear set now for fishing. They had nearly as high as 500 traps to a boat on our side last season.

Q. Do you think it is possible for any one to fish that number of traps easily?—A. I could never see that point, that they could attend to so many traps. They were all right this year, there was less trouble in taking them in up the northwest way and that part.

Q. Are there many traps left in the water?—A. They left them all this year.

Q. But in a fine season we hear there is a great deal of gear left in the water, that old traps not worth bringing in are left there?—A. Certainly they don't lose too much time bringing them in.

Q. Do you think that old gear left in the water does any harm?—A. I don't think it does much good.

Q. It would not last long?—A. Oh, no, it would not last long in the water.

Q. Do you lose any traps from the borer here?—A. No, the worm don't affect us so much on the north side where I belong.

Q. In the Straits they complain a great deal of loss by the borer?—A. I daresay but their gear lasts so much longer than our gear on the north side, they have more shelter. Three seasons is the life of our gear on the north side of Prince Edward Island.

Q. Do you not think that the modern trap with a very narrow opening is unnecessarily destructive, that it is destroying too many of the young fish?—A. Oh, certainly it gets too many young fish.

Q. How would you remedy that?—A. By opening the trap.

Q. What width would you suggest?—A. I would think that about seven-eighths of an inch would allow those small lobsters to pass out.

Q. Would you have that width all over the trap or only in the bottom laths?—A. In the bottom is sufficient. That is the way they naturally go out.

Q. What do you think about the mesh in the end of the trap? Some people say it is no use to leave a large opening, that the mesh is big enough to allow the small lobsters to get out?—A. They can go out under the laths. The mesh has got to be small enough to keep them in.

Q. What size mesh do you put in the end?—A. About seven-eighths, that to an inch.

Q. That is extension measure?—A. Yes. If they give the lobsters a small hole they will go out. Where there is any part broken in the mesh they will go out.

Q. Do you think the larger lobsters chase the small ones out, away from the bait?—A. Yes, I think they will. It used to be so in the olden times. Then we could not get small ones. It was natural for them to be chased out, they were there then to make up the natural increase.

Q. In the old trap the small lobsters got out?—A. Yes, you would never find one then, but we can find them now and hold them in.

Q. As to the female lobster with eggs, what do you think is the best way to protect and save her?—A. It would be to put her back in the water.

Q. Is that done at all do you think?—A. I suppose in some cases it is done. But then you would want a man with a shot gun in the boat to watch out.

Q. If there is such a small percentage of berried lobsters it would be a simple matter and would not mean any great loss to the fishermen to put them back in the water?—A. No. I hove them away myself this year.

Q. But up to this year the practice has been not to save them but to bring them all in?—A. Bring them in to the boat. There would be some fishermen would bring the bottom in if they could get it in.

Q. And you would find somebody ready to pack it?—A. Yes, and let the Gulf of St. Lawrence drop down into the Indian Ocean.

SESSIONAL PAPER No. 22a

Q. Some people suggest that the best way of getting the fishermen to observe the law would be to compel them to take out a license?—A. It would be a very good idea.

Q. Do you think that a man who took out a license would be more careful about observing the law?—A. What do you mean by a license? A license to pack his own fish?

Q. Not to pack his own fish, but a license to fish, quite independent from the license to can?—A. Well, is there two sets of licenses?

Q. There would be in that case if the system were adopted. I do not say that it will be done but it is a proposition that has been made. The idea is that if the fisherman took out a license he would feel himself more or less bound to live up to the law and see that others did so. Furthermore, if he violated the law he would be refused a license another year and would not be allowed to fish?—A. And what about the law to make the packer live up to the commandments?

Q. Well, we are able to get the packer ashore?—A. But he is able to get at us in the price of our fish.

Q. Is he?—A. Yes, that is where the trouble comes in. He got at us in good shape this year. There was a very poor prospect at the first of this season about the market.

Q. Well, that would naturally mean the packer?—A. They told us they knocked off eating lobsters in London this spring.

Q. The lobsters were so dear last year the people could not afford to buy them?—A. They told us the market dropped out from us every place, and that the Frenchman lost his appetite in Paris and could not use any more. We could not make a price this spring. We got \$3 a hundred last year. We had them pinned down to an agreement, those men that had their own gear. Last year was a very favourable year for us but the market was bad.

Q. That was a very good price?—A. It was not too much considering we found our own gear and everything.

Q. And this year what price did you come down to?—A. They paid us \$2.40 this year and some of them got \$3. So that is the way this license goes.

Q. Do you think that is not a fair proportion or a fair share of the gain?—A. I know pretty well it is not. I paid for knowing it too, but I don't intend to pay for it another season.

Q. Are you going to give up fishing?—A. I am not going to give it up, I am not built of that material, but I am going to find out whether I can get a license to pack my own fish or whether there is a monopoly in this business or not.

Q. You know the practice has been for a number of years, or for some years back, to refuse a license to all new applicants?—A. I know that.

Q. Except in certain cases where a number of fishermen unite to pack lobsters on the co-operative plan when a license is given to them?—A. How many will constitute that number?

Q. I think from 10 to 30.—A. 15 some tell me.

Q. Fifteen ought to be able to manage it?—A. I saw a case in our own neighbourhood where two young men got a license and three in another concern.

Q. New canneries?—A. Yes, new canneries last year, and some of them have two licenses now. They got a new license and they bought in another factory. They have got the two now and they intend to hold them.

Q. Are they running them both?—A. No, they did not operate in the west one this year at all. One of the company told me he thought they were all right. They have paid the tax and they will hold them indefinitely and perhaps next year they will be looking for another, in which case they would have three licenses. I wanted them to give me one but they would not do that.

Q. Did you ever pack lobsters?—A. No, I never got the chance.

Q. In the early years was there any difficulty in getting a license?—A. No, not in the beginning.

9-10 EDWARD VII., A. 1910

Q. What is your idea about it; do you think that every man who applies for a license should get one?—A. Well, I don't say that every man that applies for a license should get one because every man is not fit to——

Q. How would you determine who is fit and who is not?—A. I suppose they would get a recommendation from somebody so far as that goes.

Q. The department would have to inform itself as to that.—A. Yes. I would say that in my opinion and in the opinion of a good many there ought to be a license given to every three fishermen to pack their own fish.

Q. They would have to show that they were able to put up a certain building?—A. Yes, they would have to do that, certainly.

Q. Do you not think there ought to be some guarantee that the fish will be packed up to a certain standard?—A. Certainly, it is to their own interest to put up the best article they can. If they don't put up the article up to the standard they cannot expect to get the price. They are pretty well up now, they are putting them up as a general thing.

Q. Some people think the lobster fishery is falling and that it is necessary to do something or other to put a stop to the decrease, and one remedy suggested is to stop canning for a while altogether.—A. Have they anything to do with the natural increase of this business——

Q. Yes, they are people interested in the business.—A. Or are they trying to disturb the work of the Creator. They will get to that state in the Dominion of Canada yet that they will do that. They must be getting along pretty fast.

Q. We want to find out what is the best thing to do.—A. The lobster will take care of himself.

Q. Unassisted by regulations or anything else?—A. Yes, in this short season that we have.

Q. You would say let everybody do as they please in this short season?—A. Yes, get all they catch, but I don't say to catch the very small ones, or I don't think there is anything in it to catch a lobster about two and a half inches in size; there is nothing in it for the fishermen or the packer. With regard to exterminating the lobster for the sake of four or five weeks, I think they can rest easy on that score.

Q. Other people suggest another remedy: They say, 'Do away with the size limit altogether. You cannot enforce it and it is not enforced.'—A. It is a pretty hard thing to enforce.

Q. Then they suggest doing away with the size limit altogether.—A. I would say anything over 5 inches, they might work on that, and that is the most profitable fish for the packer—from 5 to 6 inches and along there.

Q. It is pretty well established that no lobster breeds until she is about 8 inches long?—A. I believe that is so.

Q. Do you think it is wise to exterminate the young of any flock—A. I don't think it would be judicious.

Q. Is that not what we are doing?—A. Yes, that is so, that is correct.

Q. I will explain to you fully what is proposed by some other people interested in the business—people that we have heard ourselves and others that went to Ottawa last winter and gave their evidence before the Parliamentary Committee that was looking into the condition of the industry. All we are doing here is to get the evidence of different individuals. We want them to express their opinion, and this evidence will be printed and laid before the committee for them to decide what is best to be done. Now we want to get the opinions of you and others like you who are interested in the business?—A. That is very correct.

Q. Well, it is proposed by some people as the best method of protecting the industry to do away with the size limit; we cannot enforce it?—A. No.

Q. But so regulate the space in the traps that the smaller run of lobsters might escape?—A. I would say that would be correct.

SESSIONAL PAPER No. 22a

Q. And it is proposed also to limit the season, to cut off July fishing?—A. At what time of the year are you going to fish?

Q. From the 1st of May to the 1st July, two months fishing?—A. I believe some of them would limit us out of it altogether. In our part of the country, on the north side, we have seen it up to the 25th of May when we could not set a line out at the place.

Q. It would naturally be expected to gain something if the size limit were abolished?—A. I think that is a proposition of the packers to curb the market.

Q. I do not think the packer will say that, he has a different opinion about it?—A. I think that is the gist of it. They are all the time trying to cut down the season.

Q. No, I do not think the packers are particularly?—A. I am thinking I am pretty nearly right. When we started a petition here a few years ago in one of the worst seasons we had, for an extension of ten days, some of the leading packers here would not sign it. Mr. Longworth of Charlottetown, signed it, and after they knew we would not get an extension, others of them signed it. We did not get the extension but we got it in the neck and we have had it there ever since. I don't know that it was so long afterwards that Sir Louis Davies, who was Minister of Marine when they were making this arrangement, ordered them explicitly, and the fishermen particularly, to make their own regulations and their own seasons and they neglected to do so. They do not do it to-day and I am afraid they won't do it either so far as they are concerned. So they got no extension since, and I don't think they will.

Q. Do you think extensions should be granted, should not the season be fixed?—A. As far as I can judge about the season, this July part when the lobster gets soft should be cut out; the lobsters are not fit to manufacture then.

Q. What do you call the July season, the ten days in July?—A. When the lobsters get soft in the shell they are not fit to can. This is along about the 10th July. As far as our judgment goes, and we have been talking it over, we think it would be proper to haul their gear in then, and leave them until the 1st August and catch until the 20th August. That is the best season of the year and the best lobsters are caught then and one-third of the gear would be sufficient at that time.

Q. Well, then you are in favour of two seasons fishing?—A. We would call it one season with a blank.

Q. What would you make the blank?—A. About two weeks. Some tell me that lobsters put up with the soft shell will go all right, and other more experienced men say they are not fit to put up. I don't believe myself they are. I had a little experience myself and I found that out.

Q. Is the practice of stripping or washing the eggs from the female lobster followed here; do the fishermen rub the eggs off?—A. Not that I know of. They never bothered with it in our part of the country, but that big fellow coming around may have scared some.

Q. He has not made his appearance yet?—A. No, I think the easterly wind headed him off.

Q. As to the matter of price, are you satisfied with the price you get for your lobsters?—A. Not this year.

Q. Do you not think there was some reason for decreasing the price; are canned lobsters worth as much in the market?—A. The packer wanted to put it in his own pocket.

Q. Do you think the packer is getting as much for his lobsters as last year or the year before?—A. I am sure he is getting pretty nearly as much. They promised us they would get the laugh on us another year, certain parties. I think they have got it this year although we trusted to their honesty.

Q. Do you know anything about the shipping of lobsters alive to the market?—A. Not from this part. I have seen them shipped from Nova Scotia to the Boston market.

9-10 EDWARD VII., A. 1910

Q. What do you think of that branch of the industry; is it the most profitable one to the fisherman?—A. I think it would come in all right sometimes for them. I have known them to get as high as \$30 a thousand, or \$30 a hundred rather, I would say, in the Boston market.

Q. Is there any opportunity of carrying on that trade here?—A. Well, I think there would be if we had sheltered harbours on the north side.

Q. You have not got those here?—A. No, we have not.

Q. And you are too far from the market?—A. I don't think it would be very far to run live lobsters to Pictou and send them in refrigerator cars to Boston. I have seen them carried in smacks to Yarmouth, Nova Scotia, and then shipped to Boston from there.

Q. They are shipped mostly from Yarmouth?—A. Yes, from Yarmouth, Nova Scotia.

Q. And they go up to Boston in the night?—A. Yes.

Q. Do you think the lobster in these waters is as hardy as the lobster of the Atlantic coast?—A. I think he is one of the same family, it is about from that direction that he comes.

Q. Some people say that the lobster caught here in shoaler and warmer water is not as hardy as the Atlantic lobster, you do not think so?—A. I think he is hardy enough. If he gets hold of you at any time you will know what he is built like.

Q. Do I understand you to favour the plan adopted by the department of issuing licenses to a group of fishermen who would combine on the co-operative plan?—A. Yes, if they don't want to encourage the monopoly any further.

Q. Do you know anything about hatcheries?—A. Yes, I have been around several hatcheries but I don't know exactly how the thing is worked out. They tell me on the American coast that they are a benefit there and the size limit they tell me was a benefit to them also.

Q. Still in Maine they fixed the size limit to 10 inches?—A. They started at 9½ there some years ago and they got up to 10½ and now they tell me they would be willing to go up to 11 inches.

Q. They ship all their lobsters fresh to market, they do not can anything there?—A. No, they sell them alive in crates but they get a very decent price for them too.

Q. Would you advocate the establishment of more hatcheries?—A. I think it would be a very good idea. Anything that would propagate the species would be a very good thing. But then if the fishermen catch the small ones and kill them out I don't think it would be a very paying operation.

Q. I understood you to say that if the space between the slats were increased it would allow a fair proportion of small lobsters to escape?—A. Oh, yes, sir, I think that is the only way we can do, but the watching of the traps is where the problem comes in.

Q. To watch the traps?—A. To watch the space. We generally carry laths in the boats for repairs, and it is no trouble in the world for me to turn up a trap, nail a lath down tight, then turn it up on the other side and nail down another.

Q. If any such regulation as that were adopted, would it not be possible for the fishery officer to go afloat and watch the overhauling of the traps here and there?—A. I think the canner would be the proper man to look out for that, not to have them landed. That would be the place to watch them.

Q. Not to have what landed?—A. Not to have the small lobsters landed.

Q. Do you not think it would be possible for the fishery officer to go afloat and see the trawls?—A. Oh, yes, he could do that at any time if he would not be afraid to wet his feet.

Q. I suppose the fishery officer is generally a fisherman, is he not?—A. Not in our part. You don't get the fishermen getting a soft snap like that. I am thinking they are under a notion to fix the fishermen like they do the French Basques. They

SESSIONAL PAPER No. 22a

take them out of the penitentiary to the Grand Banks and then in the fall they take them back and put them into the penitentiary again. I think we will be in the same way if we don't look out.

Q. If there is any other statement you want to make it will be taken down. What you say will go before the Parliamentary Committee who are dealing with the matter.—A. As far as size limit goes I would suggest to try and protect the smaller lobster.

Q. What would you call a small lobster?—A. About 2½ to 3 and 4 inches long. I think anything below 5 inches is not worth handling. I should say if they were allowed to live another season they would be up to a standard of 5.

Q. Yes, they would have grown 2 inches?—A. Yes.

Q. Of course the theory of those who suggest the regulations is, that if they were observed strictly you would very soon benefit by the increase of lobsters?—A. I learnt that on the American coast. There they found that they grew in a very few years and they got a higher price for the larger ones.

Q. And fewer lobsters paid them better?—A. Yes. They would do as well by catching less of the larger ones and getting a larger price. I have seen them sold for 45 cents.

Witness discharged.

THOMAS KICKHAM, packer, Souris West, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing?—A. Some 12 or 14 years directly.

Q. Were you connected with the industry in any way before that?—A. Yes, some.

Q. Where is your cannery situated?—A. One at Souris West and the other at Rollow bay.

Q. Where is that?—A. It is only about 5 miles southwest of here.

Q. Between here and Georgetown?—A. Yes.

Q. Have you always canned in those factories?—A. No, there were others canned there before me.

Q. But since you have been canning?—A. We have been canning continuously in the same place.

Q. What number of boats do you employ?—A. Well, I guess between the two factories we had about 20 this year.

Q. Do you use your own boats and gear entirely?—A. Well, sometimes the fishermen would own some of the boats and gear.

Q. What proportion of the fishermen own their own gear?—A. About one-third I guess.

Q. Are the fishermen generally men who carry on all branches of the fishery, or do they confine themselves to fishing lobsters?—A. The majority of them confine themselves to the lobsters only. Some will fish codfish if any, but this year there are very few fishing anything else. They had to knock off.

Q. What number of cases did you pack this year?—A. About 700.

Q. And last year?—A. About 800.

Q. And the year before?—A. About the same I think.

Q. Then you have not done so badly in comparison with others?—A. No, I suppose not.

Q. What was the best pack you ever made?—A. I guess 800 cases was about the best.

Q. How do you find the condition of the fishery to-day as compared with what it was when you first began?—A. Well, I don't know. There is more expense to catch them. We get nearly the same quantity but they are a smaller run of fish.

9-10 EDWARD VII., A. 1910

Q. You employ more boats now?—A. We have to employ more boats and more gear, we get the same quantity of fish with more labour.

Q. Can you tell me to what extent the gear has increased during the last 20 years?—A. Well, during the last 20 years I think there is nearly double as much gear in the water as there would be 20 or 15 and 10 years ago.

Q. And the pack is kept up by increased effort?—A. Yes.

Q. At what time do you begin fishing?—A. Oh well, we commence at the regular time, 20th April.

Q. Are you able to get out at that time on your shore?—A. On our shore yes, the ice is generally clear.

Q. Do you get out earlier than on the north?—A. As a rule. Sometimes there is not very much difference, it is just about the same very often.

Q. In what depth of water do you begin fishing?—A. Well, 5 fathoms and 6 and 8, along there.

Q. You have shoal water quite a way off?—A. Yes, quite a piece off.

Q. At what distance would you get that depth of water?—A. I suppose about two miles.

Q. Is it the custom with you, as it seems to be in most places, to move in as the season advances?—A. Yes. At some places all the fishermen move in sometimes.

Q. Not all?—A. Well no, not all. There was not much in it this year after the moving in.

Q. One year with the other do you think it makes much difference?—A. Well, it increases. They all could not move in you know, there would not be room for them. A few of them will move in but they don't increase their catch a great deal.

Q. What is the best season of your fishing?—A. Well, of course the month of May is our best month of fishing.

Q. And into June I suppose?—A. And into June, yes.

Q. Do you think there is any difference in the run of the lobsters that are caught in deep water and those caught in shoal?—A. Oh yes, those that are caught out in deep water are a little bigger, but not this year. They are pretty small everywhere this year.

Q. Talking about smallness, what is the proportion of fish below the 8-inch size limit?—A. Well, I suppose half of them are below 8 inches. I never took much notice that way. I never measure them anyway, but I know we have a good many small lobsters. I picked out a great many of the little fellows and put them into the channel that is handy to the factory, and they seem to be increasing there. I put some spawn lobsters there too. I have a kind of a pound of my own but it is just like this: I cannot get it protected, every one can fish there.

Q. Is there any opportunity there to make a pound?—A. There is good opportunity up in the river, there is no doubt about that. I have seen them there this fall, about two inches long, just growing. That is from the effect of having these spawn lobsters in the harbour and the little fellows.

Q. It soon tells you know?—A. Yes.

Q. You know about Mr. Baker's experiment in Cape Breton. I believe he has a pound at Fourchu, just outside of Gabarus?—A. Yes, I know where Gabarus is.

Q. Mr. Baker is making a success of his pound there, that is what he claims and I think there is no doubt about it?—A. Is there any means of surrounding the pound and keeping it private property?

Q. Yes. A pound is a place with a very narrow outlet. Mr. Baker has his fenced across with wire netting. He pays so much to the fishermen for all the berried lobsters they bring him, and they are held there until the close of the season, when the pound is opened and they are released?—A. They go wherever they like. Are there many of them stay in the pound?

Q. They do not winter in the pound, they all go out?—A. It would be something different from putting them in the channel. There is only a certain quantity of water I suppose occupied by the pound, an acre or two?

SESSIONAL PAPER No. 22a

Q. There is a limited amount but if you are going to put in a lot of lobsters you want a big area?—A. We have I suppose 200 or 300 acres of bay up there.

Q. And what depth of water?—A. There is 12 and 14 feet of water in it in places.

Q. Could you shut it off?—A. It is not easy to shut it off.

Q. How wide is that place at the mouth?—A. It has considerable breadth at the mouth. The narrowest place at high water would be perhaps a quarter of a mile broad, but when the tide is very low it runs down pretty narrow.

Q. That is pretty wide?—A. Yes.

Q. Otherwise the conditions would seem to be all right?—A. There is a strong current there too.

Q. You want a strong tide running in and out, but you must not have too much fresh water, because the lobsters will not live in it. They feed the lobsters in these pounds with mulched herring. If the herrings were put in whole the lobsters would fight for them and destroy each other?—A. I see.

Q. What proportion of the lobsters that are brought into you are females with berries?—A. Well, this year we took more notice of them than usual and there was a very small percentage.

Q. It is naturally a small percentage?—A. Is it always?

Q. Yes?—A. We took more stock of it this year on account of the hatchery boats going around.

Q. Do they come from Georgetown to collect the spawn from you?—A. Yes, but there was not more than two per cent of berried lobsters I suppose. I don't know if there was that.

Q. It would not mean a serious loss to the fishermen if they could be induced to put those lobsters back into the water?—A. Oh, no. I bought the berried lobsters from them and paid for them, and put them in the water myself before ever this hatchery boat came around.

Q. Do you think you would derive any benefit in your neighbourhood from that?—A. I think so.

Q. The fact is that you made a fairly good catch this year where others did not?—A. I don't know whether we can attribute it to that or not. We only commenced to put them in the river two years ago and they would be hardly matured yet, would they? It takes what time to mature?

Q. They say an 8-inch lobster is three years old?—A. I see.

Q. Has it been the practice in the past to can all the berried lobsters?—A. Yes, I think so. I don't think there ever was any stock taken of them much. Well, this last four or five years they have been saving them, but in olden times they did not.

Q. And the same with the small lobsters?—A. Yes, sir. My opinion is that the trap is not the greatest enemy the lobster has, it is the other fish. I think a great many of them are consumed by other fish, especially the codfish. I have seen five little lobsters about four inches long taken out of one little codfish.

Q. Those fish do prey on them but they always did that?—A. Yes, they always did that. I think more of them are destroyed when they are small, than by the trap when they grow up. There is more of them destroyed by the other fish when they are small, than are caught by the trap when they grow up.

Q. One of the worst enemies to the young lobsters is the mackerel?—A. Yes, when they come around here, but there are very few come now. The mackerel cannot destroy many because they do not come this way now.

Q. Do you think the fishermen as a whole are getting more careful in regard to the berried lobsters, are they beginning to understand the necessity for protecting them?—A. Yes, I think so.

Q. Would anything be gained by sending a competent person around to address meetings of the fishermen and explain to them the necessity of protecting the lobster; do you think the fishermen as a class would listen if that were done?—A. They get that dinned into them every day by the packers.

9-10 EDWARD VII., A. 1910

Q. But it does not seem to have much effect in the past; you say it is beginning to tell?—A. There was not much interest taken in it until this last two or three years.

Q. What is the smallest lobster you have ever seen bearing eggs; have you ever remarked that in handling them?—A. I suppose 8 or 10 inches. I don't know that I ever remember seeing anything very small.

Q. The general run of spawn lobsters is fairly good in size?—A. That is right.

Q. And the number of eggs they bear increases tremendously as they increase in size?—A. I suppose so. How many eggs is a medium sized lobster supposed to bear?

Q. An 8-inch lobster may have 5,000 eggs, a 10-inch lobster 10,000 eggs and a 12-inch lobster 20,000 eggs. You see how they increase rapidly. A 16½-inch lobster caught at Wood's Hole, Mass., in 1905, was examined and found to have 85,000 eggs. Now as to the matter of hatcheries, do you think they are doing good work and should their number be increased?—A. As to that we could only just generalize.

Q. Your experience as to the hatchery at Georgetown has not been long enough and you had no experience elsewhere?—A. No more than around the channel here. They tell me the small lobsters there are growing very fast. There is no doubt about it, if the young lobsters grow after they are put into the hatcheries it is going to be a great benefit.

You will not raise as many young lobsters in a hatchery as you will if the lobster is allowed to hatch them out herself?—A. That is what I think.

Q. There is no doubt there is considerable loss in taking the eggs off the lobster and conveying them to the hatchery?—A. And there is a lot of them wasted.

Q. You can understand that if the man who takes the eggs off the lobster is not careful there is a lot wasted and destroyed?—A. I would say so.

Q. Now as to the question of traps, have you always used the same trap?—A. No, they are getting different traps. They have got now what they call the parlour trap. The lobsters get into it and they do not get out again. When they used the old fashioned trap, a good many used to get out if they were left to themselves. After they had ate up the bait they would begin to find their way out. Now they have what they call the parlour trap, and when the small lobsters get in they are not able to get out.

Q. Do you not think the slats in the trap are being put very much closer together than they were originally?—A. Perhaps they are but I don't know. I could not say as to that. I daresay that the slats should be put sufficiently wide apart to allow these very small lobsters to get out, because some of them are very small and they are not profitable. It is a pity to take them.

Q. And it must be wrong to destroy the very young?—A. Yes, that is what I think. However, as I said before, there are others at it as well as the trap. The small codfish and other fish are destroying more lobsters in my opinion than the trap.

Q. Under certain conditions there is a certain balance kept up, but when man takes a hand in the fishing, that balance is upset?—A. They are destroyed more than ever.

Q. What would you say would be a fair space to insist on between the slats?—A. That has never given me a thought because I could not form any idea what would be fair.

Q. Have you any idea of the space left at present?—A. No, I have not. Mr. Gillies here makes a lot of traps. What is the distance between our laths?

Mr. GILLIES.—About three-quarters of an inch.

The WITNESS.—We do not leave that space do we? I think they would be hardly half an inch.

The COMMISSIONER.—We have measured some that are not half an inch.

The WITNESS.—Of course there are some that are not half an inch.

SESSIONAL PAPER No. 22a

Mr. GILLIES.—It is not altogether inch laths.

The COMMISSIONER.—What is it?

Mr. GILLIES.—In the size of the mesh and the hoops?

The COMMISSIONER.—What size mesh do you put in?

The WITNESS.—Theree-quarters of an inch I think it is.

By the Commissioner:

Q. That is extension measurement?—A. I think so.

Q. Now as to the system of licensing canneries I would like to ask you a few questions. The policy followed by the department for a number of years has been to limit the number of licenses, until recently when they began issuing co-operative licenses, that is where a number of fishermen have grouped together and packed lobsters on the co-operative plan. What do you think of that policy?—A. I don't know that it could be improved upon.

Q. Do you think that the granting of licenses to fishermen in that way should be encouraged?—A. Yes, if they look after it.

Q. Do you think there is any reason why any man who shows his competency to pack should not be given a license?—A. If he is encroaching upon other people who are already able to can all the lobsters that are to be caught in that vicinity, I don't know that it would be advisable.

Q. The number of licenses has been restricted but no limit has been put upon the amount of gear fished; do you think a canner should be limited in the amount of gear he uses?—A. That is a question that deserves a good deal of consideration no doubt.

Q. Does it not seem odd to you to limit the number of canneries and not the amount of gear fished?—A. I don't know how that can be got at very well. It is a pretty critical situation to manage to pass a law to prohibit putting out too many traps. If it could be done it would be all right.

Q. Do you think that on the whole the amount of gear fished is excessive?—A. No doubt of it. There is too much gear in the water and it is too expensive to many men fishing. If it could be arranged, without causing too much friction, it might be desirable.

Q. It is claimed by some that the fishermen should pay a license as well as the packer. The fee would be only a nominal one but it is thought that if the fishermen took out a license he would feel more responsible and be more apt to observe the law and perhaps inform on others who did not. If he violated the law he could be refused a license in future and prohibited from fishing lobsters; do you think there is anything in the proposition?—A. I don't know, I am sure, whether that would be any benefit or not. It would be pretty hard to give a license for a tract of water, would it not?

Q. I think it would be very difficult—A. I don't know that I can give you any further ideas.

Q. Do you think it would be right to establish a certain standard of cannery?—A. That is for the quality of the fish?

Q. The quality of the fish we propose to get at in some other way; do you think it would be right to require a certain standard of equipment in the cannery, that the tables should be covered with a certain material and things of that kind?—A. Well, that would be all right, but the tables now are all 'zinc'd' over and I don't suppose they could be bettered much.

Q. In some places they are using plate glass or agate ware and it is more easily cleaned?—A. Is it as durable as zinc?

Q. When the plate glass is well bedded it is as durable as anything else. There is another thing: Do you think that the product of the cannery should be subject to

9-10 EDWARD VII., A. 1910

inspection?—A. The product of the cannery is well inspected these days, because the parties who buy it pay out a lot of money for it. In the first place, they have to know the reputation of the canners, and furthermore, they are always inspecting them all the time.

Q. The buyers send inspectors around?—A. In most cases the fish is shipped in to them. Sometimes they send into Souris when they buy a lot. I sell to Robert Simpson & Co., and his men inspect my pack in Charlottetown. We ship in once a week and the goods are all inspected there and any leaks are sent right back to be repaired. The quality of the fish, of course, is well known, because they have been buying from us for a number of years and putting them on the same market, and possibly the same people have been buying them. The goods are numbered you know and they buy from number.

Q. Various propositions have been suggested by various people looking to the shutting down of the industry for a term of years or in successive sections; do you think the industry has really reached such a low ebb as to necessitate such severe measures?—A. No, it would never do, just now anyhow.

Q. One of the most reasonable suggestions made is that the regulation with regard to the size limit should be wiped out; it seems impossible to enforce it and it has never been enforced rigidly?—A. That is right.

Q. It is proposed that we should do away with the size limit and insist upon a certain sized opening in the traps?—A. I would not have that opening too big either, not at first. For instance, for a number of years there have been old fashioned traps made that will have to be run off anyhow. It would not do to pass a regulation that would condemn those traps that have been made. But if they were making new traps there might be a rule established to have them built so as to allow the really small fish to get out.

Q. I do not say that what has been spoken of is going to be done, they are merely suggestions. It would seem to me to be perfectly right to say that at the end of three years the existing traps should disappear. That is about the average life of a trap and there would not be anything too severe in that?—A. No.

Q. And at the end of that period all traps should be up to a certain standard, and in the meantime the same would apply to all new traps built?—A. Yes, they would have to have a certain space.

Q. In addition to that it is proposed that we should insist upon shutting down on the first of July instead of the tenth?—A. You may say we shut down every year on the first of July, because the fish get scarce and the fishermen do not fish. In fact I think if we were to commence on the 1st of May and finish on the last of June or the 1st of July, we would be just about as well off. Most of our fishermen this year knocked off about the 1st.

Q. Would these seem to be reasonable and fair measures?—A. That would be all right, this year anyway. Of course I will tell you, if we had a stormy summer and fish were pretty plentiful about the last of June it would be bad to have to close down then.

Q. You have got to take your chances on those things?—A. Of course.

Q. The theory entertained is that if the regulations were strictly and properly enforced and provision made for all the berried lobsters, in a very few years the fishery would re-establish itself and you would reap the grain?—A. There is another thing about it: If a law were made to close down on the 1st July and there was a stormy season and a poor pack, the government could always be appealed to have the time extended for a few weeks. I think that has been done before.

Q. Well the experience in many places is that these extensions have not always been an unmixed blessing?—A. When there was a good catch you would not want it, but if there was a poor catch it would be very necessary, because the people would want to get the best there was. They do not allow the boiling of lobsters here except at the factories.

SESSIONAL PAPER No. 22a

Q. According to the regulations it must be done at the factories?—A. Yes, that is to prohibit boiling on the coast or factories.

Q. It was found there was a good deal of humbug in the business?—A. Oh, yes. I think it is better not to boil the lobsters on the coast, but to haul them to the factories and get them put up there.

Q. How is the arrangement made with the fishermen as to price and pay?—A. Well, it is so well established now that they have nearly the same arrangement from one year to another. It may perhaps vary a little from year to year. It was a little lower this year than last.

Q. Do you think there is anything in the nature of a combination to keep the price down?—A. Oh, no, not in this part of the country.

Q. Is there any illegal fishing during the close season?—A. No, sir, I think not. Not in this part of Canada, not on Prince Edward Island, I don't think, especially about the East point.

Q. There is a good deal in some other parts?—A. Perhaps so, but not here. They seem to be all glad to give it up when the time comes.

Q. As to the abandonment of gear, is there much gear purposely abandoned in the water?—A. Yes, some of the fishermen are very careless, and they do leave it there, and we have to send our own men out and pick it up. Sometimes they do it from carelessness and sometimes they are too lazy. I don't know how to qualify it, but we lose a good bit of gear anyhow.

Q. As to the method of stamping the cases, do you think it has had the effect of keeping down illicit canning? We are told there are a great many ways of getting around it?—A. Well, I don't know. I don't think the people are inclined to do any illicit canning.

Q. Do you think any harm is done by fishing in harbours, bays, lagoons and in-shore waters?—A. There is nobody fishes in those here, there is none caught in those places in this part of the world. I was trying to start a little nest of lobsters up in Souris West harbour and I don't know how it will pan out, I am sure.

Q. What is the extent of that harbour?—A. From the mouth to the head of it, about three miles long, and up the bay there is quite an area of water.

Q. Is the channel wide?—A. The channel is a quarter of a mile. At high water there is quite a breadth, but at low water when the tide is out it is only a small space at the mouth.

Q. Is it used for the purposes of navigation at all?—A. Very seldom now.

Q. Do any vessels go in there?—A. Very seldom. There is only eight feet of water at the entrance, 7 to 8 feet, and very few vessels go in there now.

Q. Is there anything further you wish to say that you think of yourself?—A. I don't think there is, that is all. Of course, you are doing the hatching out of lobsters in the hatchery at Georgetown, and if you thought it well to put the spawn lobsters in these rivers it would be a good thing. I think they are more likely to do well in the rivers.

Q. Especially the harbours, I have more faith in them than in the hatcheries?—A. Yes, I would think it would be better.

Witness discharged.

ALLEN GILLIES, packer, St. Margaret's, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in packing?—A. Six years.

Q. What number of cases do you pack?—A. From 250 to 400 and 430.

Q. What did you pack this year?—A. 400 cases.

9-10 EDWARD VII., A. 1910

Q. Then you made a good catch this year?—A. It is slim enough considering the expense of running and so on.

Q. What number of boats do you employ?—A. Six this year.

Q. Are they your own boats?—A. All except one.

Q. What was the best year you ever had?—A. Last year, 1908.

Q. What did you pack then?—A. We packed 427 cases with five boats.

Q. You heard the evidence of the preceding witness?—A. I did not pay very much attention to it.

Q. Does your opinion tally with his as far as you heard him?—A. As far as I heard him I guess he was all right.

Q. Do your boats follow the same practice as in his case, do they begin the season in deep water, and as it advances move in?—A. Yes, that has always been our rule.

Q. That is the rule everywhere, as far as we know, where you fish in deep water at all.—A. Yes.

Q. You have not long been packing to know whether there has been much difference in the conditions; I suppose they are about the same?—A. Which condition, Sir?

Q. As to the run and size of the fish?—A. I commenced to fish 13 years ago. I don't see much difference in the size of the fish.

Q. If the decrease has occurred it took place long before that?—A. It must have, because it is not in my experience.

Q. In your experience things are about the same?—A. About the same.

Q. Do you think the decline has been arrested, that there is no decrease going on now?—A. I don't see that there is any decrease so far as my experience goes.

Q. Do you think the fishermen are getting more careful about preserving the breeding lobsters?—A. Well they may be, but I don't see it.

Q. Has it been your practice up to this year to take all the lobsters that were brought to you?—A. Yes.

Q. Was there any exception made this year?—A. None that I know of.

Q. You took small lobsters and berried lobsters, everything went into the boiler?—A. I took them as they came, I did not see any berried lobsters. The small ones of course we took; the berried lobsters are never caught.

Q. Do you ever get any berried lobsters?—A. They may come but I don't see the berries on them.

Q. Is it the practice with the fishermen in your neighbourhood to brush the berries off?—A. It may be, I cannot say.

Q. In your opinion should the berried lobster be protected?—A. Yes.

Q. How do you think we are going to get at the fisherman to induce him to do that?—A. I would think to buy these lobsters.

Q. Do you think that the canner would be prepared to pay an increased fee in order that the government might purchase the berried lobsters?—A. Well, I don't know that the canner would be the one. Of course the canner has got to pay enough for them anyway, but I think if the department or the government want to preserve the industry they should pay for the lobsters.

Q. Do you not think the industry should pay for its own protection?—A. Yes, probably it should.

Q. What is the best of your fishing season?—A. The month of May.

Q. There is no use asking you I suppose about the percentage of berried lobsters since you do not see them. What proportion of the fish you take are under the 8 inch limit?—A. Well in the month of May there is a very small proportion I would think, not very many, but from the 15th of June up to the latter part of the season, 10th July, there is a very big percentage of small fish.

Q. Would you say you get a better run of fish off shore than inshore?—A. Yes, we certainly do, a larger run of fish.

SESSIONAL PAPER No. 22a

Q. Do you think there is any time when the lobster is not fit for food?—A. I never heard. Of course I have got a certain man to put up the fish. The fish goes up just the same from the first of the season to the latter part and I don't hear any complaint from the parties I sell to. I find the fish going out about the same.

Q. Do you think that when the lobster has cast its shell, when it is soft shelled, it is equally as good for human food as at another time?—A. Well in my experience I don't know any more than those who buy from me. They always say my fish is all right for the market.

Q. You put them up and you do not note any difference?—A. I don't take any note of them.

Q. What style of trap do you use?—A. We use what is called the parlour trap.

Q. Do you think it is any more destructive for a small lobster than the old fashioned trap?—A. I don't think it is any more in my experience. Of course I fished previous to running the factory.

Q. And you fished the old fashioned trap?—A. Yes.

Q. And you think the new trap is no more destructive than the old one?—A. None whatever.

Q. Do you allow the same space between the slats now as when you first began to fish?—A. No.

Q. Have you narrowed it down?—A. Narrowed it down.

Q. Does the parlour trap not catch smaller lobsters than the old trap?—A. Yes.

Q. Do you think that if the size limit of 8 inches were strictly enforced you would have to close down?—A. Oh certainly.

Q. In your opinion is the present policy of the department in limiting the number of licenses a sound one?—A. Of course as far as our coast is concerned, we find it small enough with the ground that we have got. That is, I always had five boats up to the present. Last year I had six. I think if there was a license to come in between me and my neighbour it would be as well for me to drop out, or for those who have got a license to drop out.

Q. That means that you are satisfied with things as they are?—A. Well yes, as far as I am concerned. Of course it might be possible that my neighbours would want to get a license. If they did and obtained one I would retire out of the business, because I would not find it a paying occupation.

Q. What do you think of the department's policy of issuing co-operative licenses where a number of fishermen club together for the purpose of engaging in packing.—A. It might be all right provided they could get a good honest club to work together. Of course partnership in an industry, which is not a very certain industry, never works very good.

Q. Could you give me any idea of how your lobsters run; how many green lobsters does it take to fill a pound can?—A. About five.

Q. How many hundred pounds of green lobsters do you allow to the case?—A. Well in the first of the season, in the early part of May, they run about 240 pounds. Later on they run lower. We could get a case of meat out of about 220 pounds.

Q. They are fuller then?—A. Yes.

Q. And these small lobsters, as a rule, turn out better in the end?—A. And the most profitable.

Q. What do you think as to this matter of the payment of the fisherman; do you think the fisherman is getting a fair price for his lobsters?—A. Well they are getting all I can afford to pay them.

Q. The price to the fishermen is not quite so much this year as last?—A. No.

Q. Because of the state of the market; you are not getting as much yourself?—A. Last year was a year which almost killed the whole industry, as far as I know, because prices went up so high for hired help in the factory and the cost of fish, that it was very hard to curtail them down so as to make a profit or make anything at all out of it. On that account we are just barely living this year.

9-10 EDWARD VII., A. 1910

Q. Within your knowledge there is no combination on the part of the packers to establish a fixed price to be paid to the fishermen?—A. None whatever.

Q. You have had nothing to do with the exportation of live lobsters?—A. No, Sir.

Q. The facilities do not exist here?—A. No.

Q. What do you think of hatcheries; should their number be increased?—A. Certainly they should on this basis: The seed lobsters should be bought and sent to those different hatcheries. It is very hard to protect the seed lobsters otherwise.

Q. Do you think there is any illegal fishing done, that is fishing after the close of the season?—A. None that I know off.

Q. About abandoning gear in the water, is that done to any great extent; are traps left out at the close of the season and not picked up?—A. Well, no, I think they have been very honourable to me up to this year. Of course the storm has made it unprofitable this year, wiped the whole thing out, closed it up quickly.

Q. Do you know anything about fishing in bays and lagoons?—A. None whatever.

Q. That is about all I have to ask you, you are at liberty to suggest any recommendation you wish to make of your own accord?—A. There is nothing that I can say. Of course there are small lobsters caught, and I suppose it is your duty to try and protect the industry as much as possible. I don't see any way that you can protect it, except by opening out the trap and getting a larger mesh in the hoop.

Q. What do you say the mesh should be?—A. It should be a two-inch mesh.

Q. And what should be the distance between the slats?—A. About three-quarters of an inch, an inch where you can. I know the second year that I went fishing. Of course the partner I had was an experienced hand. We followed up the rules which they followed for years previous to that, and I guess on the off shore fishing in May we caught a good deal of fish in comparison with our neighbour. But we had neighboring fishermen who had close slat traps and close netted hoops, that is about an inch mesh I should say. When it came that we came inshore to what we call the late fishing, that is the inshore school, we would get the large ones, but he would get the large ones and the small and he used to double our catch every day. That is about all I have to say. Of course I would like to get some small ones too, they are profitable, but if you want to protect the fishery, open out the trap and open out the hoop.

Witness discharged.

ANGUS CUMMINGS, packer, Goose River, called and sworn:—

By the Commissioner:

Q. Where do you pack?—A. At Goose river on the north side.

Q. How far is that west of East point?—A. It would be about 12 miles from East point I suppose, or a little better.

Q. How long have you been engaged in canning?—A. Nine years.

Q. What number of boats do you employ?—A. Five.

Q. What number of cases did you pack this year?—A. We did not put up 300 this year, not quite 300.

Q. What did you do last year?—A. We put up pretty nearly 400 last year.

Q. Was that your best year?—A. Yes, last year was our best year.

Q. How are your men employed, fishing your own gear?—A. Yes, we own all the gear.

Q. How many traps do they fish?—A. About 350 to a boat; some 400, some 300.

Q. Do you think that a man can fish properly 300 traps?—A. Yes, I think he can with the way we have the gear divided, each dory has got so much.

Q. What depth of water do you fish in generally?—A. From 5 to 13 fathoms.

SESSIONAL PAPER No. 22a

Q. Do you fish always in the same depth of water or, like all the others, do you move in?—A. They move in about half the gear.

Q. I suppose the outside traps are moved in?—A. The outside traps are left out, the middle ground traps are moved in.

Q. Is it easier to leave the outside ones?—A. So that they will be safe there. They have only room for a certain amount of gear.

Q. During the time that you have been packing what is your experience of the fishery; do you notice any appreciable decrease in the run of fish?—A. No, I think it has increased here of late years.

Q. Are you getting the same amount of fish with the same amount of gear?—A. Well, pretty near. We did not have the same amount of gear when we commenced first, but we generally get the fish according as we put out the gear. The gear has been increased, and we are getting more fish every year. We have got twice as much gear as when we commenced, and we are getting double as much fish.

Q. And how are the fish running?—A. I would say they are about the same size as when we commenced.

Q. What proportion of the fish you catch would be below the limit of 8 inches?—A. I suppose there would be one-third coming on towards the last of the season.

Q. Would you be able to continue canning if you were forced to stick to the 8 inch size?—A. No, sir.

Q. What becomes of the berried lobsters?—A. They say they throw them all away. Our orders are to take none, that is the orders we get from the fish warden.

Q. Is it the case that they have not been taken?—A. Not that I know. They talk about the fishermen washing them off; that is something I don't understand anything about.

Q. How long have you been living up to those instructions?—A. The last two years.

Q. And before that what did you do?—A. It was not enforced very particularly. There was talk about it the last two years. It has been talked about and particularly mentioned by the warden.

Q. What is your opinion about the spawn lobsters, do you think they come inshore for the purpose of spawning?—A. No, sir, I don't.

Q. What do you think about it, what is your experience in the matter?—A. Well, I don't think they come inshore to spawn, I think they just pass into the shallow water according as the water gets warm.

Q. Then they do not particularly come in to spawn?—A. I don't think so.

Q. Where do they spawn?—A. I don't know, I think they spawn all over the ground.

Q. Outside as well as in?—A. Yes, outside as well as in.

Q. What proportion would you say of the lobsters you catch are berried fish; how many are there in every hundred?—A. I could not say. For the last two years we have not seen them.

Q. But when you did see them what was the percentage?—A. I could not say. I would say some were about 150 and 200 to the 1,000 pounds. When I used to be fishing I never saw it that large.

Q. Do you think the practice is followed to any great extent of rubbing the berries off the female lobster?—A. I never heard much about it until I heard it here to-day.

Q. Prior to two years ago all the berried lobsters were taken, there was no necessity for doing it?—A. I guess pretty much; I don't know that there was any restriction on it.

Q. How would it be possible to get the fishermen to return all the berried lobsters to the water?—A. Pay them for the fish, that is the only way you will get them to do it I believe.

9-10 EDWARD VII., A. 1910

Q. As a canner would you be prepared to pay an increased fee so as to raise a fund with which to buy these lobsters?—A. I would not be against paying my share.

Q. About this matter of the trap, do you think that by regulating the space between the slats and fixing the size of the mesh in the end of the trap, you would allow a fair proportion of small lobsters to escape?—A. I think the mesh in the end of the trap is sufficient. These little lobsters there is nothing in them.

Q. What size mesh do you make?—A. About a two-inch mesh.

Q. How do you find that to work because that is a much larger mesh than usual?—A. Yes, some are powerful small.

Q. Some are only three quarters of an inch?—A. I will tell you the difference in the mesh we used to have. We used to have 4 inch mesh and this year we have only got 2. That shows you the difference there.

Q. What has been your experience; since you did that have you got a better run of lobsters?—A. We don't have so many small ones.

Q. Do you think the matter would be better governed by altering the mesh than by widening the slats?—A. I think it would be just as good, there is no difference certainly.

Q. Your idea would be to do both?—A. It would be all right to do both, only in the case of the old traps that have been made it would not pay to alter them.

Q. What do you consider the life of a trap?—A. From two to three years.

Q. Did you lose many traps this year?—A. Pretty much the whole of them.

Q. What do you value a trap at?—A. We value a trap at \$1 when it is ready for fishing.

Q. What do you consider your lobsters run; how many lobsters would there be to the pound can?—A. Between 5 and 6 I guess.

Q. I suppose you know better perhaps the number of pounds weight it takes to fill a case?—A. Our average this year was 209 pounds. The lobsters did not pack so well in the first of the season.

Q. The lobsters are not quite so full then are they?—A. Not quite so full at the first of the season; 209 pounds was our average for the season through.

Q. Various suggestions have been made for the improvement of the fishery. One is to close down altogether, and another to close down by sections. It seems hardly necessary to adopt such an extreme measure as that. What do you think of the suggestion to do away with the size limit altogether, and to regulate the matter of size by providing for certain sized mesh and openings in the trap?—A. I would say that would be proper.

Q. Of course protecting the berried lobster in every way possible; either placing her in pounds, putting her back in the water, or having hatcheries where her eggs could be hatched out.—A. Where they can be established it is all right. On the north side we cannot have them.

Q. It is also suggested that in exchange for doing away with the size limit, the season should close on the 1st July; how would that affect you?—A. I would not like to see that myself on our north side. Here last year and the year before, our best fishing was just then. We had very good fishing and fine lobsters.

Q. Of course the theory of those who advance this proposition is, that by enforcing such a regulation, in a very few years the lobsters will have a chance to pull up and you will be making better catches.—A. The north side is so uncertain in the spring. There have been years when it was the 20th of May before we could get anything out.

Q. The present date of opening suits you all right?—A. Yes, 26th April suits us all right.

Q. What do you think of the matter of licensing canneries; do you think there is any real reason why any man that shows his competency to can should not be given a license?—A. I think if he is not interfering with any other packer and there is room for him he should—that is where he can see there is room enough without interfering with any others.

SESSIONAL PAPER No. 22a

Q. Otherwise things should remain as they are?—A. Otherwise give two years notice to that effect so that people could get out of it.

Q. What do you think of limiting the amount of gear fished by the cannery?—

A. I don't think there will be any need for doing that unless they are fishing in other ground where the gear is mixed up. But where the packer has his own gear let him use all the traps he likes on his own ground.

Q. What do you think of the proposition to license the fishermen, do you think it would make any difference to them at all?—A. I don't think that would be any good at all.

Q. You do not think the fisherman with a printed paper in his pocket would be any more likely to observe the law than another man who had not?—A. No, I do not think so.

Q. Should the output of the lobster cannery be inspected?—A. Well I think it is very well the way it is, I don't hear much complaint.

Q. You think the thing is pretty well put up and that all the protection the consumer needs is given?—A. Yes.

Q. Where the live lobster industry can be carried on, is it more profitable to the fisherman than selling to the canner?—A. Where it can be done, in Nova Scotia and other places, I think it is, but here you cannot do that.

Q. Is there very much fishing out of season done in your locality?—A. Not to my knowledge, I don't think it is done at all.

Q. Have you anything to say with respect to fishing in bays and lagoons?—A. No, sir, I don't know anything about it.

Q. There are many who say that once the fish have passed from the sea into these inshore bays and lagoons they should be protected there and not caught; have you any idea on that matter?—A. No, sir, I have not. There are not any of them around where I am at all.

Witness discharged.

DONALD F. McEACHERN, packer and fisherman, Hermanville, called and sworn:—

By the Commissioner:

Q. What is your occupation?—A. I have packed lobsters for seven years and also fished.

Q. How far back does your experience as a fisherman go?—A. About 11 years.

Q. Where is your cannery situated?—A. At Hermanville, about 8 miles from here, on the north side.

Q. How many boats do you employ?—A. Six.

Q. They are mostly double boats I suppose, two men in each?—A. All.

Q. Do you own the boats and gear?—A. All but one.

Q. What number of cases did you pack this year?—A. 424 cases.

Q. And last year?—A. About 450 cases.

Q. And the year before?—A. I think about three hundred and some odd cases, as near as I can remember.

Q. This year has not been a bad one in some places?—A. Only the prices, the prices are bad.

Q. I suppose your boats fish in about the same depth of water as those of the other gentlemen that have been examined?—A. Along the north side.

Q. The fishermen go out to 12 or 13 fathoms?—A. Between 11 and 12 fathoms is the depth of water any of our boats has been on.

Q. And do they follow the usual practice of moving in as the season advances?—A. Yes.

Q. What is your experience with regard to the lobsters caught in the early part of the season before the fishermen move in, and those that are caught later?—A. Well, I

9-10 EDWARD VII., A. 1910

don't know, I cannot say very much about that. I think the lobsters we got out in deep water are larger. When we move inside, for a certain amount of days, we get very large lobsters too. That is principally on rock. Some times late in the season the lobsters got inside, on rock, are fairly large.

Q. Do you get smaller lobsters on sandy bottom?—A. Yes, that is right.

Q. Are you fishing about the same amount of gear now that you formerly did?—A. Oh, no, we fish a lot more gear.

Q. Can you say that you have to keep up your pack by increasing the amount of your gear?—A. That is the only way we keep up the same quantity of lobsters, by increasing the amount of gear.

Q. You had to do it?—A. Yes, that was practically the only way.

Q. Within the years of your experience do you notice much diminution in the average run of the lobsters?—A. No.

Q. Or the average size?—A. No. I think the lobsters we got—seven years ago was my first experience, that is for ourselves, and we got more lobsters that year with the same amount of gear than we got three years previous, but we had a different trap.

Q. Did you begin with the old fashioned trap?—A. Yes.

Q. What is the difference in the fishing capacity of the two traps?—A. Well I could not say, only I guess the other simply holds all the lobsters that come in. I would say that if the traps are left for a length of time, the new one seems to hold the bait better, that is the principal question.

Q. A great many people find that where the lobsters are fished every day there is no great difference, but if they happen to skip a day they find more lobsters in the wheeler trap?—A. I think the fact is, that when the lobster gets into the wheeler trap it does not get out so easy and does not eat the bait so much.

Q. Are you putting the slats of the trap closer together than when you first began to fish?—A. Just about the same. I don't think there is any difference.

Q. Have you any idea what width is allowed between the slats?—A. About three quarters of an inch.

Q. Do you not think that the new trap is catching an unfair proportion of small fish?—A. I am not prepared to say. It is six years since I fished the two-headed trap and I am not prepared to say.

Q. What proportion of your catch would be below the size limit of 8 inches?—A. I cannot say. It would be three or four weeks before we closed the factory that our lobsters were inspected, and I guess in my own boat they got an average of 7 or 8 inches in a catch of 700 pounds.

Q. What do your lobsters run to the pound tin; how many pounds of green lobsters does it take to fill a pound tin?—A. I have never figured that out closely, but I have figured out how many it takes to the case. Between 217 and 220 is our best average.

Q. Do you pay for your lobsters by weight?—A. Yes, sir.

Q. Are there any people who pay by count in this part of the world?—A. Not that I know of anyhow.

Q. Could you give me any idea of the proportion of berried lobsters taken in your region; what number of berried lobsters would you find per hundred?—A. That is spawn lobsters? I could not say for sure. Well for the hundred there would not be any more to the best of my judgment—some days they might be a little more plentiful than others—but for an average there would not be more than two per hundred pounds.

Q. What has been the practice of the canners; have you taken everything that the fishermen brought to you without regard to size or whether they were berried?—A. Yes, because I was not always there myself, and I cannot say what was always done. I have chucked away some spawn lobsters except there would be one got in unknown to me.

Q. Has there been any notice taken of the size limit regulation at all?—A. No, I don't think so.

SESSIONAL PAPER No. 22a

Q. What would happen if you were tied down strictly to the 8 inch limit?—A. We would have to close up I suppose.

Q. Would you get any fishermen to continue fishing?—A. No, it would not pay them to fish.

Q. What do you think is the best way of getting after the fishermen with a view of preserving the berried lobsters?—A. Just simply heave them overboard or have a hatchery where they can be carried. That is about the principal view I have.

Q. Do not the fishermen understand they ought to preserve and protect the berried lobsters; if there is only such a small percentage as you say taken, it cannot make an awful difference to the fisherman if he has to throw them overboard?—A. It would not make an awful difference.

Q. But still it never seems to be done?—A. It is done by lots of people.

Q. This year it seems to have been done more generally according to all accounts?—A. Yes.

Q. Do you think there is any possibility of educating the fisherman up to the fact that he should protect and preserve that lobster, that it is in his own interest to do it?—A. I could not say. One person might be anxious and another one might not be. The opinion of the fishermen differ so much that I could hardly say.

Q. What do you think of the present method of issuing licenses to pack?—A. I don't think the fishermen are getting fair play. I think they ought to be granted a license. If the fishermen don't get fair play from the packers they should be granted a license.

Q. Do you think the fishermen are getting fair play?—A. So far as our business is concerned they do get fair play, and if they don't get fair play I am satisfied they should be granted a license or anybody else.

Q. Well they do complain that they do not get fair play in some places. Others say they are satisfied with what they get, that they receive all the packer can afford to give them; do you think they do?—A. I think they do in our part. We did our best anyway this year.

Q. Do you think we should insist upon a certain standard of cannery?—A. I think it would be better that all fish should be put up in good order and not have these rough coolers or anything else.

Q. Do you think it would be well to insist upon an inspection of the product of the lobster cannery?—A. I think it would be.

Q. What do you think of requiring fishermen to take out a license to fish?—A. I would not be prepared to answer that question, I don't quite understand it.

Q. How have the regulations for the protection of the lobster fishery been observed in your district, for instance as to the 8-inch size limit?—A. It is not observed by any means.

Q. Do you think the size limit regulation would be a difficult one to enforce?—A. It would be a difficult one to enforce because you would get no fishermen to fish.

Q. What do you think of stopping canning altogether for a number of years?—A. It would be a very serious injury I think to all concerned, fishermen and everybody else.

Q. What would you think of closing down by sections?—A. Down in our part of the country it is farming and fishing principally, and it would be a great injury to the people if that thing should happen.

Q. Other people have suggested doing away with the size limit, protecting the berried lobster, and closing down on the 1st of July instead of the 10th; how would that suit?—A. I think as far as my idea is concerned if we start on the 1st of May and then get to the 20th July. As far as my estimation goes there is just as many spawn lobsters in deep water as in shoal water.

Q. You don't believe in shortening the season?—A. No.

Q. Would it seriously cripple the industry to close on the 1st of July?—A. I think it would, the fishermen as well as the packer.

9-10 EDWARD VII., A. 1910

Q. It would not hurt the fishermen so much as the packer would it?—A. It amounts to the same thing. If the packer does not make good money, the fisherman is not expected to get his.

Q. What do you think about inspecting the pack of the canneries?—A. I think it would be all right.

Q. Are there any co-operative canneries in your neighbourhood?—A. None that I know of.

Q. What do you think about the policy of issuing a license to a group of fishermen who incorporate a company and engage in the packing of lobsters?—A. Well I don't believe in that at all.

Q. Do you think the fisherman would make more money if he were allowed to can for himself than merely by fishing?—A. What I mean is to give the fishermen fair play. I don't believe in a combine.

Q. Do you think there is any combine in existence?—A. Not that I know of at present.

Q. Has there ever been?—A. There may be.

Q. You are in the business, you ought to know?—A. Not in my experience, but I guess there have been though before my experience, as near as I can judge.

Q. Is any fishing out of season carried on to your knowledge?—A. Not to my knowledge.

Q. You think the season really closes on the 10th of July, and there is no more canning or fishing after that?—A. We are generally allowed to pack what is taken in our traps for a couple of days or so. That is during the time you are landing your traps, that is our experience since we started the factory.

Q. What about the practice of stamping your cases, do you think that is of any value as a safeguard?—A. I certainly think it is, it must be.

Q. You think it is not the practice to remove labels from cases and put them on others packed illegally, or empty the stamped cases and refill them with lobsters caught out of season?—A. I have never known anything of that kind to be done.

Q. Would you confine lobster fishing to a certain depth of water?—A. I could not say I would.

Q. Do you know anything about the practice of abandoning gear in the water?—A. I guess I have had experience of that.

Q. Do you make any agreement as to prices?—A. We never had a written agreement, but we generally always pay a little more than we offer to the fishermen and our factory hands also. We never went a cent lower than we offered factory hands or fishermen.

Q. What are most of the men who fish lobsters for you, farmers or fishermen?—A. I think there were two fishermen who follow fishing and the rest generally were farmers.

Q. Who go back to the land after the lobster fishing is over?—A. Yes, principally. A good many are people from the neighbourhood around.

MR. J. J. HUGHES. With regard to the question of inspection, what you mean is inspection by a government inspector?

THE COMMISSIONER. By a government inspector the same as is done in the case of meats and other food products.

MR. J. J. HUGHES. To see that the goods are properly put up. I think there is a good inspection now by the jobbers and the wholesale men.

THE COMMISSIONER. We find some of these men going around and inspecting the pack.

MR. J. J. HUGHES. The buyers will not buy anything unless subject to inspection by themselves. My own opinion is you could hardly improve on this.

SESSIONAL PAPER No. 22a

THE WITNESS. If you had government inspection we might have a fairer value for our lobsters.

THE COMMISSIONER. The idea would be to inspect the product of the lobster cannery the same as cheese and canned meats.

MR. J. J. HUGHES. And to see that the quality would be uniform

THE WITNESS. To see that it would be first class.

THE COMMISSIONER. The question would then arise, are the existing staff competent to carry out that inspection.

Witness discharged.

Commission adjourned.

APPENDIX No. 1.

SUPPLEMENTARY SUGGESTIONS BY MR. TIDMARSH.

CHARLOTTETOWN, P.E.I., Nov. 4, 1909.

Chairman,

Marine and Fisheries Committee,
Ottawa, Canada.

Dear SIR,—Supplementary to my evidence of last spring, I beg to submit 'Measurements of Lobsters,' made at several of the canneries, under my control, which will explain themselves.

A size limit between 8½ and 6 inches, would put every cannery in Prince Edward Island out of business.

In order to carry into effect, the present, or any other fisheries regulations that may be enacted, it will be necessary to improve the administrative force. I would suggest the abolition of the fishery wardens, and substituting a marine and fisheries police. For Prince Edward Island, two policemen for each county, in the summer, and one for the whole province in the winter, should be sufficient to effectually enforce the regulations.

These men should be selected for their efficiency, and come from points outside of the province. They should be uniformed, and clothed with the full powers given under the Fisheries Act, to Fishery Wardens.

This system of administration should be effective, and less expensive than the present system.

Yours respectfully,

(Signed) W. F. TIDMARSH.

NOVA SCOTIA.

RIVER JOHN, August 7, 1909.

C. H. McLENNAN, packer, River John, called and sworn:

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. Since 1905. Four years.

Q. Your experience in connection with the industry goes back further than that does it not?—A. Yes.

Q. How far back?—A. Personally to 1895.

Q. What number of canneries do you control?—A. One.

Q. Where is it situated?—A. Cape John.

Q. What number of boats do you employ?—A. I had 30 boats this year.

Q. Were you fishing your own boats?—A. About half our own gear and traps; the other half the fishermen owned their own gear and traps and boats.

Q. What was your pack this year?—A. 951 cases.

Q. How does that compare with last year and the year before?—A. It is a little better this year.

Q. What was the best pack you ever made?—A. This was the best pack.

Q. Where do your boats fish?—A. Off the ledges.

Q. That is the Amet ledges?—A. Yes.

Q. In what depth of water mostly?—A. I suppose three or four fathoms.

Q. That would not be far off shore?—A. Not far off shore.

Q. What time does the fishery begin here with you?—A. 20th April.

Q. That is the opening of the season?—A. We don't get any lobsters until May.

Q. What is the closing time here?—A. 10th of July.

Q. Are you delayed by ice at all in the spring?—A. Yes, sometimes we are. We have got to be very careful and use ice boats some time.

Q. Still usually your fishery begins about the 1st of May?—A. About the 1st of May.

Q. Do the boats fish in the same water all through the season?—A. No, as the season advances they come into shallower water.

Q. About how shoal?—A. I don't know just exactly.

Q. How do you find the fishery to-day; how does it compare with the fishery when your experience first began?—A. Well for the last four years I do not see much difference.

Q. Is the run of lobsters as large as when you began?—A. I think so.

Q. Your size limit here is 8 inches?—A. Yes, sir.

Q. Do you live up to that regulation?—A. No.

Q. What proportion of your fish would be below the legal size limit?—A. Quite a proportion, I would not like to say exactly.

Q. The lobsters have been measured this year have they not?—A. Yes.

Q. So I suppose there will be some statistics that will contain that information?—A. There should be.

Q. Is the proportion of small lobsters larger now than it was when you first began to pack?—A. Oh, I think it is.

Q. The lobsters have decreased in size?—A. Not the last four years I don't think they have.

9-10 EDWARD VII., A. 1910

Q. I suppose the eggs from the berried lobster are preserved for the hatchery are they not?—A. No, not from our factory.

Q. Does not the boat from the hatchery come here?—A. Very seldom.

Q. What is your practice with regard to berried lobsters, are they returned to the water or are they canned?—A. Canned.

Q. Has that always been the case?—A. Yes.

Q. Is there any more attempt being made now to protect or save the berried lobster than there used to be?—A. No.

Q. Do they ever come this far with their collecting boat from the hatchery at Caribou?—A. I think Burnham and Morrill have taken them.

Q. It has been the practice then for the canneries generally to take everything that was brought to them?—A. Everything that was brought to them.

Q. Without regard to size limit or whether the lobsters were berried or not; has any attempt ever been made to induce the fishermen to return the berried lobsters to the water?—A. No.

Q. Supposing you refused to accept the berried lobsters what would happen?—A. That is a pretty hard thing to get at about the berried lobsters. I think perhaps they would have to brush them off in the boat.

Q. At some places they have told us the fishermen brush the berries off, at other places they have said that if one canner did not take them the fishermen would bring the berried lobsters to another packer who was less scrupulous?—A. Yes, they might do that.

Q. We hear from some canners that they are obliged to take berried lobsters in order to retain their fishermen; what would you say?—A. Could not the Government pass a law to stop that in some way?

Q. At present it is illegal to do it.—A. Then enforce the law.

Q. Has any attempt been made to enforce the law?—A. No.

Q. Have you ever known of anybody being fined for violating the law?—A. I don't know of any.

Q. Of the total number of lobsters brought to the cannery, what proportion would be females with eggs extruded?—A. I cannot tell you that, I don't know.

Q. Do you know what kind of lobsters they generally are, are they good sized lobsters or small?—A. There are not many berries on a 7-inch lobster.

Q. Did you ever see a 7-inch lobster with berries?—A. Yes, a few.

Q. What is the smallest lobster you have ever seen with berries on her?—A. Seven inches.

Q. Is there any particular part of the season when you would expect to meet with more berried lobsters than in others?—A. The latter part of the season.

Q. Is the practice of stripping or washing off the eggs followed here by the fishermen to your knowledge?—A. They don't require to do that.

Q. Do you think it would be possible to induce the fishermen to return to the water the berried lobsters they take; the percentage of these lobsters is so very small it should not make a great difference in a man's catch?—A. They should not take them.

Q. How can we go to work to persuade the fishermen to protect the berried lobster?—A. They should know better themselves.

Q. Where does the trouble lie, with the packer who takes them or with the fisherman who catches them?—A. With both.

Q. Would it be a simple matter to return the berried lobsters to the water when the fishermen are taking them out of the traps; is that the right time to cull the lobsters?—A. Yes.

Q. Can you tell me how many lobsters it takes in your cannery to fill a pound can, what your average is?—A. Four and a half to five lobsters.

Q. Do you remember what the average was when you began?—A. I think it is about the same for the last four years.

SESSIONAL PAPER No. 22a

Q. You are only speaking for a short time?—A. I am only speaking for McLennan and Redmond.

Q. During that time did you not find much decrease?—A. No.

Q. To what do you attribute the decrease in the size of the lobsters; there is undoubtedly a decrease from old times, is there not?—A. Not within the last four years we packed I think.

Q. Still your recollection of the conditions of the lobster fishery will go back further than four years?—A. Yes.

Q. Have you any idea when the fishery was first established here?—A. A good many years ago, I could not tell you the exact date.

Q. Who first began it?—A. A man by the name of Shad.

Q. Was he a Canadian or an American?—A. An American I think.

Q. What style of trap is used by the fishermen here today?—A. Just the common trap.

Q. The common double ender?—A. The double ender. Then there is three.

Q. Are they very largely used?—A. They are coming into greater use.

Q. What is the particular merit they have over the other trap?—A. They claim they get more lobsters.

Q. That is they hold more lobsters?—A. Hold more lobsters.

Q. And what is the space left between the slats?—A. I don't know exactly.

Q. Well the reason why this new trap is coming into use is because it is more killing?—A. Yes.

It holds more lobsters and is rigged so as to retain the small ones is it not?—A. Yes.

Q. What is the smallest sized lobster you will can?—A. Everything we get.

Q. Down to two or three inches?—A. Well we take everything the fishermen bring in.

Q. Do you think that is a right condition of affairs; what must be the ultimate result if that goes on and the immature fish are destroyed wholesale?—A. My idea would be to take everything and make the season a little shorter.

Q. Do you not think that some provision could be made for allowing a wider space between the slats of the trap so that the very small lobsters could get out?—A. I don't know, I am sure, how that would work. I think the traps are about right now.

Q. Then you would justify the taking of these immature lobsters?—A. Yes. Make the season a little shorter and take everything.

Q. How much shorter?—A. Begin the 1st of May and end the last of June.

Q. And how about the berried lobster, would you continue to pack that, too?—A. No, not if we can help it.

Q. Who does it rest with to take care of the berried lobster?—A. Perhaps with the government. It would be a good thing for them to send a man down to lecture to the fishermen.

Q. And to the canners?—A. The canners could come too I suppose.

Q. And do you think that would have any effect? I should think that any intelligent person would understand already that you cannot go on destroying the immature and the breeding fish without producing ruin in the long run.—A. It is very wrong to take the berried lobsters, there is no question about that.

Q. It has been suggested that it would be wise to do as the Agriculture Department does in the case of the farming population, send some one down to explain to the fishermen the necessity for carrying out protective measures; do you think that would have much effect with the fishermen?—A. I think it would have some.

Q. Various remedies are suggested for the present condition of affairs. Some people suggest closing down altogether for a term of years; how would that appeal to you?—A. That would not appeal to me.

Q. What would be liable to happen in that case?—A. Oh, well, I don't think there is any need of it just now because the lobster fishing is good.

9-10 EDWARD VII., A. 1910

Q. The Lobster Commission of 1898 recommended establishing temporary reserves in various sections along the coast where fishing should not be allowed for a couple of years, the location of such reserves to be changed from time to time; what do you think of that?—A. Oh I think we had better go along as we are going.

Q. What is the most active period of the fishery with you?—A. The month of May.

Q. You get a better run of fish in May than you do later?—A. Yes.

Q. The average would be larger?—A. Yes.

Q. Now, as to the opening season, do you favour the present date, 20th April, or would you advance or shorten it?—A. I would shorten it to the 1st of May.

Q. What is the particular reason for shortening it to the 1st of May?—A. Well we would not catch so many small lobsters for one thing.

Q. You do not catch the small lobsters in the opening of the season do you?—A. No, we do not.

Q. You say you would not begin so early because then you would not get so many small lobsters?—A. I would propose closing the last of June and beginning the 1st of May.

Q. Why would you cut off the ten days in April?—A. It is too early for several reasons. The fishermen come here too early from other parts, and sometimes we don't get our lines run until late you know.

Q. That is for reasons peculiar to the canning industry, not anything connected with the lobster?—A. No.

Q. On the other hand it has been suggested to shorten the season up to the 1st of July—some have even gone so far as to say the 30th of June, some packers we have met—do away with the size limit, and provide for some alteration in the trap whereby the smaller run of lobsters may escape; what do you think of that?—A. I don't know I am sure what to think of it.

Q. Does the present regulation restricting the number of canning licenses satisfy you?—A. No, I would favour giving more licenses.

Q. You would be in favour of giving any man a license to pack who shows his ability or fitness to do so?—A. Yes.

Q. Would you be in favour of limiting the amount of gear fished under any license?—A. No.

Q. Does it not seem odd to limit the number of licenses and not limit the amount of gear fished?—A. Yes, it does.

Q. Do you think the product of the canneries should be inspected?—A. Well, it is inspected by the buyer.

Q. But I mean an official government inspection?—A. I don't think so.

Q. Other food products are inspected nowadays, why should the lobster escape?—A. Well, canned lobster is inspected, there is a pretty rigid inspection, I think.

Q. But not an official inspection, it is only by the buyer?—A. That is all.

Q. Do you think it would be possible or right to establish a standard of fitness for the canneries, to insist upon certain conditions in the canneries?—A. What do you mean?

Q. See that the tables are made in a certain way, covered with a certain material.—A. Covered with zinc?

Q. Is zinc the best thing for that purpose?—A. I think so.

Q. It has been suggested to have marble or plate glass.—A. Would that be better? I don't know that.

Q. How about the matter of issuing canning licenses to aliens, would you approve of that?—A. It is better to have them for our own people.

Q. How is the price paid to fishermen for lobsters arranged?—A. The price has been about the same from year to year.

SESSIONAL PAPER No. 22a

Q. Is the price as high this year as it was last?—A. Well, this year the price for canned lobsters was lower you know, and of course we had to reduce the price to the fishermen a little.

Q. What are the fishermen who fish in your boats paid here?—A. \$1.25 with our own gear.

Q. That is per hundred weight?—A. Yes.

Q. And in the case of those that fish their own gear?—A. Well, a little more.

Q. Do you think the price is a fair one to the fishermen; some of course have complained they are not getting enough?—A. Yes, we know that.

Q. What do you think of the policy of encouraging the fishermen to co-operate in canning?—A. Well, they have that in their own hands.

Q. What is wanted is advice on the subject, whether it is a wise policy to encourage the fishermen to co-operate in canning? Is it to your knowledge that fishermen have lost their catch of lobsters by the canners refusing to accept them?—A. I don't know of any case.

Q. It is alleged that in some cases fishermen have suffered injury by the failure of canners to operate their canneries, although a sufficient supply of lobsters was available; do you know of a case of that kind?—A. No.

Q. If the canneries were closed would the fishermen find any other market for lobsters?—A. I don't think so.

Q. Has the live lobster business ever been attempted here?—A. No.

Q. I suppose the run of lobsters is rather small for such a business just now?—A. Small enough.

Q. And do the facilities exist for transporting live lobsters rapidly and safely to market?—A. Well near Halifax they transport them or take them alive to Boston.

Q. Which branch of the lobster industry do you think is the most remunerative to the fishermen, the shipping of live lobsters or the sale of them to the canneries?—A. I don't know anything about the live lobster market.

Q. As to the matter of hatcheries, have you had any experience of the effect of their operation; do you derive any benefit from the hatchery below you?—A. Not very much. I think we should have a hatchery at the Cape here. It is about 24 miles, I understand, from here to Caribou hatchery, and there is quite a number of canneries here.

Q. Then you think the number of hatcheries should be increased?—A. Yes.

Q. The establishment of pounds has been suggested as an alternative to hatcheries?—A. I don't know anything about them.

Q. Are there any facilities in this neighbourhood for building pounds?—A. I think the hatchery would be best.

Q. As a packer, would you be prepared to pay an increased fee with a view of raising a fund for the purchase of berried lobsters, whether they are returned to the water or not?—A. No, I would not.

Q. The policy contemplated by the regulations is taking the large lobster and permitting the small one to escape; is there any kind of traps better adapted for that purpose than another?—A. I think the trap we have is all right.

Q. Is there any fishing done here after the close of the season?—A. Not that I know of.

Q. Lobsters are not being packed illegally in that respect?—A. Not that I know of.

Q. Is it the practice here at the close of the season to abandon gear in the water?—A. No.

Q. What do you think about the present method of stamping the cases; is there any advantage in doing it, is it properly done?—A. I think it is properly done all right. We send for the inspector and he comes down and gives them to us.

Q. Does he leave the label with you or see it put on?—A. Sometimes, yes.

9-10 EDWARD VII., A. 1910

Q. I do not know that there is anything else particularly that I want to ask you. Have you any suggestion to make yourself?—A. My own suggestion is about shortening the season and not taking the berried lobsters. That is a hard question about the berried lobsters, to know what to do exactly.

Q. What makes it hard particularly?—A. Well, the law is not enforced now.

Q. Would it be possible to enforce the law?—A. I don't know.

Q. Are the present penalties sufficient, if they were enforced, to compel the packers to refuse to accept berried lobsters?—A. Yes, I think so.

Witness discharged.

ARCHIBALD MACKENZIE, packer, River John.—I approve of the season, one end, and the doing away with taking the berried lobsters.

The COMMISSIONER.—The percentage is not very large, is it?

Mr. MACKENZIE.—It is very small and getting smaller. This year it is very much smaller. Of course we are not packing as late and if you cut the season down to the last of June there would be less.

The COMMISSIONER.—You think that by cutting down the season you would save the berried lobster?

Mr. MACKENZIE.—Yes, an awful lot of berried lobsters.

The COMMISSIONER.—How about the matter of the trap, do you not think something could be done?

Mr. MACKENZIE.—The principal object of what we call the bedroom trap is that when there are storms the fish do not get out.

The COMMISSIONER.—In the early days of the fishery—my own connection with it goes back 33 years—we used an old fashioned trap with nearly an inch and a half space between the slats. That is the trap we had along the Gulf, Anticosti, Baie des Chaleurs and the Magdalen islands.

Mr. MACKENZIE.—How did it work?

The COMMISSIONER.—It worked all right.

Mr. MACKENZIE.—There are in some sections very small lobsters. We don't have them at the back of the Cape. Of course there have been measurements taken that will give you the exact data as to the size of the lobsters caught.

The COMMISSIONER.—There is a larger percentage of small lobsters than you would think.

Mr. MACKENZIE.—In some particular places.

The COMMISSIONER.—Do you not think that slats only half an inch apart are a little too close?

Mr. MACKENZIE. The space can be regulated to let certain sized lobsters out. I don't know how that would work. I know it was talked of but never enforced.

The COMMISSIONER. Do you think it is wise or right to continue taking very small lobsters?

Mr. MACKENZIE. I think not, because I don't think they are profitable. I don't think these small lobsters should be taken.

SESSIONAL PAPER No. 22a

JAMES D. LANGILLE, fisherman, Brule Shore, called and sworn:—

By the Commissioner:

Q. Where do you fish?—A. I have been fishing at Cape John for a number of years.

Q. What cannery do you supply with fish?—A. This last season I fished for Mr. McLennan.

Q. How long have you been engaged in fishing?—A. Twenty-five seasons.

Q. Straight along?—A. During that time there was six seasons I think that I did not fish.

Q. Have you always fished in the same neighbourhood?—A. No.

Q. Where else have you fished?—A. I have fished off of Cumberland County. I fished inside.

Q. But always along the shore?—A. Always along the shore, within a radius of 20 miles.

Q. Do you own your own boat and gear?—A. I have for a number of years.

Q. What number of traps do you fish?—A. Well I suppose when I tell you you will think I am pretty lazy. I never fish very big gear. This year I fished 161 traps as near as I can recollect.

Q. Have you fished alone?—A. I fish alone always, or practically alone. There might sometimes be a fellow come out with me. I have fished as high as 200 traps but very seldom.

Q. We hear of some people fishing 400 traps but they cannot be fishing very thoroughly. About what season do you begin fishing?—A. Some seasons I am late in getting started. We generally get lobsters about the 1st of May.

Q. In what depth of water do you begin your fishing generally?—A. We have always fished in pretty deep water, from five to ten fathoms.

Q. How far off shore will that take you?—A. Well, in some places you get the water deep close in. I have generally fished outside of other gear. This last season I fished in six fathoms of water off Brule shore. The rest of the gear was all inside.

Q. Is it your experience that you get a better run of fish by confining yourself to the deeper water?—A. It is my experience you get a larger run of fish.

Q. Do you fish in the same depth of water throughout the whole season?—A. I generally fish into shallow water.

Q. About what time do you shift in?—A. Oh, well, different seasons, when the lobsters shift. If it is a cold late spring the lobsters stay out in deep water. If it gets hot and it is an early season they generally go into shallow water.

Q. And practically you follow the lobsters?—A. We try to follow the lobsters.

Q. On what bottom do you fish or prefer to fish?—A. Hard bottom.

Q. Do you get a better run of lobsters as a rule on hard bottom than on sandy bottom?—A. You get no lobsters on sandy bottom here or practically none.

Q. What is the least depth of water some fish in here to your knowledge?—A. Into a fathom of water. But when I say a fathom of water that is at low tide. I have fished in a fathom of water at low tide some years.

Q. What sort of fish do you expect to get in that very shallow water?—A. Sometimes the lobsters come right in on the shore, good fish.

Q. What proportion of your catch would be below the size limit of 8 inches?—A. That is a pretty hard question to answer.

Q. We do not expect to have that given absolutely; would there be a considerable or only a small proportion?—A. Taking the season through there would be over half below eight inches.

Q. Would you expect to get a larger proportion of large lobsters in shallow water than when you first began to fish outside?—A. You will get the big lobsters in the

9-10 EDWARD VII., A. 1910

spring. It appears that when lobsters are plentiful the big ones drive the small ones out of the traps or away from the traps and as you get the big lobsters caught up the little ones take their place.

Q. What proportion of berried lobsters do you think you take in your traps; how many out of every hundred or every thousand would be berried lobsters?—A. Well I fish at the Cape and taking the whole season I don't think there would be five per cent.

Q. That would be a pretty large average?—A. There would not, I think, be five per cent.

Q. They get a larger run of berried lobsters in some places than in others; they make for certain points?—A. If you set your traps on some ground you will get one-third seed lobsters in a certain time of the year. Of course, in the spring you don't find very many seed lobsters, but later on towards the last of June you will get them then. It seems the other lobsters get ready to shell quicker than the berried lobsters, and consequently you get more of the latter kind. The others are getting ready to shell or are too much fed up and won't trap.

Q. Later in the season and in shoal water you would you would expect to get a larger percentage of berried lobsters than you would outside and early in the season?—A. Late in the season and in shoal water. But you get the berried lobsters in deep water the same as in shallow water. These lobsters appear to go into shallow waater to get ready to shell and as the berried lobsters do not shell as early as the other kind they do not appear to go into shallow water so soon as the others.

Q. Later in the season you get a larger percentge of berried lobsters, you get more in June than in May?—A. Certainly you will, a great deal more.

Q. Is there any fishermen's union in this neighbourhood?—A. Not any.

Q. Has it been the custom here to take to the canner everything you caught practically?—A. Yes.

Q. They do not reject anything?—A. Until this summer. I guess it is like everything else. Some will throw their berried lobsters away and others will wash them off and you might just as well take them in as wash them off. If a man gets a berried lobster in his trap he is very apt to take it if selling by weight or count, for a lobster is a lobster, if he could get clear of it all right. It seems they all get rid of them.

Q. Does it not seem a pity?—A. It certainly is a pity, and it should be stopped.

Q. Could it be stopped by a strict enforcement of the regulation?—A. That is a big question. There are people that would throw berried lobsters away. I would be perfectly satisfied myself to throw them away, but it is very hard for one or two men to throw the spawn lobsters away and for men alongside of you to take them and get their money for them after you have had them in your own hands.

Q. Do you think the fishermen would resort to the practice of brushing the berries off the female lobster, as they do in a great many places, if an attempt were made to enforce the regulation?—A. There are a number of them would do that as they do it now. They have been in the habit of doing it. They did it on the south shore and they will do it here.

Q. As to the matter of the trap, do you fish the new trap?—A. I fish I think all the different traps that are made.

Q. What is the advantage of the new trap over the old one?—A. Well I think there is a big advantage as they hold the lobsters you get, you get the biggest percentage of them. You take the two headed trap, the old trap that we used to fish, even ten years ago the old trap was in vogue then altogether.

Q. In some places it is entirely in vogue yet, they have not adopted the new trap.—A. It is no use for you to set old traps alongside of the latest traps. In the early spring when the lobsters trap well you would get a fair percentage but they would not begin to come up to the catch made by the latest trap.

Q. What is the space you leave between the slats in your trap?—A. Seven eighths of an inch, that is almost an inch. Some probably have an inch or a little more but

SESSIONAL PAPER No. 22a

we allow to a lath seven eighths of an inch as the sills of the traps they are built on is seven eighths of an inch thick generally but sometimes a little thinner. If you get them milled they will be seven-eighths of an inch, that is the way they are milled, and sometimes you have to nail them that way at the bottom as the lobsters generally crawl below.

Q. What sized mesh do you leave at the end; what is the size of the ring?—A. About four and a half inches.

Q. I mean the mesh at the other end of the trap, the closed end?—A. Most of us will lath that up too.

Q. In most places that is a netted end?—A. That is more expensive and with a fellow finding his own gear it takes little more labour to have those ends nailed up with a lath than if they were netted in.

Q. A great many people have told us there is more to be gained by leaving a large mesh in the end than by leaving a space between the slats?—A. A small lobster will go out through a wonderfully small hole. You often see lobsters go out through the mesh.

Q. Do you think there is anything in that matter of enlarging the space between the slats?—A. Yes, there is to the fishermen.

Q. Do you think half an inch space is too close?—A. I don't think you can find traps in this vicinity with half an inch space. A trap that is lathed too close won't fish alongside of a trap that is lathed right. I don't believe an inch is any too far apart.

Q. Do you believe in having the inch space through the lower slats or should it be all over the trap?—A. It would not make any difference. I would sooner have my traps lathed an inch apart than half an inch as regards fishing.

Q. Do you think an inch space would be a fair space to insist on with a view of protecting the small lobster in so far as possible?—A. I cannot see that it would be very much benefit without those slats were an inch thick. Then it would be quite an item for all those traps to be made over again. That would be almost an impossibility.

Q. I do not know that would be possible. What is the life of a trap?—A. The life of a trap is six years.

We generally understand the life of a trap is about three years?—A. Well, that is made with iron nails and generally made by jobbers or fishermen who work one year in one factory and another year go to another factory.

Q. What percentage of loss do you meet with from storms and ice?—A. Sometimes there is considerable ice. If you go into two or three fathoms of water you may lose a few and get some smashed up, but in five fathoms to deeper water you never lose traps. They may get worn a little.

Q. As to the matter of price, do you think there is any combination to keep down the price paid for lobsters to the fishermen?—A. There likely is by some of the canners.

Q. Do you think the fishermen generally are satisfied with the share they receive of the profit?—A. That is another hard question. It is pretty hard to satisfy any man.

Q. We have heard of complaints continually made about these matters, that is why the questions are asked?—A. There is one thing we do see. The canners will pack a few years and they get very well off on packing lobsters, but you cannot find a fisherman that is well off by fishing lobsters and selling them.

Q. Do you think the fishermen would make more money if they were allowed to pack for themselves?—A. Certainly they would. This ought to be a free country and a fisherman ought to be allowed to pack his lobsters or sell them if he wanted to.

Q. How does the price you receive now compare with what you received in the past?—A. The price this last season was smaller compared with what it was some years ago, but just as good as two years ago. Before that it was smaller.

9-10 EDWARD VII., A. 1910

Q. There was a reason for the smaller price paid this year?—A. As far as I know there was, certainly.

Q. Have the regulations ever been observed in this district; that is, confining the fishery to an 8-inch limit, protecting the berried lobster and closing the season sharp on time?—A. No, it has not by any means. We have parties, not just in this district here, not in Pictou county, but in Cumberland county, that fish two, three and four days over the time every year. They catch those newly shelled lobsters and boil them. A man will get six times as many lobsters, perhaps ten times as many, in the last days as in the ten preceding days.

Q. Where are those lobsters canned?—A. Saddle island. There is a shop run there—Burnham & Morrill's shop.

Q. What is the smallest sized female lobster carrying eggs that you ever saw; did you ever remark?—A. I have noted them down to 7 inches, but not very many.

Q. Where count has been kept of the thing accurately it is said that not one lobster in a hundred thousand seven inches in size carries eggs?—A. I have seen lots of them at 8 inches and 9½ inch lobsters I have seen berries on. When they get very large you will see them with the spawn on. I have not seen very many of them.

Q. In the early part of the season the lobsters are not as full as they are later?—A. They are fuller I would say about the 1st to the last of June.

Q. If the canner refused to accept berried lobsters what would become of them?—A. The majority of the fishermen would have to wash the berries off. The canner would have to take the lobsters then because they could not tell them from any other lobster.

Q. Is it difficult to tell the lobster that has had the berries rubbed off?—A. Well, I guess so. It is just that difficult that I don't know how a man would detect it if there were not any berries on them. It is very little that the berries cling to, it is the slightest thing that the berries are on. If that is washed off how could you detect it? You could not tell.

Q. They are very seldom washed if the canner takes everything that is brought to him?—A. Generally they don't have to do that.

Q. As a means of regulating the fishery some people have suggested that the fishermen should be licensed, the fee, of course, would only be a nominal one; what would you think of licensing the fishermen with a view of controlling the fishery in that way?—A. I don't see that it would be any good. I suppose it would take a few dollars out of the fishermen, and they would have to swipe a few more spawn lobsters to make up that money.

Q. I do not think it would be a matter of dollars, it would not do to impose a heavy fee, but only a nominal one. That idea was suggested to the Parliamentary Committee last session, the impression being that a man feeling himself a licensed fisherman would be more apt to observe the law, and perhaps inform on others who did not; do you think it would have any effect upon the fishermen?—A. The fishermen are like any other men. It is very hard for a man who is doing the thing himself to inform on any other man.

Q. The fisherman would be licensed, and if caught taking berried lobsters would lose his license and be prevented from fishing in the future?—A. That would not be right to prevent him fishing lobsters.

Q. Not if he violated the law?—A. Why not fine him. They do not take the license away from those shops that can berried lobsters and all kinds of lobsters, they simply fine them.

Q. They have not done that. Perhaps if the law were carried out strictly it might have the desired effect?—A. Then, that would be up against the fishermen again, the fishermen would have no place to take their lobsters and the lobsters would be no good to anybody. They should fine them all. They should not stop at one, but fine them all. Then when they had done that the whole thing would be shut down. If you shut

SESSIONAL PAPER No. 22a

down the factory for taking lobsters they have no right to take, and the fishermen as well, there would be no lobsters taken.

Q. Would you have things go on as they are?—A. No, I would not. There ought to be something done about these berried lobsters.

Q. How would you propose to do it, buy the berried lobsters from the fishermen?—A. That would be one of the ways to do it. But it looks like a big thing; I don't know that it would be.

Q. It looks like paying men to observe the law?—A. There are lots that are paid to observe the law, and then don't do it.

Q. In what way?—A. I could tell you numerous ways, it is not necessary here.

Q. So you would not have much faith in the licensing system as regards the fishermen?—A. I would not have much faith in the licensing system.

Q. Who are the majority of those who fish lobsters, are they genuine fishermen or are they men who, when the lobster fishery is over, carry on farming?—A. They are men that are farming and have got to fish to help along and make a living. I think likely these packers will tell you the best fishermen they have belong here too. It is the money they are after, not just the lobsters.

Q. What do you think of the present method of issuing licenses to can?—A. My idea of issuing licenses is that any man who can put up a shop ought to get a license, provided he obeyed the law. Then if he could not run his shop, let it go down; he would be that much out of pocket, and have that much experience.

Q. Do you not think we would have a right to expect him to put up a cannery that should be up to a certain standard?—A. That would not be asking for much if you took the other factories as a standard.

Q. The standard should be the same for everybody?—A. If you took all the factories into consideration it would not be much of a standard you would need to have.

Q. Do you know anything about the live lobster trade?—A. We have never had anything to do with the live lobster trade here. We have not got good railroad connections.

Q. Where they have the necessary facilities do you think it is a more profitable branch of the industry for the fishermen?—A. It certainly is, there can be no question about it.

Q. Who fixes the price paid for lobsters?—A. The packers. To a certain extent, of course, when there is a lot of packers after a man he can bid one up against the other and maybe get a rise.

Q. Then there is some give and take in the matter?—A. Yes, but generally the packers say they can give so much and that settles it all. You cannot pack them yourself and you have got to sell your lobsters or not catch them.

Q. Is it a cash business generally?—A. Yes.

Q. Are the fishermen in the habit of getting advances from the canner?—A. Lots of fishermen get advances I guess, but it is considered cash anyway. They are considered good for cash at any time.

Q. What would you think of doing away with the size limit altogether, it seems to be a difficult one to enforce—A. I guess it is.

Q. But insist on a moderate space between the slats in the trap, say an inch as you suggest?—A. Well, I would not have much fault to find with that, but if you commence right now it would undoubtedly entail quite a lot upon packers who own their own gear—to shift one lath or two laths on a trap would make it all right.

Q. And then in addition to what has been already mentioned shorten the season to the 1st of July or the last day of June; how would that affect you?—A. As far as I can see I think likely it would be just as well. From the last of June until the 7th of July, there is practically nothing done fishing lobsters. Then there are three or four days we get the new shelled lobsters and a lot of work of the hardest kind is entailed. A man has got to shift into soft bottom to get these new shelled lobsters and

9-10 EDWARD VII., A. 1910

get up into the bays and creeks. For instance, he would have to go right up into the mouth of this river to catch the first of them.

Q. Do you think that fishing in bays and creeks should be continued or should it be confined to a certain depth of water outside?—A. I don't see how you could do anything like that.

Q. Some people have argued that fishing of that kind should be prohibited?—A. If there could be a certain place left off for a spawning ground, but you could not do that. You would have to have a cutter with guns lying off to keep the men away because certainly that would be the place for lobsters.

Q. Do you not think an unfair proportion of spawning lobsters is taken under these conditions?—A. At the present time?

Q. Yes.—A. Why there certainly is.

Q. I do not think there is anything else I wish to ask you?—A. How would it be if I were to make some propositions?

Q. You are at perfect liberty to do so; that is what we want?—A. I believe the fishermen ought to be compelled to put up a buoy that would be at least three feet above water to mark their gear, and they should not have trawls more than three coils of rope, that is 120 fathoms in a coil.

Q. How many traps would that represent?—A. It would be according to the water. If you were fishing in shoal water you could not have your traps as far apart, and the thing to consider is the depth of water. If in ten fathoms of water it would mean less on the same line. In shallow water it would mean much closer. There are fellows that go out in the spring and run their lines with any kind of buoys. Another man would come along afterwards and those buoys would be probably under water or only 6 inches above and hardly showing; you could not tell anything about them and the tide is running to the eastward. When the first fellow ran his line the tide was fast running northeast, setting off shore. The next fellow will run his lines over those of the other man. What is the consequence? It is a lot of labour, your lines are cut and it makes bad work. Then again a man will string his lines in such a way that you cannot see from one end or the other. Two or three men will run out there, before daylight, and put their traps down and all run over each other. There are no buoys to be seen, and the lines are so long that you cannot see to the other end of them to find out from their buoys how they are running.

Q. Do you think it is necessary to fix a date for the opening of the season? Does not nature provide an opening date? Why might it not be as well the 1st of January as the 1st of May?—A. I don't see why it might not. It does not make any difference here as far as that goes, there are men running before the time. If one man breaks the law, or 20 or 30, it does not make any difference that I can see. Last spring there was a number of fishermen running before the time. They had their gear nicely set and they were all ready when the fishing commenced, and the fellows who came afterwards had to take what was left.

Q. Do you think the amount of gear fished by a cannery should be limited?—A. A man getting a license for a factory can run three, or four or five hundred boats if he wanted to. But what about the man who cannot get one? I believe a man ought to be able to run what he decently can so long as he could get them. It ought to be a free country and a man, so long as he observes the law, ought to be able to do so as to suit himself.

Q. Do you think the amount of gear fished by a boat should be limited? There are boats fishing 500 traps?—A. I would not just like to say. I believe 200 traps is enough for any man. There is something of a hog about a man who wants to fish 500 traps. He will probably haul 200 traps a day and 200 to-morrow, and he has three or four hauls out of each trap. He might as well have 3 boats fishing those 500 traps as one. That is the difference; he is taking up the ground from somebody else. I have known some fellows take up ground and never put a trap in. The other fellow would

SESSIONAL PAPER No. 22a

have to get out. He would say: 'I have got the ground and I am going to put out traps there.' I would have to go somewhere else. You have been talking about catching spawn lobsters and throwing them out. I have handled them myself this summer.

Q. You have held the female lobsters in your trap and watched what happened to her?—A. I have. I had spawn lobsters in my trap three weeks and kept them out; they never spawned. The lobster, as far as I know, does not cast her spawn off.

Q. No, it is hatched out on the lobster?—A. They hatch right on the lobster and drop off gradually. This summer I marked spawn lobsters and threw them out. How long do you think it was before I got those same lobsters again? I told the other fishermen around me about those lines and the mark I had put on them. It was a week and four days before the first was caught, as near as I can recollect, right where I put it. The last ones I marked I never caught and I never heard tell of any one else catching them. The lobster caught again was, to all intents and purposes, just the same as when I released her, and had no sign of the spawn hatching.

Q. Is there any place here where pounds could be established? A great many people think that impounding the female lobsters is the best way of securing a return from her eggs?—A. There is certainly as good a place as a man could wish for a pound. You would want a place that was not too full of perch.

Q. And a considerable area because we could not crowd the lobsters?—A. If the pounds would not be broken up by rough weather there is no trouble in getting them in this bay.

Mr. MACKENZIE.—I think the solution of the difficulty is in having more hatcheries. There is no reason why we should not have a hatchery here and save the spawn.

The WITNESS.—If hatcheries will hatch spawn. What percentage of the spawn will they hatch?

The COMMISSIONER.—They will hatch practically all the spawn that is brought to the hatchery in good order. There is a great difference in the way the eggs are taken off. If taken off roughly the eggs are destroyed. Furthermore, if the eggs are exposed to the sun or warm weather they will not last any time. They must be taken to the hatchery very rapidly. In the case of people like Mr. Baker, of Cape Breton, who is a great authority, the best results are obtained from the pound. That is, they take the female lobster, and put her into the pound and let her hatch out her own eggs.

The WITNESS.—Certainly, that is the natural way, that is the right way.

Mr. MACKENZIE.—If there was a hatchery here there would be a hundred million more eggs saved.

The WITNESS.—I have seen buckets of spawn taken off and thrown over the wharfs at the hatchery; they never came after them. I have seen ripe spawn taken off and thrown away. It seems they would come up here and only go to a few factories.

Mr. KITCHING.—There are 10 factories within a radius of 10 miles at the end of this cape here.

The COMMISSIONER.—Has the pack been up to the average along this section?

Mr. MACKENZIE.—In this section, but not out towards Pictou.

Mr. KITCHING.—There was a shop put up about 1,400 cases. He told me that he made the fishermen throw out every spawn lobster taken, but he said at least 60 per cent of the lobsters were under 7 inches.

The WITNESS.—I know they bother their fishermen. They put the lobsters out in crates, and when the catch gets scarcer they take the spawn lobsters in.

9-10 EDWARD VII., A. 1910

By the Commissioner:

Q. There seems to be a disposition on the part of the coast fishermen to be careful of the spawn lobster?—A. There certainly is among those who own their own gear, and it ought to be so, because when a man kills his hen he cannot expect her to lay any more eggs.

Witness discharged.

JOHN W. MYERS, canner, River John, called and sworn:—

By the Commissioner:

Q. On what point do you wish to speak?—A. About keeping the spawn lobsters. You want a harbour or some such place as that do you not?

Q. You want a place with a narrow outlet that you can fence across.—A. It is pretty hard to get that along this shore.

Q. Suitable places are not to be found everywhere, but are there not localities, with the shore broken up like it is here, where you would expect to find them?—A. In same places. In the majority of places along this shore I do not suppose you could get them. It is very rough along this coast and in lots of places it is pretty hard to keep gear.

Q. We want a large area, with sufficient depth of water, and narrow enough at the mouth to be fenced across. The lobsters must not be too crowded or they will destroy each other.—A. It is pretty hard to find a place like that. If there was a hatchery it would be much better.

Q. A hatchery you think is better than a pound?—A. Yes, far better.

Q. In what way?—A. You could dispose of your eggs every day.

Q. So you could with a pound?—A. But in a pound there would be a lot destroyed.

Q. How?—A. Because you could not get suitable places.

Mr LANGILLE.—Excuse me, there is one place between Tatamagouche and Brule where there could be a pound placed but scarcely any fresh water comes in.

The COMMISSIONER.—What is the depth of water?

Mr. LANGILLE.—A four foot channel, a channel very wide with a narrow outlet. It is several acres in extent inside, there would be at least ten acres. Large schooners used to go in, but now there is a bridge across so that they cannot get in.

The WITNESS.—But there is a lot of fresh water comes in there.

By the Commissioner:

Q. Are there any lobsters found in there now?—A. Yes, they find lobsters in there now. You can get them in the spring or at any time. They set their traps right off the bridge. I have seen them there in the fall.

Q. You wish to go on record as favouring the establishment of more hatcheries?—A. I do, sir.

Q. I suppose the conditions are pretty much the same with you as with these other gentlemen?—A. Yes, sir.

Q. Have the regulations ever been observed in your neighbourhood?—A. Just about the same as it has been along with the rest.

Q. To what extent is that?—A. About eight inches.

Q. Have the lobsters below eight inches been saved in your case?—A. No, we have been taking them all.

SESSIONAL PAPER No. 22a

Q. And the berried lobsters also?—A. Well, yes.

Q. That is to say the regulations were never enforced?—A. No.

Q. Were they ever enforced?—A. Not strictly, I suppose they were to a certain extent.

Q. They were in the beginning?—A. Yes. There have been some thrown away. The trouble is that a lot of fishermen wash the eggs off.

Q. Is it a difficult matter to detect the lobster that has had her eggs brushed off?—A. It is pretty hard to detect her.

Q. I suppose where you are handling a large quantity of lobsters such detection is pretty hard?—A. At times you can detect them, but you often pass over a lot.

Q. What percentage would you say of the lobsters brought to your factory bear eggs?—A. I would say somewhere between three and four per cent.

Q. It is greater at one part of the season than at another?—A. Oh, yes.

Q. At what time do you find the most?—A. In the latter part of the season.

Q. What do you think about the present method of issuing licenses?—A. The way the licenses are issued now I think is the best.

Q. That is restricting the number?—A. Yes.

Q. Do you think there is anything gained by restricting the number of licenses and not restricting the amount of gear?—A. I think that ought to be restricted too.

Q. How would you go to work to restrict it?—A. I would say so much gear to a boat.

Q. What should be the limit to the number of boats?—A. A great deal would depend upon the size of the shop in that respect. But in a general way the fishermen I think fish too much gear. Four or five hundred traps are too many for a man to attend to. He cannot attend those traps right and do justice.

Q. Is there any other matter that you want to dwell on?—A. I don't know that there is.

Q. You think that the present license system should be continued in force, that the number of licenses should be restricted, but that we might limit the amount of gear fished by any one packer?—A. Yes, sir, I do.

Q. What do you think of the various propositions advanced: Shutting down altogether, or shutting down by sections, or else withdrawing the size limit regulation and somewhat shortening the season?—A. I think it is better to shorten the season.

Q. What would you put the limit at?—A. From the 1st of May to the last of June.

Q. Limit the fishing to two months?—A. Yes.

Q. What is the average number of fishing days here along the shore?—A. It is pretty hard to come at on account of the storms. Some seasons we have more than others.

Q. What would it average one day with the other?—A. A little over two months.

Q. But you have only two months fishing?—A. From the start you mean at the 20th? I could not say.

Mr. LANGILLE.—I would say we would lose on the average about three days in a season. That is a good man will lose that. Other men will lose a great deal more than that.

The COMMISSIONER.—There are some places where the coast is very rough where they do not average more than 35 fishing days.

Witness discharged.

JAMES MACKENZIE, packer, River John, called and sworn:—

By the Commissioner:

Q. Where is your cannery situated?—A. On the north shore. I think it is called the back shore.

9-10 EDWARD VII., A. 1910

You have heard the evidence of the other gentlemen?—A. Yes, sir.

Q. Do you agree with it in the main?—A. I do.

Q. Do you differ with them on anything?—A. No, nothing at all.

Q. Do you wish to speak particularly with regard to the matter of the berried lobster?—A. Yes.

Q. What is your suggestion?—A. I would to say to swear every fisherman, every weigher and every packer.

Q. You would put them under oath not to take the berried lobster?—A. Yes, and the business will look after itself then. I don't think any people need worry then about putting slats one inch or ten inches apart. The business would take care of itself if berried lobsters were thoroughly protected. If a man broke his oath let him take the consequences.

Q. Who would administer the oath?—A. The magistrates in the villages.

Q. There would have to be some record; how would you know whether the man had kept his oath or not?—A. When the officers visited the factories.

Q. Would it not be simpler to adopt the license system?—A. It might be worth while having.

Witness discharged.

Commission adjourned.

PICTOU, August 9, 1909.

GEORGE W. ATKINS, packer, Pictou, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing industry?—A. 18 seasons.

Q. Before that what did you do?—A. I fished lobsters.

Q. How many canneries do you control?—A. Three.

Q. Where are they situated?—A. One at Little Harbour, Pictou county; one at Gull Rock, Caribou island; and one at West End, Caribou island.

Q. Are there many other canneries licensed in your neighbourhood?—A. Yes, there are.

Q. How many boats do you employ?—A. Eighteen at Gull rock, 8 at Little Harbour, and 10 at West End, Caribou.

Q. About what number of hands do you employ ashore?—A. Males and females? Twenty-three at Gull Rock, 10 at Little Harbour, and 50 at West End. That does not include the cooks, but just the factory hands. There are 4 cooks altogether.

Q. Are the boats mostly owned by yourself?—A. All but 7.

Q. There are 7 fishing their own outfit?—A. Seven fishing their own outfit.

Q. What number of cases did you put up in those three canneries this year?—A. We put up 605 whole cases at Gull Rock, 315 at Little Harbour, and 367 at West End.

Q. How does that compare with your pack of last year and the year before?—A. It is away down. The pack last year was 1,650 cases, and the year before, as near as I can tell, about 1,480.

Q. What was the largest pack you ever made?—A. Last year.

Q. When do you begin fishing one year with the other?—A. We never made a pack but two years on the 20th April, and all the other years from the 5th up to as late two years ago, as the 25th May. That was on account of the ice.

SESSIONAL PAPER No. 22a

Q. What number of traps do you fish to a boat?—A. All the way now from 225 to 290 and 300. Some of those that own their own gear fish as high as 400, but my own boats no more than that.

Q. Do you consider that is enough for a boat to fish?—A. That is enough.

Q. Would you say that no two men can fish 400 traps and attend to the job properly?—A. I would say so.

Q. Do the fishermen fish in the same depth of water all through the season?—A. No, sir, they move in the first move, most of the fishermen.

Q. Move into shoaler water?—A. Yes.

Q. What is the shoalest water they fish in?—A. I would say about three and a half fathoms.

Q. What sort of a bottom do they select when they can get it?—A. Hard bottom.

Q. What proportion of the lobsters you take will be under the legal size limit of 8 inches. The lobsters were measured this year, were they not?—A. The officer came around and measured them at my factory.

Q. Then about what would you say is the proportion below 8 inches?—A. There would be quite a number under 8 inches.

Q. Here you deliver all your berried lobsters to the hatchery, do you?—A. Yes, I do every day.

Q. Out of every hundred how many would be egg-bearing lobsters?—A. Oh, well, some years more than others. This was an awful year for spawn fish. At the first of the run I would say there was one-quarter for the first three weeks.

Q. That is a very high run?—A. Yes.

Q. Was that the first three weeks in May?—A. Yes, they were caught up farther off shore.

Q. How is it generally; do you get the largest amount of berried lobsters off shore or inshore?—A. Off shore in the first three weeks fishing, and then at the end of the season they come inshore.

Q. Does the hatchery run from the beginning of the season to the close?—A. From the beginning, as soon as the first fish is caught.

Q. Up to the 10th of July, when they shut down?—A. They put the eggs out after that, but they collect no more berries.

Q. And is it generally the case that every season you get the first run of berried fish in May and then the others later on inshore?—A. Last year they were not as plentiful at the first of the season. They were more plentiful at the last along in June.

Q. That was in 1908?—A. 1908.

Q. How are they generally?—A. Most always for the first three weeks the outside fishing is a good run of fish.

Q. What sort of lobsters are they as a rule, the berried fish?—A. They are good fair-sized lobsters; there are not many of them go under 9 inches.

Q. What was the smallest you ever remarked?—A. I remember this summer measuring one about $7\frac{1}{2}$ inches with berries.

Q. That is unusual?—A. Yes.

Q. The majority of them are large?—A. Yes.

Q. Is there any part of the season when you would consider lobsters not fit for human food?—A. Yes, just after they have cast their shell.

Q. While they are in the soft shell state?—A. Yes, sir.

Q. What sort of trap do you use?—A. Well, I use some of what they call the parlour trap, I suppose you know, and some two headed.

Q. Do you find much difference in the fishing capacity?—A. The parlour trap fishes the best.

Q. That is to say, it will hold the fish it takes?—A. Holds the fish. When the seasons strike on there is small perch that gets in and eats the bait, and if the perch strips the bait in the two-headed trap the lobster goes out, but not out of the parlour trap to the same extent.

9-10 EDWARD VII., A. 1910

Q. What width do you allow between the slats in your trap?—A. The width of the pole of a hatchet, but some are a little finer than others.

Q. There is complaint from many places that the width between the slats is only half an inch?—A. Ours is over half an inch.

Q. A good many people have suggested as a means of protecting the small lobsters and allowing more of them to escape, that the slat should be fixed a little farther apart than it is?—A. The mesh in the head would be more liable to do that.

Q. What size do you make your mesh?—A. About two and a half extension measure.

Q. And you think that by means of the mesh in the head more lobsters are liable to get out than with the opening in the slats?—A. Yes. I will tell you if you are fishing lobsters and there is one mesh cut you will never get a lobster in that pot; they will all escape.

Q. It is proposed to protect the smaller lobster because evidently an unfair proportion of small lobsters are being canned; what would you think would be a fair-sized mesh to accomplish the desired object? In some places they are canning lobsters down to three inches?—A. We don't do that. I don't think they can can a three-inch lobster. Where would they get the meat, in the claw?

Q. Where they are packing 18 to 20 lobsters to the pound tin they are pretty small?—A. I have never seen that.

Q. What would be the effect if the size limit of 8 inches were strictly enforced?—A. It would close all the factories. Yes, sir, that is what it would do.

Q. Now, as to the method of issuing the licenses: Under the present regulations the number of licenses is restricted. The department will not issue a new license unless it is to a group of fishermen who form an association and pack lobsters on the co-operative plan; are there any such associations in your neighbourhood?—A. No, sir

Q. What is your idea as to issuing licenses?—A. I would say issue none.

Q. No more than there are at present?—A. No. I have reasons for that.

Q. What reason would you assign?—A. The fishermen get together and talk it over, and say that the lobster packer is making a fortune and the like of that, but that they are not getting anything for their fish.

Q. We hear lots of that?—A. They should get together and build factories of their own. The first thing they would find is that they have not got the capital to do it, and they would only make a failure of it after two years. The fisherman is getting well paid for lobsters. I paid one fisherman last year \$600 at Gull Rock.

Q. That is two men in a boat?—A. One man at \$3 a hundredweight; he had his own gear.

Q. That was last year?—A. Yes, sir.

Q. This year the price has dropped?—A. I dropped 15 cents. I paid this year some of them \$450 to a boat.

Q. What rate per hundred would that be?—A. \$2.85.

Q. Was that the general price here?—A. That was the price paid by Logan and I, and all the rest, a general thing.

Q. The fishermen complain, of course, that there is a combine on the part of the canners to keep the price down; is there anything of that kind to your knowledge?—A. No, there is not. The packers are running big risks, and this year we did not make a dollar.

Q. What condition is the lobster fishery in now compared with its state when you first began fishing?—A. Well, when I first commenced fishing 32 years ago at Brule harbour, Burnham & Morrill had a factory there.

Q. That is at River John?—A. That is the Cape John factory now. The lobsters were then plentiful. We did not fish as many boats, but there were no factories. The next factory was at Macdonald's Cove, and the next one was Pugwash. Now, there are so many more factories, and the pack last year was bigger than it was for years and years.

SESSIONAL PAPER No. 22a

Q. Will the lobsters run as large now as when you first began fishing?—A. No, sir, they do not run as large.

Q. Have you kept up your pack by fishing an increased amount of gear?—A. Yes, sir.

Q. Do you find much difference in the run of the fish in the last five or ten years?—A. No, sir.

Q. Do you attribute that to the hatchery in this neighbourhood?—A. Yes, that is what we claim.

Q. What indications are there that lead you to believe the hatchery is doing good work here?—A. Well, because the pack is kept up.

Q. Do you find runs of lobsters of the same size and quality?—A. Yes, of the one size, thousands of them.

Q. That would lead you to believe they had been planted at some time?—A. Yes, sir.

Q. Are there any facilities in this neighbourhood for the establishment of pounds a good many people are of the opinion that pounds are of as much value as hatcheries?

—A. Do you mean like the Baker pound?

Q. Yes. Do the facilities exist along this coast for establishing pounds of that kind?—A. No.

Q. You want a considerable area of salt water, two or three fathoms deep, and the possibility of barring the mouth so that the lobsters can be held there.—A. There is no place suitable from here to Merigomish, I don't know what it will be like from there.

Q. Have the regulations as to size ever been enforced in this neighbourhood?—A. No, sir.

Q. Do you think it is the case that a larger percentage of lobsters is required in the fall than in May and June to fill a one pound can?—A. Yes, sir.

Q. Is it the case that canners are compelled to accept undersized lobsters for fear of losing their fishermen, would the men fish if they were compelled to abide by the size limit?—A. No, sir, they would not.

Q. What number of green lobsters in your case does it take to fill a pound can?—A. About four and a half in June, and maybe four and three-quarters in May.

Q. They are fuller in June?—A. Yes, sir, it is the fullest time of the season.

Q. It has been suggested among other things that one way of getting the fishermen to observe the law with regard to berried lobsters and size, is to license them as well as the canner; what do you think about that, would there be anything gained by licensing the fishermen?—A. No, they would wash the spawn off the lobsters outside.

Q. Several suggestions have been made to the department at various times by people that were interested with a view of improving the fishery. One is to stop altogether for a term of years, issue no licenses and do no canning; what would you think of that?—A. Well, that would be a great drawback on the packers and on the country where there is millions of dollars paid out.

Q. Of course the idea is that in the meantime the fishery would recuperate and be made stronger than ever.—A. Yes, and then fill the market and get about \$3 a case.

Q. The Lobster Commission of 1898, recommended the creation of temporary reserves, that is closing down by sections, shutting off one section for a term of years, and then another and so on?—A. That would not do. I read about that.

Q. Another suggestion is to do away with the size limit altogether, but so regulate the traps as to permit a larger proportion of small lobsters to escape. A great many, in fact a majority, of the traps now in use are not intended to allow small lobsters to escape at all.—A. But the fishermen would take and fix the laths every day.

Q. If the fishermen were licensed it would be possible to follow them up strictly and prevent a man from fishing who violated the law. However, the proposition is to do away with the size limit and if possible regulate the mesh or the space in the slats

9-10 EDWARD VII., A. 1910

and shorten the season by ten days, knocking off at the first of July.—A. Taking the ten days off?

Q. That is the suggestion that has been made, I think you will see a number of those things in your copy of the evidence?—A. Yes, I read them all. Well, now that is the ten days where the packer makes money if he makes any.

Q. In some localities?—A. Yes.

Q. There are some localities where the canners and fishermen have all said it will not make any difference.—A. I own all my traps and gear and outfit, maybe \$10,000, and maybe it will take to the last of June to clear that \$10,000 and pay expenses; I will not get a dollar. If I get the ten days I will have paid for everything and in that time will make a pretty good profit, I will only have to pay for my fish in the season. It might do on the southern shore where they get no lobsters for ten days.

Q. Do you think it would be possible or right to establish a standard of fitness for canneries, that regulations should be enforced requiring a cannery to pack up to a certain standard, that the table should be constructed in a certain way and kept clean and so forth?—A. Yes, we have got to do that.

Q. What do you cover your table with?—A. Cover them with zinc and I have racks of planed wood. The meat never touches the zinc.

Q. Do you think the product of the cannery, that is the tinned lobster, should be inspected?—A. Well, the buyer does it.

Q. The buyer does it in every case, but the inspection is not an official one. Of course the buyer always does that and he trusts very largely to the person he deals with. Will the fishermen make more money if they are allowed to can?—A. No, sir, they will make less.

Q. What is the price paid for lobsters in your district to those that are fishing with your gear?—A. \$1.25 per hundred weight.

Q. And to those that fish their own gear?—A. \$2.85.

Q. And most of the men come from Nova Scotia?—A. Yes, sir.

Q. Their way is paid coming and going?—A. Yes, sir.

Q. Have you ever heard the fishermen here complain that they were not getting enough for their lobsters?—A. Yes, sir, I have heard them complain, not all, but some.

Q. Is it the case that fishermen have ever lost their catch of lobsters through the canners refusing to accept them?—A. No, sir, not in our district.

Q. In some cases it is alleged that the fishermen have suffered injury by the failure of the canners to operate their factories, has any such case come under your notice?—A. No, sir.

Q. That is what led to the adoption of the co-operative license regulation, the complaint that canners refused in some cases to buy the lobsters and the fishermen were put to loss?—A. Not in our district.

Q. What market would the fishermen in this district find for lobsters if the canneries were closed?—A. No market to pack them in this district and they cannot ship them alive.

Q. For what reason?—A. They won't live.

Q. Has it been tried?—A. Yes, sir. We can hardly keep them alive long enough to get them to boil on a warm day. Great care has to be taken.

Q. Do you think there is any difference between the lobsters taken here and those caught on the Atlantic coast?—A. Yes, sir, they are softer here and die much easier.

Q. That is because they are caught in warmer water?—A. Because they are caught in warmer water and have not much strength.

Q. Has the experiment been made of shipping them alive from here?—A. No, I never tried to ship them alive. They have been boiled and shipped that way but they did not make a success of it.

Q. Is there much fishing done here after the close of the season?—A. Well, not very much in our district, a little at Little Harbour.

SESSIONAL PAPER No. 22a

Q. Has there been much gear abandoned in the water? In some places we find the practice is not to take in old rigging but leave it in the water?—A. There is quite a lot.

Q. Cannors complain that very often at the tag end of the season the fishermen clear out and do not bother about moving the gear in and there is a great deal of it left in the water?—A. That is right.

Q. Now as to the method of putting on the labels, do you think it answers any good purpose?—A. Well, it does not answer any good purpose if any one is wanting to get stamps because they can stamp a hundred cases. The inspector comes around and they show him a hundred cases and he stamps them. If any one is bad enough he can come back and remove fifty of them and then get fifty more stamped the next time.

Q. Now tell me about the fishing in bays and lagoons. It is claimed that a good deal of damage is done late in the season by the practice of fishing in shoal water inside bays and lagoons; is that done here?—A. We don't do that here, we don't have any bays in our district. I would like to state in regard to the date of opening in the spring, the 20th April. There are mountains of ice then but men get out and run their gear on poles. The moment they run the gear it is sunk. When the ice clears another man will go and run his gear there and the man who sinks the poles claims he has the berth. Then the other man has got to lift up his gear and it gives him a lot of trouble.

Q. What is your remedy for that?—A. I say if you do not cut the season off till the 1st of May, make it like the Island, the 26th April and that will be better.

Q. How do you think we can best keep down the catch of small lobsters, what would be your remedy for that condition of affairs? There is no doubt that too many small lobsters are being taken and it must be injurious to any fishery to kill off the young before they reach maturity?—A. Yes, they grow pretty fast.

Q. An 8-inch lobster is supposed to be three years old?—A. Yes, I measured them coming out of the shell lots of times when I was fishing them. They just grow three inches.

Q. Up till the fall?—A. That is the time when they come out of the shell. There is the shell in the pot. Take the fresh lobster that comes out and put him alongside the shell and he is a lot bigger, he swells right up.

Q. I do not know anything else to ask you?—A. I claim myself that a lobster under 7 inches should not be packed. What I would do I would deal with the fisherman as well as the packer.

Q. The modern trap takes lobsters a good deal under seven inches and holds them; what would be your suggestion for letting anything under seven, or six, or five inches escape, for I assure you they take lobsters under that size in many places?—A. All I know would be to put a fine on the fishermen.

Q. For bringing in undersized lobsters?—A. For bringing in a five-inch lobster because that size is altogether too small.

Witness discharged.

WINTON CORBIN, packer, Pictou, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster packing?—A. About 16 years.

Q. How many canneries do you operate?—A. Of course I am only manager for one.

Q. What number of boats do you fish?—A. Ten.

Q. Do the men fish their own or are the boats yours?—A. Nine fish Burnham & Morrill's gear and one owns his own.

9-10 EDWARD VII., A. 1910

Q. You are manager of a factory for Burnham & Morrill?—A. Yes.

Q. Are there many other canneries licensed in your neighbourhood?—A. Yes, there are several very handy.

Q. In what depth of water do your boats fish?—A. Anywhere between $5\frac{1}{2}$ to $7\frac{1}{2}$ fathoms. Perhaps it may run a little over that sometimes.

Q. Where is this particular cannery situated?—A. At Little Entrance, four and a half miles from here.

Q. You are close to the hatchery?—A. There is just a hundred feet space between us, we are right beside it.

Q. What is the practice of your boats, do they fish in the same water all through the season?—A. They shift around. They may only shift half a mile, perhaps three-quarters of a mile, perhaps less.

Q. But they keep in the same water?—A. The same water.

Q. They do not go into very deep water?—A. Oh, no.

Q. What number of hands do you employ in the cannery?—A. About 15 men and women.

Q. How much did you pack this year?—A. Two hundred and ninety cases.

Q. And last year?—A. Four hundred and seventeen. Of coures this year we shut down early.

Q. Why did you shut down early?—A. The lobsters did not seem to be plentiful enough, and they were small. Then we lost considerable traps in the storm in May and it was not worth while fitting up again.

Q. Is the run of lobsters as good now as it was when you began?—A. No, they are not. They were not as good this year as they were last, but we have noticed this thing years ago, the same thing.

Q. Even in the beginning you had off years?—A. Yes, and we find it the same now, that we have not varied a great lot in our pack. Of course years ago we used to get 800 and 900 cases, but we had more boats and at that time there were not so many factories. Since that time there are more factories and we can only catch what passes them.

Q. There is more gear in the water now than when you began packing?—A. I should say so.

Q. To what extent?—A. I don't know. We know what we are using ourselves but we don't know what the other factories have.

Q. What is the amount of gear you use now as compared with years ago?—A. We don't use as much gear now as years ago because we do not have the same quantity of boats.

Q. Then you are not packing as much either?—A. No, not packing as much.

Q. Are most of your men regular fishermen?—A. The fishermen are all imported men from the eastern shore of Halifax county.

Q. From your observation and your proximity to the hatchery what would you say is the principal spawning month of the lobsters?—A. You can get spawn all the time, the whole season, but the way we find it we get more spawn in May than in any other time with the exception that there is a time in June that you get a stock of lobsters for three or four days with more spawn than at any other time. That is about the period when they are going to cast their spawn. That is how we find it. But of course you get spawn every day.

Q. Do you think the lobster goes inshore to spawn?—A. Well, I don't know about that. Where we get most of our spawn fish is off on the Pictou island ground. That is four or four and a half miles from the factory.

Q. What is the smallest sized female lobster you have ever known to carry eggs?—A. Six and a half inches.

Q. By measurement?—A. Yes, and I don't know but what she is stuck up, in the hatchery. Mr. Ogden caught it. It was caught off our place. There was an old gentleman, Mr. Wilmot, who used to run the hatchery at Bedford had a lobster under

SESSIONAL PAPER No. 22a

nine inches with much spawn on it. You get lots of them six and a half, six and three-quarters and seven inches, find them every day. Only when the lobsters are plentiful you get more big ones. The small lobster won't come in when the big lobsters are there, they won't stay in the trap.

Q. What would be the average size of the berried lobster?—A. Anywhere from 8, 9, 10 to 12 inches. I have measured them with eggs on.

Q. Could you give me any idea of the percentage of berried lobsters, how many per hundred there will be?—A. No, I could not. I have seen 160 pounds weight of spawn fish out of 450 or 460 pounds. I know there was not 500 and there was 160 pounds, or probably it is 156 pounds of spawn fish on the Pictou island grounds.

Q. You say they are more numerous in May?—A. In May.

Q. And there is another run in June?—A. Always a run in June. That is the time they are trapped.

Q. Do you think the eggs are taken off the berried lobsters carefully?—A. Yes, they are taken off carefully.

Q. By whom?—A. Sometimes by the men at the hatchery, I take off a good many myself. Of course as soon as there is a boat they get the eggs and they are taken right over.

Q. In your neighbourhood is the regulation restricting you to an 8-inch size limit observed?—A. Oh, no, we take under that; there is no use to lie about it.

Q. You not only do it, but it is done everywhere?—A. Just so.

Q. Has the regulation ever been observed?—A. Well, no, I don't think it has.

Q. Could you give me any idea of the proportion of lobsters taken that will be below the size limit?—A. No, I have no idea how many would be taken. As a general rule we got a majority of the lobsters at Caribou until this year when they got small at the end of the season. That is why we closed down as much as anything.

Q. That is because you caught fish that were too small?—A. Fish that were too small to pack and they were of very little benefit to packer or to fishermen. I have known the fishermen to throw away a hundred lobsters a day.

Q. Would you say a considerable proportion was below the size limit?—A. I could not give you an estimate because I do not know exactly, but there are a good many small ones.

Q. How do they run in your case; what number of green lobsters would it take to fill a pound tin or fill a case?—A. It would take about 220 or 225 pounds at one time.

Q. Is that in May or June?—A. The latter part of May and the first week in June is when you get your best average. This year the lobster was a kind of watery and did not weigh very good. Some claim that is on account of the early spring, but I don't know whether it is or not.

Q. Did you suffer much loss of gear this year?—A. We lost 291 traps in that one storm. The next storm we had our gear on the bank.

Q. Has there been any noticeable decline in the average size of the lobsters caught in your district within the last ten years?—A. Oh, yes, it varies almost every year; there are no two years alike.

Q. That is what we understand, but on the whole is the average size decreasing?—A. Well, this year, but last year, as I said before, the lobsters were very large.

Q. But on the whole, how is it?—A. There are other years we have seen them small. I have seen it take 265 lobsters in count to make 60 pounds in weight of meat. That was a small lobster caught in the mud and shallow water. That was over 14 years ago.

Q. Was that very late in the season?—A. I don't remember the time of the year.

Q. Well, you would not be fishing very early in the season?—A. No, we shift in in May. It was down below in Pictou harbour where we caught them.

Q. Do you think that on the whole the average size of the lobster has decreased within your recollection?—A. No, I don't think it has. Of course, years ago they

9-10 EDWARD VII., A. 1910

say they used to get them awful large. That was when they first started, in the first two or three years. Of course, when the lobsters are plentiful the little ones won't come in where the large ones are.

Q. Were there any regulations enforced at first?—A. No. I remember when the 9-inch law came up, they came around and fined you a few times, but still it did not stop them from taking the small lobsters.

Q. Is there any attempt made to enforce the law?—A. The inspector comes around and has a look at you; he doesn't say much.

Q. To what cause do you attribute the decline in the size of the lobsters?—A. I don't know, I am sure. Of course, the traps they are using now are a little different from what they were using years ago. That might account for it, they can hold smaller lobsters.

Q. What trap do you use?—A. We use the old fashioned trap, the double ender, this year. We used to have what they call the parlour trap, but our men were dissatisfied with them, and don't want to use them any more, that is, our fishermen.

Q. Why are they dissatisfied?—A. They thought they caught lobsters that were too small and had to throw them away.

Q. Had to throw away too many?—A. Yes.

Q. Have you any idea of the space allowed between the slats in the trap?—A. Oh, well, they are about an inch apart. It is not the slats that holds them in, it is the head, the slats are all right. Any small ones that get in are held.

Q. What is the size of the mesh in the end?—A. Two and a half inches, I think it is. They make them extension measure.

Q. What would you suggest would be the best way of allowing a larger proportion of small lobsters to escape?—A. I think if the double end traps were used the little ones can get out when they like.

Q. Would you prefer to stick to the double end trap?—A. That is what I would have if I had my way, but most people like this parlour trap, they are so much smaller and easier to handle. They put more on a boat and find them easier to handle.

Q. What is the average number of traps fished to a boat?—A. They run anywhere between 180 and 250. With 250 traps to a boat there are two men in it. A man fishes 180 and sometimes 200 traps in a single boat. Of course, they may have a few traps more than that, perhaps not so many.

Q. Would you carry on your factory if strictly tied down to the 8-inch size limit?—A. I don't know but what they would have to close her up. An 8-inch lobster is a pretty good lobster, you know.

Q. If the size limit were reduced to 7 inches would there be any better chance of enforcing it?—A. Yes, I think if they made the size limit 7 inches everybody would be satisfied.

Q. Do you think they would be more likely to live up to that limit?—A. Yes, they would be more apt to.

Q. We were told when the limit was nine inches and was reduced to eight, that no more small lobsters would be caught. Now you suggest that it be reduced to seven inches.—A. Well, if they could not take seven inch lobsters it would not be worth while for them to open their shops.

Q. Is there not the danger that if the size limit is reduced to seven inches the same thing will go on?—A. There are very few lobsters you get under seven inches that are any good. A man asked me how many seven inch lobsters it took to make a pound can. That is a question nobody could answer unless you tried it. I tried it myself. Some man in Ottawa said it took 19. It only took nine and a half seven inch lobsters to make a can. Probably later in the season nine would have done it.

Q. Our calculation is that it takes nine seven inch lobsters to make a pound tin.—A. That would make it say the first week in June. All June the lobsters average fairly well.

Q. But there are places where they are using sixteen and eighteen lobsters to make a pound tin.—A. It is pretty small fish they must be catching.

SESSIONAL PAPER No. 22a

Q. You say they must have pretty small lobsters where they catch those fish; you have told us it takes four and a half green lobsters to fill a pound tin?—A. Sometimes it will run a little better than that.

Q. It has been suggested to the Parliamentary Committee that the fisherman should be required to register and take out a license at a nominal fee; what would you think of that?—A. I don't know.

Q. The idea is that if they were licensed the fishermen would observe the law better with regard to berried lobsters and all that sort of thing?—A. The fishermen would not look at that. The fishermen, the same as Burnham & Morrill and Mr. Atkins, where they have to import them, would say: 'We will not take out any license, we may not go in the spring,' and if any one came along and engaged them to go on a little better job they would take it. What is the good of their taking out licenses?

Q. The license would have to be taken out in the neighbourhood of the cannery when they began work?—A. Just so.

Q. Have the regulations for the protection of the lobster ever been observed in your district?—A. I don't know hardly how to answer that.

Q. What would be the effect of strictly enforcing the present regulations?—A. That you could not take anything under eight inches? If they enforced that law I think there would be no factories running anywhere on the coast so far as I know.

Q. Has the number of canneries reached a maximum compatible with the preservation of the lobster industry and should the issuance of further licenses be discouraged?—A. I should think so. I think myself there are too many issued, but still you could not take them away after giving them. There are factories enough I know around where we are.

Q. Do you know of any good reason why any man who shows his competency to pack should not be given a license?—A. No, I do not.

Q. Do you think it would be possible to regulate the matter of licenses by insisting upon a standard cannery, it would not do to give everybody a license?—A. No, it would not. I don't think there are many that will want licenses on this coast.

Q. You would be astonished at the number of applications.—A. They only want to let the folks at Ottawa live in some parts down here and see what they will say to them.

Q. During what period of the open season is the lobster fishery most actively prosecuted with you?—A. The last of May and the first of June is our best period always.

Q. As a rule when do you begin to pack?—A. Where we are we don't generally get started before the 10th of May. Last year I think we had the first haul on the 5th of May, I would not be sure.

Q. What, in your opinion, would be the effect of a shorter open season with no restriction as to size limit?—A. I think the season is about as short now as it ought to be when they take off say two days in the spring.

Q. You would shorten the season at the beginning?—A. Yes, because that would not affect the fishery much, that is the easiest time to shorten it. I was always under the impression that if they took five days off the opening of the season it would be more suitable for us at Little Entrance. We cannot get as early started as they can on the Gulf. The ice when it leaves them comes down to us for quite a little while. My opinion is that lobsters are not fit to pack when you get them in April. I have seen them get large lobsters and the claws are thin and watery. You have to throw them away, you cannot put them in a can, they are like felt. I don't think anybody should be allowed to start hauling lobster traps before the 1st of May.

Q. Do you think it would be possible or right to insist that a cannery should be up to a certain standard?—A. What do you mean by that?

Q. That the tables should be of a certain construction, covered with glass, marble, zinc or galvanized iron or whatever is thought to be most desirable—that provision of that kind be made?—A. We use zinc covered tables and block tins for putting all

9-10 EDWARD VII., A. 1910

the meat in when it comes out of the shell. No meat touches the table. We have a rack and that is washed and scalded down every day and kept clean.

Q. Do you think the product of the cannery should be subject to inspection?—A. It would not do any harm to be sure.

Q. Do you think the existing staff are competent to make this inspection, or that it would necessitate a new staff to carry on that work?—A. It would require a man to know considerable about it.

Q. Do you think the fishermen would make more money if they were allowed to can; they claim, of course, that if given a license and allowed to can on their own hook they would?—A. No, I don't think they would.

Q. Are there any co-operative canneries in our neighbourhood?—A. No, sir.

Q. What is the price paid for lobsters in your neighbourhood?—A. They pay \$2.85 a hundred.

Q. To those who furnish their own gear?—A. To those who furnish their own gear and \$1.40 where we furnish everything.

Q. How is that price arranged, who fixes it?—A. The canners fix that themselves.

Q. Are you aware of any complaints made by the fishermen that the price paid them by the canners is not satisfactory?—A. I never heard them find any fault. The fishermen are a class of people that if they don't get what they want they won't go. You cannot do with them as you like. They are about as independent a class as you find anywhere.

Q. Is it to your knowledge that any attempt has ever been made in this neighborhood to carry on the live lobster industry?—A. I don't think it has ever been done, nothing more than for the local market.

Q. Do you think there is any difference between the lobster caught here and the lobster on the Atlantic coast?—A. I don't know, I am sure; I never worked on the Atlantic coast.

Q. Do you think the live lobster trade should be encouraged?—A. I don't know, I have no idea about that at all.

Q. From your experience can you say whether the hatcheries have helped to maintain the supply of lobsters?—A. I believe they have. I believe the hatchery is a grand thing.

Q. Have you any proof to offer in support of your statement?—A. We know they hatch them out and put them out all right, millions of them. We often get little lobsters about that long (illustrating by a gesture) that would be about a year old. Men have hauled them in their traps, especially where there is a kelpy bottom. Of course they have to keep picking them out.

Q. Do you think the female lobster goes inshore to spawn?—A. No, we get them in deep water with as many spawn as in shoal water. That is as far as I know. I never was fishing lobsters on rocky bottom where the lobsters that spawn mostly go.

Q. What is the average length of time they hold spawn in the hatchery?—A. They generally take the spawn the first day they open, and it goes out anywhere between the 17th and the 30th of June.

Q. Is there any fishing out of season done in your neighbourhood?—A. I don't think there are an lobsters caught at all. There is no packing done anywhere so far as I know.

Q. Have you any opinion about the matter of fishing in bays and lagoons?—A. I don't know anything about it.

Q. Have you any suggestions to make?—A. No suggestions to make at all. I tried to tell you the truth, all I know about the matter. If it is not all true I tried to shape as close to it as I could.

Q. Do you think we might prevent the catch of small lobsters by regulating the mesh?—A. No, sir, I don't think that would have the effect because the lobster never attempts to get out of the mesh, it is out of the side. In the parlour trap he cannot get out, he has to stay there.

SESSIONAL PAPER No. 22a

Q. How would you go to work if you wanted to preserve the small lobster; is there any kind or any arrangement of trap that would prevent the catching of small lobsters?—A. I suppose the old two ender is the only size there is. I hired a man who did not have any of these parlour traps this year. This is the first time he ever tried them. We made 130 for our nine boats. One man would not make them, he made the old fashioned trap. All the lobsters he caught was 9 but he did not have any small ones. The other fishermen made 30, 25, and some only 15. They would not have anything to do with the trap again under any condition, they kept catching small lobsters and throwing them out. This same fisherman had not one small lobster. The others want anything they can sell.

Q. Do you think the fishermen as a class are realizing the necessity of saving the berried lobsters and the small ones?—A. I don't know, I am sure. At our place—that is all I can speak for—they bring in all the spawn and we give it to the hatchery.

Q. Are they disposed to save the small lobsters?—A. Yes, they know the small lobsters are no good to can. I have picked out as many as 30 or 40 out of a barrow holding anywhere from 210 to 235. We have some fishermen that will pick out small lobsters and throw them overboard themselves. We have one old fisherman who has been fishing for 28 years. He is very particular about anything like that.

Witness discharged.

A. L. WHITMAN, packer, Ballantyne's Cove, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. About 20 years.

Q. Did you ever fish lobsters?—A. Just a few when I was a boy.

Q. Are you running your own cannery?—A. No.

Q. Whose cannery?—A. Burnham & Morrill's.

Q. Where is that cannery situated?—A. Ballantyne's Cove.

Q. What number of boats do you employ at the cannery?—A. 26.

Q. Are they all your own?—A. No, the fishermen are all natives fishing their own gear.

Q. How many hands do you employ in the cannery?—A. The biggest time we employ about 30 hands.

Q. What was your pack this year?—A. 533 cases.

Q. And last year?—A. 526 cases. The year before seven hundred and something, as near as I can remember.

Q. What was your best pack?—A. 701 cases, I think.

Q. How long have you employed this number of boats?—A. Ever since I have been there.

Q. Are you fishing the same amount of gear?—A. Yes, the same amount of gear.

Q. You have not increased it?—A. We have not increased the gear.

Q. What is the average number of traps?—A. They average about 150 traps to a boat.

Q. Are they single handed boats?—A. Most of them have a boy. There are fathers who take their son or brother with them.

Q. Who are the fishermen?—A. All natives of the place.

Q. Are they regular fishermen who fish all the year around?—A. No, they fish and farm.

Q. In what depth of water do they fish?—A. They fish in anywhere from 4 to 10 fathoms.

Q. How far off shore do they go; do they go into St. George's Bay?—A. Into St. George's Bay and at the end of the Cape. They don't have to go over half a mile straight, or three-quarters.

9-10 EDWARD VII., A. 1910

Q. To get into deep water?—A. No.

Q. Do they fish in the same depth of water all the season or do they move in?—

A. Some of them move in. Where they start in the spring they generally run on and off. They start in four and a half fathoms of water and they have not to go very far before they reach 8 or 9.

Q. They run off shore, not parallel with it?—A. Not parallel.

Q. What is the best time of fishing in your neighbourhood?—A. Well, along from about the 10th to the last of May.

Q. Do you notice much difference between the run of the fish you get at the beginning of the fishery and those you take at the end of the season?—A. No, they run along about the same average size.

Q. You are beyond the range of the hatchery there are you?—A. Yes.

Q. What proportion of the fish would you say is below the legal size limit of 8 inches?—A. There is quite a number.

Q. Where they measured this year?—A. Yes, and the measurements were sent in to Mr. Hockin. I just forget now but I know there was quite a percentage.

Q. And as to the berried lobster what is your practice?—A. I will tell you what we have been doing the last four years there. Our inspector, has enforced the law. He has told us that we are not to take spawn lobsters and we don't wish to, and the fishermen have come to the same idea themselves. Therefore we find very little trouble with the spawn lobster. As for other years, there is no spawning ground and the lobsters don't appear to spawn. We find very few spawn lobsters, I think. The first week we start in May, we see no spawn.

Q. And the practice of washing the eggs off the spawn lobster has not been followed by the fishermen down your way?—A. No, it has not. They throw them away, we will not take them.

Q. Do you think the fishermen are beginning to realize the advantage of doing that?—A. Yes, they are beginning.

Q. Do you think it would be a serious matter generally for the fishermen to do that; the percentage is not so large all the season through, it comes in runs of course, could it be done?—A. I think it could be done if there was a law compelling them to do it.

Q. The law is there now, but it is not enforced?—A. Not enforced.

Q. Have the regulations ever been enforced?—A. To a certain extent they have there. The inspector comes around and makes us throw away the small lobsters and the spawn lobsters. We had to do it on account of his coming around at first. We stuck up a notice in the factory.

Q. Has anybody ever been fined for violating the regulations?—A. No.

Q. What is the smallest size at which you have ever known a female lobster to carry eggs?—A. Well, I could not answer because I have never measured them, in fact I bother very little with the berried lobster.

Q. Do you think there is any part of the season when lobsters are not fit for food?—A. Yes, I believe at this time of the season they are not fit by reason of shelling.

Q. How would it affect you if the regulation as to size limit were strictly enforced?—A. It would affect us in this way: It would be of no use to open the shop at all.

Q. If you refused to accept undersized lobsters from the fishermen what would happen to them?—A. I don't know what would happen to them, the government would have to feed them.

Q. They would have to give up?—A. Yes.

Q. Do you think that regulation has ever been strictly enforced within your recollection?—A. Not to my knowledge, it has never been strictly enforced.

Q. What would you think of the proposition requiring the canner to pay an increased fee, instead of 2 cents a case as at present, and in that way realizing a fund

SESSIONAL PAPER No. 22a

for the purchase of the seed lobsters from the fishermen?—A. What would be the idea of that?

Q. With the object of returning the berried lobsters to the water or putting them in pounds.—A. There is no chance of pounds there.

Q. Well returning them to the water?—A. You would be paying for the same lobsters probably a hundred times in the season.

Q. What is the fishing season with you?—A. From the 20th April to the 10th July.

Q. When do you generally get your gear out?—A. Anywhere along from the 5th to the 10th of May.

Q. Are you much bothered with ice in your neighbourhood?—A. Very much.

Q. What is the percentage of loss one year with the other with gear?—A. Our percentage of loss down there at Cape George is quite a lot. This year we have lost nearly half our gear by storms, and more springs with ice. We always lose anywhere from 1,000 to 1,500 traps. I am safe in saying that.

Q. Every season?—A. Every season.

Q. How many traps are you supposed to put out altogether?—A. We fish twenty-six boats there and we make an average of 150 traps.

Q. The fishermen fish their own gear?—A. They fish their own gear.

Q. How do the lobsters run in your case, what number of lobsters will it take to fill a pound tin?—A. From four and three-quarters to five.

Q. What style of trap are you fishing?—A. We fish the old two end trap altogether.

Q. How is it they never adopted the wheeler or parlour trap in your neighbourhood?—A. They were never introduced and they are a very expensive trap to make.

Q. What is the difference in price?—A. That I could not tell you because I never made any.

Mr. ATKINSON.—About 40 cents. We put the parlour trap at \$1.

The COMMISSIONER.—And the other at 60 cents?

The WITNESS.—To those having out their own gear they come a kind of expensive.

By the Commissioner:

Q. What space is left between the slats of the traps fished in your locality?—A. I guess about an inch. It is just about the thickness of the pole of a hatchet. That is the gauge.

Q. They have always allowed the same limit?—A. Always.

Q. It was never any larger in the beginning?—A. No.

Q. Do you think it is in the interest of the lobster fishery that lobsters should be taken before they have reached the age of maturity, or the age at which reproduction takes place?—A. Well, I don't know that it is anything to the interest of it. That is as to the size you mean?

Q. Yes, do you think it is in the interest of the fishery that the practice of taking undersized lobsters should be allowed?—A. Well, as far as anything under seven inches, as a rule I don't think they are very often taken.

Q. Do you think if they are taken, it is right to do so?—A. I don't think it is, because it is of no advantage to the man that takes them and no advantage to the packer.

Q. But is it not ruinous to the fishery?—A. I don't see why it would not be.

Q. If you kill off the young in any flock how are you going to get any adults?—A. That is true.

Q. Have you any knowledge of the matter of hatcheries?—A. No.

Q. Would you advocate an increase in the number of hatcheries?—A. Well, I think the hatcheries are all right enough. The one out here at Bay View seems to give good satisfaction.

9-10 EDWARD VII., A. 1910

Q. Is it the case that canners are compelled to accept undersized and berried lobsters for fear of losing their fishermen?—A. It might be so in some places.

Q. If you were strict would you not be afraid that your fishermen would go to some one else?—A. I would not be afraid because I have never known them to kick about it.

Q. Are you so well situated that the fishermen could not go to other people?—A. Yes, but other people won't take them either.

Q. What do you think about fishermen taking out a license to pack?—A. In some places it is all right. You take a place like Ballantyne's Cove where the fishermen all belong there and are natives of the place—where we don't have to import fishermen—it would be all right in a locality like that for fishermen to take out a license. That would be the way to stop taking spawn lobsters. In other places where they have to import fishermen I don't see how it would work at all. I think that in the case of berried lobsters there ought to be some restriction placed on the fishermen as well as on the packer.

Q. You think it is more easy for the fishermen to cull the berried lobsters out when taking fish from the trap than it is for the canner to inspect them at the factory?—A. Certainly it is.

Q. Are the berried lobsters in such a condition when they reach the cannery that they would not live if put back in the water?—A. They would live all right.

Q. They are lively enough?—A. Yes, but there should be restrictions laid on the fishermen, say a fine of some kind.

Q. The law provides that?—A. If that were done it would be more benefit because a man could say: 'You will pay a fine for bringing in these lobsters.' When there is no restriction the fishermen do not care so long as they can get them out of the way and get them away.

Q. What do you think of these various propositions that have been made to improve the fishery and bring about a change; for example that of closing down altogether for a term?—A. I don't think that would help it any. It would be more ruinous than to keep on.

Q. What about the proposition to close down by sections?—A. I don't see that would be any better.

Q. Another proposition is to do away with the size limit, and if possible so regulate the traps as to allow a fair proportion of small lobsters to escape, and somewhat shorten the season?—A. The fishermen down there want the ten days taken off April.

Q. They want to fish beginning the 1st of May?—A. That is what they want down there and they are agitating all the time because it is no good to them.

Q. What do you think of the matter of licensing canneries; are the present regulations restricting the number of licenses satisfactory?—A. I think so.

Q. Do you think there is any good reason why any man who shows his competency to can should not be given a license?—A. I cannot see where there is any chance for a man who wants to pack lobsters—where there can be anything in it for him or the fishermen to start a new industry.

Q. What do you think about insisting upon the cannery being up to a certain standard of fitness?—A. I think it is a good idea. Burnham & Morrill have their canneries up to standard as closely as possible to what is called for. They have the tables covered with zinc and they use wooden racks to keep the meat off so as to prevent any smell. They have all block tins to put the meat in so that it won't turn, and keep everything up to date with that object in view, and they have their shops according to the best standard of lobster canning. For the rest of them I don't know.

Q. Now, here is a question that you have practically answered already: Could not the fishermen make more money if they were allowed to can?—A. I think they are making more now than the packers at the present time.

Q. What do you think of the policy of encouraging fishermen to co-operate in the canning?—A. I don't think it is a good idea.

SESSIONAL PAPER No. 22a

Q. You have no co-operative canneries down your way?—A. We have not any. I know how they co-operate.

Q. Is it to your knowledge that the fishermen complain they are not getting a sufficient price for the lobsters?—A. It has always been the case since I have been in the business. They have always growled that they were not getting enough.

Q. Is there a fishermen's union in your locality?—A. Yes.

Q. How do you establish the price in your case?—A. We paid last year \$3 and \$3.50. This year \$2.25.

Q. Did that satisfy the union?—A. That satisfied them. They all went to work and fished, and they were better satisfied this year than when they were getting \$3.50 or \$3. They humbugged in the spring and they lost a good part of the time. Then we had to close up, and then, after the closing up they asked to have the shutters taken off and went to work and fished. They saw where they were misled. They realized that.

Q. Is there any chance of making a pound in your neighbourhood?—A. No chance of getting a car even.

Q. Is there any fishing done after the close of the season?—Not to my knowledge.

Q. Is there much gear abandoned in the water?—A. Not that I know of, not by the owners themselves. They bring everything ashore.

Q. What do you think about the method of stamping the cases; does it fill the bill?—A. It does not do any harm. If there is a case of lobsters to be shipped out of a factory to its destination, I don't see why it could not be done just as well without a stamp.

Q. Is there any statement you would like to make?—A. There is only one thing, and that is about the question of spawn. Where there are no hatcheries we don't take the spawn. There ought to be some restriction on the fishermen even if they have to be fined. I think a fisherman that finds his gear would have 500 or 600, or it may be 1,000 pounds of lobsters in his boat to come to the factory. Well, you have a man or two at the wharf. I will have men picking them over to see if there are any spawn or undersized lobsters.

Q. You think the culling of lobsters should be done in the boats, and the spawn lobsters should be put overboard where they belong?

Mr. CORBIN.—The practice is to give the fisherman a box so as to put the berried lobsters to one side and save the difficulty and bother of culling them when they come in, and those lobsters are weighed separately.

Mr. ATKINS.—I do the same thing.

Mr. CORBIN.—It saves a lot of bother.

The WITNESS.—I gave the fishermen a crate down there but they did not want to take it. However, they have come to give more attention, especially this last few years, and to liberate these lobsters. I don't think there is a man that has washed the spawn off, for I could not say how long. They see it is not to their interest to do so.

By the Commissioner:

Q. On what kind of bottom are you fishing?—A. A mixed bottom, rocky bottom, and broken mud and hard bottom. Off at the point of the Cape it is all a hard ridge along there. We got some very good lobsters this spring around that point.

Q. Have you taken large lobsters lately?—A. The lobsters there this spring were large until the storm came.

Q. What is the largest lobster you have seen down there?—A. I have seen a 12-pound lobster at Ballantyne's Cove, and a lobster 15½ pounds at Morristown, ten miles above Ballantyne's Cove, which was accidentally caught by the claw in the laths.

9-10 EDWARD VII., A. 1910

Q. What is the diameter of the hoop in the trap?—A. Four and a half inches, I think it is.

Mr. CORBIN.—We had a lobster of $9\frac{1}{4}$ pounds that was taken up to Ottawa by Mr. Cunningham, and we had another $12\frac{1}{2}$ pounds, I think it was.

Mr. ATKINS.—Two years ago we had a lobster of $12\frac{3}{4}$ pounds which was caught in the hoop. It was the broadest lobster I ever saw. It was three feet in length and three feet from claw to claw. Next day they caught his partner. He weighed $11\frac{1}{2}$ pounds.

Witness discharged.

Mr. GEORGE W. ATKINS, recalled.—With regard to my loss from traps, I would say that my loss at Little harbour was 900 traps and a new boat. The other boats were smashed considerably. I think my loss at Little harbour amounted to \$800. There was a storm on the 24th of May, and another storm on July 8th.

Witness discharged.

WILLIAM MCCLURE, shipowner, Pictou, called and sworn:—

By the Commissioner:

Q. How many years experience have you had in lobster packing?—A. Twenty-five years.

Q. You went out of the business how long ago?—A. Two years ago.

Q. How many canneries did you run when in the business?—A. I formerly started in Prince Edward Island and moved to Pictou Island where I began with one small shop, and finally I bought out the Pictou Island packers, one after the other, until I got control of the whole place. There were seven factories all told. I condensed the business and reduced it to two factories, one at the east end and one at the west end. I thought I was getting control of the business in that way by getting all the rest of them out. Then Logan of Caribou went over and built a place alongside our factory. At first he could not get a license but eventually he squeezed one out. I got disgusted. After it got on that way it became a matter of whether I would not increase the quantity of traps. Where you had opposition the man who had the most traps got the most fishing.

Q. What was the extent of your pack?—A. The last year that I was in the business we packed about 3,000 cases on Pictou Island, the year previous about 3,500 cases.

Q. When did you begin to pack?—A. In 1884, I think.

Q. What was the state of the fishery then?—A. When we went there first it was simply a matter of trying to put them up. We had a factory on the High Bank shore and there never was any fish there, it is bold water. We had a few at first and then it gave out. Then we moved to Pictou Island where we started a small factory. The trouble was to put up the fish at that time.

Q. There was no bother catching them?—A. No.

Q. My idea in asking the question was to try and compare the condition of affairs then with the condition of affairs now, as far as the fishing is concerned.—A. There was no comparison at all, that is you really can hardly figure it out. At that time it took about a lobster and a half to two lobsters to a can. To-day I don't know what it takes, the fish are very much smaller. A thousand lobsters at that time, and they were all taken by count then, was a very much different matter from what they are to-day. Had the regulations been carried out right at the start and the number of factories limited in some way, the law could have been enforced. As it stands to-day

SESSIONAL PAPER No. 22a

if the law were enforced strictly as to size limit it would shut every one out. At that time I advocated the only thing I saw possible for the preservation of the lobster and that was to shorten the season. My idea then was to shorten it to the 1st of July, I was satisfied to shorten the season right down. I was the only one though at that time and Professor Prince—the way we arranged it we called a meeting. I presented a typewritten statement. It was asked how would it do to close down for three years. I said to Professor Prince that it was all right, that it would save the fish. He said it would clean the market up and fish would be larger. I replied yes, but it would cost a lot to indemnify the packers. I do not believe it is possible now to carry out the law as regards size limit; in fact I know it is not. The only thing possible that I can see is to shorten the season.

Q. Do you think it is not possible to insist upon a certain type of trap with a certain space between the slats and the mesh, so that at least a proportion of the small lobsters would escape?—A. That is an endless job to do. It was done one year some years ago, the laths had to be so far apart and the bows all marked. The trouble was the fishermen would take out laths in their boats and close the traps up when they got out to the ground. The boats carry laths and they would fix up the gear and you would never know where you are at. That is the trouble I see; of course it would be a protection.

Q. We find the laths of the modern parlour trap only half an inch apart and the trap holds anything that comes in.—A. It takes the whole thing. When we started first we would not get lobsters at all in the traps that were used. We had a trap with a bow four feet long and a great big mesh and you could only take a dozen on a boat. We never had any small lobsters at all. Then we commenced reducing the space between the laths and the mesh finally, and the parlour trap was the finish.

Q. There are some men who fish both kinds of traps and they tell us they get a very much larger run of lobsters in the old fashioned trap?—A. Undoubtedly.

Q. But the merit of the parlour trap is that they get the lobsters on Monday, if they do not go near it for a day or two; the lobsters are still there?—A. That is correct too, there is no doubt about that. That is the benefit of the parlour trap.

Q. That was the object of it?—A. Undoubtedly.

Q. They are making the trap more complicated every day?—A. All the time we are getting more of these parlour traps. My candid opinion about the thing is I would not have sold it out if I thought the business would continue because I had it right down as fine as I could get it. There are a good many people packing lobsters down about the Magdalen Islands. It is a pity to see that where people could be making money they lose it all by not putting up good goods.

Q. What do you think of the present system of licensing canneries? At present the issuance of licenses is limited to co-operative associations, that is where a group of fishermen who are not satisfied with their treatment by the canner co-operate together and go in for canning themselves and are granted a license by the department?—A. That is a pretty hard thing to fight against because in some cases where there is a combination—Mr. Venning when he was down, and I got control of Pictou Island, came right at me with that. He said: 'The government is against any one controlling a certain situation as you want to do there.' I said: 'You are on a mission to the Magdalen islands. Go down to Pictou island and take the evidence of our own men and if they can get any more money and are not satisfied cut me out in some way.' The hatchery I saw was the only way that would really save the spawn, and when it started I insisted upon my fishermen saving the spawn lobster. It took a year to get them to do that. Without hatcheries there would be no spawn. So there are so many different things to be considered. In the matter of limiting the number of licenses, new licenses are practically ruled out except in the case of co-operative associations.

Q. We have heard of instances where men went about and got the fishermen to come together and obtain a new license?—A. Yes, and got it in that way.

9-10 EDWARD VII., A. 1910

Q. Whereas there was nothing of the co-operative character about it at all?—A. Excepting the name, it was only a blind.

Q. It seems to me the thing requires to be governed in some way, it ought to be possible to insist upon a standard cannery.—A. That is as important as any part of it. I was in London for about a fortnight last winter and I went into the big wholesale houses where they handle the goods, and there were thousands of cases left unsold or selling as low as 40 shillings. And yet good goods were wanted and they could not get them. If you had No. 1 goods there was no trouble about getting a good price. Poor goods you couldn't sell at all. So there should be some way of getting over that. Of course the matter is pretty hard to fix. At first, in the inception of the industry the very moment I left my factories, even in charge of the best men I had, I found they would not take the care that was necessary. See them down at the Magdalens with the old sour boards in the factory; they have been there for ten years. Some fifteen years ago I had a complaint about smut. No one could account for it. I asked a gentleman in London to get a chemist and give me the cause of this smut. I was told it was because the lobsters had become heated and gone through a certain stage of decomposition, which might not be detected, and that the meat had gone through this stage before being put into the can. I could not understand that except we were packing as high as ten tons of lobsters a day and we could not put them up, and these lobsters were let lie in hot weather. After that I never let them lie over. The packers formerly left their fish like to-day to cool and packed them to-morrow. We always turned them right out of the boiler and directed the hose on them and cooled them off, and the quicker they were in the can the better.

Q. Were you the only one troubled with smut?—A. We never had any trouble with it.

Q. Apart from insisting upon the cannery being up to a certain standard do you think there is any advantage in requiring an inspection of the product?—A. The only thing is would that remedy the pack.

Q. The goods would be classified according to what they were?—A. It would need an expert to do it.

Q. The idea is that the inspection could be carried out by the existing staff of fishery officers?—A. It could not, it would need special men. It comes down to a scientific thing almost, the preserving of that food in such a way that it will keep and still not be discoloured or anything else. Of course there is one cause I think; it is the quality of the tin used. Now I have been using what they call double dipped charcoal tin the last two or three years I was in the industry, and paid a duty of, I think, two or three shillings a piece extra. We got a specially made tin through the brokers right direct from the tin works. I found it paid me to expend a little more for my tin. You see there is quite a difference in the quality. In selling if you have a poor quality of tin you have got to use other materials to compensate for it. Another thing, they use a coarser grade of solder. All this works against the business. This year I saw a lot of goods at Halifax, and among some, bad stuff that was smutted and all black and discoloured. I think a good deal of it is owing to dirty factories and sour tables. The chemists say that the lobster meat is like a sponge, it will absorb even the air, and anything like that deteriorates very quickly.

Q. Can you give me any idea of the proportion of berried lobsters to the hundred in your experience?—A. They are limited. I have seen us take in 10,000 or 15,000 lobsters, and some times there would be quite a few and at other times very few. Perhaps you would have half a dozen out of a barrowload and sometimes you would get a dozen. I really don't know what the proportion would be but it is surprisingly small.

Q. Yes, because you see one half the lobsters must be male, and of the females only a small percentage of them have the eggs extruded, so that naturally it would not be more than 25 per cent at the very outside?—A. It would not be that. The way we have got the thing to work, we arranged with our men in every boat to keep

SESSIONAL PAPER No. 22a

the spawn lobsters by themselves and we would sometimes have a quarter of a barrow-load or so.

Q. That is what makes me think it would be possible to induce the fisherman to return the berried lobsters to the water because the percentage of loss to him would not be serious.—A. It would be very small.

Q. Some people have suggested educating the fishermen in the importance of this matter?—A. It is awful hard to persuade the fishermen.

Q. They are apt to be careless?—A. It is only the present moment they are thinking of.

Q. Still in spite of that I believe there is a growing feeling among the fishermen and they are beginning to appreciate the importance of this matter?—A. If you once get them going, it is not a bit of trouble. We had to go to the bother, but we followed it up. I said: 'It is our bread and butter, and if the lobsters go everything goes.' After a time they would be as careful as possible, they got interested in it.

Q. Do you know anything about pounds?—A. I really do not know anything about them, but they should be all right.

Q. It seems to be the most perfect way of providing for the breeding lobsters?—A. It is, there is no doubt about it. There are only certain locations where you can secure suitable places.

Q. I suppose it is safe to say that the regulations governing the lobster fishery have never been strictly enforced?—A. They have never been strictly enforced.

Q. There was a time when an effort was made to enforce them?—A. I was in the business then and the inspector at Pictou island got strict orders in the matter. At that time the fish were really good and the regulations could have been enforced. Mr. Campbell came out and followed the regulations up good and hard. The first day he came out I asked him to have some dinner. He was one of those stiff old-fashioned Scotchman and he said: 'No, no dinner.' He stayed there quite a time and he made them put out all the small lobsters. I said to them: 'Put out the small ones and I will pay you for them.' The second day there was some more and the third day the fishermen all struck. At Caribou fishing on a sandy bottom and in shoaler water there was a smaller run of lobsters. The officers caught them on the cooler and fined the packer for them.

Q. Can it be laid down as a rule that late in the season in shoaler water you get a smaller run of fish?—A. I always found that the shoal water is where you get the small fish.

Q. When you first began fishing in the spring in deep water you got a better run of fish than you do later?—A. Yes.

Q. It is natural I suppose that you get the big fish first?—A. Undoubtedly you get the big fish first.

Q. I suppose there is no doubt the present condition of the fishery is due to overfishing?—A. That is what I would imagine. They are claiming that the fish are just as plentiful. Well, in numbers they may be.

Q. Do you think there is any reason for having a smaller size limit in one region than in another?—A. I don't think so.

Q. I suppose where the live lobster trade exists you can enforce a larger size limit?—A. That is a different matter altogether.

Q. There is no doubt that on the southern Atlantic coast the live lobster industry is the principal one?—A. Yes, undoubtedly.

Q. And there the handling of live lobsters should be encouraged even if the canning suffers?—A. Yes, the quantity they get hardly entitles them to fish any other way. The canning is only a secondary affair.

Q. I suppose a strict enforcement of the 8-inch size limit would put the cannery out of business?—A. It would put them out of business, there is no doubt about that.

Q. In regard to the opening date. Here they want to have the 1st of May as the opening time, but that is merely to protect their gear and to have a little more order

9-10 EDWARD VII., A. 1910

perhaps among the fishermen, is it not?—A. As a rule, you see they do not really get going before the 1st of May. There are many things that would act differently. In a good many cases the packers have their men come on here from the south shore. Those men are practically on pay and the canners have got to feed them anyhow. Provided the spring is late and the packers bring them on, those men would be round for two or three weeks. When I was in the business I did not board my men. I gave them so much a hundred and they found themselves so I did not care how soon the fishing came. There are many things like that which make a difference. If I had my men on the same lay as people who are boarding them and all that, it would be different altogether. One great thing, I have seen them darting around the ice and standing a chance of losing their gear. When the open season comes there are always men who will run great risks by putting out their gear. If you do that I will want to do it, and in that way it is a starting point. However, they should start sufficiently late to be clear of the ice.

Q. The season begins here 20th April?—A. We hardly ever did anything before the 1st of May and we have been as late as the 1st of June.

Q. The fact of getting out late at the opening of the fishery has no bearing on the protection of the industry?—A. No, the best fishing we ever made was beginning the 5th of June. They ran out to June, July and August. It was a September season. If you are a little later in starting, the lobsters hold out a little longer. I would think the season should begin the 1st of May and end on the 1st of July.

Q. And you think it will be wise, in view of the fact that it is proposed to do away with the size limit, to try and enact some regulation as regards the traps; how would it do to revert to the old fashioned trap altogether?—A. It is going to be quite a contract to figure that out. There is no doubt the parlour traps get the whole thing.

Q. Do you think the fishery has reached a low ebb as is the opinion of a great many people?—A. Not at all. This has been an off season. It has been terrible weather but in some places they have done just about as good as they did last year.

Q. The question is, would it be an unfair enactment to condemn the parlour trap?—A. There is no doubt it would be a big protection to get the parlour trap done away with. It is just a matter with this parlour trap of cleaning the ground up very much quicker. Where you have parlour traps you are going to get more fish. I have none; but eventually if the parlour trap is better I will get it. I have been talking with several who have used them: 'I have 500 parlour traps and if we did not have them we would not have done as well.' It is just a matter of catching everything that comes in.

Q. What do you think of the live lobster trade?—A. Delaney Bros. tried the live lobster trade at the Magdalens and sent up five cases. But they missed the express. They had not any arrangement to get the lobsters right through; in fact previous to this the boat never got here in time in the morning and the express did not take anything until the afternoon. I have tried it twice but a good many died. I don't think there would be any difficulty in carrying on the live lobster trade, provided they had a car to put them in when they arrived. In the lot I packed there were some dead ones, we picked them all over. There were none in extra good shape but there were only five out of some 200 and odd that were dead.

Q. Does not the lobster deteriorate when he is out of the water; if you boiled the lobster on the coast and shipped him refrigerated to market, would he not be in better condition?—A. That would be all right.

Q. Do you not think that in that way you would get a more perfect article?—A. You would undoubtedly. The live lobsters arriving here are in bad condition; you might as well put a lot of cattle in a car and starve them for three or four days. I have a brother living in New York, and they had some few traps there and they would get any price they liked for fish right out of the water. That is a different matter from our live lobster trade. Cold storage no doubt is the way to handle them.

Q. Would you give a license to pack to every fisherman that applied for it?—A. I would to certain men who would pack carefully.

SESSIONAL PAPER No. 22a

Q. Is the matter of prices a thing that regulates itself, or is there a combine among the packers to fix the price?—A. There is no combine. The fact is, as a general rule, it is a fight among the packers to see who can beat the other out. I have never known of any agreement as to prices. There was only one time I ever made any agreement, and afterwards I found that some of my best fishermen were gone. They were cute enough and able enough to take advantage of the situation.

Q. As to hatcheries, would you recommend an increase in their number?—A. Yes, I have great faith in the hatchery. There may be a lot of spawn destroyed, but there must surely be a big percentage that is saved.

Q. There should be somebody in charge who will take an active interest in the matter?—A. Undoubtedly. It is a thing that wants very close attention.

Q. The creation of an Advisory Board in connection with the administration of the lobster and other fisheries of the maritime provinces has been suggested; what would you think of the idea?—A. I think it should be placed in the hands of the people that are right in touch with the industry the whole time.

Q. Do you know if there is much fishing after the season in this neighbourhood?—A. Not very much.

Q. In some places there is a good deal of complaint about the enormous amount of gear that is abandoned in the water; do you think that has had an evil effect?—A. I don't see that it has, any more than the loss to the man that owned it.

Q. Those traps must break up and disappear?—A. Yes, I don't think that would have much effect.

Q. Has the system of stamping and labelling the cases proved to be the restriction it was intended to be?—A. Well, if it is strictly carried out there is no doubt it would. I know some time ago the officers were not so strict in putting the labels on, but now they won't give the labels.

Q. At one time they used to leave the packets lying around in all directions?—A. Yes.

Q. In spite of all their strictness, it is claimed in some places that a lot of lobsters caught out of season have been labelled and that there is much fraud in connection with it?—A. There is a certain little amount, but I think it would not amount to much.

Q. Do you know anything about fishing in bays and lagoons. They have prohibited fishing in lagoons at the Magdalen islands because those places are breeding grounds for the lobsters?—A. I have heard a good deal of talk at the Magdalens. Some were in favour of that and some were not. There is no doubt the spawn lobsters get in places like that and probably that is about where they breed.

Q. No doubt the fact of the fishery being in a good state in the Magdalen islands is due to the fact that the lobsters have those lagoons in which to find a retreat?—A. The lobsters are large in the Magdalen islands from what they are on this coast. From London, on one occasion, I had a letter asking if we could get No. 1 goods with good large meat because they had so much of the small stuff. At Pictou island, when we started first, it took just a lobster and a half to a pound. We could not get the claws and tails into smaller tins than pound flats. But they say that there is relatively more meat in small than in large lobsters, that if, you buy a hundredweight of large lobsters and the same quantity of small lobsters, you will get more meat from the latter in proportion. But I would not prefer to have the smaller lobster because you have not got the goods when canned. Larger fish are the profitable goods to buy. When we were in it at first we did not bother picking the arms. We were paying 50 cents by count and getting \$4 to \$5 a case, and a few hundred pounds of lobsters at 50 cents by count per hundred did not amount to anything. The meat of the lobsters was large and easily washed and handled. At Murray harbour, twenty years ago, we used to gaff the lobsters off the rocks in two or three feet of water. You do not see those lobsters to-day, they are no doubt

9-10 EDWARD VII., A. 1910

caught up outside. At Murray harbour, off Fisherman's Bank, eight or nine miles off, there must certainly be a great breeding ground. They have taken an immense quantity there, and the boats are always going outside a little farther. Where there is a straight shore line and a bold coast they cannot do that. One man built a factory, put out 1,200 traps and put up 2,000 cases about 27 or 28 years ago. They were in a general business and this was a side show. The next year they put 3,000 traps out and all they caught was 200 lobsters.

Witness discharged.

Committee adjourned.

PORT HOOD, August 10, 1909.

A. J. MACDONALD, Packer, Seaside, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. It is 22 years I think since I first started. I have been idle for two years during that time.

Q. But you started up again?—A. Yes.

Q. Are you interested in more than one cannery?—A. One only.

Q. What number of boats do you fish?—A. Very few boats this year. I only started in the 1st of June this year. The union organized here and I did not know that I would be able to get any lobsters at all. After a while things got settled down.

Q. What would be your average number of boats when you are in full blast?—A. 25 boats.

Q. Do you use your own boats and gear or do the fishermen own them?—A. The fishermen own the boats and gear now.

Q. What arrangement had you with the fishermen, were they paid by the hundred weight?—A. Yes.

Q. What price did you pay them this year?—A. \$2.50. Last year \$3.75, and the year before that I think it was \$3.50.

Q. What number of hands do you employ in the cannery, men and women?—A. Well I did employ at one time about 20 girls and 15 men. Now I don't employ quite so many.

Q. What was your pack this year; you only began on June 1?—A. 61 cases.

Q. Last year what did you pack?—A. I don't remember exactly, something over 100 cases.

Q. What is the largest pack you ever made?—A. It would be 1,200 cases.

Q. When was that?—A. About 15 years ago, I don't recollect exactly.

Q. Do you find much difference between the lobsters now and those you used to get when you made that pack 15 years ago?—A. Well they might be a little smaller. I don't see that there is very much difference in the last few years. Before then, up to 15 years ago, I think they were a little larger than they are now.

Q. That is the general experience, they have run down?—A. Yes.

Q. As a rule when do you begin fishing here?—A. Generally about the 1st of May, as soon as the ice goes out.

Q. Is the ice late in leaving you sometimes?—A. Sometimes it is. It is not very often that it stays past the first week in May I think.

Q. When is the best time of the fishing here with you; you fish from the 20th April to the 10th July?—A. The best time of the fishing is generally a week after

SESSIONAL PAPER No. 22a

they start in, or two weeks. About two weeks after they start in they generally got good fishing.

Q. Do they fish in very deep water?—A. Not all of them.

Q. What would be the average depth of water?—A. From one fathom to 15 fathoms.

Q. Where is the bulk of your fishing done, in St. George's bay?—A. Yes, out here. It is all done here.

Q. Do the fishermen remain fishing on the same ground all through the season, or do they come into shoaler water as the season advances?—A. Yes, they come into shoaler water.

Q. Do you find much difference between the run of fish you get in deep water and those caught in shoal water?—A. I don't think we do, not very much.

Q. Are you pretty careful about not accepting berried lobsters?—A. We have been lately. The fishery officer here won't allow us to move unless we look out.

Q. What do you find the average percentage of berried lobsters to be, how many out of a hundred?—A. I could not say, but they are very scarce this year because I advised the fishermen not to take them in.

Q. Are the fishermen in this neighbourhood, do you think, learning to throw them overboard?—A. Yes, they have, because we told them we would not take them. We go over them here. Mr. MacLean told us to be careful or else we would have to stand a fine and we were careful.

Q. Do you know whether the fishermen here have learnt the practice of washing off the eggs from the berried lobsters outside?—A. I could not say whether they have or not. I never saw them at it although I heard there is a way of doing it.

Q. You have been refusing to accept berried lobsters and the fishermen are careful not to bring them in?—A. Certainly, and I have been advising them not to take them right along.

Q. And the same with the very small lobsters?—A. Oh, yes.

Q. What trap do you use here?—A. I don't know what it is called.

Q. The old fashioned double ender?—A. Yes.

Q. Have you any idea of the space the fishermen allow between the slats?—A. I suppose about an inch and a half probably.

Q. That is a very wide space?—A. It may not be, no it is not that much. I think an inch is handier.

Q. We would like to know your views as to the best regulations to enforce. Many propositions have been submitted, including one to close down altogether for a term of years. Here, owing to the fact that you have observed the law, you do not feel the decrease of the fishery as much as they do in some places, I expect?—A. I do not suppose so.

Q. Well it has been proposed by some people to close down altogether for a term of years?—A. I would not approve of it.

Q. Then again the Lobster Commission of 1898 recommended closing down by sections, shutting down for a couple of years in one place and continuing to fish in another, and changing those sections from time to time; what would you think of that?—A. I would think if we go along as we are doing now and save our berried lobsters and look out for the small lobsters, we will not get any less lobsters for years to come than we are getting at present.

Q. The size limit regulation is very difficult to enforce?—A. Yes.

Q. It has been proposed to do away with the size limit, which of course is 8 inches, provide for the care of the berried lobsters—where it is possible to establish hatcheries or pounds—regulate the space between the slats of the trap so that any unfairly small lobsters may escape, and to some extent shorten the season, say to the 1st of July?—A. I think that would suit here all right. We only fish up to the 1st of July.

9-10 EDWARD VII., A. 1910

Q. Of course if you are fishing the double ender trap you are not using one that's very destructive?—A. No.

Q. But in many places they are fishing a new trap which allows nothing to escape.—A. Our trap cannot be very destructive I do not think, because our fishermen find, when they leave their traps two or three days without being hauled and with no bait in them, the lobsters will go out.

Q. The proposition just mentioned would not be too severe you think?—A. No, sir.

Q. How would it affect you to enforce the present size limit of 8-inches?—A. I would not like to see it enforced I don't think. The main thing is to look after the berried lobster.

Q. And not have too long a season and look after the close of it?—A. Yes.

Q. And protect as far as possible the small lobster?—A. The very small lobster, because there is nothing in it for the packer or for the fisherman.

Q. Now as to the present method of issuing licenses; do you think the department are wise in restricting the number of licenses as they have been doing; are there licenses enough?—A. I think there are fully enough, that is my opinion.

Q. As to the matter of co-operative licenses what do you think of the department's policy? At present where fishermen are dissatisfied with the conditions and a number of them will unite together and demonstrate that they can carry on packing, the department will issue a canning license to them. You have one here I believe?—A. Yes, sir.

Q. What do you think of that policy?—A. I daresay it is good to have a license if they can better themselves any.

Q. Of course, the fishermen complain it is unfair that a license should be granted to one man and not to another?—A. That is true.

Q. The fishermen complain, moreover, that there is a combination on the part of the canners to keep the price down; do you believe any such combination exists?—A. I don't know that it does, I don't believe there is any such combination existing. I am not sure, there may be something like that amongst them, but I never heard it.

Q. Do you believe the price the fishermen are getting is a fair one considering the state of the market?—A. I believe so.

Q. When the market warranted it the fishermen got more?—A. They got more than the market warranted sometimes.

Q. It has been suggested by some people that another way of getting the fishermen to observe the law would be to license them; do you think there would be anything gained by that?—A. Licensing the fishermen?

Q. Yes. The theory of those who advocate the proposition is that if the fishermen take out a license they will observe the law better?—A. That would stop them altogether.

Q. You think it would be more apt to stop them altogether? In a great many places, I need not tell you, the berried lobsters go into the pot, with the berries on or brushed off; in the majority of places there is no distinction made, the law is not observed?—A. There is no question about it.

Q. Would the fishermen, in your opinion, make more money if they were allowed to can for themselves?—A. Well, I don't know. It is possible they might have made a little more money down here this spring if they had packed for themselves.

Q. But as a general rule what do you think?—A. As a general rule I don't think so, I don't think they would.

Q. Do you think it would be wise or right to establish a standard of fitness for canneries, to insist that the cannery should be up to a certain standard of fitness, that the tables should be made in a certain way, and covered with a certain material—in a word that precautions should be taken for preserving and protecting the product so that it shall be as clean and as nice as possible?—A. Canned lobsters have got to be kept clean now or you cannot sell them. I don't see why any table, even if made of

SESSIONAL PAPER No. 22a

wood, cannot be kept clean if you use water enough—on a wooden table covered with zinc or galvanized iron.

Q. In some places they are using plate glass now?—A. I suppose so, but that is not a bit better. You can clean tables thoroughly that are covered with galvanized iron or material of that kind. You must have them thoroughly clean of course.

Q. There are complaints that the market is being injured by carelessness in that respect?—A. I have no doubt, because people do not use water enough. You have to use plenty of water.

Q. Are you aware of any complaints made by fishermen that the price paid by the canner is not satisfactory?—A. They have been complaining some this spring.

Q. You had trouble with them this spring?—A. I did not have much trouble, because I was going to go out of it altogether rather than have any trouble. The fishermen were complaining a little but of course they all came into it at last. I believe that at last they considered they were getting all it was worth.

Q. Is there any facility here for carrying on the live lobster industry; have live lobsters been shipped from here to the market?—A. Not from here. I am not sure whether they tried it from the island or not.

Q. From your experience can you tell me anything about hatcheries; do you think they have helped to maintain the supply of lobsters?—A. That is my belief, but I know nothing of it.

By Mr. MacLean, Fishery Officer:

Q. Do you think if the fishermen were licensed, the law could be practically carried out here?—A. I don't believe it could.

Q. They fish in all sorts of ways and times?—A. Yes, and drop it when they please.

By the Commissioner:

Q. What kind of trap do you think is best adopted for letting the small lobsters escape?—A. I think the present one suits us and is just as well calculated to preserve the industry. It proves that it is, because the fish go out of the traps when there is no bait in them; there is a chance for the lobsters to get away.

Q. The appointment of a fisheries board to advise the department in connection with fishery matters in the maritime provinces has been recommended; what would you think of such an idea?—A. I daresay it would be a very good thing.

Q. Is there any packing out of season done here?—A. Not that I know of.

Q. Is there much gear abandoned in the water; we have heard complaints that the fishermen leave a lot of gear in the water when they knock off?—A. There is not much of that done here.

Q. Where they are using their own gear they are more careful than where the gear belongs to the canner?—A. I have no doubt they are not very careful, but there is not much of that done here.

Q. Is there any statement you would like to make of your own accord; I understand your opinion to be to leave the opening season very much where it is?—A. I think so.

Q. Is there any feeling in favour of a change?—A. Do you mean if there is any anxiety to have fishing done in September?

Q. We have not asked you anything about fall fishing; what do you think about opening up operations again in the fall?—A. Some of the fishermen tell me they would rather close up earlier if they can.

Q. What do you mean by that?—A. If they closed up at the 1st of July and opened up in the month of September. Some of the fishermen have been talking of that, not very many. They say they see lobsters about September.

9-10 EDWARD VII., A. 1910

By Mr. MacLean:

Q. You remember about 25 years ago the season extended to the last of August and sometimes there was an extension to the 10th of September?—A. I think sometimes they fished right through, even when the time limit came to be law. I have an idea it was not very profitable.

Q. Owing to stormy weather and the fishermen prosecuting other branches of the fishery?—A. It might not be so profitable then.

By the Commissioner:

Q. It is not every place where you could fish in the fall; where you are exposed to westerly winds, you are out of it?—A. It is not very easy to carry on fishing under these circumstances.

Q. And the experience of canners is that the fish are not in as good a condition as in the early summer?—A. Of course this has only been a matter of some talk.

Witness discharged.

Commission adjourned.

PORT HOOD ISLAND, August 11, 1909.

A. W. MORRISON, fisherman, Port Hood Island, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. Twenty years.

Q. When you are not fishing lobsters do you carry on any other fishing?—A. Oh, yes.

Q. Do you carry on your fishing away off Port Hood Island?—A. I do my lobster fishing in St. George's bay.

Q. Have you always carried on fishing at this place?—A. Yes.

Q. Is there any station of the Fishermen's Union in this locality?—A. Yes, sir.

Q. Are you a member of that union?—A. Yes, sir.

Q. Has the union ever met or organized in connection with this inquiry; I suppose they knew this inquiry was to be held?—A. I don't suppose they did.

Q. Printed notices were sent to the member for the constituency and to the postmaster?—A. We never heard of it.

Q. Can you speak for the union?—A. Yes, I think so.

Q. Are there many other men engaged in lobster fishing in this neighbourhood?—A. Yes, sir.

Q. What is the total number so engaged; how many members of the union are there?—A. Eighty now. That includes Judique. There are about 100 lobster fishermen.

Q. For what factory do you fish?—A. Burnham & Morrill.

Q. How many boats do they employ?—A. About 40.

Q. Do they own the boats and gear?—A. No, sir, they are all owned by the fishermen.

Q. How far off shore do they fish and in what depth of water?—A. The farthest off in from 12 to 18 fathoms. There are a few fishermen in 18 fathoms, but that is not very far off. That would be half a mile off, I think. We don't fish that far off.

Q. Do they fish throughout the season in the same depth of water?—A. Not if they possibly can help it.

SESSIONAL PAPER No. 22a

Q. Is it their practice to move inshore as the season advances?—A. Yes, sir.

Q. As to your catch, is it decreasing or otherwise; what is the difference in the quality of the fish to-day compared with when you first began?—A. I don't think we ever get as good lobsters—well for the last 9 years I have the catches and have taken particular notice from year to year, and I don't think we ever got as large lobsters as we did this year.

Q. What has been your practice here with regard to berried and undersized lobsters?—A. Well we have not been very particular until this year. We would rather not take berried lobsters, but we were never very particular until this year. The union talked the matter over this year and we thought we would draw the line as far as the berried lobsters were concerned. Moreover the canners did not want them. They came to the conclusion I suppose that they did not help the pocket.

Q. You think the berried lobster regulation was pretty thoroughly followed out?—A. I think it was.

Q. And what about the regulation as to undersized lobsters?—A. I think they don't take them at the factories if they can possibly help it. In fact there are some of us who do not get them.

Q. Where would the canner draw the line?—A. At 7 inches.

Q. The legal size limit is 8 inches?—A. Yes, I know.

Q. What style of trap do you fish?—A. Well we fish the ordinary trap.

Q. The old fashioned double ended trap?—A. Yes, there are very few of what you call parlour traps here.

Q. What is the size of the entrance hoop, the ring?—A. Six inches I suppose; there is no particular size, some may have 8 inches.

Q. What distance do you leave between the slats in your trap?—A. We leave about an inch off and on, we have no gauge. I know I have left the lobsters in the traps this year, small lobsters that I did not bother with. I did that from year to year experimenting and I would not see those lobsters next morning. I have done that with 7 inch lobsters. I have done that regularly and I would not see them again.

Q. You think the 7 inch lobster will find it way through an inch opening?—A. I was going to say half an inch. It is incredible. Any kind of lobster will go through an inch opening, I don't know whether he goes through the end hoop.

Q. How many traps does a man fish here as a rule?—A. We fish a good many, I suppose 300 on an average. Some of us fish quite a lot but others do not, they have not the ground. I would say 300 on an average, not less.

Q. What is the arrangement made with the canner, are the fishermen paid by the count or by weight?—A. By weight.

Q. And what was the price paid this year?—A. \$2.25 per hundred.

Q. And last year what was it?—A. \$3.75.

Q. You understand that the price offered this year was because of a difference between the fishermen and the canner?—A. Yes, sir.

Q. The fishermen protested against the decrease in price did they?—A. It was a ridiculously low price compared with last year, it was only \$2 that was offered.

Q. Please explain to us what occurred?—A. Well the fishermen were organized and we were talking through the union. We could not get anything definite for a long time but we were allowed to believe that the price would not be less than \$3. We got our gear finished and ready for fishing, and nothing definite could be obtained until the season was just opening. Then Burnham & Morrill's representative came down and J. G. Rood, of Judique. Even then they did not want to state any price for us to go on. Still we felt we must have the price, so we called a meeting of the union, and Mr. Gunn, Burnham & Morrill's representative here, came and told us that the price would be \$2. The fishermen protested against fishing for \$2. We had reports from the markets, and from the Provincial Association, of which Mr. Scott was president. We also telegraphed Mr. Nickerson, at Cladk's Harbour, who was then in

9-10 EDWARD VII., A. 1910

Halifax attending the sessions of the House. We telegraphed to Halifax asking for prices along the shore, of factories then in operation along the south shore. He said they were paying \$3. Well all told, from all these sources, we came to the conclusion that the canners were taking advantage of us, and giving us too low a figure. Then they came up to \$2.25. We found out that the Burnham & Morrill Co. were only giving \$2.25 at their factories in the Gulf, that is so far as we could find out, and they closed down one factory. They would not even give \$2.50. They came to the conclusion they would close down. I am positive they were going to close because I am personally friendly with the agent and he lived here. I was sure they were going to close. We had all our gear ready for the water and it meant quite a loss to us if we stayed ashore. There was a strong feeling in the matter and the union was bound to hold out. I may say I did not feel for a strike. I was only speaking for myself. Still I wanted to hold on to the union, and I wanted the union to hold on to me. The end of the matter was—I believed at the time and these men here will back me up in the assertion—that if it was not for the feeling of poverty prevailing, the factory would have closed down. However the friends thought they would fish and so all hands came in then. One of the directors of the union came across from the mainland and concluded we had better hang on to the union, not break up the union but fish, and we did so.

Q. Were the figures you have mentioned paid generally?—A. No, sir. Rood in Judique gave \$3, the very next factory, the second factory to us. The canners might have given \$2.50 but we only got \$2.25 from Burnham & Morrill. We fished believing they were still giving us too low a figure and we believe so still. The markets were low, there is no doubt about that, and seemed to be in a demoralized condition, but now we believe they were making a pretty good thing out of it.

Q. Is it your belief that there was a combination on the part of the canners to keep the price down?—A. Well, personally, no, but it is the feeling of the union.

Q. Is there any competition in the matter or are you forced to accept a certain price?—A. We are forced to accept it, we can prove it. We tried to sell our lobsters to others but they would not take them. They would not take our lobsters at \$2.25. We proposed selling them in any other quarter rather than accept the price of Burnham & Morrill, because they were able to pay as much as the others and the others were able to pay more.

Q. What had they paid the year before?—A. \$3.75.

Q. How long have Burnham & Morrill been canning on this island?—A. About 30 years.

Q. Are they the only people licensed to can here?—A. Yes, sir.

Q. Coming back to the fish, do you notice any difference in the quality of the lobsters you catch early in the season in deep water, as compared with those you catch later on in shoaler water; do you get the same run of fish throughout the season?—A. Yes, I think so.

Q. The fish caught early are not any larger or better than those taken late?—A. Yes, but we seem to follow the fish, we seem to follow the fish inshore.

Q. Do you get a smaller run of lobsters late in the season than you do early in the season?—A. I think that in general we do. A great deal depends on the grounds. If the grounds are rocky we get good lobsters. South of this part the lobsters are always better than in the north. There is all the difference in the world between the south and north just on account of the grounds.

Q. Have you any idea from what direction the lobsters come, do they winter in St. George's Bay or come from outside?—A. I could not say. I think we can prove that they winter. We fish for haddock in December, about three or four or five miles off, and we get lobsters regularly on the trawl on the hard bottom off shore and on the muddy bottom too. There was a nine pound lobster caught last December. That proves they were just off shore.

Q. Could you give me any idea of the percentage of berried fish you get throughout the season; what proportion will the berried lobsters bear to the rest of the catch,

SESSIONAL PAPER No. 22a

how many in a hundred?—A. They are a very small percentage. I find there would be in 207 pounds, 8 berried lobsters; in 250 pounds perhaps 10 and 11; in 196 pounds—we are just as apt to get more, that morning, perhaps—12, 13 or 14; but the percentage is very small. I have heard of one fisherman getting 22 out of 222 pounds.

Q. Is there any part of the season when you expect to catch more berried lobsters than in an other?—A. Yes, more towards the end, in fact we don't get any at the first of the season.

Q. What sort of fish are they generally?—A. Good fish.

Q. What was the smallest sized lobster you ever saw carrying berries?—A. I have seen very few less than 10 inches. They are so very few they are not worth canning.

Q. The limit is 8 inches but the lobsters here have been taken down to 7?—A. But there are good large lobsters, 12 and 13 pounds and so on.

Q. But as to the small lobsters, below the legal size limit, what would you say would be the perceneage of those taken in the traps?—A. This year I have taken notice. Have you the date at which the fish were measured?

Q. No.—A. I think we were about three weeks fishing when Mr. MacLean came over. At that date, personally, I did not see a 7 inch lobster myself.

Q. We saw the measurements yesterday and they formed a very good return.—A. Yes, it was all right. Although, as I have said, I think the fish this year were better than usual at that time, and on the outside island boats I did not see a 7-inch lobster.

Q. Owing to the confusion last spring you were late in beginning?—A. Yes, sir.

Q. When did you make your first catch?—A. On the 16th of May, but we could not have fished earlier. We lost about a week when the ice was running.

Q. And when did you knock off?—A. July the 2nd was the last catch that I have heard of, I think that was the last catch.

Q. Why did you knock off?—A. The factory closed.

Q. What caused it to close?—A. They thought they were not making any money. The fishermen dropped out. There was other fishing going on and it was hard to get bait. A great many fishermen dropped out and Mr. Gunn, the agent, thought he could not get enough lobsters to run the factory profitably, but the night he gave out that he would close on Saturday he got word from the maritime agent, Mr. Leary, to keep on, that lobsters were coming up, but it was too late. That is the reason some of us closed, because the factory was closed.

Q. Were the majority of the fishermen prepared to knock off at that time and take to other fishing?—A. Yes, sir.

Q. What other fishing could they take to?—A. Codfish, haddock and hake, that is trawl fishing.

Q. The mackerel would not be on quite at that date?—A. We are not interested in mackerel fishing.

Q. Is there any time of the season when lobsters are not fit for human food in your opinion?—A. Well, I think part of July and August they are not very good. That is my opinion, personally.

Q. When they are soft shelled?—A. There is plenty of shell on them now, but no meat in them.

Q. When do the lobsters cast their shell in this neighbourhood?—A. It is quite a question. We get them soft shelled sometimes about the 1st of July, before we knock off. There are some soft shelled ones but very seldom we see a soft shelled lobster. I gaffed one or two the other day where we were fishing on the island, about a fortnight ago, which would be the last week in July, and the shell was just as hard as ever it was.

Q. The new shell hardens up very quickly?—A. It must.

Q. Do you think it possible to regulate to some extent the capture of small lobsters by leaving a moderate space between the slats and using a certain mesh in the end?—A. I don't think it makes a bit of difference, not a particle.

9-10 EDWARD VII., A. 1910

Q. But such small lobsters as are taken in some places would not then be caught in the traps?—A. I don't think it makes a bit of difference. Supposing the laths are two inches apart, the lobsters stay so long in the trap.

Q. The way the parlour traps are being made now it is a more complicated arrangement?—A. Yes.

Q. And where the slats are not more than a half inch apart, as in many places, the young lobsters that get in cannot escape again, the trap is so small and has such a complicated entrance?—A. It does not make a bit of difference, the lobster will get out where he gets in if you will give him time, that is the second night. He will not be there two nights, he will not be there over Sunday. We have tried the parlour traps here.

Q. But they are not in general use?—A. No, sir, we don't find them a particle better. They would be better for hand fishing, but we are not hand fishing, we are trawl fishing. I used them almost the whole of one spring.

Q. Has the practice of stripping or washing the eggs off the female lobsters ever been followed by the fishermen in this district?—A. I suppose a witness is not supposed to incriminate himself. I think it has.

Q. The idea is to find out what is the practice; it is the practice and we know that it is done?—A. Yes, sir.

Q. Where the canner objects to taking berried lobsters, the eggs are washed off outside?—A. Yes, it can be done.

Q. Until the present year, have the canners been in the habit of taking everything that was brought to them, without regard to the size limit or the fact of the lobsters being berried?—A. The factory agent here never wanted to take the small lobster or the berried lobster, but he did not draw the line strictly until this year. In fact that was owing to his desire to keep the good will of the fishermen, not because he wanted them. He has been trying to educate the fishermen all he possibly can.

Q. Should the selection, or throwing out, of the berried lobsters be done by the fishermen on the spot or at the cannery?—A. Personally, I don't think the lobsters should be taken into the boat at all, it kills them more or less the longer they are out of the water.

Q. Do you think they are more tender, that they won't live out of the water as long as the non-berried lobster?—A. I don't think they are so hardy.

Q. Do you think it would be possible to induce the fishermen to return to the water all the berried lobsters they take in their traps, and, if so, how would you propose to do it?—A. I think that matter is pretty well settled here, because the union has taken it upon themselves and it has been practically done this year. I have myself made experiments with them. I have taken and put white strings on them every nine and ten days to see if I could catch them again.

Q. And did you catch them over again?—A. No, sir, very few.

Q. Did you hear of anybody else catching them?—A. No, sir. One of my neighbours tried it. Some of them have been caught inshore again.

Q. Are you aware of any fisherman having lost his catch of lobsters through the canner refusing to accept them?—A. I am not aware of any.

Q. Various recommendations have been made to the department as to the best way to bring about a re-establishment of the lobster industry. Some people have proposed as a remedy to close down entirely for a number of years; what would you think of that, would it be a very severe measure?—A. Yes, as far as we are concerned, very severe, especially these late years. So far it has been our only source of income this season. For the first two months of the season, particularly May and June, we would be idle.

Q. Is it a cash business?—A. Purely.

Q. When does the canner make his arrangement with the fisherman?—A. The business is so established now that the canner has his fishermen and knows exactly

SESSIONAL PAPER No. 22a

who they are. All the fisherman has to do is to get his gear and get ready, and the canner will be ready to take his fish.

Q. Is there any advance made by the canner to fishermen during the winter?—A. Not here, not generally.

Q. Is the fisherman paid for his fish as he brings them in, or at the close of the season?—A. He gets money any time he wants it after he brings his fish in, but the payment is monthly by Burnham and Morrill.

Q. What is the average return for a good fisherman; how many tons or what number of quintals does the average catch represent here?—A. I could not say. Of course I know what my own is and that is about the average I think. No it would be a little higher than the average all through, there may be a few pounds difference between us.

Q. What is your total quantity?—A. About 6 tons

Q. That is pretty good, is that about the average?—A. I fish a little later than the rest, perhaps four tons would be the average.

Q. Do they reckon at the cannery the number of cases per boat?—A. No, sir.

Q. What number of cases did they pack here this year?—A. Not quite 756.

Q. Do you remember what the pack was last year?—A. About the same.

Q. Did they make their average pack this year?—A. Yes.

Q. The Lobster Commission of 1898 recommended that the fishery should be closed down by sections, how would that appeal to you?—A. I don't know in the world. To my mind in any lobster ground with a close season of ten months as we have it practically here, the lobsters will never be depleted.

Q. Especially if they protect the berried lobster?—A. Yes, or any way. Those lobsters have been taken here until this year.

Q. Another suggestion made is to do away with the size limit—it is a regulation that is very difficult to enforce—you would require a man at every factory, and in some places its enforcement would mean closing down altogether. Yes, sir.

Q. I don't think your own particular cannery would run?—A. I don't suppose it would either.

Q. You do not think it would either??—A. It would not be worth while.

Q. The next proposition is to do away with the size limit?—A. That is practically what we have been doing.

Q. It is a mistake to have on the statute book regulations that are not enforced?—A. That is right.

Q. Well it is proposed to do away with the size limit, protect the berried lobster—putting her back in the water or where it is possible establishing pounds or hatcheries—as far as possible regulate the traps so that unfairly small lobsters should not be taken, and close down on the 1st of July; how would that appeal to you as a way out of the difficulty?—A. That would not hurt a soul around here. That is just what has been done. There are very few run in July.

Q. You think that would be a reasonable suggestion to make?—A. Yes, I think so. There are some fishing stations that wish to run to the end of the season, in fact they applied for an extension, but it has never been done here. I speak now for Burnham & Morrill's firm.

Q. As to the matter of issuing canning licenses the practice of the Department has been to restrict the number?—A. Yes, sir.

Q. That has been the practice for a number of years; how does that appeal to you, do you think there are canneries enough?—A. Well that question came up this spring before the union and some fishermen proposed that we should pack our own lobsters, but the trouble was to get a license, so that would operate against us.

Q. The present policy of the Department seems to be where a sufficient number of fishermen co-operate together to engage in canning, to grant them a license?—A. That would be all right, that is the way out of the difficulty.

9-10 EDWARD VII., A. 1910

Q. Does it not seem strange that we should limit the number of canneries and not the amount of gear?—A. Well it is apt to create a monopoly.

Q. It is apt to create a monopoly?—A. Well to our minds.

Q. Is there any reason why any man showing his competency to pack should not be given a license to pack as well as another man?—A. I don't believe so. It is a matter for himself. If he pays for the license, establishes a factory and tries to operate it and cannot get the fish it is a loss to himself. I believe it would be a help to the fishermen because it would create competition.

Q. Do you think it is right in that case to require the cannery to be up to a certain standard at all events?—A. Yes.

Q. There are a number of canneries in operation that should not have the right to exist, and their output must seriously affect the market?—A. Is a man who operates a large business not more apt to have bad lobsters than a man who operates a small one?

Q. I suppose it depends on his ability to handle the lobsters; he would need to have a large factory and a large number of hands?—A. If he is not able to put them all up he has to put them in crates in the water for a number of days.

Q. Is it the practice in particular canneries to hold the lobsters in that way?—A. Yes, they are held here.

Q. And you think they do not improve in quality?—A. They throw a large percentage of dead ones out and we have to pay the bill.

Q. When they are held in that way?—A. Well, we did not have to pay the bill, but we do not get the price. Owing to the scarcity of men in the factories, or of hands to handle them, there is a glut. This year the practice has been different. They never handle the catch in a day. They have to crate then and when they are crated they always lose some; they get dead lobsters.

Q. As to the live lobster trade, has the exportation of live lobsters ever been carried on from here?—A. No, sir.

Q. Do the necessary facilities exist?—A. No, sir, not at present.

Q. In your estimation where that trade can be carried on is it more profitable for the fishermen than selling to the canner?—A. Well, sir, as to that I am not posted.

Q. It has been alleged that in some instances the fishermen have suffered injury through the failure of those holding canning licenses to operate their factories, although a sufficient supply of lobsters was available; do you know of any such instance?—A. No, sir.

Q. Who fixes the price to be paid for lobsters?—A. The canner. The union tried to fix it this year but failed.

Q. Has any co-operative canning been done in this neighbourhood?—A. It has not been done in our neighbourhood. There has been a license granted at a distance from here, Long Point, but they have not operated. It requires fishermen of means that are able to command a little capital to start a factory. Those men got a license and they never operated.

Q. They started under bad conditions did they not?—A. They started under bad conditions. Their excuse is they have tried every packer for cans and not a packer would give them a can. I am not sure whether that is correct or not, but that is their story.

Q. Would you be in favour of increasing the number of lobster hatcheries?—A. I think a hatchery would do good.

Q. Do you think there are any facilities in this neighbourhood for the establishment of pounds?—A. So far as I know in regard to hatcheries and pounds, a pound would be the most successful of the two; but I don't know where there would be a place around here for a pound. Of course there are coves.

Q. You must have shelter?—A. It is very hard to get a good place.

Q. Has there been any noticeable decline in the average size of the lobsters caught in your district within the last ten years?—A. I don't think so.

SESSIONAL PAPER No. 22a

Q. Would you say within the last thirty years?—A. I don't know. Since twenty years, as far back as my experience goes, to my mind there is no difference, the lobsters are just as large I think. I am not saying anything about the catch thirty years ago. They were almost walking the shore then but they are not that now.

Q. It takes a larger amount of gear to-day to catch the same amount of lobsters?—A. Yes. I know about 25 years ago, which was about the time I came to this place, any man with 100 traps could bring in a ton of lobsters in one catch.

Q. He could not do that now?—A. He could not do that with 1,000 traps now.

Q. What do you think has brought about that change?—A. The lobsters have been caught up. At that time, and since then too, I suppose, the season has always been well observed, the close season. There has never been any poaching in this neighbourhood.

Q. There has been no canning after season?—A. No canning at all.

Q. Do you think it is in the interest of the lobster fishery generally that lobsters should be taken before they have reached maturity?—A. It would not be natural. It is not a wise thing.

Q. Your season begins here on the 20th April and you close when?—A. July 10th.

Q. What do you think about the opening season? A great many people, including Professor Prince, think the season should open everywhere on the 1st of January and people should begin to fish whenever it is possible to do so.—A. That would be just the same to us. You could not open anyway before the 1st of May, some years the 20th of April, when the ice leaves early.

Q. The opening date seems to have been fixed with the idea of saving the gear, not out of regard for the lobster?—A. We want to save our own gear. Personally I would rather see the opening of the season later. I think perhaps the majority of the fishermen would rather have the opening season the 1st of May, they do not consider there is any gain in starting the 20th of April. We catch most of the lobsters anyway.

Q. What is the most active period of the fishery with you?—A. It is about the second or third week of our fishing that we have our best catch.

Q. It has been asked that fall fishing be allowed in some localities owing to the delay in commencing to fish caused by ice remaining off the coast.—A. I am not interested.

Q. It does not affect you here; you have other fisheries to take up and you would not fit out again?—A. No, I do not think it.

Q. Have you any suggestion yourself to offer?—A. No, I do not think it. The great majority of the fishermen here drop out the 1st of July.

Q. Then supposing we do away with the size limit, and make it legal to take fish down to a size that will be profitable to can; do you think there would be any serious hardship caused by closing on the 1st of July?—A. No. I don't see where the difference would come in there. It is only the law on shore now, it is not in practice.

Q. Was the law ever enforced?—A. No, sir, never. The fishermen don't want to see small lobsters.

Q. In your opinion should the product of the cannery be subject to inspection by an official inspector?—A. Yes, I think it should. To my mind it is to the advantage of the canner himself to see that his goods are up to standard. It is better to have that if possible and it means more money for himself. If he is a man that is able to put up a factory and start a canning business that should be guarantee enough. A man that is able to do that I consider that he is qualified.

Witness discharged.

9-10 EDWARD VII., A. 1910

LEWIS D. MACDONALD, fisherman, Port Hood, called and sworn:

By the Commissioner:

Q. Are you a fisherman yourself?—A. Yes, but I was not fishing this year.

Q. But you have always fished before, have you?—A. Yes.

Q. For how long?—A. Off and on ever since I was able to fish, I suppose 25 years.

Q. Have you always fished on this part of the coast?—A. Yes, sir.

Q. When was the Fishermen's Union organized in this neighbourhood?—A. Last February.

Q. Can you give me any idea of the number of members?—A. I could not exactly, I suppose there would be about 150 in good standing.

Q. Its district extends from where?—A. From Mabou to Judique.

Q. Are practically all the fishermen members of the union?—A. No, they are not all members of the union; they did not all come in.

Q. What led to the establishment of the union here?—A. Well, the fishermen thought they would better themselves to be united.

Q. We have had the history of the dispute between the Fishermen's Union and the packers from Mr. Morrison; would you mind giving, in your own words, the nature of the trouble last spring?—A. You want to find out how it occurred and how it ended? Well, I will have to commence, I suppose, at when we organized the union, and the reason we organized.

Q. Yes; what were the reasons for establishing the union?—A. Well, the reasons—we were informed here that the packers held a meeting and were going to cut down the price to \$2 per hundred. So we had a meeting and organized a union, and we made a price for the packers to come up to. We notified the packers after we had got organized that we wanted such a price for our lobsters. When they came down they seemed to say they could not afford to pay this price. So with respect to our members, while we could——

Q. What was your price?—A. We notified them first that we wanted the price we were getting last year, \$3.75; but then we compromised and came down to \$3 per hundredweight. The packer here for Burnham & Morrill would rather close down than give us this. He did come up to \$2.25. The packer in Judique, Rood, paid \$3.

Q. And what about Mr. Macdonald?—A. I could not be certain. He paid \$2.50 anyway at the start. I could not be certain, because I did not sell the lobsters myself. He started later on. The union had no dealings with him.

Q. That was the beginning and ending of the trouble?—A. The fishermen could not do anything else, and they had to accept the price. They were not prepared to can for themselves.

Q. And they had no chance of exporting their lobsters alive?—A. That is it. That is as far as I know.

Q. Do most of the fishermen here own their own boats and gear?—A. Yes, I believe they do.

Q. How does the fishing to-day in this neighbourhood compare with that when you began to fish?—A. Of course, the lobsters are not as plentiful.

Q. Are they as large?—A. I suppose they would be about as near as large. Of course, the lobsters were more plentiful then, and they were particular about their traps.

Q. Is the trap made any different now from what it was when you began to fish?—A. I believe it is different. Well, not much of a change. The fishermen are getting more in the way of fishing and are making better traps I suppose.

Q. Do they put the slats closer together now than they did when you first started fishing?—A. Some might and some might not. They are, I suppose, about the same.

SESSIONAL PAPER No. 22a

- Q. What would you say is the opening between the slats around the sill now?—
A. Oh, I suppose it would be about an inch.
- Q. Do most of the fishermen make their own traps?—A. Yes.
- Q. How does the price paid for lobsters now compare with what you got when you first began to fish?—A. There is more paid for them now.
- Q. What number of traps did you use when you last fished?—A. I fished, I suppose, about 225 traps, two men in a boat.
- Q. What did you use to fish when you first commenced?—A. About 100 traps.
- Q. Who fixes the price paid for the lobsters?—A. Up to now it is the packers.
- Q. Do you think there is any combination on the part of the packers to keep the price down?—A. Well, that is the impression that there was.
- Q. Do you think the fishermen would be better if they were allowed to can for themselves?—A. I believe so.
- Q. Now as to the regulations, what has been the practice; have you been in the habit of taking to the canner everything you caught in the past? The regulations say you must not take berried lobsters or anything under 8 inches, have these regulations ever been enforced?—A. Well, not very strictly in regard to small lobsters. There would not be very small lobsters stay in those traps anyway.
- Q. What do you say is about the smallest sized lobster you have taken to the cannery; we have seen lobsters three or four inches brought in?—A. There would be none here that small that I would know of. I could not say that there would be anything smaller than 7 inches, and I could not say as to 7 inch lobsters.
- Q. What has been the practice with regard to berried lobsters up to the present?—
A. I suppose letting them go.
- Q. You think they have been let go?—A. They say they have been.
- Q. Has it ever been the practice to brush the berries off and bring the female lobsters to the canners in that way?—A. I never did that.
- Q. Are the fishermen beginning to see, now that they are organized and in a union, the importance of these matters; are they beginning to appreciate the fact that they should observe the regulations and that berried lobsters especially should be protected?—A. Yes, I hear them speak very strongly about that.
- Q. Do you think there is a prospect that the berried lobster will be better protected in the future?—A. I think so.
- Q. From your observation as a fisherman what do you say is the spawning season of the lobster?—A. Well, I could not exactly say.
- Q. Do you think you find more spawn lobsters inshore than offshore?—A. I didn't take notice.
- Q. When did you give up fishing?—A. I have not fished for a few years now.
- Q. Have you given up the fishing permanently?—A. No.
- Q. If an attempt were made to enforce the protection of the berried lobsters where is it best to begin, in the cannery or in the boat; where is it easy to best determine which are berried lobsters and which are not, and then throw the berried lobsters out? Should the fishermen do it when the lobsters are taken from the trap?—A. I suppose it would be easy for the fishermen to do it.
- Q. Have you any idea how many berried lobsters there are to every hundred fish?—A. I could not say.
- Q. Would you favour issuing a license to every man competent to pack?—A. Yes, I would.
- Q. If you were not allowed to take berried lobsters, or anything under 8 inches, what effect would it have?—A. Well, an 8-inch lobster is quite a nice size.
- Q. But a lobster must reach that size before it is able to reproduce itself?—A. Yes.
- Q. If the law were strictly enforced in regard to the 8-inch and berried lobsters, do you think it would compel the factories to close down?—A. I could not say, I suppose it would be a bad thing for them.

9-10 EDWARD VII., A. 1910

Q. Have you any idea which brings in the largest profit to the fishermen, selling live lobsters to the market or selling to the canner?—A. I could not say, for I have not studied it out.

Q. Is it to your knowledge that fishermen have ever lost their catch of lobsters by the canners refusing to accept them?—A. I don't think so, not in this neighbourhood.

Q. Would you be in favour of increasing the number of lobster hatcheries?—A. Yes.

Q. Is there any statement you would like to make of your own accord or have you any advice to offer? If so, we will be very glad to take it down for submission to the Parliamentary Committee?—A. I don't think there is. You have gone over the ground pretty well. They claim that the beam trawls smash up the lobsters quite a bit. They run over the lobster ground.

Q. Were they trawling here?—A. Yes, right through the bay last year. There was one of the union men told me they saw after the beam trawler ran up ashore up to Judique and Long Point and those places, a wind came up and you would see the lobsters where they washed ashore after the beam trawlers went through. They were crushed on the bottom.

Q. Was that after the fishing was through, after the traps were up?—A. Yes, it would be in the bay.

Q. What is the nature of the bottom out there?—A. It would be gravelly.

Q. A smooth bottom?—A. Smooth bottom.

Q. Where the trawl could be used?—A. Yes.

Q. Because they cannot use a trawl on a rough bottom?—A. No.

Q. Was the trawler there long?—A. Well, he was running back and forth there.

Q. How long was he fishing in that neighbourhood?—A. I could not exactly say. He would be there I suppose for a month.

Witness discharged.

Commission adjourned.

ARISAIG, August 13, 1909.

ROBERT E. WHITMAN, packer, Goldboro', Guysboro county, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. Twenty-seven years.

Q. On what part of the coast?—A. I have been from Cape Sable to the Magdalen Islands.

Q. How long have you been located here?—A. I have been here nine years.

Q. You have had experience of the fishery in many places then?—A. Yes.

Q. Who owns the cannery here?—A. Burnham & Morrill, Portland, Maine.

Q. Are all the people employed about it Canadians?—A. Pretty much all.

Q. Are there any other canneries licensed in the neighbourhood?—A. Yes.

Q. Where is the nearest cannery to you?—A. At Merigomish, eight miles from here.

Q. How many boats do you employ here?—A. Twenty-five.

Q. Do the boats and gear belong to the factory?—A. All belong to the Burnham & Morrill Company.

Q. What number of hands do you employ? Are there as a rule two to a boat?—A. Well, I would say half that number, not quite half.

SESSIONAL PAPER No. 22a

Q. How many hands are employed in the factory?—A. Thirty-two I think this year.

Q. What number of cases did you pack this year?—A. We packed 567 whole cases.

Q. How does that compare with last year?—A. Below.

Q. And the year before?—A. Less again.

Q. So this was a poor year with you?—A. This was a poor year.

Q. What was the best pack you ever made?—A. The best pack I have had in the nine years is 742 whole cases.

Q. About what distance do the fishermen fish off shore here?—A. I would say no more than two miles.

Q. How does the number of boats and traps compare with what you used to fish when you came here first?—A. There is about the same amount of gear.

Q. What style of traps do you use?—A. We fish now with the old style of traps.

Q. When did you begin to pack this last year?—A. The 9th of May.

Q. Since you have been here when do you begin one season with the other?—A. About the 1st of May, that is about the average.

Q. Are you prevented from getting out here any earlier by the ice?—A. Yes.

Q. How have the regulations in this neighbourhood been observed as to under-sized and berried lobsters?—A. Well previous to last year it was not looked into very stringently. I will say that for the last few years it has been observed pretty well here with regard to the spawn and small lobsters, more particularly in regard to the spawn lobsters.

Q. How many lobsters go to the pound tin here?—A. They will average five in the month of May, and according as the season advances. I might say that we get them four and three-quarters in June, and if we run in July they would be four and a quarter. On the whole about four and three-quarters is our average for the season.

Q. Do you find the lobsters are not as full when you begin packing as they are later on in the season?—A. No, sir.

Q. What percentage of the lobsters that are taken here do you think bear berries, how many out of every hundred?—A. I could not say.

Q. How do you find the lobsters running now as compared with when you first came here?—A. They are not so large.

Q. Are they decreasing in size do you think?—A. I think so.

Q. Do you get a larger run of lobsters at the earlier part of the season than you do later?—A. Usually.

Q. Has it been your practice in the country to make any cull in order to detect the presence of berried lobsters?—A. Yes.

Q. You think that during the last few years the fishermen are more careful about bringing the berried lobsters in?—A. Yes.

Q. Is that because you refused to accept them or how is it?—A. It is the instruction of Burnham & Morrill. The superintendent tells me in the spring when I go out on this mission, and Mr. McAdam, our inspector, is very strict.

Q. What width do you usually allow between the slats in your traps?—A. I guess it would be about an inch. I would not say that it was an inch, I would take a little off. Our gauge is the pole of a hatchet.

Q. When did they first begin to pack here?—A. It was about eighteen years ago, I think.

Q. Was there any cannery here before this one?—A. There was one.

Q. It is your opinion that the lobsters have decreased slightly in size; what do you think that is due to?—A. Well, sir, I don't know. We noticed them more this year than any other. They held up their size. We almost had a Boston market lobster here until this year, sir.

Q. That is a 10½ inch lobster?—A. Yes, sir, we could ship lobsters if we had the facilities to do it. This year they were a little smaller than usual.

9-10 EDWARD VII., A. 1910

Q. If the 8-inch size limit were strictly enforced how would it affect you?—A. I think it would affect us slightly.

Q. It would not close you up; most of the canners we have met, and most of the fishermen, say an 8-inch limit would put them out of business—A. I am most of their opinion too.

Q. Were the lobsters measured here this season?—A. Yes, sir.

Q. Did you see the list of measurements?—A. Yes, I saw it.

Q. Were there many under the 8 inch mark?—A. There were a good many.

Q. You fish altogether the old fashioned trap?—A. Yes, sir. Oh there might be two or three what they call the parlour trap, but we fish the old regulation style.

Q. As to the matter of licensing canneries. You know the practice of the department for some years back has been not to license any new canneries; what do you think of the regulation in that respect?—A. Well my own opinion would be that along the shores here and in other places I think there are canneries enough, that is operating.

Q. What was the price paid to the fishermen here for lobsters this year?—A. \$1.75 per hundred weight.

Q. How does that compare with the price paid last year?—A. It is not so good.

Q. What was the difference?—A. 25 cents was the difference. We gave them \$2 last year.

Q. That change, I suppose, was due to the drop in the market?—A. That is it, sir.

Q. Is there any station of the Fishermens Union here?—A. There was this spring. I don't know whether it was discontinued or whether it is still in existence or not.

Q. Is the president or secretary here to-day?—A. No, they belong to another neighbourhood altogether, to Georgeville, east of here.

Q. You do not evidently feel the bad condition of the fishery here as much as they do in most other places, or in northern New Brunswick, where it takes 14 or 15 lobsters to the pound can. Still it appears necessary that some change should be made to bring the lobster fishery back to its former condition, and a number of suggestions have been made to the department with that object in view. One proposition is to close down for a number of years and allow no lobster fishing or canning; what would you think of that?—A. I think as far as the building up of the business, it certainly would have a tendency, but I think it would be ruinous to Nova Scotia in the meantime.

Q. Another suggestion, which was made by a former Lobster Commission, is to close down in sections?—A. Well, I suppose it would be a benefit.

Q. Would it be pretty hard in the meantime?—A. That is right.

Q. The general opinion is that if the regulations as they stand with regard to the berried lobster and the 8-inch limit are strictly enforced, it will put everybody out of business. I do not say that it will everywhere, but they say it would in a great many places?—A. I don't think there is any place that I know of that it would not be on the decline for the fishermen and the packer both at the time.

Q. You would soon recover because you would get a larger run of lobsters?—A. That is right, and if the spawn lobster were protected and more fishery money coming from the government to pay fishermen for catching them. Most of the fishermen believe if they throw away the spawn lobster at the first part of the season they will eventually get him again.

Q. Another suggestion that has been made is to do away with the size limit altogether, but of course protect the berried lobster?—A. I think there is more injury done in trying to fish in July along this north shore than any place I know of.

Q. That happens to a great extent where they fish in shoaler water?—A. You know there is this to-day: There are men right on this shore that do not do anything say from the middle of June until, we will say, the 1st of July. They do not attend

SESSIONAL PAPER No. 22a

their lobster fishing, and they want those ten days in July. We do not feel it here because we do not have any shoal water fishing. But take it around on the other side of Cape George, in George's bay, and even up here in Merigomish bay, I think these gentlemen will bear me out in saying that——

Q. Do you think that, of all the propositions, seems to be the most feasible and least hurtful to the fishermen and those interested?—A. Yes.

Q. When do you have your best fishing here?—A. In May.

Q. You are allowed to begin here the 20th of April?—A. Yes, sir.

Q. Does that regulation fit all right?—A. No. We have never begun—the earliest we ever did anything was April 25, that was to put a rope in, but as far as catching lobsters is concerned we don't do it in April, we cannot. There might be a man or two get a few.

Q. In some seasons it might be a little earlier than others?—A. Yes, sir. It is a little irregular, perhaps.

Q. It has been asked that fall fishing be permitted, say during the month of September; what do you say to that?—A. I don't know, sir, I am sure; I never saw any of it.

Q. Do you think it would be possible or right to establish a standard of fitness for canneries, to insist that all canneries should be up to a certain standard?—A. I think it would.

Q. We see a great many canneries that are a long way below what they should be?—A. Yes.

Q. What would you suggest as some of the things we should insist upon in a cannery?—A. Cleanliness would be the first thing, to keep the place good and clean and airy inside. Our water facilities here are good, and speaking for this shop I do not know hardly what improvements to put on to it.

Q. What are your tables covered with?—A. With zinc.

Q. Do you think the fishermen would make more money if allowed to can for themselves?—A. I do not.

Q. The only new canning licenses that are issued now, are to groups of fishermen who combine for the purpose of carrying on the canning business. There have been a number of what are called co-operative licenses issued; what do you think of fishermen co-operating and obtaining a canning license?—A. Well, I think if the fishermen ought to have that privilege they ought to have that right.

Q. By that you mean you would not increase the number of licenses?—A. No, sir.

Q. Are you aware of any complaints made by fishermen that the price paid for lobsters is not satisfactory here? Is it the case that fishermen have lost their catch of lobsters by the canners refusing to accept them?—A. No.

Q. That has not occurred here?—A. No.

Q. It has been alleged that in some cases fishermen have suffered injury by the failure of canners to operate their factories although a sufficient supply of lobsters was available; are you aware of any instance of that kind?—A. It has never happened here, not in the factory of the Burnham & Morrill Company.

Q. Is there any market here to which the fishermen could take their lobsters if the canneries were closed?—A. No.

Q. There has never been any attempt made here to ship live lobsters to the market; you are too far from the market here and you have not got the necessary facilities?—A. No.

Q. Which branch of the lobster industry do you think is the most remunerative to the fishermen and the least calculated to deplete the industry, the canning or the live lobster trade where it can be carried on?—A. I think the live lobster trade where it is carried on.

Q. I suppose the experience in southern Nova Scotia has shown that?—A. Yes, sir.

9-10 EDWARD VII., A. 1910

Q. Is it within your knowledge that lobster hatcheries have done any good in this neighbourhood?—A. No, sir.

Q. Would you recommend an increase in their number?—A. I would.

Q. Do you know anything about lobster pounds? In the State of Maine and in Cape Breton there are places in which they place the female lobster and hold her?—A. I know F. H. Baker had one down in Cape Breton.

Q. Are there any facilities along this shore where pounds could be established?—A. I do not think there would be.

Q. You want a large pound with a narrow inlet?—A. Yes, sir. The cove would need dredging and a lot of work done to it.

Q. Is there any fishing done here out of season?—A. Not any.

Q. At some place there are a good many complaints about the practice of abandoning gear in the water; is that done here?—A. Not any, because I have to reckon and take account of the gear when it is on shore.

Q. As to stamping the cases, do you know if there is any fraud in connection with it?—A. Not any here with me.

Q. Is there anything you would like to add on your own account?—A. I don't think there is anything. I think the questions you have asked are all right.

Q. Are most of the men who fish lobsters here regular fishermen?—A. Farmers.

Q. They mostly fish for lobsters and are not regular fishermen?—A. No, sir.

Witness discharged.

MICHAEL D. MACDONALD, fisherman, Arisaig, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. About 20 years.

Q. When you are not catching lobsters what other industry do you devote yourself to?—A. I fish.

Q. Have you always carried on your fishing on this part of the coast?—A. Not altogether but mostly.

Q. Do you fish your own gear?—A. I use the company's gear fishing lobsters, I use my own when at other fishing.

Q. Is there a station of the Fishermen's Union here?—A. Yes, sir.

Q. Are you a member?—A. Yes, sir.

Q. What number of fishermen are engaged in the lobster fishery here altogether?—A. About 25 I believe, that is 25 boats. There may be more engaged such as hired help.

Q. How far off shore do you fish?—A. I would say from a quarter of a mile to nearly two miles.

Q. What is your greatest depth of water?—A. About 12 fathoms, between 12 and 13 fathoms for lobster fishing.

Q. What kind of bottom?—A. Hard bottom.

Q. When do you first set your traps out as a rule?—A. As soon as we can after the ice goes. The ice permits us between the 25th of April and the 5th of May.

Q. Do you fish all season in the same depth of water?—A. Oh, yes, we have traps scattered all around from inshore to out, but the latter part of the season we generally bring most of our traps inside.

Q. What is the shoalest water you fish in?—A. About four fathoms, three or four fathoms.

Q. Is the bottom the same all over?—A. Not all over, there are ridges of mud.

Q. You avoid those?—A. Yes, we avoid the mud.

Q. Is it the general practice to move a little farther inshore as the season advances?—A. Well, it is the general practice, yes.

SESSIONAL PAPER No. 22a

Q. How do you find your catch, is your annual catch decreasing?—A. Decreasing a little.

Q. Do you require to fish more gear to keep it up?—A. Yes, you would a little to keep it up.

Q. What number of traps do you fish in your boat?—A. 275 I had last year, I think.

Q. Did you always fish with the same number?—A. Well, I have since a good many years. Not when I began first though.

Q. What number had you then?—A. About 200.

Q. And did you catch more fish with 200 traps then, than you do now with 275?—I don't know that I did catch very much more.

Q. How many pounds did your boat catch this year?—A. This year about 10,000 pounds.

Q. Has the number of traps increased much in this neighbourhood of recent years?—A. Not a great deal since seven or eight years.

Q. But since olden times?—A. Since olden times they have increased.

Q. When did the lobsters first begin to show a falling off?—A. Our experience is that during the last five or six years the fishery has been very steady, the real falling off occurred some years ago?—A. Yes.

Q. When would you say within your experience?—A. I don't know, about 12 or 13 years ago.

Q. What did you attribute it to then?—A. Well, I don't know, if not probably overfishing.

Q. Was the practice then the same as of recent years to take everything that came?—A. Yes.

Q. Down to how small would you say?—A. Down I guess to anything at all.

Q. There must be a limit?—A. There was a 9 inch limit or supposed to be.

Q. What is the smallest lobster you would carry to a factory and expect the boss to receive, two or three inches?—A. Two or three inches? I would never take them in.

Q. Where would you draw the line, what is the rule with fishermen; we want to see how far down they generally go you know?—A. I guess some of them would take anything that would be accepted from them and more would have a little better conscience than that, they would fire a baby overboard.

Q. And how about berried lobsters?—A. The berried lobsters were regarded here this year. The fishermen made up among themselves that they would not take any in and they kept the regulation.

Q. Was that discussed among the members of the union?—A. Yes, sir.

Q. And what did the union decide?—A. That we should not take any berried lobsters and we did not take any in. Of course the inspector and the packers helped us, we were all agreed.

Q. And what was done prior to this year?—A. I never threw anything overboard.

Q. Was the practice of brushing off the berries followed here at all?—A. They had to fire them overboard, if they were compelled by the inspector and packers. There would be some of the spawn lobsters brushed off, but I believe there was nothing like that this year, they were all fired overboard. I certainly think they were.

Q. Then you think the fishermen are beginning to realize the necessity of doing that?—A. They are here.

Q. That is one of the good effects, I suppose, of the union discussing this matter and the fishermen coming to a decision?—A. Yes, sir.

Q. Is there any difference between the trap you fish now and what you commenced to fish with?—A. Not here. It is the same as the boss stated; they may have a few parlour traps just for experiment.

Q. What is the particular good quality of the parlour trap?—A. It holds everything that goes into it, big and small.

9-10 EDWARD VII., A. 1910

Q. In your opinion is the supply of lobsters kept up by taking much smaller lobsters than formerly 'would have been taken in the beginning of the fishery?—A. Well, I don't know.

Q. When you first began to fish some years ago you did not see so many small lobsters?—A. No, sir.

Q. How do you find the lobsters run when you move in towards the end of the season; do you get smaller lobsters than when in deep water?—A. Yes, sir, the lobsters seem to be smaller in June than when you start first.

Q. What would you say was the percentage of berried lobsters?—A. The percentage, I would say, would be five to one hundred pounds.

Q. That is all through the season?—A. Yes. Sometimes they will be a little scarcer. I mean that would be the number on the average.

Q. As to undersized lobsters what proportion would be taken?—A. Do you mean under 8 inches?

Q. Yes?—A. I would say that over half, a good bit over half, would be under 8 inches, because I have been with the man that was measuring them last summer on the wharf and took down the figures.

Q. Is that your own experience, too?—A. That is my own experience for the last few years.

Q. It has been suggested that the fishermen should be registered and take out a license to fish lobsters, just the same as the canner takes out a license to can, but at a nominal fee. The theory is that under such circumstances the fishermen would feel themselves under more responsibility to observe the law, and would very likely inform on others who did not carry out the regulations. If a fisherman were found to be continually violating the law he would lose his license and not be allowed to fish for lobsters; what do you think of that?—A. I don't know but what it might be a good idea.

Q. How does the price now paid for lobsters compare with that paid when you first began to fish?—A. The price is a little better now of course.

Q. Were you paid 50 cents a hundred when you first began?—A. Yes, sir, I started at 50 cents.

Q. And it has gradually risen to what figure?—A. \$2, but it has dropped a quarter this year.

Q. You have not dropped as much in proportion as they have in some places?—A. Probably not.

Q. Is there any competition in the matter or are you forced to accept a certain price; is it a question of take it or leave it?—A. We are forced to accept a certain price here.

Q. When do you think is the spawning season of the lobster?—A. That is pretty hard to tell. I believe you can get the lobsters mostly any part of the year and get some with spawn on them.

Q. Do you notice a difference in the spawn?—A. The fishermen that have experience seem to say that the lobsters generally spawn in June, the majority of them.

Q. Do you find more spawn lobsters later in the season inshore than when you first begin fishing?—A. Well, about the first start of the fishery and the last; the last part I find more spawn lobsters.

Q. Is there any time when you consider the lobster not fit for food?—A. Well, I don't know. I cannot say much about that. I have not had that experience about the lobsters.

v

Q. I suppose when they are casting their shell?—A. When they are casting their shell I believe.

Q. Can you tell the smallest sized lobster you ever saw bearing berries?—A. Well, I never took notice of anything just for smallness of size with berries on it. The smallest I have seen I would say would be between 7 and 8 inches.

SESSIONAL PAPER No. 22a

Q. The general run of berried lobsters are fairly good lobsters?—A. Yes, fairly good.

Q. What do you think is the best way of getting at the preservation of the berried lobsters?—A. The way I believe the lobsters would accumulate better would be its natural way by firing it overboard, but it is pretty hard to get at that so that every man will do it. The next best way, and these are the only two ways I know anything about, would be to establish a hatchery. The hatchery is the surest. That is if the government would make some arrangement with the fishermen that they would be paid for these lobsters and then fire them overboard.

Q. Would not one difficulty be that the fishermen would be selling the same lobsters over and over again?—A. Yes, and still another difficulty would be here: Supposing the government were buying this lobster the greedy fisherman that would not agree, he might wash the lobster. No he could not do that; his object would be to sell the lobster with the berries on it. This hatchery at Caribou is doing a certain amount of good.

Q. Does the boat from that hatchery come here to collect spawn?—A. No, they have never come here to collect spawn.

Q. You have heard the three propositions with regard to stopping fishing altogether for a term of years, or closing down by sections, or doing away with the size limit, shortening the season by a few days and protecting the berried lobsters; which of these propositions would you approve of?—A. Speaking only for myself, I believe that protecting the spawn lobster and shortening the season would be of most benefit to all, because knocking off for a couple of years, where a man is dependent upon fishing—and the lobster fishing is the best thing he has to depend upon—would put him in a kind of hole for a couple of years. I believe in cutting off ten days and protecting the spawn lobster. As to protecting the small lobster, as far as I can see, it will be pretty hard to arrive at the size.

Q. Do you not think the parlour trap is doing a good deal of injury by capturing and holding too many small lobsters?—A. I believe it is.

Q. What do you think of the present practice of the department in the matter of licensing canneries; is the present regulation restricting the number of licenses a sound one?—A. I believe there are licenses enough given out to canneries. As to licenses to the fishermen, if the cannery were not using them right they could turn out canned lobsters for themselves.

Q. The method of allowing fishermen to co-operate, in places where they are not satisfied with their treatment by the canner, gives them an opportunity to do better?—A. To do better if they think they can.

Q. Some capital is required of course?—A. Yes.

Q. It would not do to issue licenses indiscriminately?—A. No, sir.

Q. You have had nothing to do with the live lobster market?—A. No.

Q. And there is no opportunity of shipping live lobsters from here?—A. No, sir.

Q. Do you know of any instance where a fisherman has suffered injury or loss by the refusal of the canner to take his lobsters?—A. We have had no experience of it here.

Q. Is it to your knowledge that there is any combination on the part of the packers to keep the price down?—A. We have only one packer here.

Q. Do you think the fishermen would make more money if allowed to can for themselves?—A. I don't know. I don't think they would if they got a reasonable price from the packer.

Q. Would a strict enforcement of the 8-inch limit do harm?—A. It would close the factory.

Q. And shut the fishermen out too?—A. And shut the fishermen out too.

Q. Do you think it would be wise to insist upon a certain style of trap, would it be possible to protect a fair number of the small lobsters by fishing any special trip?—A. Yes, I believe the old fashioned double ender would be the right kind of trap.

9-10 EDWARD VII., A. 1910

Q. What space would you recommend to have between the slats?—A. I don't know, I believe we lath them here about right. I don't know just the inch or fraction of an inch they are apart.

Q. You never fish in the fall here?—A. Never.

Q. Is there anything you would like to state yourself?—A. I don't believe there is. You went into the whole thing.

Witness discharged.

ANGUS A. MACDONALD, fisherman, Arisaig, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster fishing?—A. About twenty years, I guess.

Q. Always in this place?—A. Yes.

Q. Do you fish for the same cannery as the last witness?—A. Yes.

Q. And you use the factory gear?—A. Yes, sir.

Q. After the lobster fishing is over what is your occupation?—A. Fishing.

Q. Do you fish for cod?—A. Yes, anything that is going.

Q. Do you belong to the Fishermen's Union here?—A. Yes, sir.

Q. How far off shore do you carry on your fishing?—A. From about a quarter of a mile to not more than two miles.

Q. In what depth of water generally?—A. In about thirteen fathoms.

Q. Do you fish the whole season in that same water?—A. Well, yes, outside, but most of the traps that are inside move about quite a lot.

Q. In an attempt to follow the fish?—A. An attempt to get some of the traps on new ground.

Q. What style of trap do you fish?—A. The old style.

Q. What is your experience in the fishery, is it as good as when you first began to fish?—A. No.

Q. To what extent would you say it has diminished?—A. I don't know. I suppose it is down to about half.

Q. To get the same weight of fish you require to fish harder with an increased amount of gear?—A. Oh, yes.

Q. Are the lobsters as large now as when you first began to fish, will they run as large in the average?—A. Oh, no, they will not.

Q. What proportion would you say now are under the 8-inch limit?—A. I would say that about a half of them are under the 8-inch limit.

Q. And what proportion of the total catch of lobsters are berried lobsters?—A. I would say that about 5 out of every 100 are berried lobsters.

Q. That is taking the whole season through?—A. Yes.

Q. There are more at some times and less at others?—A. Yes.

Q. At what time of the season would you expect to find the largest percentage of berried lobsters?—A. The very first of the season, that is when we get the traps out here first.

Q. That is the first week in May?—A. Yes.

Q. Is there much increase in the number of traps fished here now compared with the time when you began?—A. Oh, yes, a little, not much.

Q. Of course you are not crowded with canneries; you have your ground to yourselves?—A. Yes.

Q. What do you think of the proposal to register and license the fishermen, do you think there would be any good results from it?—A. Well, I don't know in the world. I don't believe it would be of any benefit.

SESSIONAL PAPER No. 22a

Q. You do not think that having—A. Having a license to fish lobsters would be of any benefit.

Q. Would it not benefit a fisherman to have a license?—A. Not in a case of this kind. Here, Bob Whitman is the only packer, and if he gets anything against the fishermen, me or any other fisherman, he could make me guilty of fishing illegal lobsters. Then I don't fish any more.

Q. How does the price paid for lobsters to-day compare with what you got when you began?—A. We get a better price now.

Q. A case of lobsters to-day is worth a good deal more than it was then?—A. I suppose it is.

Q. Are the fishermen generally satisfied with the price they get from the canner?—A. Well, yes, I guess they are.

Q. What has been your practice in the past with regard to undersized and berried lobsters, did you bring everything ashore?—A. Everything came ashore.

Q. Until this year?—A. Yes.

Q. What would you say with regard to this year?—A. I threw away all the spawn lobsters, and anything I would be ashamed to take ashore I threw away also.

Q. Do you think the small lobster makes much attempt to get out of the trap when you commence to haul it up?—A. I guess they do.

Q. My idea is they generally grab hold and hang on?—A. No, they try to get out of the trap. Some of the lobsters will get out, too, very quickly.

Q. Then if that is the case, having a regulation governing the distance between the slats, especially the bottom slats, would have some effect in allowing small lobsters to escape?—A. Yes, I guess so.

Q. Many of the traps we have seen in different places have slats that are not more than half an inch apart; it is pretty hard for anything to get out through that small space?—A. Yes, I guess so.

Q. The fishermen have told us that a 7 or 8 inch lobster can get out through that space. It must be pretty soft shelled, I think?—A. Yes.

Q. What is your experience with regard to the spawn lobsters; do you find more of them off shore, or do you get the most in the deep water when you commence fishing?—A. Yes, most of them are in the deep water when we begin.

Q. At the very last of the season when you are fishing in shoal water what sort of run do you get?—A. Oh, a kind of small.

Q. Do you think the greatest harm is done to the fishery during the last ten days of the season?—A. Yes, I believe it is.

Q. Have you ever remarked the size of the smallest berried lobster you have ever seen?—A. No, I have not. I have always found berried lobsters large lobsters.

Q. We hear a great difference of opinion. Where they have kept count of the lobsters and measured them, they find very few under 8 inches?—A. Very few, yes.

Q. Do you think the number of hatcheries, where they can be established, should be increased as one means of preserving the berried lobster?—A. Yes.

Q. You can only have hatcheries where there is a considerable number of canneries close together because the latter furnish the eggs. Do you know if there is any place in this neighbourhood where pounds could be established?—A. No, I do not. I have no idea where such a place could be established.

Q. Has the practice of stripping or washing the eggs from the female lobster ever been followed by the fishermen in this neighbourhood?—A. I don't know.

Q. That is practised, I think, where the canner refuses to accept such lobster?—A. Yes, that is so.

Q. If the canners refused to accept berried or undersized lobsters would it have the effect of inducing the fishermen to return them to the water?—A. Yes, sure.

Q. You heard the evidence given by the previous witness, do you endorse what he said?—A. Yes.

9-10 EDWARD VII., A. 1910

Q. Have you any knowledge of the live lobster trade at all?—A. No.

Q. Which do you think is the most profitable to the fishermen, selling the lobsters alive to the market, where that can be done, or to the canner?—A. I have no idea.

Q. Which proposition appeals to you as the most likely to protect the fishery and cause the least injury to the fishermen; closing down for several years altogether or by sections, or shortening the season and protecting the berried lobsters?—A. Shortening the season and protecting the berried lobster.

Q. What do you think of the department's policy with regard to restricting the number of canneries?—A. Oh, I think there are canneries enough for all the lobsters there are to catch.

Q. Do you approve of the policy of granting licenses to can on the co-operative plan?—A. Yes.

Q. Would you suggest any change in the opening date of the season; it opens with you on the 20th of April?—A. I think the 1st of May is early enough, because we never get out very much before that date. We are generally losing our time, there is generally ice floating around here until the 1st of May.

Q. Within your experience when did the decrease of lobsters first begin?—A. I would say about 13 years ago as a witness said before, 12 or 13 years.

Q. What do you attribute that decrease to?—A. I don't know unless it was catching everything that came.

Q. Within your experience has there been any material decrease during the last five years?—A. No, I do not think during the last five years.

Q. You have off seasons of course; even in the good years there were seasons when you did not catch lobsters?—A. This was a poor season owing to the storms.

Q. Was there much loss of gear?—A. Oh, yes, quite a lot.

Q. Do you lose gear every year?—A. No, not every year.

Q. How long will a lobster trap last?—A. Four years.

Q. Are the traps attacked by the borer here at all?—A. No.

Q. When do you make your best fishing?—A. In May.

Q. Have you any idea how many days you actually fish in a season?—A. 38 days, but this last season only from the 8th of May to the 28th of June. We had that number of hauls.

Q. Is there anything you think of yourself that you would like to state?—A. No. I guess you have asked pretty nearly all that is required.

Witness discharged.

Commission adjourned.

BALLANTYNE'S COVE, August 13, 1909.

JOHN MCGILLIVRAY, fisherman, South Side, Cape George, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing?—A. Since I was eight years old, not in lobster fishing. I think I fished lobsters, the first fishing that was done on this shore. That is about 30 years ago and I have been fishing off and on ever since.

Q. Always on the coast?—A. Always on the coast.

Q. Are you a member of the Fishermen's Union?—A. Yes.

Q. How many fishermen fish in this particular cove?—A. I think over 30 boats.

Q. Do they own their own gear and boats?—A. They all own their own gear here.

Q. And boats also?—A. Yes, and boats.

SESSIONAL PAPER No. 22a

Q. What style of trap do you fish?—A. The long trap with two heads.

Q. That is the old fashioned trap?—A. Yes, sir.

Q. What space do you generally allow between the slats?—A. All kinds. They are down to a little better I guess than a lath apart.

Q. What space would you say it was?—A. About an inch, better than an inch. Off and on about that.

Q. And what is the size of the mesh in the ends?—A. About the same as the laths.

Q. That is an inch square?—A. Yes.

Q. And what sized hoop do you use?—A. The little bow?

Q. Yes?—A. Four, and some four and a half.

Q. Is that the same style of trap that you commenced fishing with 30 years ago?—A. Yes, the same trap only we are more active at building traps and lath them a little closer than we did at first.

Q. At about what time do you begin to fish?—A. 20th of April.

Q. Are you always able to get out at that time?—A. No, sir.

Q. What time did you get out this spring?—A. We got out some time about the first part of May, about the 10th of May.

Q. What kept you so late?—A. Ice and bad weather.

Q. How far off shore do you first set your traps and in what depth of water?—A. Last year we set them out earlier. Last year I set out I suppose over two miles in fourteen or fifteen fathoms.

Q. Do you fish all season in the same depth of water?—A. No, we come in. This year because we were later we did not go out quite so far. The fish move in though.

Q. About when do you shift in?—A. First? About the middle of June.

Q. When is the best of your fishing?—A. About the start. We meet the fish outside.

Q. Have you any idea where the lobsters come from; do they come from the gulf or the straits?—A. We always believed they came off the banks, in those waters out here.

Q. Do you think they winter in St. George's bay?—A. I could not tell you that. It is my experience that they live on the banks out here because there are none in real early, so they move in.

Q. How does the fishing compare now with what it was the first year?—A. It is a little hard to tell that because we are taking them by weight now and by count at that time. I think they are just as numerous but they are lighter in weight.

Q. It takes more of them to make up the weight?—A. Yes.

Q. How did they run to the hundred pounds when you first began fishing, have you any recollection?—A. I counted them myself last summer and there was about a hundred and some odd would go to the hundredweight.

Q. A hundred and how many?—A. Perhaps 128.

Q. Perhaps 128 or 130 to the hundredweight?—A. Then there are seasons when they are lighter again and times when they are heavier.

Q. When do you get your best fishing?—A. At the start. They are fuller towards the last of the fishing.

Q. They will weigh more?—A. Yes, they will weigh more.

Q. Now as to the run; will they average as large towards the close of the season as when you first meet them outside?—A. No, they are perhaps a bigger fish. Last summer I had a larger catch of fish right in the land wash, just in handy to the rocks.

Q. How close do you go, into what depth of water?—A. One fisherman up here told me the traps would be half dry and then they would get good fishing when the tide rose.

Q. Still on the whole the lobsters are not as large as when you first began to fish?—A. No.

Q. Are you fishing more gear now than when you first commenced?—A. Yes, double. 120 traps I used to have in the olden times and we go 240 traps now and 200.

9-10 EDWARD VII., A. 1910

Q. The same style of trap?—A. Yes.

Q. It takes nearly double the amount of gear to give you the same return?—A. Yes, sir, it does.

Q. Do all the fishermen own their own boats and gear here?—A. Yes, I don't know of any that do not.

Q. What is the practice here with regard to the regulations? What we want to find out is whether the regulations have ever been observed. The regulations say you must not take berried lobsters or any under eight inches?—A. Well, my boat was full of small fish last year. My son went to work and put a measure in the boat because we were not supposed to take any lobsters of such size.

Q. What size were they?—A. I think about seven inches. My son measured them, but only threw away three or four. Those three or four were about four or five inch lobsters.

Q. How about the female lobster with berries; what has been the practice in years past with regard to her?—A. I am on oath and to tell the truth. Some used to wash them off and some to scrape them. You had no other way to do. If you threw that lobster away to-day, another one would catch it to-morrow. Sure death for them I fancy. I might let her go and another one would catch her to-morrow. Another fisherman might throw her away lest his boss got stuck. That was my experience of it.

Q. How did they do at the cannery, did they refuse to take the berried lobsters there?—A. They would not be getting the spawn lobsters if the fishermen were throwing them away or washing the seed off.

Q. Did they object at the cannery to taking them?—A. Oh, they did here, they were on the watch all the time here. They have been here nearly every day on the lookout for spawn lobsters.

Q. What price did you receive for lobsters this year?—A. \$2.25 per hundred weight.

Q. And last year?—A. \$3.50.

Q. And what was the price in previous years?—A. \$3.50 for a good many years.

Q. And when you began to fish originally what was the price?—A. 50 cents, but we did not own any gear.

Q. You fished the factory gear then?—A. Yes.

Q. And the price was by count then?—A. 50 cents a hundred by count and furnished everything. They would never see you stuck on bait.

Q. And now you have to supply your own bait?—A. Supply everything. First we did not furnish anything only our bait.

Q. It has been suggested as a way to get the fishermen all over the coast to obey the regulations that the fishermen should be licensed; do you think that would have any good effect in inducing them to observe the regulations? The idea would be that if a fisherman continually violated the law we would not give him a license and would not allow him to fish lobsters?—A. I think this is a free country. I would not approve of that. That is cutting out some fishermen and taking in others. That would mean that you could do what you liked with fishermen and poor men who wanted to make a bite for their family. It would not do any good a license of that kind, and the fishermen would not agree to it at all.

Q. What is the best thing to do to get the fishermen to carry out the regulations, because over the greater part of the coast a large part of the lobsters caught are below size?—A. I think they are pretty strict here. Lobsters under 8 inches are not worth being taken in; they are thrown away. There are no lobsters brought in 4 or 5 inches in size. Anyone would know that by the naked eye.

Q. And they are not brought in you think?—A. No, they are never brought in or packed.

Q. Have you any idea how many female lobsters with eggs there would be to the hundredweight; what percentage?—A. You are more apt to catch them when you come in later in the season. At the first going off there is none at all hardly. You

SESSIONAL PAPER No. 22a

might get six or seven some days. Other days hardly two, and other days perhaps ten.

Q. What would be a fair average?—A. About between four and five a day.

Q. And that would be how many to the hundred?—A. About four out of a hundred weight. That is my experience. I fish days that I don't see any at all.

Q. And you tell us the practice of washing or stripping off the eggs has been carried on?—A. Oh, well, I believe it has because I heard the fishermen talking about it through the winter.

Q. Have the canners in this neighbourhood ever objected to receiving berried lobsters at the canneries?—A. Oh, they do. They objected every time. I was one of them myself. I do not want to take the spawn lobster, but what can I do? That is the state of the fishing. Put the spawn lobster out of your trap to-day and he is in another man's trap to-morrow or in your own again.

Q. The fishermen ought to recognize that the spawn lobster should be protected?—A. We are always talking of it, but could we do it? We cannot afford to make a pound for her.

Q. Is there no chance to make a pound here?—A. There is one of the greatest places in Canada right here.

Q. Whereabouts?—A. Right in this wharf. There is clear water enough if it were off a piece.

Q. It must be in a sheltered place; it is a pretty difficult place here to build a wharf that will stand?—A. We had four or five vessels in this last gale to seek shelter and one of them was loaded. If the wharf was built a little higher there would be no difficulty at all.

Q. How would it be if the government bonussed a small steamer to bring the lobsters in and then release them at the wharf?—A. That is always what we are talking about. To tell you the truth, the fishermen do not know what to do. The berried lobsters are there in your way and this heaving out a few they are going to die. We fishermen are old enough to understand that.

Q. Is it possible to bring them in in boats and turn them out alive?—A. Yes, sir.

Q. You would keep a certain proportion of them alive, I suppose, but not all?—A. You mean without a pound? I know of a lobster that was let go here that was caught three miles away, taken by a fisherman.

Q. Was he marked?—A. He was a black lobster and they put a mark on him. So he told them on the shore. It was in the first of the fishing that happened.

Q. How do the fishermen make arrangements for fishing lobsters? Who fixes the price?—A. We don't know until we get the price. This year they let us know, but it was late. The factory was closed and opened again. There was nothing in it this year. It did not pay the fishermen at all. When they figured for their grub and everything they did not make ten cents a day. I always figure just what the fishing costs me.

Q. What is the average weight of lobsters caught by a fisherman in a season?—A. I suppose other fishermen would know it better than I would. I do not go over five or six thousand pounds.

Q. When do you knock off fishing? Did you fish right up to the 10th July?—A. Yes, we did this year. Last year they closed us down. They handled us as they like, so we formed a union to try and do a little for ourselves.

Q. The practice of the department in the past has been to restrict the number of canning licenses; except in the case of co-operative associations no canning licenses have been issued for several years now; do you think there are canneries enough?—A. Well, there is where they have got the hook on us. They got us there all right and they just stuck it to us. This year we got quotations from all parts of the world, and in France it was a shilling higher for canned lobsters than last year.

Q. Per case?—A. Yes, per case. We know all these things now and before we did not know anything. They are making the money now and we are not making a

9-10 EDWARD VII., A. 1910

cent, and the natives have to leave the place if they don't get justice. It has been going one-handed like that.

Q. What are most of the fishermen here?—A. They fish right through. There are lots of farmers and fishermen. There are always two out of a house that will fish steady, they shift about like that.

Q. You know very likely that the only new licenses for canning issued of recent years are what they call co-operative licenses. That is where a number of fishermen who are associated together ask for a license and say they are able to open a cannery and conduct it?—A. We are looking for one of them.

Q. Are you trying to organize an association of that kind?—A. Yes, sir, we are looking for it. The canners have it all to themselves and we have nothing. They never caught a lobster, these men, and they commence to cut down those who are always fishing. They are in possession and we are not. They will make you believe they will close the factory here and the other factory will close. They will make you believe anything.

Q. Is there any other factory here?—A. There is one at Morrystown, about seven or eight miles from here.

Q. Who owns it?—A. Burnham & Morrill.

Q. Do you know anything about the live lobster industry?—A. No, I never shipped anything from here.

Q. Are there any facilities for the carrying on of the live lobster trade?—A. The Strait of Canso is not very far from us if we only had a boat to take the live lobsters there. But we are bound down so that we cannot get anything.

Q. Do you think there would be more money in the live lobster trade for the fishermen?—A. Oh, yes, we get a lot of big lobsters here.

Q. What was the size of the largest lobsters you caught here?—A. We caught lobsters here 8 and 10 pounds and we caught one weighing nearly 14 pounds. I have caught them myself, 5, 6 and 7 pounds.

Q. There are no hatcheries in this neighbourhood?—A. No, sir.

Q. Do you think the hatchery is one method of saving the berried lobster?—A. I have had no experience but I think the best hatchery we could get would be the simplest, to put the spawn lobsters in the water. I think that is as good a hatchery as there is.

Q. One remedy suggested for the improvement of the fishery is to shut down for two or three years?—A. I would not suggest that at all. That would be ruining the fishery and the young men would have to leave. I believe there is on the average as big fish as ever coming in and larger, that is an odd one.

Q. Then it has been suggested to close down the fishery by sections?—A. That would never do, the like of that, in my experience.

Q. Another remedy proposed is to shorten the fishing season, provide for the protection of the berried lobster in some shape or other, insist upon a kind of trap that will allow a fair proportion of small lobsters to escape and do away with the size limit.—A. I was one of the men that tried that myself. I put the laths wide apart and put a big head in. My belief is that I put the laths too far apart and if a 10-inch lobster can get his tail out through he is going to squeeze his body out. If there is a mesh broken you will get no lobsters big or small. I believe the big fellows won't allow the small lobsters in. They just chase them out. But anywhere the lobster will get his tail out he will get his body through.

Q. There are a good many traps with only half an inch space between the laths; there is no doubt they interfere with the escape of small lobsters, especially the parlour trap?—A. There is no parlour trap here. I think the trap we have is the right trap. I know one fisherman here that rigged out 100 traps. I told him myself: 'You are making a mistake in lathing them too far apart.' He told me 'My lobsters never paid for the laths that went into the trap.' He was a brother of mine.

SESSIONAL PAPER No. 22a

Q. How far apart did he put the laths?—A. They were fully over an inch apart, there was just the distance of the pole of a hammer. We used to have them that they could take a lath as a gauge.

Q. Do you fish with that space now?—A. We would not catch any fish.

Q. You would lose too many?—A. Yes.

Q. What would you think of doing away with parlour traps and somewhat shortening the season, knocking off say on the 1st of July instead of on the 10th?—A. We have such an awful short season here. We have not got two months and ten days at all.

Q. As far as the season goes it is practically the same everywhere?—A. Our season is too late here. The 1st of May to the 20th of July is a good season. That is what we want here too.

Q. Is there anything else you would like to say?—A. I have not got anything else to say. As to the fishing here these companies when they come here, when they send a man here, they lie to the fishermen and all like that and we fishermen are not in it at all. We have taken a hatred against them and are trying another way of getting around it. This summer there was dang near being a battle, but still we fished for \$2.25 and we have nothing for it. That market for fresh lobsters is what we are looking for if we had some boat that would take them out of here. The Strait is only about an hour and half's run from here and we could ship them there. There are about from 10 to 15 in every hundred of lobsters fit for the live lobster market. That is why we are looking after all these things this summer.

Q. Is there not some party in Mulgrave that buys live lobsters?—A. I suppose there is. But I do not know these people. I have nothing else to say but that the spawn lobster should be looked after and corralled in deep water right out a piece. They are all right in deep water. Put the fish there and let them go and they can spawn there and the spawn will give you lots of lobsters. I believe it is a great way of making the fish numerous. The poor fishermen get 10 or 12 of these spawn lobsters and they don't know what to do with them. If he lets them go another fisherman may take them and then they are lost to him.

Witness discharged.

ALEX. McDOUGALL, fisherman, Ballantyne's Cove, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in the lobster fishery?—A. About 27 years.

Q. Do you do any other fishing when the lobster fishery is over?—A. I did in former years, but not in these latter years.

Q. Are you a member of the Fishermen's Union?—A. Yes, sir.

Q. How many members has it here?—A. I can't exactly tell you.

Q. What district does it embrace? Does it go away to Merigomish?—A. No, it comes to Arisaig, and the other way it goes up to the head of the bay here.

Q. Are you fishing for the cannery here?—A. Yes, sir.

Q. How long have you fished for them?—A. Ever since they started business here, all of 14 years ago, I think.

Q. When do you begin to fish in the spring?—A. Well, the season opens 20th April. Some years we start 20th April, and more years we don't start until the 1st of May, 10th of May, 8th of May; it depends on the ice.

Q. When did you start this year?—A. About the 8th or 10th of May I think.

Q. This was a late spring then?—A. A late spring.

Q. Did you have a very rough season?—A. We had a very rough season.

Q. Was there much gear lost?—A. Quite a lot, more gear than I ever saw before.

Q. Was it destroyed by rough weather or ice?—A. Rough weather.

9-10 EDWARD VII., A. 1910

Q. I suppose the damaged gear was in shoal water?—A. The shoal water gear gets it the worst.

Q. What depth of water do you fish in when you begin?—A. I fish in from 6 to 8 fathoms, and some spots shoaler than that. I run along shore, I don't run in and out.

Q. You don't go off shore, you fish parallel with it?—A. Parallel with the shore.

Q. What number of traps do you fish?—A. 150 traps.

Q. Do you fish alone?—A. I hire a boy.

Q. Do you fish the old fashioned trap or the new trap?—A. The same old trap.

Q. What is the best time of your fishing?—A. The first start is the best with me anyway.

Q. How do the fish run; do you get a better run of fish at the first start than towards the back end of the season?—A. I get a better run at the first start.

Q. When do you see the most berried lobsters?—A. Well, towards the 1st of June up to the 1st of July.

Q. Can you tell me how many out of every hundred you catch are lobsters with berries?—A. It will average about 10 or 12 some days. There would not be perhaps over two or three some days, and some days there would be eight or ten.

Q. Then the average would be somewhere between that?—A. Yes, somewhere between that.

Q. What size do the berried lobsters generally run?—A. They generally run from about 8 or 9 inches, and 9 or 10 inches.

Q. Did you ever see any under 8 inches?—A. I cannot say that I did.

Q. The berried lobsters are generally good fair lobsters?—A. Yes.

Q. Do you think that the style of trap makes any difference in the catch; have you ever seen the parlour trap?—A. Yes, sir.

Q. Do you think the parlour traps catch an unfair proportion of small lobsters?—A. I don't know that they catch any more than the other kind of traps, but of course they hold better. The small ones are more apt to get out than the big lobsters, and the parlour trap holds them better.

Q. Do you not think the parlour trap is a means of catching a lot of small lobsters that would escape out of the other traps?—A. Sure. That is the idea of having the parlour traps.

Q. What price did you receive for your lobsters last year?—A. We got \$3.50 last year and the year before. This year we only got \$2.

Q. How do the packers account for the price going down?—A. They said it was a slump in the foreign market.

Q. Who fixes the price of lobsters?—A. It is Mr. Daly in Pictou.

Q. Is he the manager for Burham & Morrill?—A. Yes.

Q. The price began at \$2 but did it not go up to \$2.75?—A. He paid \$2.25 after we struck.

Q. Were you later in beginning to fish?—A. We were. I suppose we lost four or five days, but still there was no bait up to the time we did start.

Q. Do you supply your own bait?—A. Yes, sir, herring always.

Q. What is your experience with regard to bait; does the lobster take the stale bait as well as he does the fresh?—A. It is hard for me to say. Sometimes with a lot of stale bait we get as many lobsters as we would with the fresh. You would naturally think that the fresh bait would be the best.

Q. What has been your practice with regard to undersized and berried lobsters; has everything gone to the cannery?—A. No, the canner would forbid bringing them in.

Q. Has the canner always done that?—A. Oh, yes, always. When we would start in he would always give us the rules and tell us we would have to abide by them.

Q. He would not take anything under what size?—A. Under 8 inches, I think.

Q. Did the canner live strictly up to that, do you think?—A. I cannot say that

SESSIONAL PAPER No. 22a

he did. I don't think myself they can run the factory and live strictly up to the rules.

Q. And it would not pay the fisherman to fish would it?—A. No, I don't think so.

Q. And live strictly up to the rules?—A. No.

Q. The berried lobsters must be saved?—A. Oh, sure.

Q. Don't you think they ought to be saved?—A. Oh, yes.

Q. What has been the practice, have the berried lobsters been stripped generally?—A. The fishermen were ordered to let them go, but I can't say they were letting them go.

Q. What do you say is the lobster spawning season?—A. Somewhere between the 1st and 20th of July. That is as near as I can get it.

Q. What would you suggest yourself as to the best way of saving the berried lobsters?—A. The best way I see it can be done is to shove them into a hatchery somewhere.

Q. Buy the berried lobsters and take the eggs off?—A. Buy them and take the eggs off in a hatchery.

Q. What do you think about the licensing of canneries?—A. As far as the licensing is concerned I don't think it would be pretty hard to remedy. I don't think any more licenses would help us out any.

Q. Supposing the fishermen were allowed to can for themselves?—A. I don't think that would last very long either.

Q. As a remedy for the trouble that is evidently occurring between the fishermen and the canners in some places the department have apparently decided to grant co-operative licenses?—A. Yes, I am aware of that.

Q. The co-operative method of packing has been tried in some places?—A. I guess they tried it up at Cape Breton this summer, but I did not hear the result.

Q. It was tried on the other side of the bay at Port Hood?—A. Yes.

Q. But they were very late in beginning and they did nothing at all and had to get help from various directions?—A. I am not in a position to say how that would work at all. For my part I would rather get rid of my lobsters when I am sure of them.

Q. Do you think if the average fisherman gets a fair price, he will do better than running a cannery himself?—A. I think so.

Q. That requires capital, ability, and experience, things a fisherman has not always got?—A. It requires lots of things.

Q. What do you think about the establishment of more hatcheries, would you favour an increase in their number?—A. Yes, sir.

Q. Are you aware of any fisherman having lost his catch of lobsters by the canner refusing to accept them?—A. No.

Q. That has not occurred here?—A. No.

Q. What do you think about the live lobster business, is it your opinion that where it can be conducted the fishermen would get more money by shipping his lobsters alive to market than selling them to the canner?—A. It would not pay a man to go fishing lobsters and ship what he can ship from here, because he will not get enough big ones to pay him. It would be all right if the factory agreed to take the small ones and ship the big ones.

Q. They are not likely to do that, I suppose?—A. I don't think so.

Q. What do you think would happen if the present size limit of 8 inches were strictly enforced?—A. Well, it would be pretty hard to live up to it.

Q. Do you think the cannery could run and the fishermen continue fishing?—A. It would be tight work for them.

Q. Is it your opinion that there is any combination among the various packing firms to keep the price down?—A. Well, we were told there was, but we are not well enough posted to decide for ourselves. We were told by our head man that there was.

9-10 EDWARD VII., A. 1910

Q. Is there any illegal fishing done on this coast, that is fishing after the close of the season?—A. Not that I am aware of, unless it would be young boys setting out traps to catch some to eat.

Q. Is there much gear left in the water at the close of the season?—A. Well, I think there was here some years ago, but to-day the fishermen own their own gear, and they are careful about getting it ashore.

Q. There have been various propositions made to the department as to the best thing to be done. One suggestion is that we should stop fishing and canning lobsters for a few years, until the lobsters grew as large as they formerly were?—A. I don't think it would work at all. I don't see what would become of the present gear or of the fishermen.

Q. Is there nothing else they could turn their attention to?—A. They might turn to something else, but it would be at the loss of their boats and gear.

Q. It would not pay to carry on other fishing if the lobster business were shut down?—A. I hardly think so.

Q. Another proposition is to close down in sections?—A. That would be no good, I think.

Q. Still another proposition is that we should try to regulate the size of the trap so that it would not catch too many small lobsters, protect the berried lobster in some way, and cut off the season a few days?—A. A hatchery is the best that I know of to take care of it.

Q. Would it seriously cripple the fishermen in this neighbourhood if they had to cease fishing on the 1st instead of the 10th of July?—A. It would not, but I have heard some of the fishermen remark that they would like to have from the 1st of May until the 20th of July.

Q. The idea would be, if we did away with the size limit, to protect the small lobsters, by requiring a wider space between the slats in the trap, and cutting off part of the season?—A. It would be pretty hard to do it with the traps.

Q. But you think the traps would not make any difference?—A. Of course in the spring of the year when the water is cold the lobster is a kind of dead, there is not much life in them, and mostly any kind of trap will hold them. As the water commences getting warm in June and July the lobster gets smarter, and will crawl out of a very small hole. You might build your trap of the ordinary size in order to let the small lobsters out, but it would still hold them in the beginning of the season.

Q. Do you think later in the season a fair proportion of small lobsters will escape?—A. No doubt.

Q. In some places they are canning lobsters down to 3 and 4 inches; there are very few lobsters of 8 inches at all?—A. Very few in some places.

Q. And the parlour trap apparently is responsible for that entirely. If they did not have that trap they would not catch so many small lobsters?—A. The only difference I see between the parlour trap and the trap we use, is that the parlour trap is better for holding the fish.

Q. We find in a great many places that the parlour traps are built with only half an inch space between the slats; nothing will get through that?—A. No.

Q. Do you think lobster fishing should be kept farther out from the shore? Some people have suggested that we should not allow fishing too close inshore because by doing that they capture very small lobsters?—A. To tell you the truth as far as I know, I catch more lobsters in shoal water than I do outside, and I think as a general rule—

Q. What you call shoal water is three or four fathoms?—A. Yes.

Q. But supposing a fisherman fished in one fathom of water?—A. There is a time of the season when there are no lobsters at all outside, hardly any, and they move their traps in.

SESSIONAL PAPER No. 22a

Q. It has been asked that fall fishing be allowed in some districts owing to the delay in commencing the present fishing season caused by the presence of ice; what would you have to say about that?—A. I would say it would be all right.

Q. Have you ever fished in the fall at all?—A. I fished here long ago up to the 20th of August, years ago.

Q. How did you find the fishing then; there were of course plenty of lobsters?—A. They were coming up a little from the 1st of August up to the 20th, but lobsters were so plentiful then that you could get them at any time.

Q. Have you any idea how many lobsters it takes to fill a pound can?—A. I think it takes from 7 to 8 to fill a pound can.

Q. Has anybody ever tried shipping live lobsters here?—A. No, sir, they never had any chance to do it.

Q. Is there anything you would like to say yourself concerning any subject I have forgotten or omitted to touch upon?—A. I know that our evidence varies a lot. You take the fishermen and every one has a different idea.

Witness discharged.

ALEX. MCINNIS, fisherman, Ballantyne's Cove, called and sworn:—

By the Commissioner:

Q. Where do you belong, Mr. McInnis?—A. Around here.

Q. How long have you been engaged in lobster fishing?—A. About 22 years.

Q. Always in this place?—A. Yes, sir.

Q. Have you always fished for the same cannery here?—A. Always the same cannery.

Q. Has the cannery always had the same manager?—A. This is a new man. I worked a couple of years ago for another man before this one.

Q. Do you own your own boat and gear?—A. Yes, sir.

Q. Do you fish single handed?—A. I have got some one with me.

Q. How many traps do you fish?—A. 160 to 200. I fished 200 this year.

Q. In your experience does it take a larger amount of gear now to get the same weight of lobsters that you caught formerly?—A. Nearly double.

Q. How do you find lobsters compared with when you first began?—A. They were a good deal larger at first, they have run down.

Q. When did you first notice they were running down, has it been a gradual decrease?—A. It has been a gradual thing.

Q. Do you think they are still going down?—A. I think so.

Q. In what depth of water do you begin to fish?—A. I fish all the way from 5 to 10 fathoms.

Q. Do you fish in the bay or around the head?—A. I fish around the head. I have to go out quite a distance, about a mile off the shore.

Q. And do you fish in that depth of water all through the season or move in?—A. I never shift, I have always two lines running in and out.

Q. How many traps to a trawl?—A. About 100 to each trawl.

Q. Do you fish the old fashioned trap entirely?—A. Yes, sir.

Q. Have you always done so?—A. Yes.

Q. How is it the parlour trap is not used here?—A. They are getting into them now, some of them. Some of the southern shore fishermen at the head of the bay have started them.

Q. Is it safe to say that you have increased the amount of your gear to keep up the catch?—A. Quite certain. You could not catch the same amount of lobsters with the gear we started in with at first.

9-10 EDWARD VII., A. 1910

Q. And is there a great deal more gear in the water around you than formerly?—

A. Yes, lots.

Q. Have you always fished the same number of boats?—A. Well, I expect there are a few more boats now than at first, when we started.

Q. Was it 12 when the fishery started?—A. It is away up to 20 now.

Q. What proportion of lobsters would you say were below the size limit of 8 inches?—A. Oh, well, there would be a good many if they were strictly overhauled.

Q. Would it pay you to continue to fish if the 8-inch limit were strictly enforced?—A. I don't think it would.

Q. What do you think would become of the canner if he were strictly tied down to the 8-inch limit?—A. I don't believe he would get enough to keep him going. In some places they might do it. On the north side there are bigger lobsters than on the south side.

Q. How is that, is it not fished out so much?—A. It is more out on the Atlantic there.

Q. There is deeper water?—A. Yes, here it is all penned in.

Q. Now, as to the price paid for lobsters. There seems to have been difficulty over a good part of the coast this year between the canner and the fishermen as to that; what price did you get this year?—A. \$2.25.

Q. And last year what was the price?—A. \$3.50 per hundredweight up to the 15th, and then they cut us down to \$3 after the first pay-day.

Q. That was last year?—A. Yes.

Q. How is that price fixed between the fishermen and the canner?—A. I don't know. They did not seem to agree on it very well.

Q. Does the canner at the opening of the season say what he is willing to give and no more?—A. He never gave it out until this year. We never used to find out until a week or two before pay-day. This year it was given out before the factory was opened at all. That is that the price was \$2.25.

Q. Did that lead to the formation of the Fishermen's Union or was the union in existence before that?—A. The union was in existence before that.

Q. And how did you eventually settle matters; this spring the canner did not open up, did he?—A. He did not open up. The fishermen came to the conclusion they would fish and if there was more pay elsewhere he would have to pay it. It was the same all round, I think. There were some places that they did not fish. In some part of Cape Breton they did not open up at all.

Q. How does the price you get now compare with that paid when you first began to fish?—A. It is better than what we used to get when we began to fish. Then it was \$1 a hundred by count.

Q. The price of a case of lobsters was then not as high?—A. No.

Q. What has been the practice here with regard to taking lobsters; has the canner been accustomed to taking everything that was brought regardless of undersized or berried lobsters?—A. They were a kind of strict at the first start.

Q. Do you mean this season?—A. No, every season with regard to small lobsters and berried lobsters.

Q. Do they become less strict towards the end of the season as to the lobsters they will accept?—A. Oh, yes, they would take everything that came in then.

Q. But they always endeavour at the beginning of the season not take small or berried lobsters?—A. Yes.

Q. What has been the practice of the fishermen in regard to berried lobsters?—A. Well, some chuck them out and others take them in. They are watching them very closely and sometimes they are thrown overboard. The canner does not take them if he notices them.

Q. Is there a fishery officer here and does he keep watching you?—A. Yes, sir, he is here very often. He visits the place about once a week.

SESSIONAL PAPER No. 22a

Q. He is on the lookout?—A. Yes, sir.

Q. Do you find more spawn lobsters inshore that you do off shore?—A. No, sir, I do not.

Q. How many out of every hundred you catch are berried lobsters with the berries outside?—A. There are some days you would not get any at all. Some days you might catch two or three out of a couple of hundred.

Q. Do you think there is any time when the lobster is not fit for food?—A. Well, I don't know as to that.

Q. Could you suggest any change in the regulations that will make it more easy to save the berried lobster; what do you think is the best way out of the difficulty, how are we going to protect that lobster?—A. If she could be put in some place where she would hatch. If you get hold of a berried lobster to-day and throw it out, another fellow might get it and take it in. The berried lobsters are destroyed in that way. If not taken into the factory she might die in the boat.

Q. Would it be possible for the fisherman, when fishing his trap, to put the berried lobster to one side, and bring her on shore in good condition?—A. I think so.

Q. You could have a special box or basket to hold them?—A. We could take her ashore alive all right. You have a lot of lobsters in a boat and they all come ashore alive. They are no good to can if they are dead.

Q. How long does it take you in ordinary weather to fish your traps and bring the lobsters in?—A. Generally as a rule it is 12 o'clock when we get into the factory, and we generally get out about five in the morning. If you have no distance to go and are handy to the factory you can do it in less time.

Q. When would you expect to find the most berried lobsters?—A. The time I generally find them is about the last of May. That is about the time they come, from that to the 1st of June.

Q. Various suggestions with a view of improving the condition of the fishery have been made to the department. One is to close down for a term of years?—A. There is no doubt it would help the lobsters a lot.

Q. And what about the fishermen?—A. It would be pretty hard on some of them because they depend on the lobsters.

Q. And there is no other fishery at that time to which they can turn their attention?—A. It would hurt lots and mean a lot of loss to the fishermen.

Q. Do you think a strict enforcement of the 8-inch size limit would shut everything up?—A. It would run pretty close and no mistake.

Q. The Lobster Commission of 1898 recommended shutting down by sections; what do you think of that?—A. Well, they shut down a couple of years at Arisaig, and started in again, but the fish did not run. They started up again but there was no change.

Q. Had the grounds in the meantime been fished by other people?—A. Not up there.

Q. And you say there was no improvement?—A. No, sir.

Q. Did they shut down with the idea of making any improvement?—A. Oh, I don't know that it was on account of that, but the firm did not run there. They shifted their factory and moved to another place.

Q. Another proposition is to arrange if possible for a trap that will allow a fair proportion of small lobsters to escape, do away with the size limit altogether, provide for the berried lobster in some way—either by releasing her or placing her in a pound or hatchery—A. That is the only way to save them.

Q. And in addition shorten the season by ten days; how would that appeal to you?—A. Well, they used to start about the 20th April.

Q. But you never did start in practice?—A. There was a couple of years we did, but this year we were held back until the 10th of May by the ice. We came to the conclusion if we got from the 1st of May until the 20th of July, it would be better. This early fishing is no good to us anyway.

9-10 EDWARD VII., A. 1910

Q. If that were done would you expect to have the 8-inch size limit enforced strictly?—A. Well, they seem to be satisfied with the 8-inch limit around here.

Q. But supposing it were strictly enforced?—A. I am afraid it would close the factory. I think it would be better to do away with the size limit and take the ten days off.

Q. Have you known any fisherman to lose his catch of lobsters because the canner would not accept them?—A. Not that I know of.

Q. Is it to your knowledge that there is a combination on the part of the packers to keep down the price?—A. It looked like it this year because the companies seemed to have the same price.

Q. Do you know anything about the live lobster industry?—A. I don't know anything about it. There is no chance here to ship anything. They claim in other places it is a good idea.

Q. Would you get lobsters here large enough to ship?—A. You would get some. I don't say there would be a great many, but at the first set out you would get some.

Q. Where would you have to ship to, Mulgrave?—A. Mulgrave is the only place,

Q. Is there any steamer running to Mulgrave?—A. Only the *City of Ghent* that makes a fortnightly trip.

Q. How far are you from the railroad here?—A. Twenty-two miles.

Q. Have you had any experience of hatcheries?—A. No, sir, I have not.

Q. Is it your opinion that the establishment of more hatcheries would help?—A. I think it would.

Q. Do you know anything about the system of placing lobsters in pounds?—A. There is no chance here. If fresh water was needed there would be a good place.

Q. Do you think we can ever hope to preserve the fishery if we keep on taking lobsters before they have reached the age of maturity, if we go on killing of the young?—A. No, sir, we never will.

Q. What is your idea of fall fishing?—A. I could not tell you, sir; it has never been tried here.

Q. Are you a member of the union?—A. Yes, sir.

Q. I suppose all the fishermen belong to it?—A. Practically all.

Q. How often do you meet?—A. We had monthly meetings previously, but we did not have them for a couple of months now.

Witness discharged.

Commission adjourned.

HARBOUR BOUCHE, August 14, 1909.

JAMES CORBETT, packer, Harbour Bouche, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in lobster packing?—A. About 20 years.

Q. Always in this place?—A. No, I have packed at Cape George and Bayfield.

Q. Was that before you came here?—A. I was here first; I started here.

Q. What number of cases did you pack in the cannery here this year?—A. I could not tell the exact number; somewhere about 1,100 cases. That was what the license is for.

Q. How does that compare with last year?—A. That is more than last year.

SESSIONAL PAPER No. 22a

Q. And more than the year before that?—A. I don't know about the year before; I was not here then.

Q. You do not know the year they have made the best pack here?—A. No, I do not.

Q. How many other canneries are there near you; where is the next cannery?—A. Mulgrave is the next nearest, and on the other side of it there is a small cannery at Long Point. They started very late; I guess in June.

Q. Who is it owned by?—A. H. L. Forham.

Q. About how many hands are employed in the cannery?—A. I think there must be 35 men, boys and women.

Q. Could you give me any information as to the regulations that are in force here; what is your season?—A. It opens 20th April and closes 10th July.

Q. The regulations of course are that berried lobsters and lobsters under 8 inches shall not be taken; what has been the practice in the past with regard to them at the canneries in this neighbourhood?—A. As to the size limit they have not taken any precautions. They take all that comes.

Q. You do not take lobsters 2 or 3 inches in size?—A. Whatever the fishermen will bring in. There are not many less than 4 or 5 inches. I do not know that there are any.

Q. And as to berried lobsters, what has been the practice?—A. Well, until this year they have been taken. This year they have not taken them; I don't think the latter part of the season anyway. There was a steamer from Canso came and took the spawn.

Q. Did she come here all the season?—A. No, I guess not until about the last month, or probably from the middle of May until we closed.

Q. When do you have the rush of your packing here?—A. Well, from the 15th to the last of May.

Q. How do the lobsters run now, compared with the time when you first began your connection with the industry, are they decreasing in size?—A. Oh, yes, very much.

Q. How many pounds of green lobsters does it take to fill a pound tin in your case?—A. We took four pounds this year, and last year four and a half. At Bayfield it used to take four and three-quarters. This year the lobsters run better.

Q. That means a pretty good run of lobsters?—A. Yes, that is very good. One reason for that is they got the lobsters in very fresh. Sometimes in a smack a lot of lobsters die, and that causes the average to slacken; you could not get at it very well. This year they had a better way of taking them in with a gasolene smack.

Q. Do most of the fishermen use their own gear or the factory gear??—A. They fish their own gear.

Q. All of them?—A. Yes.

Q. And how are they paid?—A. Paid by the hundredweight.

Q. At what rate?—A. \$2.25 this year. Last year \$3.50. The year before, \$3.50 to \$3.25. Part of the season it was \$3.50.

Q. Do you know how the price paid to fishermen is fixed?—A. I don't know. The packers say it is according to the market price.

Q. I suppose instructions come from the head office that they are willing to pay so much?—A. Yes, and of course here there is no opposition.

Q. Has there ever been any trouble between the fishermen and the packer here as to the price; is there a station of the Fishermen's Union here?—A. No.

Q. Could you give me any idea of the proportion of berried lobsters taken that would be below 8 inches; if the 8-inch size limit were enforced, would you be obliged to shut down?—A. Well I don't know that they would have to shut down because they could not get enough.

Q. It would cripple them at all events?—A. It would cripple them.

9-10 EDWARD VII., A. 1910

Q. The practice of the department has been not to issue any new licenses, except to fishermen acting on the co-operative plan; what is your opinion as to the restriction of licenses, do you think there are canneries enough?—A. Well, I don't know. If it was to favour the fishermen—if there were more canneries it would be better for them no doubt.

Q. You think there would be more competition?—A. There would be more competition and it is likely the price would be better for the fishermen.

Q. Within the last few years the department have been granting licenses to fishermen who grouped themselves together and gave assurances that they were going to can on the co-operative plan; would you approve of that policy being continued?—A. Yes, certainly.

Q. Do you think it is a fair one towards the fishermen?—A. Certainly. It may not be taken advantage of here very much unless the fishermen could get a packer to pack for them.

Q. They have got to get a packer, a cannery and a regular outfit?—A. Yes.

Q. Do you know when this factory was first opened here?—A. This factory must have been here for thirty-five years.

Q. Was it always run by the same people?—A. No. A. Ogden, of Canso, opened it. He owned it and the Portland Packing Company bought it from him. The buildings on the wharf are leased from Mr. Webb.

Q. Do you generally run the whole season through?—A. No, we seldom run out the whole season. The lobsters get slack about the last of June, I guess, and the fishermen give up fishing; it does not pay them to continue at it. There might be an odd year they would run out to the last.

Q. As a rule when do you begin here?—A. Between the 1st of May and the 10th. It depends upon the bay ice, as soon as it gets away.

Q. To your knowledge have the regulations as to size and the berried lobster ever been observed; were they ever enforced or have they always been a dead letter?—A. Always a dead letter here.

Q. Do you think the fishermen would make more money if allowed to can for themselves?—A. Yes, I believe they would.

Q. And you think the policy of encouraging the fishermen to co-operate in canning is a reasonable one?—A. Yes, certainly, where they can do it.

Q. Are there any co-operative canneries in the neighbourhood?—A. None.

Q. Are you aware of any complaints made by fishermen that the price paid for lobsters by the canner is not satisfactory?—A. Oh certainly.

Q. Are you aware of any fisherman having lost his catch of lobsters by the canner refusing to accept them?—A. No.

Q. Do you know anything about the live lobster trade; has any attempt ever been made here to ship live lobsters to market?—A. Not from here.

Q. You are close to Mulgrave?—A. Yes, but they don't bother with them here.

Q. Would it be possible to get large enough lobsters; they must be up to a 10 inch limit?—A. It is 9 now. Yes, they could get enough lobsters.

Q. In your opinion which is the most profitable branch of the industry to the fishermen, the live lobster trade or the canning?—A. No doubt the live lobsters if they could get any quantity. Of course right here the lobsters are not as large, but there is a bank where the fishermen fish on, six or eight miles off.

Q. Out in the bay?—A. The lobsters are larger out there.

Q. It is a wonder the live lobster trade has never been tried here in view of your proximity to Mulgrave?—A. Yes, but they did not get into it yet.

Q. From your experience can you say whether or not hatcheries have helped to maintain the supply of lobsters?—A. We have had no experience of hatcheries around here.

Q. Would you favour an increase in the number of hatcheries?—A. I think so.

SESSIONAL PAPER No. 22a

Q. What do you think is the best way of protecting the berried lobster; of course if you destroy the berried lobster you destroy the mother which is breeding the stock and it must be wrong?—A. It is certainly.

Q. What is your idea as to the best way of protecting or preserving the eggs of the spawn lobster?—A. I think if there was a way of getting them to a hatchery.

Q. What do you think would happen if the canner refused to accept the berried lobster?—A. Of course the fishermen would have to put up with it that is all. It would be right that they should let those lobsters go.

Q. The proportion of berried lobsters is not very large, is it?—A. It would not be a big loss to the fishermen.

Q. What do you think of the idea of buying the berried lobsters from the fishermen and placing them in pounds, where they would be left to hatch out and released at the close of the season?—A. That would be a good way. That would, I think, be better, because it would be less expense than a hatchery.

Q. Of course it entails some considerable expenditure to make a pound and the lobsters have to be fed while there?—A. The fishermen would be paid for them just the same. I think that would be a good thing.

Q. There ought to be some corner in this harbour that could be fenced off; is the water salt enough?—A. Yes, but it has a muddy bottom. I don't know that that would be very good.

Q. Is there any other place in the neighbourhood where pounds could be established?—A. Inside the breakwater would be a good place. No doubt there could be a place found in this harbour.

Q. Is there any fishing done after the close of the season?—A. No, not here.

Q. What are the men engaged in the lobster fishery, are they purely farmers who only fish for lobsters or bona fide fishermen?—A. The fishermen of course do some farming but the most of them I think depend on the fishery.

Q. After the lobster fishing is over what fishing do they engage in?—A. Mackerel, herring and codfishing.

Q. Is there much gear left in the water at the close of the season?—A. Oh no, they take them in unless it is some old traps that are not worth taking in. Probably a few of them are let go but not many.

Witness discharged.

WILLIAM E. WEBB, fisherman, Harbour Bouche, called and sworn:—

By the Commissioner:

Q. How long have you been engaged in fishing lobsters?—A. About 12 years

Q. Have you always fished at this place?—A. Yes, sir.

Q. Do you fish your own boat and gear?—A. Yes, sir.

Q. What number of traps do you fish?—A. 250.

Q. Yours is a double handed boat, is it?—A. Yes, sir, two hands.

Q. Are most of the boats here double handed?—A. Most of the boats are double handed.

Q. Do you use a gasoline boat?—A. Yes, sir.

Q. What style of trap do you use?—A. Mostly parlour traps.

Q. When did you begin using the parlour trap?—A. About three years ago.

Q. What led you to change from the old fashioned to the parlor trap?—A. Well the parlour traps fish better and hold the lobsters better.

Q. What space do you allow between the slats of the trap?—A. About an inch and a quarter.

Q. When do you generally begin fishing?—A. About the 1st of May on an average.

9-10 EDWARD VII., A. 1910

Q. In what depth of water do you fish?—A. Eight fathoms on an average.

Q. How far off shore would that be?—A. About three and a half or four miles.

Q. Do you fish practically the same ground every year?—A. About the same ground.

Q. Is there any station of the Fishermen's Union in this locality?—A. No, sir. I do not think so.

Q. Are you using more traps than you used to or have you always fished the same number?—A. No, sir, I am increasing the number.

Q. What number did you begin with at first?—A. About 150.

Q. And now it is 250; why is it necessary to fish more traps?—A. Well, we have larger and better boats.

Q. You do not find it necessary to fish more gear to keep up your catch?—A. Well, it is.

Q. Could you get the same weight of lobsters now with the same amount of gear that you began with?—A. I get a little more, but not a great many.

Q. Out of every hundred fish you catch, how many would you say are lobsters with eggs?—A. Not very many. At the first you hardly find any but at the last of the season you find more. That would not be many.

Q. Could you give me any idea about what the number would be?—A. I don't think they will average more than four to a hundred weight of fish.

Q. At what time of the season do you find the most of them?—A. At the last of the season.

Q. Do you find them where you begin to fish or in shoaler water?—A. I would not admit there are a few more in shoaler water.

Q. What percentage of the fish you bring in would be less than 8 inches in size?—A. Not very many. I often fired a lot overboard, small fellows. Three or four small fellows would spoil the whole lot. You are liable to be fined too.

Q. Did you ever hear of anybody being fined for violating the fishery regulations?—A. Yes, I did, but not fishermen.

Q. How many boats are there fishing from this neighbourhood?—A. I don't know that exactly. Just lobster fishing?

Q. In the lobster fishing season how many boats fish out of this harbour? We understand they smack a good many of their lobsters along the shore, but I suppose the boats that fish here deliver their lobsters at the cannery?—A. About six, I guess, about the harbour here.

Q. Is it the practice of the fishermen to move their traps closer inshore as the season advances?—A. Some seasons, it is according to the lobsters. Some seasons the lobsters haul in and others they do not.

Q. Would the run of lobsters be as large now as when you began to fish?—A. My own experience is that I do not see much difference.

Q. How has it been during the last 12 years?—A. I do not see very much difference.

Q. Are there more traps fished now in the neighbourhood?—A. Yes, I think so.

Q. The boats are fishing more traps as a rule?—A. Yes.

Q. Do all the fishermen here own their own boats and gear?—A. Yes, sir.

Q. The factory keeps none?—A. No, sir.

Q. I suppose the evidence given by the previous witness as to prices is correct; you got \$2.25 this year and last year \$3.50?—A. Yes.

Q. How is the price arranged between you and the canner?—A. He is giving the price you see. We cannot kick, he is making the price.

Q. You have to take what the canner pleases?—A. He is the boss of us, he has the money, and whatever he says, I suppose goes.

Q. What is the average fisherman earning, how many hundred weight of lobsters will the average fisherman catch?—A. Some catch more than others.

Q. Certainly, that is always the case; what will the catch of the average fisherman run per season?—A. How many thousand weight would a boat catch?

SESSIONAL PAPER No. 22a

Q. How many thousand weight is a boat supposed to turn in? You know what you turn in yourself?—A. I don't know that they average much more than 3,000 pounds.

Q. I suppose some will go a good deal more and some below that?—A. Yes, sir.

Q. Do you think that the parlour trap that you fish now catches and holds smaller lobsters than the old fashioned trap you used to fish previously?—A. No, sir, I think it will hold and catch the bigger lobsters. If the bigger lobsters will stay in the trap they will drive the little fellows out.
